In 1804 Schleiermacher returned to his old university, Halle, as preacher and professor of theology. In that home of rationalism his reputation as a *Romantiker* and a pietist caused him to be regarded at first with some suspicion. But he soon won his way to a considerable reputation as lecturer and preacher. The fine dialogue, *Weihnachtsfeier*, which he published in 1806, served to illustrate his growing appreciation of the fundamentals of Christianity and also the confusion which still marked his theology. It is a strongly imaginative work and shows traces of a vein of real poetry. At Halle he also busied himself with patriotic political utterances, drawn from him by the need of the times, and with schemes for Church reform—a subject in which he remained deeply interested all through his life. In 1806 the University of Halle was temporarily suspended owing to Napoleon's invasion, and Schleiermacher retired to the island of Rügen. After the battle of Jena he returned to Berlin and was soon afterwards appointed pastor of the Trinity Church. The following year he married the widow of his friend Willich, with whom he lived very happily, in spite of the disparity in years (he was old enough to be her father). In 1810 he took a leading part in founding the university of Berlin and was at once called to fill the chair of theology. He was also elected secretary to the Academy of Sciences. He lectured on almost every branch of theology as well as on philosophy and philosophical introduction. He also preached regularly on Sundays, and his preaching speedily won for him a foremost place in the national life. The force and fire of his sermons, their sound common sense, and their bearing on the needs and duties of the nation at a time of danger and humiliation won for them a wide hearing and a generous appreciation. At the same time Schleiermacher was deeply concerned with the reorganization of the Prussian Church and became a lifelong advocate of union between the Lutheran and Reformed Churches. He became a great personage in the life of Berlin both social and official. The firstfruits of his new position appeared in the small volume entitled *Kurze Darstellung des theologischen Studiums* (1811). In this he surveyed the whole field of theological inquiry in quite a new way and laid down the lines for all future systematizing of the subject. It was a most important and fruitful new departure. Ten years later he issued his monumental theological work, *Der christliche Glaube nach den Grundsätzen der evangelischen Kirche*. This was an attempt to reform and restate Protestant theology on lines suggested by the *Reden*, making religious experience, or the sense of dependence on God mediated through Jesus Christ, the norm of dogmatic theology rather than the Creeds, the Fathers, or the unaided human reason. It met with much criticism from both evangelicals and rationalists; but Schleiermacher defended his positions with vigour and mastery skill, and there is no doubt that the fundamental ideas of his work have entered into the warp and woof of modern theological thought. He may have no disciples in the strict sense of the term, but every theologian is his debtor. The *Christliche Glaube* went through two or three editions in its author's lifetime, each of which was greatly altered. It should be read in connexion with his defence of it published in letters to his

friend Lücke in *Studien und Kritiken* for 1829. In the same year Schleiermacher lost his only son—a blow from which he never recovered. He was now an old man; but he persevered in his manifold labours and controversies and retained his full mental vigour to the end. He died in 1834 after a few days' illness, full of years and of honours.

In appearance Schleiermacher was short of stature and slightly hump-backed. His face was grave and strongly marked, but very mobile and full of fire and expression, while his movements were quick and nervous. He had a ready and satirical wit, but it was never malicious. He kept his friendships well and was of a most affectionate nature, and he bore no grudge against his opponents. He prided himself on a certain philosophic calm and on a complete control of his emotions. At the same time he felt strongly and was often moved by conviction into lines of conduct that were by no means to his advantage. He gives the impression of a strong, fervid soul, a deeply Christian spirit, and an intellect of the widest range and sweep. Germany has never failed to do him honour, and in recent years there has been a remarkable revival of interest in his works, which are now more widely studied than perhaps ever before.

2. Work.—(a) *Philosophy*.—Schleiermacher has been called the prince of *Vermittlers*, but this is more true of him as a philosopher than as a theologian. In theology he was a pioneer, and in striking out his own line he was not concerned merely to mediate between extremes. In philosophy, on the other hand, he sought quite frankly to give equal weight to the idealistic and realistic elements in the Kantian position and to allow for the *a priori* as well as for the empirical factor in knowledge. Quite in consonance with this position, he made no attempt at a systematic philosophy, but was content rather to sow seeds for future thinkers and to approach philosophy from the side of his religious and theological interest. His aim was to unify the world of being and the world of thought, the real and the ideal, in God.

The materials for his philosophy are to be found in his *Dialektik*, in the criticism of previous ethical systems, and in his *Ästhetik*. The first and last named, published from his pupils' notes, are materials and nothing more. His epistemology distinguishes between the form and material of knowledge, the former being given in the 'intellectual function' and the latter through sensuous perception. The forms of knowledge, which correspond with forms of being, are concepts and judgments, and knowledge is developed by induction and deduction. Knowledge is of phenomena; and Schleiermacher definitely repudiates the Hegelian theory as to the originative power of pure thought independently of the phenomenal world.

God is the great unifying principle in the universe. In Him real and ideal are one; and He is to be conceived neither as separated from, nor as identical with, the world. But, just as absolute knowledge, the complete identity of thought and being, is an ideal which can never be wholly realized by our finite minds, so we are incapable of knowing God as He really is. He is the great First Cause, mirrored in the universe and in human souls.

The usual conception of God as one single being outside of the world and behind the world is not the beginning and the end of religion. It is only one manner of expressing God, seldom entirely pure and always inadequate. . . . Yet the true nature of religion is neither this idea nor any other, but immediate consciousness of the Deity as He is found in ourselves and in the world.¹

Though Schleiermacher urges that philosophy is not subordinate to religion, it should be remem-

¹ *Reden*, tr. Oman, *On Religion*, p. 101.

bered that his chief interest is in the latter, and that he always confessed himself a dilettante in philosophy. The unconscious aim of all his speculation is to vindicate the need and worth of religion and the innate power of the religious consciousness. Far more important than any of his strictly philosophical works is the practical application of his philosophy found in the *Reden*. There he seeks the justification of religion, not in any dogmatic ideas, but in the religious consciousness of man.

'If man is not one with the Eternal in the unity of intuition and feeling which is immediate, he remains, in the unity of consciousness which is derived, for ever apart.'¹

Religion is the necessary and indispensable third to science and art, because it accompanies, if it does not produce, both knowledge and action. Whatever advances true art and science is a means of religious culture. The whole world is the mirror of the individual spirit, and the being of God is involved in the very idea of our personality. The soul, through meditation and self-contemplation, enters into union with the Eternal. This union is an act not of will or of intellect, but of feeling, and it is in this feeling, or consciousness, that religion consists. If we come to analyze it, we find it to be a feeling of absolute dependence on the Divine; and in the true exercise of this feeling piety is found. The communion of all those who practise this piety is the true Church, and the various religions of the world represent the different forms assumed by this fundamental religious consciousness. The Christian religion represents not only the striving of all finite creatures towards the unity of the whole, but also the action of God in response to this striving. It is essentially a religion of redemption and reconciliation with holiness as its goal. Of this Jesus Christ is the one Mediator to men. At this point the argument of the *Reden* merges into that of the *Christliche Glaube* and is carried on in strictly theological terms. Before leaving the *Reden*, however, we should note that they belong to Schleiermacher's Romantic period, and that he modified his position considerably as time went on. They should always be read in the light of the notes and corrections which he afterwards published.

Next to theology, Schleiermacher's chief interest was in ethics. As we have already seen, his earlier efforts were confined to the criticism of previous attempts at a moral philosophy. He fails to find in any of them a complete and systematic treatment and relation of moral states and actions. He therefore sets himself to supply these deficiencies and to give a coherent and exhaustive view of the entire world of human action. The subject-matter of ethics is the action of reason upon nature; and the good at which ethics aims is found in an agreement between the two. The subject assumes certain forms such as the doctrine of goods, the doctrine of virtue, and the doctrine of duty, according to the point of view from which ethical problems are approached. The force from which all moral action proceeds is virtue, and its function is to further the highest good of man found in the agreement between reason and nature. There are four great provinces of ethical action—organization, property, thought, and feeling; to them correspond four forms of ethical relation—legal right, sociability, faith, and revelation; and to these again correspond four ethical organisms—State, society, school, and Church, the common basis of all of which is found in the family. The duties which emerge in the system thus elaborated are those of love and law, vocation and conscience. Stated thus briefly, Schleiermacher's exposition

seems somewhat mechanical in form, but there is plenty of warmth and actuality in the way in which he works it out. Generally speaking, it presents a lofty and really valuable discussion of ethical aims and relations, and it is animated throughout by motives of the purest idealism. It cannot, however, escape the charge of vagueness, owing to the use of terms like 'nature' and 'reason' without any very definite interpretation being attached to them. They are too generally used as abstract symbols and as though they had a fixed and recognized value. At the same time it cannot but be acknowledged that Schleiermacher here makes a fruitful and permanent contribution to the development of ethical philosophy.

(b) *Theology*.—It is in the realm of dogmatic, or of theology proper, that Schleiermacher's chief work was done. As we have already seen, he may be regarded as the first modern systematic theologian, and in this respect he follows the great example set by Origen among the ancients. In his *Darstellung* he sets out the whole vast field of study in an ordered and comprehensive fashion which formed the model for many who have followed in his steps. His great work *Der christliche Glaube* (1821, 2nd ed. 1831) is an impressive monument, not only to his method, but to his grasp of the whole field of theology. It marks a new departure by repudiating from the outset the traditional view of Christian theology which made it consist of a number of fixed doctrines that must be accepted on faith. Schleiermacher would not allow such an interpretation. To him Christianity was not a body of doctrine in the first instance, but a condition of the heart—a mode of consciousness making itself known in devout feeling and notably in the feeling of dependence on God. The experience thus engendered, which is that not merely of any chance individual but of the Protestant Christian Church as a whole, gives to Schleiermacher a positive and stable foundation for his exposition of the Christian faith. No doubt he is here open to serious criticism as the father of a method and system too purely subjective and individual. Such criticism, however, is partly disarmed by his exposition; and, in any case, his attitude may be excused as a natural reaction from the intense dogmatism of his predecessors.

His doctrine of God owes much to Spinoza, especially when he expounds the relation of God to the world, of the *natura naturans* to the *natura naturata*, in terms of an immanence which makes all things subsist through one. In a note to the *Glaubenslehre* he defends his peculiar type of theistic pantheism as follows:

'If we keep pantheism to the customary formula, One and All, even then God and the world remain distinct, at least in point of function; and therefore a pantheist of this kind, when he regards himself as part of the world, feels himself with this All dependent on that which is the One.'¹

In this way he reaches a conception of God as the 'somewhat' on which we depend, the correlative unity to the multiplicity of the universe. He ascribes to Him causality and omnipotence, but cannot conceive Him out of relation to His world. To do so would be mere mythology. It is from the divine causality, which to a large extent is to be identified with the totality of natural causes, that Schleiermacher derives both the actions and the attributes of God. The distinctions in them are due to our consciousness, and not to any distinctions in the Divine. This implies an ultimate conception of God very like Spinoza's Substance and apparently quite incompatible with anything of the nature of personality. At the same time Schleiermacher concedes to devout feeling (*Frömm-*

¹ Quoted by Pfeiderer in his *Development of Theology*, Eng. tr., p. 110f.

¹ *Reden*, tr. Oman, *On Religion*, p. 40.

migkeit) what he cannot grant on any other terms, and in the *Glaubenslehre* he never explicitly denies what he had stated in the *Reden* as to the necessity of a personal conception of the Divine Being to devout feeling or to the enjoyment of communion with God. This apparent inconsistency is excused by his desire to interpret the Christian system as a whole; but it does not evade the criticism that he tended to reduce Christianity to the dimensions of his philosophical theory.

Schleiermacher's Christology is closely related to his doctrine of grace and redemption. One of its great merits is that he discusses the Person of Christ not as an abstract psychological problem, but always in its bearing on the Christian consciousness and on the work of redemption. He finds a link between his theology and his doctrine of Christ in the fact that Jesus is related to men in such a way that 'their conscious blessed relation to God is ascribed solely to Him as the author of it.'¹ Jesus Christ is distinguished from all other men by His essential sinlessness and absolute perfection and by the completeness of His God-consciousness. He is therefore the one perfect revelation of God, and His life is a miraculous phenomenon in a world of sin, only to be explained as a new creative act of God. At the same time His nature must not be regarded as differing in kind from ours, though He attains to a full spiritual vigour such as we cannot show. In Him human nature reaches its perfection; and His function is to impart to us that perfect God-consciousness which is normative in His own life. In his treatment of the historical personality of Jesus and His relations with both God and man, Schleiermacher shows a warmth and glow which bear witness to the fact that he is speaking out of a very real and deep experience. Imperfect as his Christology may seem according to some standards, it has the great merit of resting on the appeal which Christ makes to the soul of man and on the effect which He has produced on the consciousness of believers throughout the ages.

It is in the intensified consciousness of God which comes through Christ to men, translated into the consciousness of the Church, that Schleiermacher finds the Holy Spirit. The Holy Spirit, he says, 'is the union of the Divine Being with human nature in the form of the common spirit of the community, as animating the collective life of believers.'² In other words, that saving principle which showed itself in the life of the individual Jesus Christ becomes in the community the Holy Spirit of God and works for the redemption of men.

The need for redemption arises from the sin of mankind, which Schleiermacher regards as the opposition between flesh and spirit, or between the lower and the higher self-consciousness or God-consciousness. The sin of Adam was but the first emergence of a tendency inherent in our human nature and existing alongside our native God-consciousness. Escape from sin can only be by strengthening the God-consciousness and so gradually overcoming the hindrances which are due to the sense-consciousness. Jesus Christ is the supreme Redeemer because He possessed the God-consciousness in a unique degree and so is able to impart it to others. The total impression of His personality has the effect of delivering men from the contradiction between the higher and the lower in their consciousness, and so reconciling them to the highest. Salvation is thus an inward process, the source and ground of which is Jesus Christ.

Schleiermacher lays considerable stress on the function of the Church, or Christian community, in originating and maintaining the Christian life.

The Church is the sphere within which opposition between the spirit and the flesh is overcome, and by providing the means of grace such as prayer, worship, etc., the Church furthers the Kingdom of God on earth. The position of the Church with regard to the future life and the final consummation of all things Schleiermacher only tolerates as 'tentative efforts of an insufficiently authorised faculty of surmise in conjunction with the reasons for and the considerations against them.'¹

Such, then, are the dry bones of a theological system which is worked out with immense amplitude of detail, intense conviction, and rare breadth of view. Schleiermacher has had few immediate followers, but his work has provided a quarry in which every theologian since his time has been able to dig and find treasure. He was certainly in advance of his day and, like all pioneers, was slow in coming to his own. But his eager, reverent, and scientific spirit could not be denied, and his influence was never greater, especially in Germany, than it is to-day.

W. B. SELBIE.

SCHOLASTICISM.—'Scholasticism' is the term usually employed to denote the typical products of Christian thought in the West under the cultural and other historic conditions which characterized the Middle Ages. The mediæval period may be understood to extend from the 8th to the 15th century. During this period a group of definite tendencies in the history of philosophical and theological reflexion can be traced; they attain to their full strength and development

¹ *Glaubenslehre*, p. 91.

² *Ib.* p. 121.

¹ *Glaubenslehre*, p. 150.

during the 12th and 13th centuries and thence decline in energy and effectiveness.

In a wider reference the term 'scholasticism' has been used to include mediæval Jewish and mediæval Arabian thought. Reference to these movements, except in their influence on Christian thought, falls outside the scope of this article. Both the Jewish and the Arabian philosophy of the period are entirely under the influence of Aristotle and Neo-Platonism. No distinctive national characteristics appear in them. They are, moreover, largely moulded by the fact that their founders and exponents were not priests but students of medicine and physical science. Two names are of outstanding importance—Avicenna (980–1037) and Averroes (1126–93), these names being originally grotesque Western corruptions of the Arabic names. The position of Avicenna (*q.v.*) is not far removed from that of pure Aristotelianism. Averroes (*q.v.*) is more independent and stands out as the most powerful and influential among the Arabian thinkers.¹

In addition to its accurate historical sense, the adjective 'scholastic' has acquired a special meaning as descriptive of a kind of reflexion or discussion characterized by excessive formality or rigidity of method, or excessive intellectual subtlety, or punctiliously systematic development of minute details devoid of real significance. These defects, however, are not peculiar to historic scholasticism; and they are specially typical of it only in its decadence. Here we find unlimited analysis leading to endless distinctions corresponding to no real differences in the nature of things; elaborate discussion of questions having no relation to reality; and a terminology which went far beyond what was required for defining genuinely philosophical ideas or discriminating really scientific distinctions.² Hallam observes: 'The Aristotelian philosophy, even in the hands of the Master, was like a barren tree that conceals its want of fruit by profusion of leaves. But the scholastic ontology was much worse. What could be more trifling than disquisitions about the nature of angels, their modes of operation, their means of conversing?'³ As a historic judgment, this is a partial and biased statement. The questions discussed in historic scholasticism were not all merely trivial or merely verbal.⁴

Scholastic reflexion involved certain general assumptions: (a) that absolute objective truth can be attained by the human mind (in the great age of scholasticism, *e.g.* in Aquinas, we may express the position as a claim to re-think the thoughts of the divine mind); (b) that the first principles or premisses of truth are revealed in Scripture and developed as Catholic doctrine by the Fathers of the Church, or, where philosophy extends beyond theology, may be ascertained by reflexion on the teaching of Aristotle; (c) that every principle must be worked out to its full logical issues. In estimating scholasticism, we must avoid two fundamental errors. The schoolmen did not limit themselves to discussion of merely immediate inferences from the dogmas of the Church; even in theology their work reveals remarkable variety and (within certain limits) freedom of thought. Nor is it true that in their distinctively philosophical speculations they were guided only by the doctrine of Aristotle. In philosophy and in theology alike they assimilated a stream of Neo-Platonist influence through the Fathers (especially Augustine), through the work of John Scotus Erigena and his Latin translation of pseudo-Dionysius (see below), and through the Arabians.

We must remember that, although an immense amount of ancient learning and ancient intellectual discipline had been lost, the Church never wholly lost the tradition of ancient education. What survived of ancient thought came to the Middle Ages through the Church. The Fathers, from the 2nd cent. onwards, were educated men, some of them trained in the best schools of their time. And the mediæval ecclesiastics inherited at least from the greater Latin Fathers educational and

intellectual ideas akin to those of the ancient world.¹

Hence, when Charlemagne, after consolidating his empire in the West, conceived the design of founding schools which should be centres of learning and mental cultivation, he naturally turned to the monasteries and with the help of such men as Alcuin established schools in connexion with most of the abbeys in his kingdom.² The name 'scholastic,' *doctor scolasticus*, given at first to teachers of the cloister schools, was afterwards given generally to teachers of systematic theology and philosophy following the tradition of the schools. At first the 'philosophy' consisted only of the elements of grammar, logic, and rhetoric, the *trivium* of the 'seven liberal arts,' of which the *quadrivium* consisted of geometry, arithmetic, astronomy, and music.

It has been said that the main objects of philosophy and theology are identical, though the method of treatment is different.³ This may be admitted; but historically scholastic theology and scholastic philosophy must be distinguished. The former claims to be founded on the doctrine received by the Church from Scripture and the Fathers and taught as authoritative. Its detailed historical treatment belongs to the history of Christian doctrine and forms part of any standard work on that subject.⁴ Scholastic philosophy, on the other hand, has its own first principles, claiming to be intuitive truths of reason. It embraces many questions wholly independent of theology, although its methods and conclusions were employed in the explanation of various dogmas. The distinction does not involve complete separation.

The scholastic age falls naturally into two periods owing to the fact that all the most important logical, metaphysical, and scientific writings of Aristotle came into the hands of Western thinkers for the first time during the latter part of the 12th century. It is convenient also to subdivide the periods as follows: (i.) the 8th, 9th, and 10th centuries, where we find (except in the case of Erigena) only the undeveloped germs of later problems and controversies; (ii.) the 11th and most of the 12th cent., where the conclusions of metaphysical logic are more and more consciously and deliberately applied to the elucidation of theological dogma; (iii.) the 13th cent., the great age of scholasticism, after the assimilation of the new Aristotelian materials, where we find strenuous endeavours to construct a comprehensive system based on an alliance of philosophy and theology; (iv.) the 14th and 15th centuries, where the alliance breaks down under the influence of Duns Scotus (who belongs historically to the previous period) and Ockham. The mutual independence of philosophy and theology involved the doctrine of the twofold nature of truth and led to the decline of scholasticism, which resolved itself ultimately into a formal perfecting of system with loss of vitality of thought.

pretatione, together with Porphyry's *Isagoge*, or 'Introduction,' to the former (all these in Latin translations by Boethius); a summary of Aristotle's *Categories*, *Categoriarum Decem*, wrongly attributed to Augustine; two commentaries by Boethius on the *Isagoge*; and his own short treatises on the elements of formal logic. Boethius was the principal source for the text-books which maintained the logical tradition of the cloister schools, such as those of Cassiodorus and Isidore of Seville. Regarding Plato, their information was derived from the *Timaeus*, or part of it, in the Latin translation of Chalcidius and his commentary, from Apuleius (*de Dogmate Platonis*), and from the writings of Augustine. Hence what little they knew of Plato came from sources moulded by Neo-Platonic influence.

Isidore of Seville († 630) is also of importance as the author of three books of 'Sentences' (*Sententiae*) or doctrinal passages from the Fathers, systematically arranged. This and a few similar compilations circulated in the schools as material for whatever doctrinal reflexion was possible. The more elaborate work, *Περὶ γνῶσεως*, by John Damascene (fl. c. 700), representing the Eastern Church, is the classical example of a systematic logical presentation of patristic teaching; but this was not in the hands of the earlier schoolmen. Such books suggested the plan or scheme which was carried out later in the *Liber Sententiarum* of Petrus Lombardus. It is not our purpose to refer to the history of theological doctrine except where it directly involves the conclusions of philosophical reflexion.

1. **FIRST PERIOD.**—Among the theological discussions of the first period we find in the eucharistic and predestinarian controversies of the 9th cent. the beginnings of an opposition that was destined to develop with great significance—that of faith (or authority) and reason. From this point of view we touch briefly on the subjects named, before passing to the logical and philosophical issues which were being opened up.

1. **Eucharistic controversy.**—In 831 Paschasius Radbertus, abbot of Corbie, published what was the first formal exposition and defence of the strict doctrine of transubstantiation; i.e., that the substance of the bread and wine becomes converted into the substance of the body and blood of Christ, the same body in which He lived, suffered, rose, and ascended. This stupendous miracle takes place under the outwardly visible form ('sub figura') of bread and wine. There is nothing contrary to nature in this, because the essence of nature consists in the entire obedience of all things to the divine will ('ut a quo est semper ejus obtemperet jussis'). This uncompromising and absolute supernaturalism was contested by Ratramnus, a monk of the same abbey. While fully acknowledging an objective supernatural process in the eucharist, Ratramnus endeavoured to rationalize the doctrine as far as possible. The body and blood of Christ are present 'in mysterio'; i.e., the Scriptural expressions are figurative and are to be spiritually understood. The elements after consecration produce an effect on the souls of believers which they cannot produce by their natural qualities, but this effect presupposes spiritual susceptibility on the part of the recipients; and, when the believer has attained 'ad visionem Christi,' he will no longer need such external means of perceiving what the divine love has achieved for him.

2. **Predestinarian controversy.**—The predestinarian dispute of the 9th cent. gives a more vivid picture of the conflict between reason and authority. In this case the Church employed the resources of human reason to counteract the unauthorized conclusions of the predestinarian Gottschalk. John Scotus Erigena, layman and independent thinker, was employed as the chosen advocate of the dogma decreed by authority.

'The force of reason evidently began to be acknowledged and felt as an antagonist which the Church had fostered within its own system, and against which the Church had need to fortify itself with the weapons of the same temper. The expedient was found to be of dangerous effect; since the philosophy of Erigena served to scatter the seeds of still more dangerous perplexity to the creed of the Church.'¹

3. **Nominalism and realism.**—As with the problem of authority and reason, so with that of nominalism and realism and other logical and philo-

sophical issues which occupied the attention of the later schoolmen. These problems were present in germ in the scholastic writings of the 9th and 10th centuries; but their implications were unknown, and their connexion with the fundamental principles of religion and ethics was not even suspected.

The problem at issue in the opposition of nominalism and realism was that of the objective significance of universals. The universal (general, generic or specific, typical) consists of those fundamental qualities, activities, uniformities of the object which it shares with others. When these are abstracted and generalized by our thought, the class-concept is formed. This consciousness of the universal is an act of thought; it is the consciousness that certain qualities realized in the individual thing are also realized in a whole group. Nominalism is the general theory that the universal has no existence outside our thought.

(a) Extreme nominalism may be expressed in the words of a modern writer: 'the only generality possessing separate existence is the name';² not even in the thought of the knower is there anything general; the universal is merely a *status coctis*. (b) Moderate nominalism, or conceptualism (q.r.), holds that universals exist, but only in thought; the universal is a *conceptus mentis significans plura singularia*. Both kinds of nominalism are included in the dictum, 'Species non sunt nisi termini apud animam existentes.'³ Realism holds, on the contrary, that the universal has a being of its own, which is objectively given. (c) Extreme realism holds that the common nature of a group of beings—e.g., man—exists *ante res*, distinct from and independently of the particular things of experience which exemplify that common nature. (d) Moderate realism means that the universal is an objective principle in *rebus*, common to the many different individuals and constituting them into a class. The schoolmen identified their problem with that which appeared to be at issue between Plato and Aristotle. The interest of the Greek thinkers, however, was different. They were concerned to show that the real is universal and to explain as far as possible how the universal became individualized in space and time. The schoolmen, on the contrary, started from the subjective side.

Cousin⁴ and others have rightly pointed to a passage in Boethius' Latin translation of the *Isagoge* of Porphyry as suggesting the question to the scholastic thinkers. The essential sentences are these: 'de generibus et speciebus illud quidem . . . sive in solis nudis intellectibus posita sint . . . et utrum separata a sensibilibus an in sensibilibus posita et circa haec consistentia, dicere recusabo.' Nominalism and the two forms of realism are here indicated.

These theories were not apprehended in their full significance in what we have called the first period; as Cousin observes, the two systems were, as yet, merely two different ways of interpreting a phrase of Porphyry. Moreover, the influence of Boethius was indecisive. He refuses to argue to a definite conclusion, although his incidental statements tend sometimes towards moderate realism, sometimes towards moderate nominalism. It is clear, however, from the earliest remains of scholastic thought that there existed in the schools a nominalistic and a realistic tradition. A collection of incidental comments on Porphyry, e.g., has come down to us from early in the 9th century. It has been attributed, probably incorrectly, to Rabanus Maurus († 856), under whose influence the school at Fulda had become an intellectual centre of some importance. Its authorship may be assigned to one of his pupils.⁵ Its statements show a distinct tendency to moderate nominalism (e.g., the genus is defined as *substantialis similitudo ex diversis speciebus in cogitatione collecta*), and the important principle is asserted, 'Res non predicatur.' A similar general observation may be made in reference to Heiricus (Eric) of Auxerre, originally a student at Fulda. On the other hand, at the close of the 9th cent. we find realism definitely taught at Auxerre by Remigius. What is individual and what is specific exists only by participation in the universal, which is the substantial unity of the individuals included under it (e.g., 'Homo est multorum hominum substantialis unitas').

4. **Erigena.**—The system of John Scotus Erigena 'stands by itself in the 9th century like the pro-

duct of another age.¹ Possessed of a high degree of intellectual originality, he endeavoured, in the spirit of Origen, to lay a philosophical foundation for theology; but his speculative genius led him into methods and conclusions hostile to the general tendency of ecclesiastical doctrine. His fundamental principle is the identity of faith and reason, so that philosophy and theology are manifestations of the same spirit. But theological doctrines are symbolic expressions of the truth; and the traditional doctrines, when taken up into his system, are treated very freely.²

Erigena's speculative conceptions were profoundly influenced by his study of an anonymous writer who, under the name of 'Dionysius the Areopagite' (Ac 17³⁴), had issued in the second half of the 5th cent. a short series of works which afterwards had a considerable influence on mediæval thought.³ The writer combines Christian conceptions with the emanation system of Plotinus, without giving up the tri-unity of God. God, as Absolute Being, is beyond all conceivable human predicates: this is the principle of 'negative theology,' which Dionysius distinguishes from 'positive theology,' where a symbolic knowledge of God and a gradual approximation to His image are admitted to be possible. Both the negative and the positive theology are valid and do not conflict when each has its proper place.

Erigena's chief speculative work is entitled *de Divisione Naturæ*. His system is based on the idea of the absolute immanence of God; the divine is exclusively real, and the world of experience in space and time is but a 'theophany,' an appearance of God. By *natura* he means the sum of all that is, regarded not as a mere aggregate, but as a unity. It embraces four types of being: (1) that which creates and is not created—God as source of all being; (2) that which is created and which creates—the world of 'ideas' or ideal rational principles, active in and from God, after which finite things are fashioned; (3) that which is created but does not create—the world of finite individual things; (4) that which neither is created nor creates—God as goal and end of all being. The whole realm of created being has no independent reality; it exists, but it exists in God. Creation and revelation are one. The four stages form a process from God to God, which through our finiteness we think of as in time; but in itself it is eternal and beyond time altogether.

Like 'Dionysius,' Erigena combines a negative and a positive theology. Real being—in other words, absolute perfection—belongs to God alone; all else has only partial or imperfect being. No predicate applicable to finite being is applicable to God; He is above and beyond all qualities that we experience in finite being. Hence ultimately we can say what God is not rather than what He is. On the other hand, the whole realm of created nature is in its measure a 'theophany,' whereby we may attain to a knowledge of God, perceiving His being through the being of created things, His wisdom through their order and harmony, His life through their activity and movement. This is a basis for an interpretation of the doctrine of the Trinity. God in His essential being is Father, God as realized Wisdom is Son, God as universal life and activity is Spirit. Erigena finds a reflexion of this Trinity in man; but further analysis of the conception is beyond the scope of this article.

The logical structure into which these principles are wrought is that of an infinite hierarchy of forms or types of existence, from the material objects of sense to the absolute being of Deity; and this graded scale of beings, in which each lower form proceeds from the forms above it, is completely parallel to the graded scale of logical conceptions in their successive orders of universality. Hence 'intelligitur quod ars illa, quæ dividit genera in species et species in genera resolvit, quæ *διαλεκτική* dicitur, non ab *autem* *facta*, sed in natura rerum ab *autem* *vere artes sunt*, condita, et a *autem* *Erigena* is therefore a realist; universals are *in rebus* as the ground of their existence and *ante res* as ideal constituents of the second division of 'nature' (see above).

From the ethical point of view, this is equivalent to a hierarchy of degrees of value or perfection; and increase in perfection means increase in being. Evil as such has no real being at all; it is mere appearance. Nevertheless Erigena cannot interpret the doctrine of sin without admitting its reality. The will of the individual represents to itself something as real and good when it is neither. This is sin; but, if the representation is false, the will that represents it is real. Deliverance from sin is the discovery made by the sinner of the illusoriness of what he aims at. To become one with God through becoming like Him is the chief end of man, which humanity as a whole can attain by purification, enlightenment, and completion, with the help of the Logos.⁴

II. SECOND PERIOD.—The second of the four periods into which the history of scholasticism may be divided for our present purpose is marked by

¹ Pringle-Pattison, in *EB* xi. 347.

the appearance of men who were prepared to apply the distinctions of human logic to the elucidation of theological dogmas, and who thereby created scholastic philosophy in its distinctive forms. The speculations and discussions thus opened up may be grouped under the heads: (1) faith (or authority) and reason, (2) nominalism and realism, (3) dualism (of soul and body). Three leading thinkers of the period are the subjects of separate articles.¹

I. Faith and reason.—Among the few names representing any original mental activity in the barbarism of the 10th cent. that of Gerbert († 1003 as Pope Sylvester II.) is prominent, not however in connexion with specially logical or philosophical questions. He had become acquainted with the work of the Arabians in Spain and Italy and had acquired an amount of knowledge such as to expose him to the suspicion of intercourse with the powers of darkness. He has the merit of urging the importance of the study of physical science and mathematics.² His pupil Fulbert founded the school of Chartres, which for two centuries was a centre of humanistic culture. Among its famous students was Berengarius of Tours († 1088), who was animated by a genuine impulse towards freedom of thought. This appeared in his general attitude towards cultural education and particularly in the fact that he adopted, developed, and defended the interpretation of the eucharist previously put forward by Ratramnus, which had also been defended by Erigena in his work *de Eucharistia*. Any detailed account of the prolonged controversy thus aroused belongs to the history of the doctrine of the sacraments;³ but what is important to note is that Berengarius defended his position on philosophical grounds, and these grounds are found to involve the essential principle of nominalism. He denied the possibility of transmutation of the 'substance' while the former 'accidents,' or physically perceptible qualities, remained; and his argument was simply a specific application of nominalism. He does not appear to have investigated the question apart from this particular application of it. But it was at once perceived that the question was no mere technicality of logic, but was of momentous significance. The perception of its importance was intensified when Roscellinus, after defending nominalism as a general principle (see below), applied it to the interpretation of the doctrine of the Trinity, with results disastrous to the traditionally orthodox conception. He found in metaphysical individualism an immediate inference from nominalism. Defining 'person' as *substantia rationalis*, he concluded that, if the usage of language permitted, we ought to speak of three Gods, since the three Persons could be united only in name or abstract idea.

The controversy aroused by Berengarius ended in the complete triumph of the transubstantiation doctrine by an act of ecclesiastical authority. But the position of Roscellinus and its theological implications required to be met with the armour of reason. This led to a philosophical assertion of extreme realism by Anselm and William of Champeaux (see below), which held its ground until the more moderate doctrine of Abelard became the accepted principle of the schools. And from the time of Anselm the relation of faith and reason became a fundamental problem.

Anselm's solution is best expressed in his own words:

'Desidero intelligere veritatem Tuam, quam credit et amat cor meum. Neque enim quero intelligere ut credam, sed credo ut intelligam. Nam et hoc credo, quia nisi credidero non

¹ See artt. ANSELM, ABELARD, BERNARD.

² Cf. K. Werner, *Gerbert von Aurillac, die Kirche und Wissenschaft seiner Zeit*, Vienna, 1881.

³ See art. EUCHARIST (to end of Middle Ages).

Intelligam.¹ 'Quanto opulentiùs nutrimur in sacra Scriptura, . . . tanto subtilius provehimur ad ea quae per intellectum satiant. . . . Nam qui non crediderit, non experietur; et qui expertus non fuerit, non intelliget.'²

In this connexion he contrasts *cognitio audientis* and *scientia experientis*. Faith is regarded as before all else a condition of the emotions and the will; but it is a positive duty, for those who are capable of it, to seek a comprehensive understanding of the content of faith:

'Negligentia mihi videtur, si, postquam confirmati sumus in fide, non studemus quod credimus intelligere.'³

How Anselm was prepared to apply these principles is seen especially in his development of the arguments for the being of God, in *Monologium* and *Proslogium*, and his investigation of the doctrine of the Atonement in *Cur Deus Homo*. The principle is *fides precedens intellectum*. This resembles some quite modern theories; but it should be noted that *fides*, to Anselm, means not only the religious truths to be derived from Scripture, and not only the personal religious experience of the believer; it means also the dogma as defined and authorized by the Church.

The position of . . . is different. Reason is not (as with Anselm) a merely explanatory treatment of what is in . . . The difference

may be expressed by saying that reason is constitutive and even decisive of religious truth. The rule of truth is found in thought. Hence Abelard had a very high opinion of the religious and moral value of Greek philosophy. He regarded the Greek thinkers as the creators of a genuine religious tradition which was improved and widened by the Christian revelation. This view was not based on any real historical knowledge of ancient thought and its possible affiliations any more than the opposite view of the Fathers (that the Greek thinkers borrowed from the books of Moses). Abelard knew little of these thinkers; his estimate of their importance is an application of his general doctrine of reason and revelation. 'Nolo sic esse philosophus,' he says, 'ut recalcitrem Paulo, non sic esse Aristoteles, ut seclular a Christo: non enim aliud nomen est sub coelo, in quo oporteat me saluum fieri'; but, unless faith comes to a rational consciousness of its own true nature and grounds, it lacks stability and full efficacy. The motto 'Intelligo ut credam' comes to mean, for Abelard, 'I seek to understand in order that I may believe more, and believe more fully and worthily.' His work *Sic et Non*, in which conflicting passages from the Fathers were arranged in opposition to one another, was compiled not to suggest scepticism but to promote rational inquiry; 'dubitando ad inquisitionem venimus, inquirendo ad veritatem.'⁴ Yet, contrary to his own intention, the formal and theoretic precedence of knowledge to faith tended to mere intellectualism in theology and actually produced it.

At the opposite extreme to Abelard stands Bernard of Clairvaux. He contended for the existence in the human mind of an immediate inner apprehension of religious truth, with a distinctive certainty of its own. Many of his statements suggest a position akin to that of Anselm—e.g., *de Consideratione*, v. 3, where it is said that faith holds the truth in a latent and implicit form; knowledge holds it in an open and explicit form, having both the truth and the distinct comprehension of it; faith is a spontaneous and assured intimation of truth that is not yet opened up before the mind in clear analysis and outline. The contrast emphasized appears to be between an implicit and an explicit form of the same truth. It would, however, be an error to assimilate the position of Bernard to that of Anselm. The former is a mystic; standing on the basis of a mystical view of religious belief, he represents a reaction against the influence of the 'dialecticians,' and especially those among them who had been influenced by Roscellinus and Abelard. The same attitude to contemporary logic was maintained through the 12th cent. at the monastery of St. Victor, near Paris, and especially by the three 'Victorines,' Hugo, Richard, and Walter; whereas the keynote of constructive scholasticism was sounded by Anselm in his solution of the problem of the relation of faith and knowledge.

2. Nominalism and realism.—The general meaning of these opposed theories has been concisely stated above. Roscellinus appears to have been the first to formulate nominalism as a general theory of the nature of universals. For knowledge of his doctrine we have to rely on the statements of his opponents, Anselm and Abelard. He is charged with making the universal a mere word, *status vocis*.⁵ Taken strictly, this is a denial of any real connexion between similar things; their similarities become merely unessential accidents,

and real knowledge is impossible. It is one thing to deny the hypostatization of an 'accident' like colour or wisdom, and another thing to deny the foundation in reality of all genera and species.

'The human race is not a word, or, if it is, we are driven to assert that there is really nothing common and identical in all men—that the brotherhood and equality of the human family are mere abstractions, and that, since individuality is the sole reality, the sole reality is difference, that is to say, hostility and war, with no right but might, no duty but interest, no remedy but despotism.'¹

It is probable that some statements of Roscellinus suggested these consequences, but it is not probable that he intended them. These statements, and the heterodox theological conclusions alluded to above, discredited nominalism.

Anselm made no attempt to think out the difficulties of realism. He found in it what appeared to be the sole means of rationalizing dogma, and he adopted it accordingly. Universals, to him, are *in rebus* as objectively real and active principles and *ante res* as ideal principles in the divine mind. William of Champeaux (†1121) may be regarded as the founder of realism as an independent doctrine. He held it in its most extreme form, in which its pantheistic tendencies were plainly apparent. The individual has no independent being, but is only an 'accident' of the real being which is the universal. From this position he was driven by the criticism of Abelard. His final position is not clear. Opposite views of its meaning are taken by Cousin and Rémusat, on the one hand, and Prantl and Hauréau, on the other.²

It scarcely needs to be said that 'mediating views' found frequent acceptance, sometimes among men who had little insight into the real problem at issue. John of Salisbury³ (†1180) gives an analysis of nine different views of the nature of universals.⁴ The most interesting of the mediating theories is that of Gilbert of Poitiers (†1154), whose carefully thought out doctrine does not appear to differ in any essential point from that of Abelard.

Abelard perceived that general ideas or concepts are involved in all thought and are the instruments of all knowledge. This is so because they have an objective basis in the similarities of individual things; and the mind attains to conceptual knowledge by comparing individual things with one another. The universal, therefore, is more than a mere name. It is a predicate (*sermo*) and for that very reason cannot itself be a 'thing.' Moreover, it is a natural predicate, 'quod de pluribus natum est praedicari.'⁵ The fundamental similarities of things are not accidental, but are due to the fact that the Creator formed them according to pre-existing types or ideals which in fact constitute the divine plan of the world. This type of moderate realism found sufficient acceptance to put the controversy into the background until the time of Ockham. Its place was taken by the problem of 'matter and form.'

Realism appeared to be satisfactory so long as interest was concentrated on those aspects of things which make them wholes or unities *inter se*—the universe as a whole, the State as a whole, the Church as a whole. The subsequent revival of nominalism indicates the rise of a new consciousness of individuality, which can be traced in the doctrines of Duns Scotus (who was not a nominalist) and of Ockham (see below).

3. Dualism.—The schoolmen inherited from Augustine the conception of body and soul as two

substances, entirely different and even opposed in character, so that no knowledge of the soul could be gained from its relations to the body; and in his work they saw how fruitfully the inner life of mental, moral, and spiritual fact could be studied as an experience. The reaction against 'dialectic' also helped to create a psychological interest, especially among the mystics. These men, in their religious aspirations and their struggles after the enjoyment of divine grace, became vividly conscious of an inner experience of a wider range; and they endeavoured to describe it. In doing so they employed a medley of Neo-Platonic and Augustinian terms and ideas; but incidentally, and amid much that was extravagant, they arrived at genuinely psychological results. John of Salisbury, man of affairs and cultured ecclesiastic rather than mystic, went farther and worked out the outlines of a systematic psychology based on a notion of development akin to that of the modern 'associationist' school.¹

III. *THIRD PERIOD.*—The logical and speculative impulses lying behind all these discussions were exhausted by the middle of the 12th cent. through lack of material. Historical and scientific knowledge scarcely existed; and the logical impulse and the kindred interest in systematic methodology had to feed on themselves, or, at the most, had to turn back on the dogmas of the Church and analyze them into details of ever-increasing complexity, or, again, had to devote themselves to the systematic collection and arrangement of patristic authorities in the many works of which the *Liber Sententiarum* of Peter Lombard († 1164) and the *de Articulis Catholicæ Fidei* of Alan de Lille or de Insulis († 1203), are conspicuous examples—the former, *instar omnium*, destined to become the authoritative text-book for the teaching of the Fathers.

At the same time an epoch-making change was maturing. During the first half of the 12th cent. the remaining logical treatises of Aristotle—the *Analytics* (both parts), *Topics*, and *Sophistical Refutations*—gradually and silently found their way into the schools. This by itself would not have brought about a great change; but in the course of the century the chief works of the Arabian thinkers were introduced into France from Jewish sources.² This came about as a consequence of the struggle with Muhammadanism, in the nearer East, and of the Crusades. And this knowledge of Arabian and Jewish thought carried with it a knowledge of the contents of almost all the Aristotelian treatises, including the *Metaphysics*, *Ethics*, *de Anima*, and the works on *Physics* and *Natural History*. At the beginning of the 13th cent. new and better translations from the Arabic were made, followed by translations direct from the Greek. These enabled the schoolmen 'to distinguish the genuine Aristotle from the questionable accompaniments with which he had made his first appearance in Western Europe.'³ Arabian Aristotelianism was conceived in a Neo-Platonic sense; and in its most distinctive forms it implied the entire immanence of the Deity in an eternal matter and excluded the possibility of personal immortality and of creation as an individual act 'from nothing.'

¹ The history of mediæval psychology is beyond the scope of this article; but reference may here be made to Siebeck's valuable contributions to this study in his series of articles on the beginnings of modern psychology in the scholastic age, in the *Zeitschrift für Philosophie und philosophische Kritik*, dealing with the period from Augustine to Duns Scotus; xciii. [1883] 161 ff., xciv. [1888] 161 ff., xcvi. [1889] 245 ff.; and in his series of notes on scholastic psychology in *AGPh* i. [1887] 375 ff., 518 ff., ii. [1888] 22 ff., 180 ff., 414 ff., 517 ff., iii. [1889] 177 ff. Further references are given below, under Duns Scotus and Ockham.

² See references given above for mediæval Arabian and Jewish thought.

³ Pringle-Pattison, in *EB* xiv. 353.

The first effects of this immense acquisition of new material are seen in a stream of confused and erratic speculation, the leading tendencies of which are revealed in the materialistic pantheism of Amalric of Bena († 1207) and David Dinant († 1215?), which was strenuously combated (along with Averroism, from which it was derived) by Albertus Magnus and Thomas Aquinas. The doctrine of Amalric, we must add, was not identical with that of David;¹ and the doctrines of both must be distinguished from the tenets of the Amalricians, a widely extended sect animated by an antinomian fanaticism which exposed its adherents to fierce persecution after the Lateran Council of 1215.

The result of all this was that, along with Averroism, the study of all the Aristotelian writings except the purely logical treatises was proscribed by the Church. It is the merit of the so-called mendicant orders, Dominican and Franciscan, that they used all their power and influence to capture Aristotle for the Church. This result was achieved after a long struggle, which may be said to have ended in 1253 in the establishment, under papal authority, of two professorial chairs of the Aristotelian philosophy in the University of Paris.² Thus Aristotle, after being suspected and condemned, was placed on the same level with Augustine and came to be regarded as the fore-runner of Christ in matters of nature, as John the Baptist had been in matters of grace. From the point of view of orthodox theology, therefore, it became necessary to combine adherence to Aristotelianism with fundamental criticism of Averroism and with justification of the doctrines of a transcendent creative God and of the immortality of the soul. This was a main part of the endeavour of Albert and Thomas.

None the less the stream of opposition to Aristotelianism was maintained during the 13th cent. by a succession of thinkers who, while making full use of the tools of analysis provided by the Aristotelian logic, advocated an Augustinian or Christianized Platonism as the true philosophical setting for the dogmas of the Church, as against the philosophical principles derived from the *Metaphysics* of Aristotle. Among these must first be mentioned Alexander of Hales († 1245), Franciscan, who appears to be the first schoolman to face the problem of organizing Christian thought in full view of the wealth of Arabian and Aristotelian material now available. This he did, with genuine power, in his *Summa Universæ Theologiæ*. His pupil and successor, John of Rochelle, illustrates a growing psychological interest in his *de Anima*, written in view of Aristotle's treatise and the Arabian and Greek commentaries on it. He was succeeded in Paris by John of Fidenza, or 'Bonaventura' († 1274), Franciscan, contemporary and friendly critic of Aquinas, who organized and defended the principles implied in mysticism, especially the doctrines of the Victorines (see above), and whose distinctive position and influence belong to the history of that subject. William of Auvergne († 1249) and Henry of Ghent († 1293) must also be named as significant exceptions to the main tendency represented by the two great thinkers to whom we have now to refer.

It is generally admitted that the highest level of scholastic thought is found in the work of the two great Dominicans, Albertus Magnus (1193-1280) and his pupil Thomas Aquinas (1227-74). The greater part, in quantity, of Albert's work consists of paraphrases and commentaries on Aristotle, in which all the writings of 'the Philosopher,' as he was now called, are systematically dealt with. So far as theology and philosophy are concerned, the systems of Albert and Thomas need not be separated. Thomas³ entered into his master's labours with an intellect finer, if not more powerful, than that of Albert;⁴ and he was able to take a more comprehensive view of the whole field.

¹ Cf. *EB* xix. 123 ff., art. 'Mysticism'; and C. Jourdain, *Mémoire sur les sources philosophiques des hérésies d'Amaury de Chartres et de David de Dinant*, Paris, 1870.

² H. Rashdall, *Universities of Europe in the Middle Ages*, 3 vols., London, 1895, esp. i. 315 ff.

³ See art. AQUINAS and references there given.

⁴ See J. Sighart, *Albertus Magnus, sein Leben und seine Wissenschaft*, Regensburg, 1857; and J. Bach, *Das Albertus Magnus Verhältniss*, Vienna, 1881.

It is noteworthy that the interests of Albertus Magnus embraced physical science. Here he advocated genuine empirical research, which he was able to engage in himself not without success, as his treatise *de Vegetalibus* shows. This interest in a *posteriori* inquiry was exceptional among the schoolmen as a whole. They would have admitted that these inquiries had a rightful place and a utility of their own. But, just as to-day there are mathematicians, with no taste for physical research, who revel in those developments of pure mathematics which have no connexion with such research, so the typical schoolmen preferred abstract argument to concrete investigation. This points to a fundamental weakness of scholasticism; and it sometimes led the schoolmen to attempt to determine, by abstract *a priori* argument, matters which should have been determined by observation or historical probability.¹

The ablest and most original critic of the Thomist system was the Franciscan Johannes Duns Scotus (1270?-1308), of British origin, who taught at Oxford, Paris, and Cologne. The Franciscan edition of his works, published at Lyons in 1639, occupies 12 volumes, but contains much that is not genuine. His *Opus Oconienense* consists of his own commentary on the *Liber Sententiarum*; the *Opus Parisiense* is a similar commentary, worked over by other hands. The miscellaneous *Questiones quodlibetales* have also been worked over.

Duns Scotus is not the subject of a separate article, and special reference will be made to his doctrines under the heads named below.²

The main problems of this third period of scholasticism may be viewed under the following heads: (1) faith (or authority) and reason; (2) realism and nominalism; (3) intellect and will; (4) matter and form, or the problem of individuality.

1. Faith and reason.—Albertus Magnus laboured earnestly to show that reason and revelation are neither identical nor mutually opposed, but harmonious, in the sense that certain doctrines, while not contrary to reason, are yet beyond reason. The human mind can completely know only those things the principles of which it carries within itself; hence there are some truths inaccessible to unaided human reason. Aquinas develops this fundamental conclusion and defines more precisely the doctrines which are beyond reason. He finds them to be the Trinity, the creation of the world out of nothing, the Incarnation, and the immediate inferences which follow from these.

'Et in his, quae de Deo constentur, duplex veritatis modus. Quaedam namque vera sunt de Deo, quae omnem facultatem humanae rationis excedunt, ut Deum esse trinum et unum. Quaedam vera sint, ad quae etiam ratio naturalis pertingere potest: sicut est Deum esse, Deum esse unum, et alia hujusmodi, quae etiam philosophi demonstrative de Deo probaverunt, ducti naturalis lumine rationis.'³

Further,⁴ he says that it is possible for natural reason to refute arguments against these supernatural truths and even to produce considerations determining the mind towards their acceptance, since natural reason cannot be contrary to the truths of faith. Our unaided reason can discover and establish by argument a great body of truth, including natural religion and ethics; but the truths distinctive of faith are revealed to, not discovered by, the human mind. The principle underlying the supernaturalism of St. Thomas may be expressed thus: God is the chief end of man, but He is a transcendent end (*finis superexcedens*):

Man, the finite being, 'ordinatur ad Deum, sicut ad quandam finem, qui comprehensionem rationis excedit; finem oportet

esse praecognitum hominibus, qui suas intentiones et actiones debent ordinare in finem.'⁵

This principle shows that he never intended to assert an absolute separation, much less an opposition, between the two kinds of truth.

In the hands of Duns Scotus the distinction widens and deepens; the range of philosophical and religious truth that can be demonstrated by the unaided reason is significantly restricted. This consequence flows from his theory of the primacy of will. For him theology is essentially practical; it points to salvation from sin by an appeal to the will. The part played by the intellect is reduced; and he finds that in addition to the Trinity, the creation at the beginning of time, and the Incarnation, the following articles of faith cannot be rationalized: the knowledge of God as omnipotent; the knowledge of God not only as infinite but as the chief end of man (i.e. as divine in the sense required by religion); and the knowledge of the incorruptibility and immortality of the soul. In all this there is implied the assertion of a breach between reason and faith, which had effects more far-reaching than Duns Scotus intended. Reason could claim unlimited scope and freedom so long as the finality of 'faith' was formally granted. Any doctrine, however sacred, might be intellectually analyzed and discussed; e.g., atheism might be shown at length to be 'reasonable,' provided that the opposite affirmation of 'faith' was acknowledged. Hence some historians regard the position taken by Duns Scotus as the beginning of the decline of scholasticism.

2. Realism and nominalism.—The age of Albert, Aquinas, and Duns Scotus presents a substantial unanimity upon this question in the moderate realism which had been implied in the position of Abelard and was defended independently by the Arabians. Avicenna taught that the universal arises through comparison in thought; 'intellectus in formis agit universalitatem,' but there is a *genus naturale* as the basis of the *genus logicum*, and the *genus naturale* was *ante res* in the thought of God. Similarly Averroes: the universals are *in rebus*, but are posited as universals first by the intellect:

'Intellectus officium est abstrahere formam a materia individuata.'⁶

The position of Albert is not different:

'Universalis dicitur ratio non ideo quia tantum sit in nobis sive in mente nostra; sed ideo quia est res . . . quae in collatione accipitur, quae est in multis et de multis, quam collationem facit ratio.'⁷

So, again, Aquinas:

The universal is 'commune multis,' but it is not something 'praeter multa, nisi sola ratione.' It is 'aptum natum de pluribus praedicari.' 'Intellectus agens causat universale abstrahendo a materia.' In this sense, 'cognitio singularium est prior quoad nos quam cognitio universalium.' Before creation universals existed in the eternal intellect of God.⁸

In Duns Scotus we find the same doctrine, but with a stronger emphasis on realism:

'Universale est ab intellectu, universali autem aliquid extra correspondet, a quo movetur intellectus ad causandum talem intentionem [i.e. the universal as an act of thought]. Effective est ab intellectu, sed materialiter sic occasionaliter sive originaliter est a proprietate in re; signum vero minime est.'⁹

3. Intellect and will.—In this regard the opposition between Aquinas and Duns Scotus is precise. The former teaches that intellect and will are never separated either in God or in man, but in man their union is imperfect. Intellect is superior to will because it involves knowledge, contemplation, rational intuition, and is *per se* related to reality;

³ Contra Gentiles, I. 3.

⁴ Ib. I. 9.

will is determined by the perception of good, and this perception is an intellectual act, so that will is dependent on intellect. Moral freedom means that, by an intellectual act of analysis and comparison, various possible lines of action are revealed and one of them is perceived to be the best; the will then decides for the latter. In God the union of reason and will is perfect. The divine will is the total expression in action of the divine wisdom and in this sense is determined wholly by the divine nature, which is absolute goodness;¹ an alternative choice would be less good and therefore comparatively evil. This conception is applied to explain the origin of the moral law, which is a divine command. God commands it because it is good; but the goodness which is commanded is not foreign to the divine nature; it is an expression of the wisdom which is God. The chief end of man is conceived by Thomas, as by Aristotle, in intellectualistic terms. It is a rational intuition rising to a vision of God, from which love of God follows. The poetic expression of this ideal is given once for all in the *Paradiso* of Dante.

According to Duns Scotus, this dependence of will on intellect destroys freedom of choice and responsibility. He was led to this conclusion because he conceived the growth of ideas in the mind, after the manner of empirical psychology, as a natural process, so that the dependence of will on such a process involved determinism. If the will is free at all, its action must be wholly unrestricted. The intellect presents to the will the possibilities of its choice; but the will is absolutely autonomous; it is 'motor in toto regno animae, imperans intellectui.' And, as with the human will, so with the divine. Just as little can Duns Scotus admit a determination of the will of God even by His wisdom. The divine will is determined by nothing beyond itself; it acts *ex mera libertate*, free from every kind of necessity. And this will of God is the *summa lex*. Hence there is no necessity for the existence of the universe under its present constitution, forms, and relations.

Nevertheless two statements are made, in reference to this theory of Duns Scotus, which require important qualification: (a) it is sometimes said that he places the intellect at the mercy of arbitrary will, and (b) it is almost always said that, according to his teaching, a thing is good only because God has willed and commanded it, which is understood to mean that God might have made good evil and evil good.

(a) He does not teach that God 'could' make a square round or make contradictories identical; this is expressly denied.² But (b) God could have given to real beings other essences or natures than those which they actually have; and then, the natures of things being different, the laws of the universe would be other than they are.³ It follows that, under the supposition stated, the laws of morality would be changed. Assuming that the content of duty depends on the constitution of human nature, it follows that, if human beings were constituted differently in certain fundamental ways, then the content of morality would be fundamentally altered. There is, however, no evidence that Duns Scotus intended to teach that morality could be determined differently by the will of God, human nature being constituted as it is.

This anti-moral conclusion was, however, actually derived from the statements of Duns Scotus. It was argued that nothing is, in itself or *per se*, either righteous or sinful, but only because God has commanded or forbidden it; and that the divine commands are made known to men only by the Church.⁴

What Duns Scotus did was to affirm an entire subordination of the speculative to the practical order, in a way that reminds us of Kant. But his position is different from that of Kant. He offers us a critique not of speculative reason as such, but of certain special uses of speculative reason. He has therefore been called a 'dogmatist Kant.'

4. The principle of individuality.—This question involves the distinction of matter and form which the schoolmen derived from Aristotle.¹ In Aristotle it is a distinction of two aspects of experience. In the hands of the schoolmen it becomes a divisor of the world into the spheres of two different real principles. In effect it becomes a distinction of two worlds. All beings in nature are composed of matter and form. 'Matter' is indeterminate and merely potential; it may be this or that. 'Forms' are equivalent to the constitutive laws of things; they are in all individuals of the kind or class and are essentially general. Averroes had laid down the principle that there is no form without matter and had based on it a system of pantheistic idealism indistinguishable from materialism.

Any subsistent being having a nature of its own, incommunicable to any other, is an individual. Such a being of rational grade is a person. Hence the metaphysical problem: Can we explain or conceive the means by which a being acquires individuality involving a nature that no other being can possess? The conclusions of Aquinas may be summarized as follows. Pure forms, real and active, exist only in the immaterial world. God is pure form and is unique and absolute genus and individual *per se*. The angels are relatively pure forms, each of whom is at once species and individual. Mankind belongs to both worlds and consists of matter and form in individual union. Hence men are members under a genus. How does their individuality arise? Individuality depends on matter *signata quantitate*, i.e. determined in reference to time and space. The matter of a man's body has been determined as to quantity by ante-natal hereditary and other influences. Matter, so determined, requires form to produce the individuality of *this* man, *this* embodied soul. The difficulty here soon became apparent. It is hard to avoid the conclusion that individuality depends on matter in a sense which puts immortality out of the question. But Aquinas and Albertus Magnus strenuously defend the incorruptibility and immortality of the soul against the materialistic implication of Averroism.

Duns Scotus appears to have seen more clearly than Aquinas that the problem of individuality is of central importance in any philosophy. It may be argued that from the nature of the case the problem is insoluble, since we cannot 'dig up the roots of our own being.' But the real nature and tendency of a philosophy depend on its grasp of the nature of this problem. In reference to the Thomist solution, Scotus affirms that all finite or created beings consist of form and matter: but there is an incorporeal matter. Formless *materia primo-prima*, i.e. matter as God created it, does not exist in isolation. It is *subjectum omnis receptionis*, the *radix et seminarium* of the world; rational souls are its 'flower' and pure intelligences (angels) its 'fruit.' *Materia secundo-prima* is the substrate of becoming and change. Scotus appears to have conceived of a series of forms determining the universal and primal matter. The result is a conception of nature as consisting of beings ever striving towards more complete and perfect individuality. Its unity consists in the order of its parts and the harmony of all bodies. The highest type of embodied existence is the human organism, because it is the organ of the rational soul.

¹ Cf. *Summa*, I. xix. 3, 10.

² Cf. commentary on *Liber Sententiarum*, I. dist. 43, qu. 1.

³ *Ib.* III. dist. 37, qu. 1.

⁴ Cf. W. Windelband, *Hist. of Philosophy*, Eng. tr., London and New York, 1907, p. 332 f.

¹ Cf. J. Royce, 'Latin and Scholastic Terminology,' in *DPhil* L. 623 ff.

In criticizing the solution advocated by Aquinas, Scotus introduces a third principle, neither matter nor form, which he calls *haecceitas*, and which is spoken of as if it produced or created the concrete individuality of the self-existent thing (e.g., the soul of the man *qua* individual). The conception is thus stated by an interpreter of Scotus:

'Haecceitas est singularis . . . nihil aliud est nisi quidam modus intrinsecus qui immediate contrahit et primo quidditatem ad esse . . . et nominatur differentia individualis.'¹

At first sight such statements appear to be open to two criticisms. (a) This is merely an illusory 'explanation' which consists in naming over again the fact to be explained: 'Socrates is an individual because he has individuality'; (b) more fundamentally, it is a case of the mischievous fallacy of treating the concrete existence involved in individuality as a logical quality like the differentia of a genus which makes it a species. On examination it appears that neither of these criticisms is relevant to the writer's real intention.

'The individual form (*haecceitas*) is for Duns Scotus an original fact; no further question as to its ground is permissible. He designates individuality (both in the sense of individual substance and in that of individual occurrence) as the contingent (*contingens*); i.e. as that which cannot be deduced from a universal ground, but can only be verified as actual fact. For him . . . the individual is the form of all reality by means of which alone universal matter exists.'²

We find therefore two divergent tendencies in Scotus. His conception of *haecceitas* implies that the real is the individual, while his theory of matter as always *informed* implies that the real is the universal.

In many respects Duns Scotus is the most important Christian thinker of the Middle Ages. Different aspects of his work have been dealt with as indicated in the references given above; but no monograph yet exists adequate to his work. Nevertheless it has been said with justice that Scotus, great Schoolman as he was, Scholasticism overreached itself, and entered upon a subtlety which was the beginning of its decline.³ In every problem which he takes up Scotus tends to multiply divisions and distinctions to the utmost possible extent, until the essential factors of the question seem, as it were, to be reduced to impalpable particles and the real issues are lost sight of. Hence it is often far from easy to trace the fundamental and essential portions of his argument.

The opposition of principle between Aquinas and Scotus, even in questions of pure philosophy, went deep enough to perpetuate itself in two antagonistic schools. And, when it is remembered that matters of acute theological controversy, arising out of the doctrines of Incarnation and Atonement, were also involved, and that the respective doctors were impressive representatives of two different religious orders, it is easy to account for the feuds of 'Scotists' and 'Thomists' during the generation following the death of Scotus.⁴

There is, however, one fundamental question in which Aquinas and Scotus are in agreement, and in which they represent the position of the schoolmen as a whole. We may describe them both as strong realists, if we use this term, not in special reference to the question of universals, but as it is used in recent philosophy; in other words, they assume as an axiom that there is an immediate apprehension of the world as beyond and independent of the knowing mind. The distinction of understanding (or intellect) and sense, as two different modes of knowing, is always insisted on; but in each case the mind is directly related to the objectively independent world.⁵ It might

seem that this position was not tenable by Aquinas and Scotus, who speak as if they held a doctrine of what in recent times has been called 'representative perception.' Aquinas in particular speaks as if the interaction of the mind and the external object produced in the mind a copy of the object which is universalized by the intellect and becomes a permanent mental possession.¹ We find, however, that Aquinas is prepared to reconcile this view with the immediate objectivity of conception and of perception.

'In the process of understanding, the intellectual impression received in the potential intellect is that *whereby* (*quo*) we understand; just as the impression of colour received through the eye is not that *which* (*quod*) is seen, but that *whereby* (*quo*) we see. On the other hand, that *which* (*quod*) is understood is the nature of things existing outside the mind, as also it is things existing outside the mind that are the objects of visual perception.'²

In brief: our sensations and our ideas are not the objects of our knowledge but the instruments or means by which we know; or rather they are themselves the knowledge.

IV. *FOURTH PERIOD.*—Scholasticism in the proper sense of the term culminates in Thomism. Granting the inviolability of the system of ecclesiastical dogma, reason could do no more; and from this point of view the position taken by Duns Scotus already marks the beginning of the end. The decline of scholasticism is further marked by what is usually described as a 'revival of nominalism.' This expression is admissible only if we remember that it is not the nominalism of Roscelinus (whether understood as 'extreme' or as 'moderate'), but a nominalism newly thought out by a man whose ability, originality, and acumen are not inferior to those of any of the thinkers whom we have already named—William of Ockham.

William of Ockham was of British origin and was born towards the end of the 13th century. He became a member of the Franciscan order and was a pupil of Duns Scotus in Paris. He shared in the revolt of the Franciscans against Pope John XXII, which came to a head in 1322; and afterwards he supported Louis of Bavaria in the latter's famous contest with the same pope. During his life-time he was best known for the position which he took up against the Vatican; but his work as philosopher and theologian was influential enough to earn him the titles of *Doctor invincibilis* and *venerabilis Inceptor*. He became head of the order in 1342 and died about 1349.

During the years 1330-43 he issued a series of elaborate works circumscribing and limiting the authority of the pope. The issue with the Franciscan order concerned the duty of evangelical poverty. John XXII. had issued formal declarations condemning this practice; and the Franciscans maintained against him the ideal of strict imitation of Jesus in His poverty and obedience. The issue with Louis of Bavaria involved the whole question of the pope's authority as against that of the emperor. These works were theological as much as political; they served the purpose of the emperor and his supporters, because Ockham, in effect, cut at the root of the spiritual as well as the temporal supremacy of the pope. The temporal supremacy is openly and deliberately attacked. Independent civil power is declared to be as much an ordinance of God as spiritual power; and the authority of the State is affirmed in a manner which partially anticipated Hobbes.³

A brief comparison with the position of Aquinas may here be made. According to Aquinas, morality and social life are based on that *lex naturalis* which is an expression of the divine wisdom, and which the unaided reason of man can apprehend and realize in conduct. The State is the ordered, organized social life for which human nature is intended, and its proper end is to realize natural virtue. Natural virtue is only the preparation for man's higher destiny which grace offers him in the community of the Church; so that the State is subordinate to the Church as the *preambula gratiae*. It is noteworthy, as Windelband⁴ points out, that in Dante this relation of subordination has become one of co-ordination. But in Ockham the two powers are separated, as are reason and faith (see below). In the world of sense the civil State is supreme.

⁴ For detailed information respecting these reference must be made to the standard histories named below.

⁵ In reference to Aquinas and Scotus this statement requires little or no qualification; but it scarcely need be pointed out that for a nominalist the objectivity of conceptual knowledge becomes the more questionable the more thoroughly his nominalism is carried out.

Ockham's philosophical and theological works consist mainly of commentaries on the *Liber Sententiarum* and on the logical treatises of Aristotle. It is a mistake to underestimate the importance of these as compared with his political writings.¹

1. Ockham and Duns Scotus.—The nominalism of Ockham is best viewed in contrast with the logical realism of Duns Scotus. If we isolate this element, with its implied intellectualism and universalism, in the thought of Scotus and examine its tendencies *per se*, we obtain a doctrine which in some respects is an anticipation of Hegelianism, pointing as it does to the identity of the conceived with the real and of logical with causal dependence. Against these conclusions and all that they imply Ockham maintains a continuous polemic. Negatively, his position involves a protest against the 'hypostatization of abstractions' (to borrow a modern phrase)—in other words, against the tendency to treat an idea derived by abstraction from perceptual experience as if it could have a substantial existence *per se* or even could correspond to (or be a copy of) anything having such existence.² He finds this fallacy in all forms of logical realism.

Hence he argues that the class-concept or universal cannot be what realism affirmed it to be. He resolved it into contingent acts of sense-perception related directly to external objects. Such an act leaves behind it a trace or disposition (*habitus*), resembling itself, in the mind; and, when several such acts, or their traces, occur together, the common elements are assimilated. But these common elements are merely *consimilia*. The intellect is nothing but a derivative continuation of this primary sense-elaboration of given material: 'intellectus operationem suam incipit a sensibus, neque enim non sentiens intelligit.'³ Its procedure is always the same; abstracting from the variable particulars of perceptual experience, it retains the common or permanent elements, and the only existence which the concepts have consists in these ever-recurring mental acts of abstraction, which by the help of language can be combined into propositions and syllogisms. Universals are therefore artificial products of our mental activity, although indispensable to mental discourse. A universal has no existence or meaning but what it derives from the particular concrete thing or group of things whose place it takes ('pro quibus supponit'). As mental act it is *una res singularis* or *intentio singularis*; and therefore 'non est universale nisi per significationem quia est signum plurium.'⁴ Universals are 'ficta quibus in esse reali correspondent (vel correspondere possunt) consimilia.' A common name is therefore like an algebraical symbol; it is a purely denotative term whose meaning is accepted on the basis of normal experience.

Notwithstanding all this, Ockham firmly adheres to realism in the modern sense.⁵ He expressly repudiates anything resembling the later doctrine of 'representative perception' (that we know things by the intervention of mental copies). He appears to assume, as an ultimate position, that

¹ A view of Ockham's system as a whole can be obtained from a compilation issued in 1422 by Gabriel Biel († 1495, usually described as 'the last of the scholastics') under the title *Epitome et Collectorium ex Occamo super libros quatuor Sententiarum* (Tübingen, 1495). No good monograph on Ockham has yet appeared; and some of his writings have never been printed. We may name Werner, *Die Scholastik des späteren Mittelalters*, Vienna, 1881-87, iii.; Siebeck, 'Die Nominalistische Ockham's', in *Archiv für Gesch. der Phil.* 1887, i. 1; and (especially for references to existing sources of information) Poole, art. 'Ockham,' in *DNB* xli. 357 ff.

² The expression usually attributed to Ockham, 'Entia non sunt multiplicanda praeter necessitatem,' is not to be found in his published writings, but is an accurate formulation of his intention.

³ Biel, i. dist. cxi. qu. 6.

⁴ Prantl, iii. 337.

⁵ Cf. above, III. *ad fin.* ('epistemological realism').

the mental act (whether *perceptio rei* or *intellectio rei*) and the objective fact are necessarily related to each other, and that truth consists in the completeness of this relation. The question which he appears to leave unanswered concerns the real basis of the *consimilia* whose objectivity he admits.

'Take the simplest possible instance. One stone falls to the earth when allowed to drop; another does the same. Is there any real connexion? If there is none, then it was a chance coincidence. If a million stones fell to the ground under the given conditions, it would be a chance coincidence, and would afford no reason whatever for supposing that the next stone would do the same. The events would be independent in their real nature. And Science would be impossible. If, on the other hand, they are not independent, if there is a real connexion, then it is a real universal. It proves on examination to be a Law of Nature.'¹

2. The authority of reason.—The doctrine of the twofold nature of truth appears in its ultimate form in Ockham's writings and was indeed an inevitable consequence of his view of the nature of reason. If reason consists only in the analysis and combination of facts of sense-perception, then no article of faith (whether of natural or of revealed religion) can be rationally demonstrated. Ockham endeavours to show this in his *Centiloquium Theologicum* and in *de Sacramento Altaris*. In the case of some dogmas his conclusion is that they are not only indemonstrable but irrational. The idea of God, though not irrational, is one whose truth cannot be demonstrated. It is a composite idea whose parts have been abstracted from various aspects of normal experience.² The mind can form the idea of God only by the artifice of abstraction. We can therefore have no knowledge of the Supreme Being in Himself; we can acquire only a purely relative notion, whose truth-value remains an open question. There is no reason to believe that such arguments imply an 'ironical scepticism' concealed 'under the mask of a most rigid orthodoxy.'³ Ockham holds that the soul has a faculty of its own for apprehending supersensuous truth. This is the significance of his metaphorical distinction between man as *viator mortalis*, limited to the world of sense, and man as *beatus*, endowed with the privilege of faith. There is no doubt that the distinction of truth *secundum rationem* and truth *secundum fidem* was used by others as a means of attacking faith while appearing to acknowledge its authority, and that Ockham's influence actually contributed to the spread of theological scepticism; but mysticism rather than scepticism is the characteristic effect of his teaching; and it is significant that an adherence to nominalism on Ockham's lines, a rejection of metaphysics, and a mystical doctrine of the basis of religious belief are combined in Pierre D'Ailly (Petrus de Alliaco, 1350-1425) and in Johannes Gerson (1363-1429).

Of Ockham we may say that, while his manner of expression and method of exposition are thoroughly scholastic, his thinking reveals a new mental energy and a wholly modern spirit. His appeal is constantly to experience. His central doctrine, that the individual is the real, implies that investigation is directed to the concrete actual fact. No free development of this tendency was possible except partially in the field of psychology, because the scholastic method and assumptions still ruled; but none the less Ockham may be described as one of the pioneers of scientific opposition to scholasticism.

3. The new learning.—As early as the 13th cent. the Franciscan Roger Bacon, at Oxford and Paris, had criticized the tendency of scholasticism and endeavoured to improve contemporary methods of studying theology. He appealed to sound common

¹ S. H. Mellone, 'Real Kinds and General Laws,' in *Mind*, new ser., xx. [1911] 248 ff.

² Cf. Biel, i. dist. iii. qu. 2 ff.

³ Hagenbach, II. 133.

sense, experience (outward and inward), and knowledge of nature and of humanity. In the second half of the 15th cent. the times were ripe for Roger Bacon's influence to come to its own. The restoration of classical studies tended to set the human mind free from absorption in one-sided theological and philosophical speculation and limited the excessive dominion of Aristotle over human thought. Scholasticism implies a Church unified and supreme, and a centralized learning employing exclusively one ancient language; but the spread of Greek literature, especially after the capture of Constantinople in 1453, exerted a profoundly transforming influence on the study of theological and philosophical subjects and promoted a reaction against the mediæval interpretation of Greek metaphysics, against the method of deduction from conceptions taken as authoritative assumptions, and against the rigidity of monastic Latin. Interest in the investigation and interpretation of nature found ever-widening scope for its effective development. Philosophy, finding a place for itself by the side of theology, claimed to be an independent secular science whose special task was the knowledge of nature; and natural science began to exert a decisive influence on the development of philosophic thought. The invention of printing (about 1440) and the discovery of America (1490) are only two out of many historic events converging to effect what was at bottom a revolution in the history of nations which necessitated a new development of religious and philosophic thought.

It is scarcely accurate to speak of a 'revival' of scholasticism in the 17th century. In 1563 the Council of Trent declared Thomism to be authoritative in reference to the essentials of philosophic truth. This, however, excluded the Church from the new movements of the time and reduced philosophy to a condition of stagnation in the seminaries. Half a century later a few writers of outstanding ability lent distinction to the movement in the Spanish peninsula, where the Thomist tradition had maintained itself most strongly: such were Gabriel Vasquez of Alcalá (†1604) and Francis Suarez of Granada (†1617); but nothing that could be described as a 'revival' took place.

A certain turning-point in the history of scholasticism is marked by the publication of the papal encyclical *Æterni Patris* in 1880. In this Leo XIII. urged the intelligent study of Thomism on clergy and laity as wholesome alike for religion, philosophy, and civil life. Movements in this direction have been initiated and have not been fruitless. The *Revue Néoscholastique*, published (until 1914) at Louvain under the editorial supervision of M. de Wulf, throws interesting sidelights on what may be expected of a reformed scholasticism in the hands of Roman Catholic scholars of competence. The same observation may be made in reference to the *Revue Thomiste*, carried on by the Dominican Fathers since 1894 and published at Paris.

LITERATURE.—Within the limits of this article it has been possible to give only a concise summary of the most essential facts and to indicate sources from which reliable guidance for further study may be obtained. Numerous references have already been given for particular thinkers or particular aspects of scholasticism. The following notes relate to works where the subject as a whole is dealt with historically.

Among the most recent authorities must be mentioned: F. J. Picavet, *Esquisse d'une hist. générale et comparée des philosophies médiévales*, Paris, 1906; C. Bäumker, *Die europäische Philosophie des Mittelalters* (in series 'Allg. Gesch. der Phil.'), Leipzig, 1909 (cf. also Bäumker, *Beiträge zur Gesch. der Phil. des Mittelalters*, Münster, 1891 ff.); M. de Wulf, *Hist. de la philosophie médiévale*, Louvain, 1905, *Les Philosophes du Moyen Âge: Textes et Études*, do. 1901 ff.; F. Ueberweg and M. Heinze, *Grundriss der Gesch. der Philosophie*¹⁰, 4 vols., Berlin, 1894-09, esp. vol. II. (the existing Eng. tr. is from Ueberweg). Among older standard authorities must be mentioned: B. Hauréau, *Hist. de la philosophie scolastique*, 3 vols., Paris, 1872-80; A. Stöckl, *Gesch. der Philosophie des Mittelalters*, 4 vols., Mainz, 1861-67 (more briefly in *Lehrbuch der*

Gesch. der Phil., do. 1876); V. Cousin, *Ouvrages inédits d'Abelard* (General Introduction), Paris, 1836. The accounts given by J. E. Erdmann and W. Windelband in their *Histories of Philosophy* are good; and the older work of A. H. Ritter is not yet obsolete. Indispensable to the special student are A. L. M. Jourdain, *Recherches critiques sur l'âge et l'origine des traductions latines d'Aristote*, Paris, 1843; and K. von Prantl, *Gesch. der Logik im Abendlande*, 4 vols., Leipzig, 1855-70. S. H. MELLONE.

SCHOPENHAUER.—1. Life and works.—Arthur Schopenhauer (1788-1860) was born at Danzig on 22nd Feb. 1788. He was the son of Heinrich Schopenhauer, an intelligent and successful merchant, who with the help of a brother created a business which held a position of pre-eminence among the chief mercantile firms in the famous Hanse town. The grandfather, Andreas, was a large farmer, who began to add merchandise to his agricultural work. The family was of Dutch origin, and, curiously enough, this was also true of the maternal side of the house. The name of Arthur Schopenhauer's mother was Johanna Henriette Trosiener. She was an attractive young woman, not only gifted intellectually by nature, but educated (largely through the instrumentality of a Scottish minister) in a much more thorough manner than was customary at the time. She became an authoress of some renown in later years.

Young Arthur had an ideal training for a child both at home in a villa near Danzig and in a farmhouse which his father had acquired in the territory enclosed between the Baltic Sea and the arms of the Vistula. But this happy life was soon interrupted. The first partition of Poland in 1772 had given Danzig an autonomy, which was, however, an autonomy only in name, since Frederick the Great exerted himself by various exactions to make mercantile life difficult and irksome. After his death in 1786 things did not improve, and finally, after the second partition of Poland in 1793, Danzig ceased to exist as a free city, and the Schopenhauer couple, with their five-year-old boy, hastily departed and took up residence in Hamburg. Thus Arthur Schopenhauer passed the most impressionable part of his life, from 1793 to 1807—from his fifth to his twentieth year—in another great commercial city. This time was broken between the years 1797 and 1799, when he was taken by his father to Paris and Havre and was left at the latter town in the household of a commercial correspondent of the firm. The elder Schopenhauer was 'advanced' in his views and deeply impressed by the literary life of France, and more especially by the fame of Voltaire and his contemporaries. On his return the boy attended a school conducted on commercial lines, but, despite his father's strongly expressed desire, his inclinations were towards authorship and in no way towards commerce. On the promise of a long tour to France and England, however, he allowed himself to be coerced into an engagement to devote himself after all to commercial pursuits. Whilst in England he was boarded with a clergyman at Wimbledon and brought away with him a very unfavourable impression of an English boarding-school.

After leaving England, the Schopenhauer family went through France and Switzerland to Vienna and thence to Berlin. Arthur and his mother then proceeded to Danzig, where Arthur tried to learn the elements of business training. Subsequently he rejoined his father in Hamburg, and, on the conclusion of his seventeenth year, entered the office of a merchant there. He himself states that never was there a worse mercantile clerk, for his mind was continually fixed on other subjects, and more especially on the subject of phrenology, then engaging much attention in Hamburg owing

to the lectures of Gall the phrenologist. In April 1805 the dead body of the elder Schopenhauer was found in the canal; whether this had resulted from an accidental fall from a granary or not was never known. At any rate Schopenhauer had suffered serious money losses, resulting probably from the speculation that was then being carried on in the city, and the family was left in a less prosperous condition than it might have been. The widow, with her only daughter, aged ten, was glad now to be able to live a new and freer life wherein she might realize some of her social and literary aspirations. She and her child went in 1806 to Weimar, where she entered on a life of interest and happiness in the intellectual circle of men and women who had gathered round Goethe. On the social side this intellectual movement developed in great measure into the romanticism which characterized German society in later years.¹

But Arthur Schopenhauer was left at Hamburg apparently in the depths of depression—the depression that followed him all through life in one form or another. His mother, who always regarded her son from a curiously detached and impersonal point of view, consulted her friend Fernow and on his advice gave her consent to his leaving his ledger and giving himself to classical study. At nineteen the young man entered the gymnasium and studied there with boys considerably his juniors. As this experiment was not successful, he went to Weimar, where he devoted himself to that Greek and Latin learning which (more especially the Greek) meant so much to him in later life.

Schopenhauer had already developed qualities of self-assertiveness and fault-finding which made him difficult to live with, and his mother had none of the maternal devotion that overlooks such faults or tries to remedy them. Hence the relationship between mother and son was strained in the extreme. The mother was satisfied with the position which she had attained and anxious to enjoy to the full her newly-found freedom; the son was critical, introspective, and gauche, never content with what was before his hands and always looking for something that was not to be found. In addition there was a mental side to his woes which his mother might have recognized, had she been less engrossed in her personal interests and happiness. It may have been inherited from a father who, with all his ability, was subject to outbursts of passion; his uncles, too, were mentally abnormal.

At the age of twenty-one Schopenhauer received his patrimony, which gave him the means of living in simplicity without dependence on professional gain. He enrolled as a student of medicine at Göttingen, but before long turned to philosophy, devoting himself specially to the study of Plato and Kant. He soon migrated to the young university of Berlin, where he worked under Schleiermacher, Wolf, and Fichte (though there perhaps was never a more critical student) and also did some clinical work in the hospital. In 1813 he was little moved by the call to arms, and, when Berlin was endangered (after Lützen), he fled for refuge to Dresden and subsequently to Weimar and then to Rudolstadt, where he composed his first published work, the philosophical treatise *Ueber die vierfache Wurzel des Satzes vom zureichenden Grunde* ('On the Fourfold Root of the Principle of Sufficient Reason,' Rudolstadt, 1813), as an essay to qualify for his doctorate of philosophy at Berlin. Later, and in an altered form, it was made a part of his system of philosophy. In this treatise we have much that forms the basis of Schopenhauer's philosophy. We certainly find here what was characteristic of his teaching—the

substitution of his doctrine of sufficient reason for Kant's system of the categories as constitutive of experience. In this book, too, we have the first statement of that conception of the world as will, the first step towards the notion of intelligence as a secondary result developed by will.

The great aim of the philosopher, though only twenty-five years of age, was to escape from the turmoil of war. In 1813 he left his inn at Rudolstadt and returned to his mother's house at Weimar, but the experiment was so disastrous that in May 1814 he left that house for good. The mother died twenty-four years later, never having seen her son again. Her qualities were fundamentally different from her son's. She was spoiled in early youth and, released from the trammels of a married life in which love had played little part, she found pleasure in surroundings which gave her opportunities for displaying her undoubted talents and social gifts. The son resented her male friendships and was morose and rude to those whom he met in her house. Schopenhauer's views of women are well known. He looked upon them as incapable of undertaking any responsibility—as creatures to be kept in subjection and regarded as unmoral rather than immoral. His own experiences certainly were far from happy. He never married, and it was perhaps as well that he did not. His nature was sensual; he was perpetually brooding over sexual matters and wrote of them in great detail.

Schopenhauer came into relation with Goethe at Weimar over a subject of interest to both—the theory of colour. He wrote an essay on the subject, which he sent to Goethe and which was published at Leipzig in 1816 under the title *Ueber das Sehen und die Farben* ('On Vision and Colours'). This treatise was in some degree in harmony with Goethe's conception of the nature of colour.

From 1814 to 1818 Schopenhauer was at Dresden, where he lived in a constant state of contemplation and self-immersion. His own notes describe the nature of that life—a life which he regarded as one continual struggle between diverging principles all endeavouring to assert themselves whilst only one could ultimately prevail. Hence came that constant consciousness of defeat to be overcome only by giving up the struggle as useless that associates Schopenhauer's name more almost than any other with the doctrine of pessimism.¹ He longed for relief such as the ascetic succeeds in reaching, although it meant mere withdrawal into negativity. He soon became convinced that his system was the great system of metaphysics and ethics combined for which the ages had been waiting. He had reached beyond the science of the day, which was no science but the 'philosophy of the barber's man,' to what towered above the sensible—the supersensible. Hence his attitude of certainty regarding his creed, an attitude which the common man called arrogance. His philosophy became fixed and certain in his mind, and he believed that he had only to wait for its recognition by the world. He had, however, to wait some time. *Die Welt als Wille und Vorstellung* ('The World as Will and Idea'), Schopenhauer's greatest and most important work, fell to all appearances dead in an unappreciative world. Most of the first edition, which appeared at Leipzig in 1819, was sold as waste paper. Another edition was, however, printed with considerable emendation in 1844. Nothing discouraged the author, so completely certain was he that he had found the truth in its entirety.

In 1818 Schopenhauer made a journey to Italy which greatly influenced his later life, though his

¹ See *ERE* iv. 350f.

¹ See art. PESSIMISM AND OPTIMISM, § 5.

diary is full of somewhat morbid introspection and melancholy observation. Next year, while still in Italy, he heard that the parental business-house at Danzig had failed, and that his mother and sister had accepted a composition. Characteristically he would have none of this and held out for full payment to himself with such vigour and determination that in the end—three years later—he obtained it even with interest. He was indignant with the women, who were not willing to join him in the fray, and ceased for years even to correspond with them. Though riches came to him, his nature was not an enviable one as regards his wealth, for he was ever suspicious and distrustful.

Schopenhauer had a desire to be connected with a university, and in 1820 he tried to teach as *privat-docent* in Berlin, but without success. He became involved in disputes with Hegel and other fellow-teachers, and even threw a fellow-lodger downstairs, and had to pay her a substantial annuity till her death. Another visit to Italy was paid in the winter of 1822-23; then he returned to Munich and after some further travel settled in Berlin again in 1825. He made overtures for translating Kant's works into English, but with no practical result. In 1831 he went to Frankfort-on-the-Main to escape from an outbreak of cholera in Berlin and finally settled there.

He lived for many years a curiously ordered life, writing, reading, and taking exercise. He was devoted to animals and sensitive to their ill-treatment; he loved his dog, which the children named 'Young Schopenhauer' and which was his constant companion in his daily walks. His only diversion was music or the play, more especially the former. In 1836 he published at Frankfort a small book entitled *Ueber den Willen in der Natur* ('On the Will in Nature'), which was intended to be a corroboration of his theory of truth from the scientific point of view. It endeavoured to demonstrate the nature of will as the *prius* of the organism.

In 1838 a Norwegian society offered a prize for the proof of the existence of free will derived from the evidence of consciousness, and the prize was to his great satisfaction awarded to Schopenhauer. Unfortunately for his *amour propre*, he was not so successful in his competition for a Danish prize. He suspected a plot against him on the part of those who were inspired by the special objects of his hatred and jealousy—Fichte, Schelling, and Hegel, the so-called transcendentalists. His jealousy for his own reputation and desire for recognition amounted to a disease.

He published at Frankfort in 1841 two essays under the title *Die beiden Grundprobleme der Ethik* ('The Two Fundamental Problems of Ethics'). In them he formulates his scheme of morality, morality signifying the inevitable consequences which are realized when man reaches self-consciousness. Man has to become aware that life is self-delusion, and morality becomes inward self-abnegation and renunciation of the world as it has hitherto been known to us.

It was Schopenhauer's great work *The World as Will and Idea* that made him famous. It was through this, the result of a life's reflexion, that its author hoped for recognition for himself and defeat for his 'transcendental' opponents. Hegel was dead, and he hoped Hegelianism would die likewise. At first the success of his work was not very apparent, and the revolutionary years that followed soon after its completion tended to depress him. With the republican system of government he had no sympathy, and he dreaded losing his own possessions. Gradually, however, he found disciples here and there. One article which

appeared in the *Westminster Review*,¹ and which introduced Schopenhauer to English readers as an opponent of the German transcendentalism expounded by Coleridge, specially delighted him. Gwinner, his literary executor and biographer, was a faithful follower and disciple.

The World as Will and Idea passed into three editions before its author's death. Some admired the work because of its views on art and music, others because of its exposition of sexual love, others looked upon the book as providing a new sort of faith for those who had rejected the old. The work that probably first succeeded in bringing popularity to its writer was, however, *Parerga und Paralipomena* (not very respectfully translated as 'Chips and Scraps'), which was published at Berlin in 1851. The book was made up of a number of essays on various topics, full of wit and sarcasm, and there was something in it to suit every taste. The date of the third edition of *The World as Will and Idea* was 1859, and a second edition of *Will in Nature* appeared in 1854 and of *The Two Fundamental Problems of Ethics* in 1860, so that before his death Schopenhauer at least had the satisfaction of finding his work appreciated. His portrait was painted in 1855 by a French artist named Luteschutz and in the following year by Goebel. The latter is the portrait best known in its reproductions. The author's mother and sister died before success came, and he led a lonely life in spite of having many admirers. He lived comfortably and worked hard, although in a well regulated way, until his death, which took place on 21st Oct. 1860 from heart failure.

2. Teaching. — One can best make Schopenhauer's point of view intelligible by comparing it with that of Bergson, to which it has considerable analogy. Bergson holds that the ultimate reality is a creative *élan* which, operating in time (which is for Bergson real and ultimate but is in the nature of duration and not formal or spatialized time), gives rise to intelligence. Schopenhauer held that the ultimate reality or thing-in-itself was will, which developed itself into intelligence. Both consider that we have a direct intuitive apprehension of the existence of the *nîsus* which is thus revealed to us not indirectly through knowledge, but directly. But Schopenhauer, agreeing with Kant, held that time, like space, was only a form of knowledge, while Bergson, agreeing with the denial of the reality of space, treats time not only as real but as of the very essence of the creative evolution of the *nîsus*. The world arises for Schopenhauer when there has been evolved a nervous system sufficiently organized to be the instrument of knowledge. The will thus governs ruthlessly. If a man wishes to reach a state of rest, he can acquire it only by an absolute renunciation of the will to live. He may, if he struggles hard enough, attain to a condition of *nirvāna*—a state of non-being where the will has vanished and knowledge only is left. We see in this doctrine the influence of the Indian religions, and of Buddhism in particular, upon Schopenhauer's mind.

Schopenhauer teaches that we do not in the phenomenal world come into contact with the ultimately real. The intellect constructs that world according to a 'principle of sufficient reason.' It is by direct intuition that we apprehend that which is not phenomenal, and here we arrive at that *nîsus*, or will, which is quite apart from the intellect and is something not in time nor determined by motives—the activity that underlies the whole universe. The will expresses itself in every phenomenon in nature, even in inorganic nature.

¹ April 1853, pp. 333-407, 'Iconoclasm in German Philosophy,' by John Oxenford.

But the body is distinguished from the rest of nature by the circumstance that by direct intuition we are aware of will as realized in it. Thus we have a conception of the universe as, on the one hand, a phenomenal construction by the intellect, and, on the other, as will—both conscious will and will revealed in the world in different stages and forms. In music and the arts universals somewhat analogous to the ideas of Plato more especially disclose themselves as stages in the self-realization of will.

Science, Schopenhauer affirms, can be learned by any one, but from art we get only what our nature brings to it. Science only teaches us how and why a thing has become what it is, how it is strictly limited in its sphere; art reveals the truth in a way that science cannot attempt to do; it teaches us, indeed, by its revelation of the truth, the unreality of the world and its manifestations. Schopenhauer was of course very largely affected by the romanticism of the day. The scholar, he tells us, is but the man who has painfully acquired certain knowledge; the genius has vision and sees the world in all its aspects and is also able to observe himself. Schopenhauer, however, follows out his theme to a point which may seem to us exaggerated, but which may be explained by the romantic reaction against the morality of culture and convention which had before this held the field. The old conventional morality he regards as selfishness of a refined sort. The will is really at the basis of all human nature, and the intellect is but a subordinate element in it. Art gives us the truest revelation of will and its stages as the meaning of life—a revelation which cannot be arrived at by any mere reasoning. The world is but an object in relation to a subject. It is from direct intuition of self that some glimpse into the nature of reality may be had, and this shows us that it is will that is the reality behind the illusionary things of sense.

Schopenhauer being naturally disposed to melancholy, his teaching turned into the pessimism that is associated with his name. The will struggles for self-assertion in existence, and this ends in a world-wide struggle in which no satisfaction for the individual is to be found. The will is inherently blind, and there is no release from the world of torture but by discovering the error of striving after the happiness of the individual and realizing our identity with other beings by finally renouncing the will and abstracting from individual desires. This is the only means of escape from the misery of the world, and artistic contemplation such as we experience in music helps it.

Schopenhauer has been regarded as an artist or a poet as much as a philosopher. Indeed, he himself has said that his philosophy is 'philosophy as art.' This explains his way of looking at philosophy as representing the vivid impression of a genius and his attitude of detachment as the teacher of a doctrine which could not be wholly carried out in practical life. We can understand how, after the period of disillusionment which followed the outbursts of 1848, men might take refuge in views such as Schopenhauer's, and we can also understand why his teaching did not take yet firmer hold as a system, even while it influenced very deeply contemporary thought and criticism. Schopenhauer has never founded a school; but as a critic he has an important place in the history of thought. He really represents one line of possible development of the Kantian system, while Fichte and Hegel (*qq.v.*) represent another and a very different one.

SCIENCE.—I. Definition and characteristics.

—Science is a system of knowledge defined partly by its subject-matter of more or less objective facts, but mainly by the methods by which its data are reached and by the extent to which its conclusions can be experimentally tested. Science is gained by observation (including, according to some, introspection) and by experiment, but also by reflecting (with every available technical aid) on the data thus supplied. Typically scientific knowledge is of such a kind that it can be verified by competent inquirers who repeat the observations and experiments and make them the subject of independent reflexion. In this respect, as in some others, science is a 'social phenomenon,' as it has been phrased. The verification requires, primarily, normally constituted minds; it also demands a certain competence—the fruit of discipline; it also desiderates some degree of freedom from prejudice and from the limitations imposed by the current errors of the age. Many sagacious astronomers were satisfied with the Ptolemaic system, and many sincere naturalists believed that they had evidence of the validity of the Linnean conception of the fixity of species. Science moves asymptotically towards adequate accuracy.

Science is also essentially communicable knowledge; indeed the possibility of it depends on man's capacity for consulting with his neighbours. Yet it cannot be supposed that the range of com-

municability is to be limited either by the man in the street or by the man in the cloister. The average man does not find the science of Newton's *Principia* very communicable, because he does not know the technical language and cannot follow the argument. On the other hand, the accurate and astoundingly practical knowledge which a clever cattle-breeder has of the eugenic merits of an animal is often not communicable. It proves itself to be sound, like an artist's intuition, but the diagnoses involved have not been made the subject of scientific analysis, and they do not enter into the fabric of communicable science. Furthermore, knowledge does not become scientific until it is detachable from merely personal conviction, until it can be de-personalized. Those possessed by a burning enthusiasm for a conclusion, as unquestionable to them as the noonday sun, are often disappointed by the cold douche of scientific scepticism which demands personal de-polarization. The fact is, finally, that, if a conclusion is to form part of science, it must be stripped of every trace of an emotional halo. The emotional context may be essential to a sane synoptic view; it is irrelevant in science.

2. Aim of science.—The beginning of science involves a process of selection from the data of the personal thought-stream. Attention is concentrated on vivid sense-impressions whose external references are localizable in space and definable in time. The routine of these sense-impressions is observed and registered, and externalized (in most cases) as natural objects and occurrences. Whatever be the precise psychology of the beginning of scientific knowledge,¹ its pursuit depends on processes of selection and abstraction, detachment and definition. In this way there is built up a perceptual framework and then a conceptual system—the counterpart of the outer world, which empirical science at any rate must treat as real. The moment at which any part of this working 'thought-model' becomes definitely scientific is when it admits of formulation and is seen as part of a larger whole, when, as Aristotle said, from a great number of experiences one general conception is formed which will embrace all similar cases. The note of science is struck when uniformities of co-existence or succession are detected and formulated, when there is 'a unification of diverse phenomena through their reduction to a common law.' Science is essentially descriptive formulation. Its aim is to describe the impersonal facts of experience in verifiable terms as precisely and completely as possible, as simply as possible, and as consistently as possible. In its universe of discourse it keeps to experiential terms or verifiable symbolical derivatives of these. It answers the question 'How?' rather than the question 'Why?'. J. H. Poynting puts it thus:

In science 'we explain an event not when we know "why" it happened, but when we show "how" it is like something else happening elsewhere or otherwise—when, in fact, we can include it as a case described by some law already set forth.'² As Karl Pearson has said:

'The law of gravitation is a brief description of *how* every particle of matter in the universe is altering its motion with reference to every other particle. It does not tell us *why* particles thus move; it does not tell us *why* the earth describes a certain curve round the sun. It simply resumes, in a few brief words, the relationships observed between a vast range of phenomena. It economises thought by stating in conceptual shorthand that routine of our perceptions which forms for us the universe of gravitating matter.'³

The true nature of scientific explanation is well suggested by Kirchhoff's famous statement of the aim of mechanics: 'to describe completely and in the simplest manner the motions that occur in nature.' It must be recognized, however, that the

end of science is not reached in the formulation of things as they are; it has also to describe how they have come to be. Its formulations have a historical or genetic, as well as an immediate, reference. They deal with the course of events. See art. NATURAL LAW.

What has just been said in regard to the past holds also of the future. The more complete a science is, the greater the power of prediction. Thus Helmholtz has written:

'We call our ideas of the external world *true*, when they give us sufficient information about the consequences of our actions throughout the external world, and bring us to proper conclusions regarding its expected changes';⁴

and Hertz said that it was the task of science to deduce the future from the past, the quality of scientific symbols being such that their intellectually necessary consequences correspond to occurrences.⁵

A scientific hypothesis *works* when it serves to sum up the observed facts in terms consistent with the rest of the scientific framework, and when deductions from it are verified in subsequent experience. If the contradictory of a deduced proposition should be verifiable, the hypothesis would have to be discarded or modified.

The primary aim of science is to see things clearly, consistently, and connectedly, to formulate, to discover laws. It reveals coherence and continuity. Its motives are curiosity, a dislike of obscurities, a desire for unity. But science as an intellectual system and endeavour has grown out of practical lore, and the desire of mastering circumstances remains as one of its mainsprings. On the other hand, while the pursuit of science will last as long as human curiosity, it is admitted by most that the crown of science is its contribution to the enrichment and betterment of human life. It is of interest to quote from a great investigator, H. A. Rowland, the following sentence:

'The aims of the physicist, however, are in part purely intellectual: he strives to understand the Universe on account of the intellectual pleasure derived from the pursuit, but he is upheld in it by the knowledge that the study of nature's secrets is the ordained method by which the greatest good and happiness shall finally come to the human race.'⁶

Trotter's excellent definition of a science sums up the matter: 'a body of knowledge derived from experience of its material and co-ordinated so that it shall be useful in forecasting and, if possible, directing the future behaviour of that material.'⁷

3. The scientific mood.—The scientific study of a subject implies a certain intellectual attitude or mood, which need not, however, be regarded as the only way of approaching a subject. Thus the æsthetic or artistic approach and the purely practical approach are not less legitimate than that of the scientific investigator. The characteristic features of the expert scientific investigator, or of any one desirous of having a scientific knowledge of a subject, may be described as a passion for facts (which implies a high standard of accuracy and a detachment from personal wishes); a cautious thoroughness in coming to a conclusion (which implies persistent scepticism and self-elimination in judgment); a quality of clearness (which implies a dislike of obscurities, ambiguities, and loose ends—what Faraday called 'doubtful knowledge'); and a less readily definable sense of the inter-relations of things, which discerns tentatively at least that apparently isolated phenomena are integral parts of a system. When Sir Michael Foster, in his Presidential Address to the British Association in 1899, said that the qualities which distinguish the scientific worker

⁷ *Instincts of the Herd*, London, 1916, p. 11.

are truthfulness, alertness, and courage, he was perhaps stating the case too generally, but he was making the point that the scientific mood does not necessarily imply expert knowledge of any particular science. It is often exhibited in a high degree by business men. Science is verifiable knowledge, systematized and generalized. As Benchara Branford puts it:

'Science is born anew in that wonderful world within each man when with deliberate will he succeeds in thinking about the principles of his work in the great world without in a clear, logical, and systematic way, and courageously puts his conclusions to the test of experiment; and the so-called sciences are the written records of such thinking, only more extensive, clear, systematic, and consistent, and more true to reality because they have been tested by countless experiments and experiences in the race.'¹

Perhaps, however, Huxley went too far in this direction when he spoke of science as 'organized common-sense,' for common-sense is often very easy-going as regards both its facts and its inferences. A corrective suggestion of the difficulty of being scientific is given in Karl Pearson's statement:

'The scientific man has above all things to strive at self-elimination in his judgment, to provide an argument which is as true for each individual mind as for his own. The classification of facts, the recognition of their sequence and relative significance, is the function of science, and the habit of forming a judgment upon these facts, unbiassed by personal feeling, is characteristic of what may be termed the scientific frame of mind.'²

4. The methods of science.—The first step in the scientific study of a problem is to get at the facts, to collect data. The virtues here are precision and exhaustiveness of observation, patience to go on collecting, impartiality to whatever is forthcoming, watchfulness against the deceptions of the senses, and humility to learn from previous mistakes made by ourselves and others. Common faults are hastiness, vagueness, acceptance of second-hand evidence, mixing up the immediate data of experience with inferences, and, worst of all, picking and choosing the facts that suit a preconceived theory.

A second step is accurate registration of the data. Science begins with measurement. Lord Kelvin said that 'nearly all the grandest discoveries of science have been but the rewards of accurate measurement and patient, long-continued labour in the minute sifting of numerical results.' Here come in instrumental aids to our senses, impersonal methods of registration such as photography, confirmatory observations by others, and various devices for securing accuracy. There is a quality of character involved, and it is very interesting that Clerk Maxwell should have referred in one and the same sentence to 'those aspirations after accuracy in measurement, and justice in action, which we reckon among our noblest attributes as men.' There is an ethical factor in the development of what has been called 'the scientific conscience.'

A third step is bringing the data into the most useful form. They may be so numerous that some statistical or graphic device is required for dealing with them. A very simple illustration is plotting out a curve which shows at a glance the general outcome of a multitude of measurements. It may also be that the data are not fully useful until they have been further analyzed or reduced to simpler terms, to a common denominator with other sets of facts with which they have to be compared. There is a familiar opportunity for fallacy here, for in reducing facts to simpler terms something may be lost sight of, as when we reduce a physiological fact to a series of chemical and physical facts. But, while the reduction of phenomena to their common denominator cannot be accomplished by violence, it must always be

attempted within the limits of the reasonable. Scientific description must be as simple as possible.

'To get away from appearances, to read the physical fact behind the sensuous effect, is one chief aim of science.'¹

So far the methods have been observational and descriptive—representing what Lord Kelvin used to call the 'Natural History' stage of study. But the essential step is generalization and formulation, which brings the study to the stage of 'Natural Philosophy.' A whole series of occurrences is seen to have a uniformity, which is called their law. A formula is found that fits them all, or, more frequently, a new set of facts is shown to be in conformity with a previously established law. A set of occurrences is unified by the discovery of the causal relations that make them one; a puzzling phenomenon is shown to be a disguised form of a well-known case; a body of facts is fitted into its place in the growing system of ordered natural knowledge. In the discovery of a formula that fits, the investigator is often helped by a flash of insight; but often he has to try one key after another until he finds one that works the lock.

'Bounded and conditioned by co-operant Reason,' Tyndall² said, 'imagination becomes the mightiest instrument of the physical discoverer. Newton's passage from a falling apple to a falling moon was, at the outset, a leap of the imagination.'

In other cases one hypothesis after another, one trial after another, may have to be made before a solution is found. And, whether the formulation is reached imaginatively or laboriously, whether it comes as a brilliant deduction from some previously established law or as a patient induction from many particulars or from an intricate interlacing of induction and deduction, it has to be tested and re-tested, criticized and verified, before it is allowed to rise to the rank of a theory. For a discussion of the logic of science we may refer to an essay by T. Case. Taking Newton's *Principia* as a supreme illustration, he shows that the method is neither the deductive Aristotelian nor the inductive Baconian, but both; it is the interaction of induction and deduction in a mixed method.

'The full title, *Philosophiæ Naturalis Principia Mathematica*, implies a combination of induction and deduction. It is also a combination of analysis and synthesis; it proceeds from facts to causes as well as from causes to facts.'³

Views of science are apt to swing from an extreme of objectivism to an extreme of subjectivism. On the one hand, it is sometimes forgotten that man forges the tools or refines the concepts which he uses in discovering and formulating the order of nature, that a great deal of the experimenting is experimenting with ideas and symbols in his own head, and that he labours under the difficulty of being immersed in the system which he describes, of being a product of the evolution which he analyzes. We can no more escape from anthropomorphism than we can from our shadow. Especially in the less exact sciences, such as biology, the danger is great that provisional concepts—e.g., 'the struggle for existence'—often borrowed from human affairs, may lead to fallacy. It must be admitted that, while there are few who now think of the laws of nature as governing the universe, as our forefathers phrased it, there are many who think of science as more objective and 'pure' than it actually is.

But the other extreme is that of those who over-emphasize the subjectivity of science. Impressed with the fact that man builds up his science by the sweat of his brow, inventing and trying concept after concept till he attains to an intellectual grasp of the facts, they exaggerate this into the doctrine that 'scientific truth is the creation of

¹ Arthur J. Balfour, *Theism and Humanism*, London, 1915, p. 79.

² *Fragments of Science*, p. 181.

³ In *Lectures on the Method of Science*, p. 15.

the human mind and not of outer nature.¹ But this misses what is characteristic of man's scientific formulation of the order of nature, that it must be verifiable by all normally constituted minds, that it must form a reliable basis for prediction, if not also for control. The order of nature is no human invention, though the formulations of it are often premature and inadequate. The concepts and symbols which man uses are not the happy thoughts of genius, but the outcome of other concepts which have survived a long process of trial and error, of testing and verifying. Between the two extremes of objectivism and subjectivism a reasonable position is tenable.

5. Scope of science.—Much confusion and unprofitable discussion might be avoided if the word 'science' were more frequently used with a qualifying adjective—chemical and physical science, exact science, mathematical science, natural science, biological science, mental and moral science, social science, abstract science, and so on. For investigators differ so widely in their outlook on the world that there can be no agreement as to the boundary lines of science. To many workers in chemical and physical science it seems doubtful whether biology and psychology are sciences at all, and to talk of political science seems to some the height of absurdity. What is just in this austere position is the recognition that in the domain of things, as treated by chemistry and physics, measurements can be made with extraordinary precision, analyses can be made with approximate completeness, formulations can be made with practical exhaustiveness, and, given a knowledge of the conditions, predictions can be made with remarkable success. So it is with the exact sciences—gravitational astronomy being the finest instance. When we pass to living creatures and their behaviour, to human societies and their inter-relations, we find that accurate measurement and precise registration are more difficult, analysis is very imperfect, formulation is only provisional, and prediction is in most cases hazardous. Moreover, test-experiments similar to those which are so valuable in the chemical and physical sciences are often difficult or impossible in biology, psychology, and sociology. The areas of greatest certainty in biology, *e.g.*, are in most cases those where chemical and physical methods are applied to the description of chemical and physical processes occurring in connexion with organisms. The discovery of methods, concepts, and formulae for dealing with matter and energy is, as Bergson insists, far from having its counterpart in the realm of organisms or in the kingdom of man. The view taken in this article is the common-sense one, that science includes all knowledge, communicable and verifiable, which is reached by methodical observation and experiment and admits of concise, consistent, and connected formulation. In regard to one order of facts the application of scientific methods has gone far, in regard to another order of facts it has just begun, but the incipient science has no reason to be ashamed beside her full-grown sister. An exact science is like a solar system, a young science is like a nebula, but we see no reason why the student of dreams may not be as 'scientific' as the student of rocks, provided that he does not allow assertion to outstrip evidence and understands what he knows. The temptations not to be scientific increase, however, in proportion to the availability of precise methods, and it is interesting to notice that one of the kinds of scientific 'discovery' is finding a method that can be used in the investigation of a previously more or less refractory set of facts. Even the most advanced science is, in Spencer's phrase,

¹ J. B. Baillie, in *HJ* xv. (1917) 359.

'partially unified knowledge'; the most living science is that in which the process of unification is most continuous.

Of importance is the distinction, on which emphasis has been laid by Clerk Maxwell¹ and others,² between dynamical and statistical knowledge in physics. It corresponds to the distinction between physiological and biometric knowledge in biology, to the distinction between the study of individuals and the study of averages in social affairs. The two are complementary, but in many cases our knowledge of natural occurrence is almost entirely statistical.

Another saving clause of importance relates to scientific symbols. The modern physicist visualizes all that his analysis can be applied to in terms of groupings and displacements of ultimate particles—the atomistic view of nature; and he is able with a good scientific conscience to assure us that there are such things as atoms.³ The modern physicist can speak of the actuality of the atom, just as the geologist can speak of the actuality of the mountains. But this is a modern achievement, for until a few years ago the atom was only a symbol, a probably real working hypothesis. And, while the reality of the atom has been experimentally verified, there remain many useful working symbols that have not reached this stage. Thus the 'determinants' in Weismann's theory of heredity and the 'ceptors' in some theories of immunity are working symbols. Yet these symbols never live long if they are fanciful or arbitrary; they are retained only if experiment shows that they correspond in some measure to reality by forming a trustworthy basis for prediction and control. The history of science shows in an eloquent way how provisional symbols gradually attain to the dignity of realities.

6. Classification of the sciences.—It is useful to have in the mind some well-defined map of knowledge, which may suggest inter-relations, counteract partial views, and help towards the fulfilment of Plato's demand that the true lover of science shall be interested in the whole of his subject. But the particular form of the classification—whether after Comte or Spencer, Bain or Pearson, or Geddes—is probably of less importance than its personal quality. For the classification which we have in our mind must express part of our philosophy. Its boundary-lines will, for instance, express our conclusions as to the autonomy or dependence of biology and of psychology, our decisions on the difficult problems of vitalism and materialism, our views as to the distinctiveness of sociology or its subordination to biology, and so on.

Another general idea of importance is that a science is defined not by its subject-matter, as is often erroneously contended, but by the methods, fundamental concepts, and formulae used in working with the material. Two or three sciences often deal with the same material; thus the chemist, the physicist, and the biologist may work with different ends in view, and in correlation if they are wise, at one and the same material, such as contracting muscle. A chemist, for purposes of his own, may devote his life to the study of the aromatic substances in flowers, and yet never ask a single botanical or biological question. It is a confusion of thought to map out territories as preserves of particular sciences, though every one recognizes broadly that there are three great orders of fact, *viz.* the domain of things, the realm

¹ A paper in *The Life of James Clerk Maxwell*, by L. Campbell and W. Garnet, London, 1882, ch. xiv. p. 421.

² J. T. Merz, *History of European Thought in the Nineteenth Century*, ii. 190.

³ See J. J. Thomson, *The Atomic Theory* (Romanes Lecture), Oxford, 1916.

of organisms, and the kingdom of man—the cosmosphere, the biosphere, and the sociosphere, as some have said.

It is useful to separate off, first of all, the abstract, formal, or methodological sciences, which deal with necessary relations between abstract concepts or between propositions, 'irrespective of the special nature of the concrete objects for which the ideas stand or to which the propositions refer.' They are deductive rather than inductive, ideal, not experiential, they are not directly based on the data of observation or experimentation. They deal with methods of inference, they supply intellectual instruments of investigation, they afford criteria for testing the consistency and completeness of scientific descriptions. They comprise especially mathematics (including statistics and graphics) and logic; and it appears to many that a place should be found here for a department of metaphysics, a criticism of categories, or a study of explanations as such.

The other sciences are concrete, descriptive, experiential, sciences of phenomena in contrast to sciences of formal relations. It is useful to recognize five fundamental and general sciences—chemistry, physics, biology, psychology, and sociology. Chemistry is mainly the science of the different kinds of matter, their transformations, affinities, and interactions; it is *par excellence* the science of molecules, atoms, and corpuscles. Physics is in the main the science of the transformations of energy. Biology is the science of the structure and activity, development and evolution, of organisms, including man as organism. Psychology is the science of the subjective aspect of behaviour, of man and animals. Sociology is the science of the structure and life, growth and evolution, of societary forms or of communities. There is something to be said for recognizing only three fundamental or general concrete sciences—chemistry and physics in one, biology and psychology in one, and sociology the third; but the fivefold scheme is the more convenient in the present state of science.

(a) Dependent on the five general sciences are the special or derivative sciences; thus botany, zoology, and protistology are special sciences within the rubric of the general science of biology. A great part of astronomy and most of meteorology must be ranked under physics, a great part of mineralogy under chemistry. These special sciences are to be distinguished from sub-sciences like morphology, physiology, and embryology, which are subdivisions of biology, or of botany and zoology when these are separated off. (b) Many of the derivative sciences deserve a compartment for themselves, being synoptic or combined sciences, using the methods and concepts of several sciences for their own particular purposes. Thus geology is a synoptic science, the focusing of several sciences on the study of the earth. Geography in the same way is a circle intersecting four or five other circles for a particular purpose. Anthropology is another good example of a combined or synoptic science. When it is practically convenient to segregate off a particular field of inquiry, a science may arise which has no radical characteristics of method. Thus the sublime science of astronomy is but a focusing of mechanics, thermodynamics, optics, and chemistry on the particular phenomena of suns, planets, and the like. (c) Lastly, it seems useful to keep the term 'applied science' for any department of a special science or for a combination of parts of several special sciences, directly oriented towards practical issues—e.g., those of the arts and crafts. Thus agricultural science and medical science, the science of engineering, and the science of education

are in great part applied sciences and are neither more nor less scientific on that account. As Huxley always insisted, 'applied science' is nothing but the application of 'pure science' to detailed practical problems.

7. *Correlation of the sciences.*—A counteractive to the impression of heterogeneity which a study of the classification of the sciences gives us is found in a recognition of their unity or, better, their correlation. They are parts of one endeavour to understand the order of nature and human life within it. They work into one another's hands, they react on one another, they are different modes of one rational inquiry. Several of them may deal with one and the same subject and yet not exhaust it. But it is begging many questions to insist that there is only one science of nature, which describes things and changes of things in terms of ideal motions, expressible in mathematical formulæ. This is false simplicity; it does not really work.

In seeking to understand and thus in some measure to control a difficult system, such as a living organism, the methods of several different sciences may be used in correlation. From the biological side the organism may be studied in its morphological, physiological, and embryological aspects; a deeper appreciation may be gained by studying its behaviour and the mental aspect of that. Many physical and chemical processes that contribute to the resultant which we call living may also be analyzed apart, and thus bio-physical and bio-chemical aspects receive their share of attention. Moreover, the creature has to be studied in its inter-relations with its appropriate environment, both animate and inanimate. It has also to be studied in its time relations; it is an heir of the ages, a historic being. The results of the various inquiries have to be pooled, or rather integrated. For the total scientific view must not be one that dissolves the organism; it must be one that makes its unity stand out conspicuously. The sciences are most scientific when they are most correlated, for they mutually correct one another, and our appreciation of the depth of reality is enhanced. New life came to astronomy and again to physiology when each established its correlation with chemistry; and biologists look with equal interest to such modern correlations as bio-physics on the one hand and psycho-biology on the other. One of the promising methods of scientific discovery is to effect new contacts or correlations.

If vital phenomena can be adequately described in chemical and physical (*i.e.* ideally mechanical) terms, a unification of biology and physico-chemistry has been effected. But the unification is not established by demonstrating that chemical and physical processes in an animal are in line with those in a thermodynamic engine. The applicability of chemical and physical methods to the study of vital processes is admitted by all; the utility of chemical and physical formulæ in the description of what goes on in living creatures is admitted by all; but the question is whether the chemical and physical concepts are adequate for anything like complete description of the behaviour of the animal, and whether we can deduce the behaviour of the animal from laws which apply equally to the animal and to the thermodynamic engine, to the flower and to the star.

We quote Arthur O. Lovejoy's statement of this point:

'Scientific unification, then, takes place in so far as diverse classes of phenomena come to be recognised as deducible from a single, relatively simple generalisation concerning the correlation of certain variables—provided that in each particular case the actual natures or values of the variables be known. And unification fails of attainment in so far as two or more kinds of phenomena appear (in the light of existing knowledge) as un-

deducible from any single, already verified law, even were the actual values of the variables referred to by any such law precisely ascertained for the phenomena in question. When two or more comparatively specific laws are, in this latter sense, incapable of being deduced from any common, more general law—in other words, are not, thus far, unified—we may speak of those laws as being discontinuous with one another.¹

And, as the same author points out, another mode of discontinuity will emerge in this connexion if it should be shown that the motion of matter in a living cell does not correspond in its uniformities with the motion of inorganic matter. We have seen that what the animal does may be in conformity with the laws of thermodynamics and yet not be deducible from them; but there will be further discontinuity if it be shown that the motion of particles in the organism sometimes neither follows from nor conforms to the motion of particles in an inorganic system like, say, a whirlpool.

Treating of the work of science, A. E. Dolbear writes:

'By explanation is meant the presentation of the mechanical antecedents for a phenomenon in so complete a way that no supplementary or unknown factors are necessary.'²

Now, what many biologists are impressed with, *e.g.*, in regard to the higher reaches of animal behaviour, is the present necessity of invoking other than mechanical factors, such as memory and a power of learning.

Thus it may be said that the ideal of one science of nature—the ideal of Descartes, of Hobbes, of Leibniz—has given place to an ideal of correlation rather than of unity. There has, indeed, been much profitable breaking down of artificial partitions, many a useful discovery of a common denominator bringing apparently disconnected facts into comparable relationship, but the possibility of making physiology a branch of physics, psychology a branch of physiology, and so on, has not been realized. Moreover, the measure of abstractness which marks each science makes it impossible that a unified scientific view of the world can be attained by merely pooling the results of each kind of exploration. The chemical, the physical, the biological, and the psychological formulations of an organism, *e.g.*, cannot be left as accretions to an aggregate of knowledge; they must be correlated; and this is what some would call 'the philosophy of the organism.'

8. Limitations of science.—Science is knowledge gained by certain methods; to apply these methods usually demands a partial or abstract consideration of the subject-matter; 'Divide et impera' is the scientific rule. This is a self-imposed limitation of science—that its descriptions and formulae refer to abstracted aspects of things. We can no more in actuality separate a living organism from its environment than we can remove a whirlpool from the river, yet for scientific purposes the abstraction has to be made; and up to a certain point—*e.g.*, in analytical anatomy—it is made profitably. The same is true in more exact spheres: the concept of mass is essential in dynamics; we treat of the mass of a body as if we had the body under the influence of gravitation only. But in actual observations and experiments we can never really secure the entire absence of electrical, magnetic, and other forces. To put it in another way, science works with 'ideal systems,' and this is one of its limitations. Thus in a general way it may be said that science aims at practically convenient representations of certain aspects of facts, deliberately abstracted from other aspects.

The terms of scientific formulation are in diverse degrees far from being self-explanatory. In biology it is necessary to speak of 'organism,' 'protoplasm,' 'heredity,' and so on, but these terms obviously

require further analysis or definition—which the biologist is indeed trying to work out. In more exact sciences there are secret-hiding terms like 'gravitation' and 'chemical affinity.' It is true that the terms of scientific description are continually undergoing a process of simplification, but how limited is our comprehension of the fundamental terms like 'matter,' 'energy,' 'inertia,' 'life,' 'consciousness'! Thus a good deal of what is called scientific 'explanation' consists in reducing unusual unintelligibility to order rather than to understanding.

Another limitation concerns origins. The scientific treatment of an order of facts begins, not at the beginning—that is impossible—but from something 'given,' which is not explained. The biologist begins with the first organisms, or with the first visible organisms, or with the first visible organisms upon the earth. But what was their origin? The chemist begins with the chemical elements, but what is meant by being an element and what was the origin of the fourscore of them? Matter has seemed to many easy-going minds a firm basis to start from, but what is matter, and what has been its history? Must there not have been a differentiation of various forms of matter, and may there not have been a pre-material state of things? This necessary limitation of science has been well stated by Arthur Shipley:

'No body of scientific doctrine succeeds in describing in terms of laws of succession more than some limited set of stages of a natural process: the whole process—if, indeed, it can be regarded as a whole—must for ever be beyond the reach of scientific grasp. The earliest stages to which Science has succeeded in tracing back any part of a sequence of phenomena itself constitutes a new problem for Science and that without end. There is always an earlier stage and to an earliest we can never attain. The questions of origins concern the theologian, the metaphysician, perhaps the poet.'¹

Another limitation has to do with causal sequences. In ordinary scientific discourse, as Bergson points out, three different meanings of the term 'cause' are common. A cause may act by impelling (one billiard ball striking another), or by releasing (a spark exploding the gunpowder), or by unwinding (the relaxing of the spring turning the cylinder of a gramophone and having the melody as effect).

Now 'only in the first case, really, does cause explain effect; in the others the effect is more or less given in advance, and the antecedent invoked is—in different degrees, of course—its occasion rather than its cause.'²

The only cases where a scientific account is complete are cases of mechanics, where the resultant is just a new form of the components, where we can say with a clear intellectual conscience, 'Causa aequat effectum.' In the great majority of cases all that science can say is, 'If this, then that'; and it is a very useful thing to be able to say. One particular totality of condition changes into another, but, when the chains of sequence are intricate, it is no longer plain that the resultant must be as it is and not otherwise. Science shows that a certain collocation of antecedents and no other will result in a certain collocation of consequents and no other; but it is only in the case of mechanical sequences that we fully know how it is that the consequents emerge from the often very different antecedents.

We have seen, then, that limitations are involved in the inevitable abstractness of science, in the residual or radical mysteriousness of its fundamental concepts, in what has to be taken as 'given,' and in the difficulty of giving complete causal explanations except in the case of purely mechanical sequences. But there are limitations of other kinds. Thus a reasonable humility of mind may be fostered by remembering how limited is our range of exact data. An admission of this may be cited

¹ Schuster and Shipley, *Britain's Heritage of Science*, p. 276.

² *Creative Evolution*, Eng. tr., p. 771.

¹ 'The Unity of Science,' *Univ. Missouri Bulletin*, 1. (1912) 17.
² *The Machinery of the Universe*, London, 1911, p. 14.

from an address delivered about the end of the 19th cent. by a distinguished physicist, Henry A. Rowland:

'It is a curious fact that, having minds tending to the infinite, with imaginations unlimited by time and space, the limits of our exact knowledge are very small indeed. In time we are limited by a few hundred or possibly thousand years; indeed the limit in our science is far less than the smaller of these periods. In space we have exact knowledge limited to portions of our earth's surface and a mile or so below the surface, together with what little we can learn from looking through powerful telescopes into the space beyond. In temperature our knowledge extends from near the absolute zero to that of the sun, but exact knowledge is far more limited. In pressures we go from the Crookes vacuum still containing myriads of flying atoms to pressures limited by the strength of steel, but still very minute compared with the pressures at the centre of the earth and sun, where the hardest steel would flow like the most limpid water. In velocities we are limited to a few miles per second. In forces to possibly 100 tons to the square inch. In mechanical rotations to a few hundred times a second.'

Finally, there is a sense in which science, if not asymptotic, is bound to remain approximate. A scientific law formulates an observed routine in the order of nature, and, if it has been established with due care, there is no going back on it unless the properties of the materials observed should change. It may be, however, that the law was only an approximate 'fit' and left residual phenomena, a recognition of which subsequently led to a re-statement of the law. So Kepler improves on Copernicus and Newton on Kepler. Even when the formulation fitted well and may have come to be regarded as of universal application, the extension or the intensification of research may show that it does not apply beyond certain limits. Thus the law of gravitation, which must be very near to perfect accuracy when applied to planetary distances, may not hold either for very minute molecular distances or for immense stellar distances. Even generalizations which work well and must bear a close correspondence to reality, since they afford a basis for effective prophecy, may require some modification, in their setting at least, in the light of some new fact or idea of great magnitude. Thus Frederick Soddy writes:

'It sounds incredible, but nevertheless it is true, that science up to the close of the nineteenth century had no suspicion even of the existence of the original sources of natural energy. . . . The vista which has been opened up by these new discoveries [of the radioactive properties of some substances] admittedly is without parallel in the whole history of science.'²

And Max Planck writes of the principle of the relativity of time:

'With the revolution which it brings about in our conception of the physical universe no other is comparable, in range and profundity, except that due to the introduction of the Copernican astronomy.'³

Finally, it may be useful to remember that, according to current and probably well-warranted scientific belief, there was once a time when what happened upon the earth might have been formulated in its immediacy with apparent exhaustiveness in terms of the dynamics of particles. But ages passed and living creatures emerged; new formulæ, as it seems to us, became necessary. Ages passed and intelligent creatures commanded their course; again a new aspect of reality required a new science. Ages passed and man emerged—with self-consciousness, language, reasoning capacity, and a social heritage. Science must always be asymptotic, for its subject-matter is evolving.

9. Science and feeling.—There is a natural antithesis between the scientific and the emotional mood; when either is in the saddle, it must keep the other at a spear's length. Science is essentially unemotional and impersonal, and its analytic, atomizing or anatomizing, methods are apt to be, in their matter-of-fact-ness, destructive of artistic

unities and poetical interpretations. But, when science makes minor mysteries disappear, greater mysteries stand confessed. Science never destroys wonder, but only shifts it, higher and deeper. For one object of delight whose emotional value science has inevitably lessened—as Newton spoiled the rainbow for Keats—science gives back double. To the grand primary impressions of the world-powers, of the immensities, of the pervading order, and of the universal flux, with which the man of feeling has been nurtured from of old, modern science has added thrilling impressions of manifoldness, intricacy, inter-relatedness, and evolution. Science has supplied art and poetry with far more raw materials than have yet been utilized. Science is ever widening and clarifying the emotional window. There are great vistas to which science alone can lead, and they make for elevation of mind. In this and in other ways science may be epigrammatically called 'one of the humanities.'

10. Science and philosophy.—A scientific system is the formulation or description of methodically observed sequences and inter-relations within groups of occurrences that admit of being measured or precisely registered. A philosophical system is the outcome of interpretative reflexion on the whole data of our experience. Science is characteristically impersonal, or, in any case, it must admit of being readily de-personalized by competent minds; but a man's philosophy must always have a personal note. To the influence of Kant, of the correlated 'philosophies of nature,' and of Hegel may be traced the fact that science and philosophy drew apart in the 19th cent., and more markedly in Germany than in France or England. Moreover, the rise of biology was giving a new completeness to science, and a fresh vigour possessed scientific inquiry as a whole. It naturally followed that scientific investigators began to resent the way in which philosophy called the tune that it wished science to play. More technically, science became less receptive to regulative concepts insinuated by philosophy into the scientific workshop. A diagrammatic example was the philosophical declaration that there could not be more than seven planets. For a time, indeed, it was in the interests of progress that science should be on the defensive against philosophy; but now there is more need for it to be afraid of thinking that it can dispense with its partner. It is well and good to ride the marches; 'I ask not proud Philosophy to tell me what thou art'; I shall scrutinize for myself. But there is a tendency on the part of science to forget its limitations, to be unaware of its assumptions, and to be easy-going in the criticism of its own categories. The truth is that science and philosophy are complementary. From the analytic descriptions which science gives we cannot but go on to the more synthetic endeavour of forming some coherent picture of the whole scheme of things and thoughts. Beyond the attainment of knowledge there is the unending search after truth.

A modern philosophy worthy of the name must take account of all the far-reaching results of scientific inquiry, of all the general conclusions of science in regard to the nature and genesis of the inorganic, the organic, and the human. A modern philosophy is inadequate which has not been influenced by the principle of the conservation of energy, by the doctrine of organic evolution, by the outstanding facts of heredity, and so on. On the other hand, philosophy justly reserves the right of critically scrutinizing the scientific conclusions which it uses in building up its interpretative system. Thus the principle of the conservation of energy, formulated in reference to the transfor-

¹ 'The Highest Aim of the Physicist,' in *Amer. Journ. Sci.* viii. [1899] 408.

¹ See Baillie, in *HJ* xv. 353.

mations of physical energies, must not be allowed to foreclose discussion of the question whether mind and body (if these be recognized as admissible scientific or philosophical terms) can interact in a way that really counts. And the answer given to that question, or to some similar question more satisfactorily phrased, affects the general philosophical or metaphysical theory that one has of the world as a whole. Science may help philosophy by bringing into prominence the results that seem to be of the most radical significance, and also by inquiring whether the facts of the case, from the scientific outlook, are congruent with the interpretations which philosophy puts upon them. On the other hand, philosophy may help science by criticizing its categories and its logic. For philosophical discipline develops a critical faculty which is different from that cultivated by ordinary scientific methods though we lessen none of the emphasis with which we have indicated that the acquirement of the 'scientific conscience,' most practicable in the discipline of the natural sciences, is of fundamental value in the solution of human problems. Especially in the spheres where it remains less exact science requires the rigorous application of a higher logic, a methodology, a critique of explanations, which some have called metaphysics. Many of the greatest discoverers of new knowledge seem to have had singularly little philosophical sense.

A. E. Taylor gives a luminous statement of the relation between science and philosophy:

'The work of the Philosophy of Nature and of Mind only begins where that of the experimental sciences leaves off. Its data are not particular facts, as directly amassed by experiment and observation, but the hypotheses used by experimental science for the co-ordination and description of those facts. And it examines these hypotheses, not with the object of modifying their structure so as to include new facts, or to include the old facts in a simpler form, but purely for the purpose of estimating their value as an account of ultimately real existence. Whether the hypotheses are adequate as implements for the calculation of natural processes is a question which Philosophy, when it understands its place, leaves entirely to the special sciences; whether they can claim to be more than useful formulae for calculation, i.e. whether they give us knowledge of ultimate Reality, is a problem which can only be dealt with by the science which systematically analyses the meaning of reality, i.e. by Metaphysics. We may perhaps follow the usage of some recent writers in marking this difference of object by a difference in terminology and say that the goal of experimental science is the description of facts, the goal of Metaphysics their interpretation. The difference of aim is, however, not ultimate. Description of facts, when once we cease to be content with such description as will subserve the purpose of calculation and call for the description of the fact as it really is, of itself becomes metaphysical interpretation.'¹

One of the deep facts of experience, persistently impressive to the thoughtful, is that science is possible at all—and on so grand a scale; that nature is so amenable to scientific formulation. This raises questions for philosophical consideration, but it must also be looked at through scientific spectacles. Experiential science does not attempt to explain consciousness, but it is not quite accurate to say that science simply accepts in a naive sort of way the wonderful fact of its own existence. To be asked 'How is this marvellous fabric of science to be explained in terms of evolutionary formulæ?' is like being asked to account for some very complex and relatively perfect structure like the human eye. All such questions must be treated historically: science and the eye must be regarded as the results of long processes of evolution, vastly older than man. Science has its roots in prehuman capacities of 'learning,' of intelligently profiting by experience. It has grown from very elementary inferences relating to man's everyday practical problems. The acquisition of the early lore and the expansion of it had assuredly survival value; and inborn

curiosity has been from first to last a stimulus to inquiry. Registration of gains in language and records, in instruments and permanent products, made cumulative advance secure. We are only hinting at an aetiology of science. But, when we go back to the possibility of it all, the metaphysical problem remains: the strands of naturally-determined sequence having woven themselves into an intelligible pattern, which human reason slowly and laboriously discovers, is it conceivable that they might have tied themselves into a knot baffling all disentanglement? In any case it is possible to suppose that our planet might have remained permanently beclouded like Jupiter, and then, as Poincaré points out, we should never have seen the stars and might never have advanced far in deciphering the order of nature. Various attempts, such as Lachelier's (1871), have been made to explain this 'correspondence' between the intrinsic order of nature and man's capacity for deciphering it, but it seems doubtful if we get beyond some device which dissolves rather than solves the problem. It looks like a frontier-problem for man's intellect. We may find ultra-scientific reasons for believing that nature is the embodiment of a divine thought and purpose, one evolutionary expression of which is man's increasing recognition of the order of nature. The Logos, or Mind, or Reason, thus postulated at the beginning, reappears in the form of science later on.

11. Science and religion.—Science is empirical in method and aim: it seeks to discover the laws of concrete being and becoming and to formulate these in the simplest possible terms. These terms are the immediate data of experience or verifiably derived therefrom. The scientific 'universe of discourse' does not include transcendental concepts; its aim does not include attempting to give ultimate explanations.

Religion, on the other hand, implies a recognition—practical, emotional, and intellectual—of a higher order of reality than is reached in sense-experience. It means the recognition of an unseen universe, which throws light on the riddles of the observed world. In the scientific light of common day are seen the hosts of the Assyrians encompassing the city; the opened religious eye sees the mountains crowded with the chariots of God. Unless religion is altogether illusory, the metaphor of this illustration expresses a cleavage. The religious language is not scientific language, but with different concepts and necessarily more metaphorical; its aim is not the scientific aim, for it seeks after interpretation, not description. In short, science and religion are incommensurables. As a diagrammatic illustration of misunderstanding, we may refer to the title of a book, *God or Natural Selection*—so obviously a false antithesis. But to call scientific formulation 'incommensurable' with religious interpretation is not to concede to the old-fashioned impossible solution of having idea-tight compartments in our intellectual voyages. Just as a novel scientific generalization is not incorporated into our scientific system unless it is consistent with previously established conclusions or unless the latter are susceptible of re-adjustment so as to admit the new idea harmoniously, so at a greater height, where philosophical discipline is invaluable, a religious idea, such as that of a Divine Creator, must be congruent with the rest of our world-picture. Here, both learned and laity have to face the moral obligation of clear thinking—which to be valid must be in conditions of organismal freedom.

Men are led to religion along many pathways—from the perplexing contradictions of the moral life, from an appreciation of the facts of history,

¹ *Elements of Metaphysics*, p. 192.

and from what is experienced by the three main types of mankind: at the limits of practical endeavour, of emotional expression, or of intellectual inquiry. When we think of the last-named pathways to religion—from baulked struggle, over-strained emotion, and baffled search after clear understanding—it is not difficult to see why the rapid development of science should have worked, for a time of transition at least, against religion. For science has given man an astonishingly increased mastery over nature; science with its numerous analytic triumphs has tended to diminish, in the shallow-minded, the sense of wonder, and science has dispelled much of the darkness which used to oppress man's mind. Moreover, the scientific mood has been widely diffused; it has a growing fascination of its own; it easily comes to preoccupy the mind and thus tends to crowd out the æsthetic, the poetic, the religious moods. The practically important conviction is that religious interpretation and scientific analysis are equally natural and necessary expressions of the developing human spirit.

12. Science and life.—In what has been said of the aim of science the primary purpose of understanding and the accessory purpose of controlling have been recognized. As Bacon said of Salomon's House in the *New Atlantis*:

'The end of our foundation is the knowledge of causes and the secret motions of things; and the enlarging of the bounds of human empire, to the effecting of all things possible.' It is unwise to separate the two aims too strictly, for all the sciences, including mathematics, sprang from concrete experience of practical problems, and many theoretical advances have contributed largely to the relief of man's estate. As Branford has well said:

'Science ultimately sprang, and is continually springing, from the desires and efforts of men to increase their skill in their occupations by understanding the eternal principles that underlie all dealings of man with Nature and of man with his fellow-men. . . . And if science ultimately has sprung from, and is continually springing anew from, occupations, science has repaid the debt both by rendering those who follow her teaching more skilled in their occupations and by actually giving rise by her discoveries to absolutely new types of occupations. One of the great conditions of human progress is this unceasing reciprocal relationship between occupation and science, each constantly producing and being produced by the other.'¹

The practical utility of the sciences is so great that there is danger in exaggerating utilitarian criteria. It is profitable to remember the distinction drawn by Bacon long ago between those results of science which are light-giving (*lucifera*) and those which are of direct practical utility (*fructifera*), regarding which he said so admirably:

'Just as the vision of light itself is something more excellent and beautiful than its manifold use, so without doubt the contemplation of things as they are, without superstition or imposture, without error or confusion, is in itself a nobler thing than a whole harvest of inventions.'²

A second point is the historical fact that the kind of investigation whose results Bacon called *lucifera* is the surest, and sometimes even the shortest, road to that other kind of result which he called *fructifera*. The most 'theoretical' researches have often had practical results of extraordinary magnitude. The quiet thinkers in the scientific cloisters are, like the poets, the makers and shakers of the world. This is admirably discussed in R. A. Gregory's *Discovery*, where it is shown, e.g., that wireless telegraphy, the telephone, aeroplanes, radium, antiseptics, antitoxins, spectrum analysis, and X-rays were all discovered in the course of purely scientific and very theoretical investigation.

The old discouragement expressed in the saying

¹ *Journ. of Education*, June 1904; see *Janus and Vesta*, p. 188.

² *Novum Organum*, cxxix

that increase of knowledge is increase of sorrow has been replaced by the hope of science as contributory to human welfare. This is pithily expressed in Herbert Spencer's well-known sentence: 'Science is for Life, not Life for Science.' While we may not be able to say of any specialized line of scientific inquiry that it is not of value to human life, there are undoubtedly some that are more promising and urgent than others. The pursuit of knowledge sometimes stands in need of being socialized, i.e. of being oriented in relation to the needs of the State. As Bacon said in a famous passage in *The Advancement of Learning*:

'This is that which will indeed dignify and exalt knowledge if contemplation and action may be more nearly and straitly conjoined and united together than they have been.' And the passage preceding this ends by declaring that what is sought in knowledge should be 'a rich storehouse for the glory of the Creator and the relief of man's estate.'

The duty of science to provide knowledge 'for the relief of man's estate' has its counterpart in the duty of the State to utilize the resources of science. That this duty is only half realized is certain.

'Whether we think of the more effective and less wasteful exploitation of the Earth, or of the gathering in of the harvest of the sea, or of making occupations more wholesome, or of beautifying human surroundings, or of exterminating infectious diseases, or of improving the physique of the race—we are filled with amazement at the abundance of expert knowledge of priceless value which is not being utilised.'³

Just as many ills that the flesh is heir to are met no longer with fatalism and folded hands, but by confident therapeutics and preventive medicine, so over a wide range there is a promiseful application of all kinds of science for the amelioration of the conditions of human life. Man is only beginning to enter into his kingdom; much suffering, depression, and poverty is remediable; the potency of the influences of improved nurture, in the widest sense, has not as yet been adequately appreciated. The idea of a scientific control of human life is gripping men's minds with fresh force, and, instead of meeting suffering and disharmony by apologetic justifications of the ways of God to men or by submitting to them as means of discipline, a nobler piety is insisting on their reduction and, it may be, eventual disappearance. It is man's part to build up, as he is doing, a scientific systematization of knowledge which will increasingly form the basis of a control of life. The implications of this ideal have been well set forth by L. T. Hobhouse in his *Mind in Evolution*² (London, 1915), *Development and Purpose* (do. 1913), *Morals in Evolution* (do. 1906). He speaks of the mundane goal of the evolutionary movement as being the mastery by the human mind of the conditions, internal as well as external, of its life and growth.³

Thus, without any depreciation of the other factors that make towards a good life, one may emphasize the ethical value of science. For science judiciously applied removes gratuitous hindrances to the good life and opens portals. Science well taught and well learned means an introduction to the ever-expanding interest and wonder of the world. In many cases, as William Archer⁴ has said, 'vice is a refuge from boredom, from that sense of emptiness and tedium that overtakes the idle brain, or the brain benumbed by soulless, uninteresting labour. But boredom, in this wonderful world, can only result from ignorance, or from—what is much the same thing—irrelevant, inert, burdensome knowledge.' On broader grounds still, he goes on to argue that in the building up of character a part is normally played by apprehension of the world as it is and as it has come to be.

J. ARTHUR THOMSON.

SCOTISM.—See SCHOLASTICISM.

SCOTTISH PHILOSOPHY.—The specific doctrines of the Scottish school of philosophy come to us from the second half of the 18th cent. and are immediately associated with Aberdeen. Before that date, indeed, there were Scots philosophers who made their mark in various lands and in diverse circumstances of life; but this fact does not bring them within the range of the school that we are now considering. The term 'Scottish philosophy' is properly restricted to a certain type of Scottish thinking and must not be so extended as to include any and every philosopher (Hume, *e.g.*, or Hutcheson, or Thomas Brown) who happened to be by birth or by residence a Scotsman. It is the name for the philosophy of 'common sense,' characterized by its devotion to psychology, its adherence to the inductive method in philosophical

research, and its determination to find in human nature itself the guarantee for truth. It owed its great impulse, in the 18th cent., to Thomas Reid, in Aberdeen, and was supported and expounded by several of his colleagues in the Aberdeen Philosophical Society—mainly by George Campbell, James Beattie, and Alexander Gerard. It was called forth by opposition to the principles and reasoning of David Hume; and, while having as its chief aim the due appreciation of the moral and religious tendencies of man, it paid full regard to the theoretical or speculative side of human nature. It was opposed to Hume, but, at cardinal points, to Locke and to Berkeley also, and to what Reid called 'the ideal system,' in all its forms. It was a spiritualistic philosophy, cautious and measured, designed to meet scepticism and to remove doubt by an appeal to what it conceived to be most fundamental in man's constitution.

Its appeal was to 'first principles,' intuitively apprehended. Experience was by no means ignored, but it was not looked upon as sufficient in itself for everything. While explaining much in human life, it needed itself to be explained: it could not account for principles that it itself presupposed, and whose authority was drawn from another source. That is what is meant by 'common sense.' The name has often been criticized, as though the use of it as a leading term ruled the Scottish philosophy out of court as a philosophy. It covered (so the critic has averred) a mere otiose acceptance of the unsifted opinions and beliefs of the plain man. But that is an entire misconception and could hardly have been entertained if due attention had been paid to the history of philosophy. Aristotle had employed the term 'common sense' as the designation of the synthetic power of the human mind in the unifying of experiences that come to us through the separate senses (sight, hearing, touch, etc.), in memory, and in 'the common sensibles' (rest, motion, etc.); and he had maintained the intellect (*νοῦς*) to be the *fons et origo* of first principles, regarding it as a native psychical activity, without which knowledge could not be, and through which alone experience becomes intelligible. So the Scottish philosophers held with regard to their doctrine of 'common sense.' The term indicates the native power and activity of the mind, which is necessary if experience is to be possible. In like manner, the Stoics, in their theory of knowledge, had laid stress on 'common consent' (*consensus gentium*) as the test of primary conceptions. They did not by this mean that the plain man, *qua* plain man, is to be the arbiter of truth; but, holding, as they did, that men everywhere share in reason and that reason is ultimately stored in the primal source of all things and is drawn by man therefrom, they maintained that there must be truths in which men in general share, and which, consequently, by the very fact that they are 'common notions' (*κοινὰ ἔννοιαι*), have an authority higher than experience alone could give—an authority that is all their own. It was sympathy with these thinkers (Peripatetic and Stoic) or with thinking on these lines that led the Scottish school to look for support to 'common consent' and to adopt the name of 'common sense' as designative of their philosophy.

I. IN THE 18TH CENTURY.—1. Thomas Reid.—The first and, in certain respects, the greatest of the Scottish philosophers was Thomas Reid.

He was the second son of the minister of Strachan, Kincardineshire, and was born there on 26th April 1710. On his mother's side, he was a member of the notable Deeside family of Gregory (akin to Rob Roy), of whom no fewer than fourteen became professors in Great Britain. He was educated at the parish school of Strachan in earlier days and, later, at the Grammar School of Aberdeen. He entered Marischal College and University in 1722 and graduated M.A. in 1728. Thereafter he studied Divinity, with a view to entering the ministry of the

Church of Scotland, and was licensed as a preacher of the gospel by the Presbytery of Kincardine O'Neil in 1731. From 1735 to 1736 he occupied the position of librarian of Marischal College. In 1737 he was presented by the Senatus of King's College and University to the parish of New Machar, adjoining Aberdeen, where he remained as minister till 1751. During his ministry he carried on and developed his philosophical and intellectual studies. He was expert in mathematics; his first publication was his 'Essay on Quantity,' contributed to *The Philosophical Transactions of the Royal Society of London* in 1748. But he exercised his thoughts also with the philosophies of Locke, Berkeley, and Hume, and laid the foundation of those literary writings which were long to bring him into fame. In 1761 the Senatus of King's College elected him regent or professor in succession to Alexander Rait. For thirteen years he continued at his post in Aberdeen, teaching Moral Philosophy and Logic but also Natural Philosophy and Mathematics (for a 'regent' in those days carried his pupil through the whole of the curriculum). In 1764, with an established philosophical reputation, he was appointed professor of Moral Philosophy in Glasgow University in succession to Adam Smith, who had resigned the chair; and he continued in this position till his death, although he retired from active duty in 1787. The order of publication of his writings was: *An Inquiry into the Human Mind, on the Principles of Common Sense* (Edinburgh, 1764), *Essays on the Intellectual Powers of Man* (do. 1785), and *Essays on the Active Powers of Man* (do. 1788). With the last of these works his literary career closed, although he did not yet cease to prosecute his studies with vigour. In 1790 he went to Edinburgh on a visit to his attached relative Dr. Gregory, returning to Glasgow in his usual health and spirits. In the end of September of that year, however, he was seized with illness, and, after several strokes of paralysis, he died on 7th October, in the eighty-seventh year of his age.

It was during his professorship in Aberdeen that, in co-operation with a few other congenial souls, he founded the Aberdeen Philosophical Society ('The Wise Club,' as the vulgar dubbed it), in which the Scottish philosophy took definite form, and which, therefore, demands here our explicit recognition. The society lasted somewhere over fifteen years, holding its first meeting in the Red Lion Inn, Old Aberdeen, on 12th January 1758, and finally disappearing in (or soon after) 1773, the last of the extant minutes of the society being dated 9th March 1773. Spread over these years, the total number of members was only fifteen (excluding the single honorary member in the person of James Trail, bishop of Down and Connor, elected in 1768). The object of the society, as at first constituted, is declared in rule 17 (in Reid's own handwriting and probably formulated by him):

'The Subject of the Discourses and Questions, shall be Philosophical, all Grammatical, Historical, and Philological [sic] Discussions being conceived to be foreign to the Design of the Society. And Philosophical Matters are understood to comprehend, Every Principle of Science which may be deduced by Just and Lawfull Induction from the Phenomena either of the human Mind or of the Material World; All Observations and Experiments that may furnish Materials for such Induction; The Examination of False Schemes of Philosophy and false Methods of Philosophizing; The Subserviency of Philosophy to Arts, the Principles they borrow from it and the Means of carrying them to their Perfection.'

Philosophy, then, was the end, but it included the principles of science; and, as a matter of fact, most of the members of the society were intimately conversant with science in one or other of its branches (some of them being recognized scientific authorities), and all were imbued with the scientific spirit. The contributions of members to the *Proceedings* of the society were either 'discourses,' fully written out and read, or 'questions,' proposed for discussion, the former to be inserted by the writer himself in a book, and an abstract of the latter to be similarly inserted by the member who proposed the question and opened the discussion—any failure to do so in either case to be visited with a money fine, and the fine to be repeated, meeting after meeting, till the requirement was fulfilled. The minutes of the society are still extant and also portions of the MS books in which discourses and discussions were inserted (they are preserved in the Aberdeen University Library); and from them we can quite well see the wide range of the topics that came up for consideration. If philosophy, psychology, ethics, and natural theol-

ogy supplied subjects for discussion, so also did political economy, jurisprudence, natural history, education, medicine, physics, chemistry, and even agriculture; and through all we can trace the gradual shaping of the writings that the world was later to know as Reid's *Inquiry*, Campbell's *Philosophy of Rhetoric*, Beattie's *Essay on the Nature and Immutability of Truth*, Gerard's *Essay on Taste* and his *Essay on Genius*, and John Gregory's *Comparative View of the State and Faculties of Man with those of the Animal World*.

The key to Reid's philosophy is to be found in the phrase, 'the principles of common sense.' Common sense is a function of reason, and its office is 'to judge of things self-evident,' which Reid identified with 'judging of first principles'; and it is conceived as 'purely the gift of Heaven,' not requiring practice and rules for the efficient use of it. First principles are of two kinds (so the *Inquiry* lays down), according as they refer to contingent or to necessary truths. The characteristic of the second class of truths is that they are necessary and immutable, and their contrary is impossible; and of the first that they are mutable, 'depending upon some effect of will and power, which had a beginning and may have an end.' Contingent truths have a wide scope and include mental states given to us in consciousness, and the existence of objects of consciousness, the trustworthiness of memory, personal identity, the existence and nature of external reality as testified by the senses, the freedom of the will, the ability of our 'natural faculties' to distinguish truth from error, the possession of life and rationality by our fellow-men as manifested outwardly in their countenances, voices, and gestures, the propriety of paying a certain amount of deference to human testimony and to authority in opinion, and the instinctive belief in the uniformity of nature. On the other hand, the first principles of necessary truth have reference to the axioms of grammar, of logic, of mathematics, of 'taste' (aesthetics), and of morals, and to the great metaphysical principles that Hume had called in question, viz. the existence of mind and of body as the subject of conscious thoughts and of material qualities respectively, the law of causality, and the legitimacy of inferring design and intelligence in the cause from marks of them in the effect.

First principles are to be considered as laid in the structure or constitution of the human mind. They are, therefore, inscrutable and inexplicable, beyond the power of critical analysis, and to be accepted by us as given without comment or question.

Hume was the writer against whom this doctrine of first principles was specially directed; but not Hume alone, for the 'ideal system' of Berkeley also seemed to have scepticism embedded in it, and Berkeley and Hume drew their inspiration from Locke. What had happened, previous to Reid, in the development of British philosophy was this: Locke had laid it down that knowledge is 'the perception of the connexion of and agreement, or disagreement and repugnancy of, any of our ideas.'¹ On this basis Berkeley had shown that, if ideas are all that we can attain to in knowledge, 'matter' (as the metaphysician understood it) must be dispensed with, although he still retained 'spirit,' as being essentially active—an agent. Accepting Berkeley's doctrine of matter, Hume proceeded, on what he conceived to be the logical outcome of Lockean principles, to discard spirit also, maintaining that change, fleetingness, succession, holds as much in the realm of mind as in the realm of matter, and that, if matter be merely phenomenal, so also is mind. In neither case is there

¹ *Essay*, bk. iv. ch. i. sect. 1.

real permanence or true causation; there is only a flow or succession of ideas, held together as a continuity by custom or association.

'What we call a mind is nothing but a heap or collection of different perceptions [Hume's name for states of consciousness] united together by certain relations, and suppos'd, tho' falsely, to be endow'd with a perfect simplicity and identity.'¹

Substance of the soul there is none; and 'the question concerning the substance of the soul' is 'absolutely unintelligible.'²

Such was the logical outcome of philosophy, working on Locke's principles, as interpreted by David Hume. What, then, required specially to be done (so it appeared to Reid) was to prove that the Lockean conception of knowledge, accepted both by Berkeley and by Hume, was erroneous; that in knowledge we have more than 'ideas' and are indubitably in contact with reality. Accordingly, Reid set himself strenuously to the analysis of external perception and to a sustained criticism of what he called, in his own terminology, 'the ideal system'—a system that he found not only in Locke, Berkeley, and Hume, but also in Descartes, Malebranche, and many others. His first point was insistence on the distinction between bare sensation and perception proper in the perceptual process. He laid it down with emphasis that sensation is purely subjective—a mere feeling that can have no existence except in a sentient conscious mind; but perception is objective and knowledge-giving, taking us out of ourselves and indicating an object whose existence is independent of its being perceived. When, *e.g.*, I smell a rose, my sensation of smell is subjective, dependent on my sentient organism; but my consciousness of the smell as emanating from the rose gives objectivity—has reference to something that is an existent not-me. The beginning in sense-perception, therefore, is not made with bare sensation, to which objectivity is somehow tacked on afterwards—not, to use his own term, with simple apprehension—but with judgment, with 'a natural and original judgment.' I judge that the sensation is effected by an existent something outside and independent of myself. Sensations thus become 'signs' of the qualities of external objects, or 'suggest' the objects. The suggestive power is of two kinds, according to the two kinds of qualities of matter. In the case of the secondary qualities (taste, smell, sound, etc.), the suggestion is simply of a cause of the sensation, without any revelation being made of the exact nature of the quality of the object that causes it (my sensation of the scent of a rose does not resemble the quality in the rose that produces the scent). On the other hand, in the case of the primary qualities (hardness, solidity, extension, etc.), the sensation actually indicates, though it does not resemble, the quality of the object (its hardness or softness, roughness or smoothness, etc.) and thereby gives us true insight into objective reality.

This distinction of the two kinds of qualities in objects Reid put to great use, although he did not claim to have originated it (it is to be found in Locke and in Descartes and goes back at any rate to Democritus). It lies at the root of his contention of our unshakable conviction in external existence as obtained through sense-perception and supplies his answer to the idealism of Locke, Berkeley, Hume, and the other upholders of 'the ideal system,' which seemed to shut us out from external reality altogether, restricting us to 'ideas' in our own minds, outside of which we cannot get.

But, while in perceptive experience we get the existence and nature of external reality, we get also (so Reid taught) the existence and nature of

the percipient's self or ego. The subject and the object in perception, though related, are not identical. The percipient subject is sentient and conscious, has all the qualities that we recognize in a real agent (is active and has 'power'), and is in many ways contrasted with the object. This fact, that the subject is in essence activity, energy, active power, introduces to us Reid's conception of causality and cause and brings out the nature of his opposition to Hume in regard to these. Causality, according to Hume, is mere uniform sequence guaranteed by custom, consequent on repetition, and involving an instinctive tendency to believe in uniformity of succession—which, however, has no rational basis and is not infallible, although it is for practical purposes indispensable. In causation there is 'conjunction,' indeed, but not 'connexion'—so Hume had phrased it. That view appeared to Reid to be wholly mistaken. It reposed simply on the physicist's conception of causation as found by observation of nature and natural events—a conception that does not refer to efficient causation at all, but only to general laws.

'In natural philosophy . . . we seek only the general laws, according to which nature works, and these we call the causes of what is done according to them. But such laws cannot be the efficient cause of anything. They are only the rule according to which the efficient cause operates.'¹

However adequate this conception may be for the man of science, it is not sufficient for the philosopher. The origin of our idea of cause (so Reid held) is not mere sequence, however uniform, but personal volition—the individual's own consciousness of what takes place when he exerts himself in an act of will; and, although sequence is involved in it, there is involved also the exercise of power—an ultimate experience, which cannot be further explained. The principle of causality, therefore, becomes more than the generalized expression of observed facts: it is a first principle of necessary truth, expressive of the causal *nexus* and assuming the form that 'whatever begins to exist *must* have a cause which produced it.' If this be so, then, it appeared to Reid, the doctrine of Hume is irrelevant: it ignores the point to be explained, and is, consequently, ineffective.

Attaching to the principle of causality, in the view of Reid, is that of design as involving a designer. It is a first principle of necessary truth 'that design and intelligence in the cause may be inferred, with certainty, from marks or signs of it in the effect.' On this ground is the existence of God assured to us. From the world as a vast complex effect, manifesting intelligence, goodness, and purpose, we may legitimately infer 'an eternal intelligent First Cause'—an all-wise, all-good, all-powerful Creator. Here efficient and final causation are inseparably bound up together.

The same philosophical spirit that characterized Reid in his intellectual speculations characterized him also in his moral philosophy. To him it appeared that, unless there were some immutable foundation on which men could rely in ethics, some principles of human character and conduct that were indisputable, that were natural to men and must be taken for granted as being self-evident, we could put no certain trust in morals. These common-sense principles of morals include the freedom of the will, as the foundation of responsibility and moral approbation and disapprobation, and the deliverances of conscience as an innate faculty in man, determining duty, right and wrong, and the like, purely on the ground of intuition, and the rejection of interest or utility as the ultimate explanation of morality.²

² *Ib.*², pp. 558-559.

'The testimony of our moral faculty, like that of the external senses, is the testimony of nature, and we have the same reason to rely upon it.'¹

For the positive doctrines of ethics Reid is very largely indebted to Butler, whose doctrines of conscience, anger, and resentment, etc., as laid down in the *Sermons*, he reproduces. The characteristic of *The Active Powers* does not lie in its doctrinal originality, but in its telling criticism of opposing views, its analysis of ethical phenomena, and its keenness of psychological insight.

These are the central points in Reid's philosophy. Where its weakness lies is obvious. In the first place, its enumeration of first principles is open to criticism. It is neither logical in the arrangement nor exhaustive: it is not sifted or determined by any rational ground, so that thinkers in general might be induced to accept it, but it savours not a little of Reid's own likes and leanings. In the next place, its appeal to consciousness as the ultimate testifier is to the *mature* consciousness—the consciousness of the adult—neglectful of the fact that the mature consciousness has at the back of it a long experience, which counts for much. It, further, ignores the fact that the individual consciousness is also social, and that the influence of heredity is of high importance. Lastly, it lends itself very readily to the loose and superficial thinker, who has simply to appeal to 'the inner light' in man for support to any prejudice or opinion that he himself may hold firmly.

Nevertheless Reid's teaching has its distinct place and value in the history of philosophy. It was the opportune insistence on the fact that more than sensation is necessary for the explanation of knowledge—that there is needed also the native activity of the mind (just as Kant, somewhat later, declared), and that the mind grasps reality and is not restricted to 'ideas.' To Reid an object implied a subject; thinking involved a thinker, and sentience a sentient. His philosophy is strong also in its psychology and its analysis of psychical processes and states, and in its recognition of the necessity of rising from psychology to metaphysics, and not, contrariwise, of sacrificing psychology to metaphysics. It is Baconian in its method—inductive and experiential—and is very suspicious of theories that are not adequately supported by facts. Hence it is robust and, in large measure, effective in its criticism. Reid's judgment is eminently sober and balanced: he hardly ever allows feeling to carry him away. He is a sound thinker, as distinguished from a deep and from an intellectually adroit thinker. His mental movements are, not infrequently, cumbrous and his literary style tedious; but he is patient and persistent and adheres closely to the point. He is also singularly fortunate in discovering the weak links in his opponent's arguments. He is fair and straightforward (sometimes even blunt) in his criticism; he is aided by humour on occasion, but he is rarely captious. He respected, while he criticized, his adversary; and Hume himself acknowledged that he was a gentlemanly antagonist. His end in arguing was truth, not victory; and that means a great deal.

2. George Campbell. — Next to Reid in intellectual ability, in balance of judgment, and in keen psychological insight is George Campbell.

Like Reid, Campbell was a son of the manse, his father, Colin Campbell, being one of the ministers of Aberdeen. He was born in Aberdeen, on Christmas Day, 1719, and was educated at the Grammar School of Aberdeen and at Marischal College, which he entered in 1734, taking his M.A. degree in 1739. After graduating, he was articled to a writer to the signet in Edinburgh, but later decided to abandon Law for Theology, and, in the last year of his term as law apprentice, attended Divinity classes in the University of Edinburgh. Returning to Aberdeen, he enrolled himself, in accordance with the usual custom, as a

student under both professors of Divinity—King's and Marischal. While a student of Divinity in Aberdeen, he founded a Theological Club, among the members of which were Alexander Gerard and James Trail (the future bishop of Down and Connor). He was licensed as a preacher of the gospel on 11th June 1748, and was ordained minister of Banchory-Ternan, Kincardineshire, on 2nd June 1748. While a country minister, he conceived a plan of translating the Gospels and wrote part of his *Philosophy of Rhetoric*. In 1757 he was appointed to one of the city charges in Aberdeen. The Theological Club was by this time extinct; but he entered with zest into the foundation of the Philosophical Society, of which he was an original member. In 1759 he was appointed principal of Marischal College and in 1771, on the transference of Alexander Gerard to King's College, was elected professor of Divinity, and held the office in conjunction with the principalship, but resigned his parochial charge. The Divinity chair was, however, connected with the college kirk of Greyfriars, so that his ministerial duties did not entirely cease. In 1795, 'owing to age and growing infirmities,' he resigned his Divinity professorship and soon after, on receiving a pension from Government, the principalship of the university. But he did not long enjoy his retirement. On 31st March 1796 (the year in which Reid died), he fell suddenly ill and, two days after, 'was seized with a shock of palsy,' and expired on 6th April, in his seventy-seventh year.

Campbell was distinguished as (a) a preacher, (b) a theologian, and (c) a philosopher.

(a) His preaching was characterized by solid thought, carefully elaborated and effectively presented, and enforced by sustained reasoning of a keenly argumentative kind. One of his sermons to which special interest attaches is that delivered before the Synod of Aberdeen on 9th Oct. 1760. The subject was miracles, and the discourse consisted of a reply to Hume and formed the groundwork of Campbell's *Dissertation on Miracles*. Another historical sermon was preached in 1776 on the day of the national fast held on account of the American War. It dealt powerfully with the duty of allegiance and strongly denounced the conduct of the colonies. Three years later (i.e. in 1779) he again intervened in a public crisis, and his attitude was greatly to his honour. The question of the repeal of the Roman Catholic penal laws was being debated, and people were much agitated over it. Campbell issued *An Address to the People of Scotland* (which formed no. 4 in the 'Tracts for the People' series), eagerly urging the claims of toleration. The result was that he provoked the hatred of an Aberdeen mob, which rushed excitedly to his house and smashed his windows.

(b) Campbell's fame as a theologian rests partly on his *Lectures on Ecclesiastical History* (published posthumously, 2 vols., Aberdeen, 1815), but mainly on his work on *The Four Gospels* (2 vols., London, 1789), being an original translation of the Gospels, together with learned preliminary dissertations and critical and explanatory notes. The very idea of a new translation of Scripture showed liberal and progressive thought, anticipatory of later critical requirements, though the execution hardly answered the conception. The dissertations are unique for the time and strikingly scholarly, raising Campbell at a bound to the first rank of Biblical critics. Their merit was at once recognized; they were accepted as authoritative not only in Scotland, but in England also, and continued to be the standard exposition of the subject for many years at Oxford.

(c) Campbell's philosophy was that of the Scottish school. As a member of the Aberdeen Philosophical Society, he was present at the first meeting on 12th Jan. 1758, and he continued a member down to the date when the minutes stop (9th March 1773). He read many papers and initiated many discussions, most of them having a bearing on the philosophical and literary positions ultimately embodied in his published works. The Scottish strain in his thinking comes out most clearly in his *Philosophy of Rhetoric* (2 vols., London, 1776). The plan of the treatise, in the words of the preface, is:

'On the one hand, to exhibit, he [the author] does not say, a correct map, but a tolerable sketch of the human mind; and, aided by the lights which the poet and the orator so amply furnish, to disclose its secret movements, tracing its principal channels of perception and action, as near as possible, to their source: and, on the other hand, from the science of human nature, to ascertain, with greater precision, the radical principles of that art, whose object it is, by the use of language, to operate on the soul of the hearer, in the way of informing, convincing, pleasing, moving, or persuading.'

This kind of psychological inquiry was precisely to the liking of the Scottish philosopher; and, as the handling proceeds, many opportunities occur for the application of the principles distinctive of the school. Bk. i., which deals with the nature and foundations of eloquence, affords an excellent example. The two sources of Eloquence recognized are intuition and deduction. Under the head 'Of Intuitive Evidence' the mathematical axioms, consciousness, and common sense are handled; and it is here that we find, though on a less extensive scale, an enumeration and exposition of primary truths or first principles precisely after the manner of Reid.

But the Scottish standpoint is apparent in Campbell elsewhere than in the *Rhetoric*. The *Dissertation on Miracles* (Edinburgh, 1762) is as much philosophical as theological. The foundation argument is an appeal to common sense, or 'the primary principles of the understanding.' Hume had argued against the reasonableness of belief in miracles on the ground that such belief must rest on the evidence of testimony, but no amount of testimony is sufficient to prove a miracle, inasmuch as the evidence of testimony is based on experience, and experience 'firm and unalterable' has established the laws of nature, whereas a miracle claims to be a violation or suspension of these laws. To most people, perhaps, it would seem sufficient to reply to this that Hume's argument contains both a *petitio principii* and an *ignoratio elenchi*. To assert that the experience which has established the laws of nature is 'unalterable' is simply to beg the question; whereas to define a miracle as a violation or a transgression or even a suspension of nature is to mistake the character of a miracle, and, consequently, any argument based on that definition is beside the point. But this was not exactly how Campbell faced the problem. The stress in his reply was laid on this—that, so far is it from being true that our belief in testimony rests solely on experience, the reverse is the case: our belief in testimony (we see it in the unstinted credulity of children) is antecedent to experience and often needs experience to correct it or to tone it down.

'To say, therefore, that our diffidence in testimony is the result of experience is more philosophical, because more consonant to truth, than to say that our faith in testimony has this foundation. Accordingly, youth, which is inexperienced, is credulous; age, on the contrary, is distrustful.'

When the objection is raised that such primitive credulity is inexplicable, he admits the fact, but maintains in substance that we must begin with something, must have some original grounds of belief, and this primitive credulity is one of the original grounds of belief, as the law of causation and the uniformity of nature are two others. This is precisely a reply forged in the Scottish school of philosophy and shows Campbell to be a true associate of Reid.

3. James Beattie.—Great though the reputations of Reid and Campbell were, they did not equal that of Beattie. This was not in strict accordance with merit, but was partly due to favouring fortune or the chapter of accidents.

James Beattie, the son of a small farmer at Laurencekirk, Kincardineshire, was born there on 23d Oct. 1735. His early education was acquired at the parish school of Laurencekirk, aided by instruction in classics from the parish minister. In

1740, at the age of fourteen, he enrolled himself as a student at Marischal College, Aberdeen, having gained the first bursary at the annual competition, and, after four years' study, graduated M.A. in the spring of 1753. The same year he became schoolmaster of Fordoun, adjoining Laurencekirk, in which post he remained five years, prosecuting studies in Divinity at the same time with a view to the ministry (which he did not ultimately enter). It was while schoolmaster of Fordoun that he began to reveal himself as a poet. In 1758 he left Fordoun for Aberdeen, having been appointed by the magistrates of the city one of the masters of the Grammar School. This position he held for two years only; for in 1760 he became a professor in Marischal College. The chair to which he was presented was that of Natural Philosophy; but, by a happy accident, before the session began, the chair of Moral Philosophy fell vacant by the transference of Alexander Gerard to the chair of Divinity. To Gerard's vacant chair Beattie accordingly was appointed, where he found the work that was proper and congenial to him. In 1761 he was duly elected a member of the Philosophical Society, to which he contributed essays and questions for discussion; and he continued a member till the society ceased.

In 1770 appeared the *Essay on the Nature and Immutability of Truth*—a work which, contrary to his expectations, brought him immediate fame. It sold rapidly, reaching a third edition within two years, and was translated into French, German, Dutch, and Italian. It was praised by English statesmen and English men of letters—such as Lord Chatham, Burke, Samuel Johnson, Garrick, and Sir Joshua Reynolds—and won for Beattie the friendship of these distinguished men and others. It was eulogized by Church dignitaries, including the two archbishops and Dr. Porteus of Chester, afterwards bishop of London, and brought forth offers of ecclesiastical preferment on the condition of his taking Holy Orders. Above all, it attracted the attention of George III. and led to Beattie's having several interviews with the king and to his obtaining a royal pension of £200 a year. Honours were now showered upon him. Oxford conferred upon him the degree of D.C.L. and made his work a text-book; Sir Joshua Reynolds painted his portrait as part of the famous allegorical picture of the Angel of Truth pushing down Voltaire and two other sceptics (now the prized possession of the University of Aberdeen); and he was lionized and welcomed everywhere as the philosophical champion of the faith. That last phrase gives the main reason of the extraordinary popularity of the *Essay on Truth*. The treatise was an exposition of the principles of Common Sense as a safeguard against sophistry and scepticism, accompanied with an unsparing and slashing criticism of Hume's philosophy—a philosophy that had seemed to religiously-minded people to undermine by invincible logic the groundwork of morality and religion alike.

The year 1771 saw the publication of the first book of *The Minstrel*, the second being issued three years later. This poem at once raised Beattie to a high place as a poet in the public estimation and had, like the *Essay*, a rapid circulation.

Other books of Beattie were: *Dissertations, Moral and Critical* (London, 1783), *Evidences of the Christian Religion* (Edinburgh, 1789), and *Elements of Moral Science* (2 vols., do. 1790-93)—all popular and commanding a wide circle of readers.

Beattie as a man of society makes a pleasing picture to the imagination; for, while moving in the highest social circles in the land and lauded by the leaders in thought and in letters, he never allowed himself to be carried away. He remained to the end unassuming and humble, being fully cognizant of his own limitations. His domestic life was clouded during many of his later years by the sad and long-continued illness of his wife, who suffered from mental derangement. Meanwhile, his own health gave way, and he had to carry on a struggle (and manfully he did it) against many physical infirmities. The situation was aggravated by the loss of his two sons—both of them very promising youths and dear to his heart. The elder, James Hay, had the religious seriousness and the philosophical tastes and aptitudes of his father and not a little of his father's humane and amiable disposition. So precocious was he that, at the age of nineteen, he was appointed his father's assistant and colleague in the chair of Moral Philosophy. But three years later, on 18th Nov. 1790, he died of lung complaint, at the age of twenty-two. The younger son, Montagu, was cut off even more prematurely, dying of a fever, after a brief illness, on 14th March 1796, aged eighteen. All this told severely on Beattie; his nerves became shattered, vertigo settled on him as his constant companion, and his memory began to give way. Paralysis overtook him; and, after repeated strokes, occurring at intervals over several years, he died in Aberdeen, on 12th Aug. 1803.

Of Beattie as a poet little need be said. *The Minstrel*, in both the parts of it (the intended third was never written), was praised by high authorities at the time and is appreciated by competent judges still. It has won this note of immortality: it appears, in selected passages, in the popular books of quotations at the present day. The same is true of his *Hermil*.

As a philosopher, Beattie has not attained the immortality that his contemporaries predicted. Yet his writings do not deserve the contemptuous neglect that has overtaken them. The principles of his *Essay on Truth* are those of Reid, although not so judiciously handled. They are expressed, however, in a harmonious Addisonian style, which

drew forth the approbation of the greatest literary men of the day. The ultimate appeal with Beattie is to common sense; but the effect is spoiled by two defects: (1) his tendency to identify the philosophical principle with the plain man's unsophisticated 'intuition' (that is Beattie's favourite term) and his setting it forth as a kind of inner light or inward feeling, competent of itself to guide a man in any circumstances of life; and (2) the occasional exaggeration and vehemence of his language, especially when he has Hume in view, thereby giving ground for Hume's complaint that Beattie 'had not used him like a gentleman.'

Vehement language in philosophy is apt to arouse in one a suspicion of a lack, in the person who employs it, of that philosophic calmness and 'indifference to truth' which are indispensable to clear thinking and to a due understanding and appreciation of an opponent's standpoint. On the other hand, the weakness of the conception of an inner light is manifest. The sceptic may reasonably enough feel that his doubt cannot be dispelled by another man's intuition; nor is a criterion like Beattie's of very much use if, on the occasion of a difference of opinion or belief arising between two men, each can appeal to the criterion as declaring in his favour. Nor is the application to the doubter of the general proposition that 'what everybody sees is indisputable' of very much avail, if the doubter can honestly say, 'But I do not see.' That, surely, cannot rightly be said to be seen by everybody which even one man fails to see.

The weakness of the appeal was early felt in Beattie's own day. In Aberdeenshire John Skinner of Linshart, author of *Tullochgorum*, turned the doctrine of the inward infallible light into sprightly Latin verse, set to the tune of 'Tullochgorum,' and treated it with pawky humour, the sting of which was removed by the laudatory epithet applied to Beattie in the catching refrain of 'Doctissime Doctorum.' On the other hand, Joseph Priestley seized the opportunity to turn the Scottish philosophy into ridicule, joining Beattie not only with Reid but also with James Oswald (who in his *Appeal to Common Sense in behalf of Religion* [2 vols., Edinburgh, 1766-72] had made such an unscientific and unphilosophical application of common sense to religion as to render him a ready butt to sarcasm and flippant wit).

'When we see,' said Priestley, criticizing Beattie, 'how miserably bewildered the bulk of mankind are, one would think that this principle of truth is like the god Baal, who when he was most wanted, and ought to have made a point of being present, to assist his worshippers, was asleep, or on a journey, or engaged some other way.'¹

Beattie's claims as a philosopher are usually tested by his *Essay on Truth* alone. But his other philosophical works ought to be taken into account also. In particular, the *Dissertations* and the three essays in literary criticism (on poetry, laughter, and classical learning) appended to the quarto edition of the *Essay on Truth* (Edinburgh, 1776) show keenness of psychological insight and sobriety of judgment that are far from common. They also show Beattie's style at its best and put it beyond question that there is real critical power in that school of literary criticism in Scotland (headed by Lord Kames) to which Beattie belonged, and which was sufficiently important to arouse the jealousy of Voltaire and to draw forth his scorn.

4. Alexander Gerard.—Of the Aberdeen philosophers of the 18th cent. Gerard alone remains to be noted.

Alexander Gerard, son of Gilbert Gerard, minister of Chapel of Garrioch, Aberdeenshire, was born in 1728 and died in 1795.

¹ *Examination of Dr. Reid's Inquiry*, etc., p. 123.

He graduated M.A. at Marischal College in 1744. In 1752 he was appointed regent or professor of Moral Philosophy in that university, having acted for the two previous years as substitute for the then professor, David Fordyce. In 1760 he was transferred to the chair of Divinity, which he occupied till 1771, when he was appointed professor of Divinity in King's College. He was not, like Reid and Campbell, an original member of the Aberdeen Philosophical Society, but he joined it at its fifth meeting—on 8th March 1758. At Marischal College he showed himself a keen advocate of university reform, and it was mainly owing to him that Marischal College gave up the 'regenting' system in 1755 and substituted that of the professoriate. His views on academic teaching may be seen in his *Plan of Education in the Marischal College and University of Aberdeen, with the Reasons of it* (Aberdeen, 1755)—a work that was translated into German in 1770. While professor of Divinity in Marischal College, he was elected Moderator of the General Assembly of the Church of Scotland (1764); and, while professor of Divinity in King's College, he held the office of one of His Majesty's chaplains in ordinary for Scotland.

Gerard attained distinction both as a theologian and as a philosopher. His two theological works are: *Dissertations on Subjects relating to the Genius and the Evidences of Christianity* (Edinburgh, 1766) and *The Pastoral Cure* (London, 1799). The former consists of two lengthy dissertations, the first dealing with the suggestive manner in which Christ and His apostles proposed the evidences of their mission, and the second with Christianity as confirmed by the opposition of infidels. The topics are ably treated, and the presentation is effective from the writer's point of view. If the book has only a historical interest now, it is simply because the modern spirit is rather impatient of such formal disquisitions as are here to be found and is more likely to be impressed by the living power of the gospel as manifested in the daily lives of believers. The lectures on pastoral theology were published, after the author's death, by his son Gilbert (who succeeded his father in the chair of Divinity in King's College) in 1799. They are full of wise counsel and sane judgment and have still an interest for all who are curious to know what was expected of a Scottish pastor in the days of parochial catechizing and at the moment when 'fellowship meetings' had made their appearance in the land and were as yet looked upon with suspicion by the older generation of divines.

But, besides being a trusted theologian, Gerard had a considerable reputation as a philosopher. This arose from his *Essay on Taste* (London, 1759) and his *Essay on Genius* (do. 1774). These two writings are marked by the analytic power of the Scottish philosophers and show the same calm, well-balanced judgment as was characteristic of Thomas Reid. Gerard, indeed, lacked Reid's faculty of sustained thinking, and one can hardly conceive him as the originator of a system; but he could handle a theme adroitly and with penetration and in a style that is pleasant to read. Special interest attaches to the *Essay on Taste* because it enunciates views that met with much acceptance in Scotland and in France, resolving beauty, 'at least in part,' into association. In like manner, the *Essay on Genius* enjoyed much popularity. In it he traces the origin of genius to the associating power of the imagination, and devotes space to a consideration of the laws of association following Aristotle—thereby giving occasion to Sir William Hamilton's complimentary remark on Gerard, that 'of the later British philosophers, indeed, there is hardly to be found another, who has studied the works of Aristotle more attentively and to better effect.'¹ But the most notable fact about this essay is that it specially attracted the attention of Immanuel Kant and affected his doctrine of genius as laid down in the *Kritik of Judgment*.²

II. IN THE 19TH CENTURY.—Two thinkers in the University of Edinburgh have great distinction in connexion with the Scottish philosophy in the 19th cent.—Dugald Stewart and Sir William Hamilton. Previous to either, in the second half of the 18th cent., was Adam Ferguson (1723–1816), who accepted Reid's 'common sense' teaching and reproduced it without appreciable modification. His reputation was mainly that of a moral philosopher, inculcating Stoical ethics, mellowed by the emphatic assertion of the importance of the benevolent affections and the reiterated insistence on the need of taking full cognizance of the essentially social nature of man.¹ His eloquence and his broadened sympathy attracted many hearers to his lectures, and elicited general admiration. He had also a reputation on account of his work on the *Hist. of the Progress and Termination of the Roman Republic* (3 vols., London, 1783). His books were widely read. Yet his fame has long since gone, and his works repose peacefully on the shelves. There remains only the laudatory epitaph on his tombstone (read by every passer-by) in the cathedral graveyard of St. Andrews, written by Sir Walter Scott, which, however grandiloquent and extravagant it may appear to us to be, does quite well represent the general opinion of Ferguson's contemporaries.

I. Dugald Stewart.—

Dugald Stewart was the son of Matthew Stewart, professor of Mathematics in Edinburgh University, and was born in Edinburgh on 22nd Nov. 1763. His school and university education was received in his native town. As a student in Arts, he proved himself expert in mathematics and in philosophy. By the professors of philosophy he was instructed in Reid's principles; and he had his views expanded and confirmed later by attendance on Reid's lectures in Glasgow. In 1772 and for the three succeeding years he taught the class of Mathematics in Edinburgh as substitute for his father, whose health was beginning to fail; and in 1776 he was definitely associated with him as professor of Mathematics. In 1778, in addition to his mathematical duties, he conducted the Moral Philosophy class, in lectures of his own, during Ferguson's absence in America. In 1785, on Ferguson's resignation, he was appointed professor of Moral Philosophy. The active duties of the chair (which extended to Political Economy, as well as to Ethics) he discharged for 24 years (1785–1809); at the end of that time, without actually resigning the professorship, he had a colleague appointed in the person of Thomas Brown. Relieved thus of the active work of the chair, he retired to Kinnell House, Linnithgowshire, which was placed at his service by the Duke of Hamilton, and devoted himself to developing and finally formulating his philosophical views. On Brown's death in 1820 he retired altogether from the professorship, and John Wilson ('Christopher North') was—mainly on political grounds—elected his successor, in opposition to Hamilton. In 1822 he was attacked by paralysis, which, however, did not impair his intellectual powers; but a second stroke in 1823 ended his life. He died in Edinburgh on 11th June 1828.

His chief literary works are: *Elements of the Philosophy of the Human Mind*, i. (London, 1792), ii. (do. 1814), iii. (do. 1827), *Outlines of Moral Philosophy*, a students' text-book (Edinburgh, 1793), *Philosophical Essays* (do. 1810), *Dissertation on the Progress of Metaphysical Philosophy*, written for the 'Supplement' of the *EBR* (pt. i. in 1815, and pt. ii. in 1821), *The Philosophy of the Active and Moral Powers* (Edinburgh, 1828). The great edition of his *Collected Works* is that by Sir William Hamilton (11 vols., do. 1854–60, including the supplementary vol. of *Translations*).

Dugald Stewart was a strict adherent of the Scottish philosophy, but with characteristics of his own both in metaphysics and in ethics. First of all, like the rest of the school, he based his thinking on psychology, pursued on the inductive method. The psychology was Reid's, for the most part; but it is marked by a fuller and more sympathetic appreciation of association than Reid had shown. He carefully explains association and felicitously and copiously exemplifies its influence on all the parts of our mental being—our speculative conclusions, our judgments in matters of taste, our active powers and moral judgments. Although thus advanced in his regard for association, he stopped short of carrying the principle fully into the ethical sphere. This was specially noted and

criticized by Sir James Mackintosh,¹ who set himself to prove that Stewart's refusal to acknowledge the power of association in the formation of conscience was a needless timidity; for conscience would be equally authoritative and equally entitled to be regarded as natural to man, whether it be conceived as derivative, and explained from the side of the associationist, or as original, and explained from the side of Butlerian intuitionism. The great point is that, if it be derivative or acquired, it is universally and necessarily acquired.

While accepting the general principles of the Scottish philosophy, Stewart entered a protest against its terminology. He did not approve of Reid's terms 'common sense' and 'instinct,' nor was he wholly enamoured of Beattie's 'intuition.' He saw how easily these words might encourage the belief that the Scottish philosophy was nothing more than an appeal to vulgar opinion and might create the impression of superficiality and lack of scientific precision. And so for the accredited phraseology he substituted the expression, 'the Fundamental Laws of Human Belief; or the Primary Elements of Human Reason.' This, doubtless, is to some extent an improvement, for it brings out the fact explicitly that psychology is the groundwork of the Scottish mode of thinking, and it emphasizes the rational aspect of the procedure. But the term 'laws' is not particularly happy in expressing what are held to be necessary truths—the indispensable conditions of belief; and there is a certain incongruity in designating them both 'laws' and 'elements.' But, further, Stewart objected to Reid's describing primary beliefs as 'first principles.' They are more like 'axioms' than 'principles,' he held; for the term 'principle' conveys the idea of some fact or some supposition from which a series of consequences may be deduced, whereas from fundamental laws of belief 'no inferences can be deduced for the further enlargement of our knowledge.' As regards primary beliefs themselves, however, it is to be remarked that Stewart is far more cautious than Reid in restricting the number of them.

Reid's doctrine of natural realism, in connexion with perception, was reproduced by Stewart almost to the letter and therefore does not call for special consideration. But it is different with Stewart's treatment of the epistemological question of the nature of the mathematical axioms and of mathematical or demonstrative reasoning. It was customary to regard the axioms, intuitively apprehended, as the foundation of mathematics; but Stewart, who was himself a mathematician, saw the importance of laying the stress on the definitions. These, he maintained, not the axioms, are the principles of mathematical science, but the axioms are not to be ignored; although they are not the foundation of mathematical demonstration, they are presupposed or implied in all mathematical reasoning, and, if their truth were challenged, further progress would be impossible.

¹ From what principle are the various properties of the circle derived, but from the definition of a circle? From what principle the properties of the parabola or ellipse, but from the definition of these curves? A similar observation may be extended to all the other theorems which the mathematician demonstrates; and it is this observation (which, obvious as it may seem, does not appear to have occurred, in all its force, either to Locke, to Reid, or to Campbell) that furnishes, if I mistake not, the true explanation of the peculiarity already remarked in mathematical evidence.²

Consequently, he strongly opposes the view of mathematical evidence 'that it all resolves ultimately into the perception of identity [$A=A$]; and that it is this circumstance which constitutes

¹ In his *Dissertation on the Progress of Ethical Philosophy*, Edinburgh, 1826, pp. 324–334, 255–400.

² *Elements of the Philosophy of the Human Mind*, pt. II. ch. I. p. 292.

¹ See his *Principles of Moral and Political Science*, 2 vols., Edinburgh, 1792.

the peculiar and characteristic cogency of mathematical demonstration.' The peculiar cogency in the case, he holds, depends on definitions and hypotheses. By adding hypotheses to definitions he meant to bring out the circumstance that the propositions to be established in mathematics are not, like those in the other sciences, expressive of facts or concerned with actual existence, but deal simply with 'the logical filiation of consequences' which follow from given suppositions or assumptions.

When we turn to Stewart as a moral philosopher, we find him eagerly engaged in arguing the two questions of the moral faculty (his own name for conscience, and preferable, in his view, to Hutcheson's term 'moral sense') and the moral standard. His doctrine is pronouncedly intuitionist. He maintains that we have an immediate apprehension of moral qualities—right, wrong, duty, obligation, etc.—and that this apprehension is ultimate and is in itself the guarantee of moral value, altogether apart from consideration of consequences. Nevertheless, he sets forth the moral faculty, not as a simple but as a complex thing, consisting of three elements: (a) the perception of an act as right or wrong, (b) an ensuing emotion of pleasure or of pain, and (c) a perception of the merit or the demerit of the agent; and he has a considerable appreciation of the power of association in relation to our moral judgments; nor can he refrain from joining the utilitarian on occasion and appealing to consequences. As the intention of the agent is the chief factor in estimating the moral character of an action, the question of the freedom of the will inevitably crops up, and a long section is devoted to the handling of it. Not deeply, but very interestingly, he marshals the arguments *pro* and *con* and clinches his reasoning by a detailed examination of the antithetic position of the necessitarian. This became the model for the treatment of the subject in Scotland for a full generation. But Stewart set the example also in psychological analysis of ethical notions. Accepting from Reid (who simply followed Aristotle) the twofold division of our mental powers into intellectual and active, Stewart was more successful than Reid had been in finding a place in his philosophical scheme for the sentiments and emotions. Under the heading 'Our Desires,' he treats of the commanding instinctive propensities of knowledge, society, esteem, power, and emulation; and the no less important impulses of love of kindred, friendship, patriotism, pity to the distressed, resentment, and anger come under 'Our Affections.' This is by no means an exhaustive enumeration of the emotive forces of our being, nor does the handling show the keen insight of (say) Spinoza in pt. iii. of his *Ethica*; but it is a distinct advance on what had previously obtained in Great Britain.

A very marked characteristic of Stewart's prelections as a moral philosopher was the large place that he assigned in his teaching to the treatment of natural theology—dealing with the being and attributes of God, the soul and its future existence. This was, no doubt, due partly to his conviction of the intimate relation between ethics and religion (though he did not base the former on the latter), but partly also and chiefly to the circumstances and requirements of the time. When Stewart began his professorial work, it was the eve of the French Revolution; and all the while that he actively discharged the duties of the Moral Philosophy chair, scepticism and atheism, connected with that great political upheaval, were rampant. He felt it to be his duty, therefore, in teaching inquiring youth, to try to mould and strengthen their characters by high spiritual principles, while instructing and developing their

minds. And so successful was he in his effort, and so great was his fame, that he attracted to his class-room not only students from the various parts of Scotland and England, but also students from the United States of America, and from France, Switzerland, the north of Germany, and other regions of Europe.

Stewart occupies a very distinct place in the school of Scottish philosophy. He was neither a deep nor an original thinker, but he was an elegant and eloquent expositor, who did great service to the study of philosophy by attracting general attention to it, by stimulating the youth to think, and by creating in them a love of high ideals—truth, virtue, and liberty. His own personality counted for much. He was a man of deep convictions and elevated views, and a master of style (in spoken address and in writing), fluent and harmonious. Enthusiastic himself, he could arouse enthusiasm in others. His scholarship was great: indeed, previous to Hamilton, he was the most learned of the Scottish philosophers. His facility in apt quotations, selected with unerring literary instinct and drawn from a wide range of reading, is quite exceptional. And yet 'his learning,' as Veitch correctly puts it, 'was more of an accomplishment than an inspiring originating element in his philosophy.' He was fortunate in being able to gauge and to minister to the intellectual and moral needs of the age. The fact that he made a lasting impression on such men as Lord Cockburn, Lord Brougham, and James Mill is testimony enough to his ability and worth; and the imposing monument erected to him on the Calton Hill of Edinburgh testifies to the high esteem in which he was held by the community.

2. William Hamilton.—The greatest name in the Scottish school of philosophy in the 19th cent. was that of Sir William Hamilton. Endowed with a powerful intellect and a strong will, Hamilton added to his natural capacities unrivalled erudition. He had all the qualifications of a successful writer of a history of philosophy. His position as a psychologist and as a metaphysician is outstanding. While retaining the fundamental principles of Reid's philosophy, he engrafted on them some of the distinctive tenets of Kant, with which he was among the first in Great Britain to be intimately acquainted. Although not more reliable in judgment than Reid, or keener in analytic faculty, he went deeper into the consideration of speculative problems; and he had the advantage of a singularly extensive knowledge of Greek and of Scholastic philosophy and of German thought. The result was that, while adhering to the Scottish school, he promulgated doctrines of his own which Reid would not have acknowledged. To psychology and metaphysics Hamilton added logic—in which Reid showed no special originality, as may be seen from his 'Brief Account of Aristotle's Logic.' Here also he was an original expositor and innovator; and, although his logical system, in its specific positions (such as the quantification of the predicate), has not been generally accepted, it aroused an interest in the subject that has had lasting effects. To his other merits has to be added that of a lucid style—inflated, indeed, and overloaded with terms of classical formation, Johnsonian to a fault, yet attractive to the student beyond anything that the accredited philosophical text-books of the time could claim. His power of incisive, even vehement, criticism has also an attraction in its way; but his personal animosities—his intolerance, let us say—sometimes narrowed his view and misled him in the interpretation of opponents, and his vast scholarship was prone to make him accept authority for argument.

A son of Dr. William Hamilton, professor of Anatomy in Glasgow University, Hamilton was born in Glasgow on 5th March 1788. His early education was received in his native city, including his Arts curriculum at the university and attendance on several of the medical classes (Chemistry and a brief attendance on medical

to Medicine as a profession.

Exhibitioner of Glasgow, to Balliol College, Oxford. Here he developed his learning, according to a plan of study devised by himself. The result was an unusually intimate knowledge of Aristotle and his commentators and of the history of philosophy. Both the number and the nature of the books on which he offered himself for examination with a view to his degree surprised the examiners; 'and after a trial of many hours, besides the honours of the University, he received the thanks and the public acknowledgment of the examiners, that he had never been surpassed either in the minute or the comprehensive knowledge of the systems on which he had been examined.'¹ He graduated 'In literis humanioribus,' in class I. This was in 1810. Abandoning the idea of entering the medical profession, he devoted himself to the study of Law, and, in 1813, became an advocate of the Scottish bar, with his residence henceforth in Edinburgh. Now, as always, learning was supreme with him, and, with the Advocates' Library at his command, he had ample opportunities of pursuing it. On this account he never aimed at, nor did he acquire, an extensive practice as an advocate. In 1816 he established his claim to the title and style of Baronet of Preston and Fingalton. In 1820 he became a candidate for the chair of Moral Philosophy in Edinburgh University on the death of Thomas Brown, but, being a Whig, was unsuccessful against John Wilson, a Tory. Next year, however, he was appointed to the chair of Civil History. It was not till 1830 that he was elected professor of Logic and Metaphysics—a dignity that he retained for the next twenty years.

Hamilton was late in life in appearing as a philosophical author: indeed, he was forty-one years of age when his first great production, the article on 'The Philosophy of the Unconditioned,' in reference to Cousin's *Infinito-Absolute*,² saw the light, in the October number of the *Edinburgh Review*, 1829. To that review and to *Blackwood's Magazine* he made contributions on a variety of topics; and he also ventilated his opinions frequently in separate pamphlets or brochures. Education and the ecclesiastical movements of the time (ending in 'the Disruption'), as well as philosophy, greatly interested him, and he strongly advocated university reform. While busily engaged in formulating and elaborating his maturer thought in that storehouse of learning, the 'Notes' or 'Dissertations' in his edition of Reid's *Works*, he was stricken by paralysis, and the edition had to be brought out, in 1846, with the 'Notes' unfinished. Fortunately, his infirmity, while limiting his physical power, left him in full possession of his mental faculties; and he was able to go on with his university work till the end came on 6th May 1856.

His leading writings are his annotated edition of *The Works of Thomas Reid* (Edinburgh, 1846, 2 1849), *Discussions on Philosophy and Literature, Education and University Reform* (London, 1852, 2 1853), *The Collected Works of Dugald Stewart* (11 vols., Edinburgh, begun to be published in 1854 and completed by Veitch in 1860), *Lectures on Metaphysics and Logic* (4 vols., Edinburgh and London, 1859-60, published posthumously and edited by Mansel and Veitch).

Hamilton's great contributions to the Scottish philosophy were his searching and extensive handling of consciousness in note A ('On the Philosophy of Common Sense') in Reid's *Works*² (pp. 742-803) and his recasting and elaborate exposition of Reid's doctrine of natural realism in connexion with the perception of an external material world, in several of the other notes and elsewhere. To the philosophy of common sense were now given a precision and a fullness of statement that it did not possess before; and Reid was presented in a fresh and telling setting, although, in the process of amendment, he was sometimes transformed almost past recognition, and not infrequently the corrections suggested are doubtful improvements.

The final appeal made by Reid in his philosophy was to consciousness. So, too, by Hamilton. But what is consciousness? What are the tests of it? How is it conditioned and limited? What is its veracity—the intrinsic worth or value of it? In answering these questions Hamilton went back in part to Descartes, in part to the Greek philosophers, especially Aristotle and the Stoics; but he laid under contribution the whole of his vast reading, and he brought to bear on the subject his own acute and independent thinking.

To him consciousness is a sort of knowledge. But knowledge is of two kinds—immediate and mediate. Immediate knowledge is concerned with

what is here and now present to the mind of the individual percipient. Its testimony is infallible and cannot be disputed; it must simply be accepted. Mediate knowledge is derivative—a consequence of, or deduction from, what is ultimate. It is knowledge at the second remove.

The tests of the data of consciousness, the criteria of the principles of common sense, the notes or characters by which we are able to distinguish our original from our derivative convictions, are laid down as four in number: (1) incomprehensibility—i.e., there is nothing more fundamental than themselves, nothing higher to which they may be referred or by which they may be explained; (2) simplicity—the opposite of what is compound and therefore derivative; (3) necessity and absolute universality—securing unwavering conviction and excluding doubt; (4) comparative evidence and certainty—inasmuch as they are fundamental, and all else is known and believed through them. Valid as these tests are in themselves (although there are difficulties in the consistent application of them), they are obviously not mutually exclusive, but overlap: the first and the third include the other two.

Hamilton set himself with great energy to purify and strengthen Reid's doctrine of external perception—the central problem in his theory of knowledge. The vacillation and looseness of Reid's utterances here (especially in the *Inquiry*), more particularly the vagueness attaching to his double application of the term 'sensation' and his disconcerting statement that sensations are the signs of external objects, seemed to throw doubt on Reid's genuine adherence to natural realism—the doctrine of the immediate apprehension of external reality in sense-perception. The question would ever and anon suggest itself, Was Reid not, after all, a representationist, like his opponents, although the *tertium quid* between object and percipient was not with him an 'idea' but a 'sensation'? This ambiguity Hamilton proceeded to clear away. He reaffirmed Reid's distinction between sensation (subjective) and perception proper (objective) in the perceptive process and enunciated the law of the inverse ratio—the more fully we are engrossed with the one, at any moment, the less alive are we to the other, and *vice versa*; but he also explicitly formulated and repeatedly asserted the mutual implication of subject and object, Ego and non-Ego, in sense-perception: each is given, and each immediately, in the individual act of perceiving, and, while given in mutual relation, they are given also as distinct and contrasted—they are one in knowledge, but opposed in existence.

This, on the face of it, put natural realism in a direct and unambiguous way. But, unfortunately, in working out the subject in detail Hamilton enunciated qualifications and modifications that went far towards nullifying his original position. An excellent example of this is the case of visual perception of distant objects.

Here he alleged that 'As not here present, an immediate knowledge of an object distant in space is likewise (i.e. as well as an immediate knowledge of the future) impossible. For, as beyond the sphere of our organs and faculties, it cannot be known by them in itself; it can only therefore, if known at all, be known through something different from itself, that is, mediately, in a reproductive or constructive act of imagination.'¹ Again, 'To this head we may refer Reid's inaccuracy in regard to the precise object in perception. This object is not, as he seems frequently to assert, any distant reality; for we are percipient of nothing but what is in proximate contact, in immediate relation, with our organs of sense. Distant realities we reach, not by perception, but by a subsequent process of inference founded thereon: and so far, as he somewhere says, from all men who look upon the sun perceiving the same object, in reality, every individual, in this instance, perceives a different object, nay, a different object in each several eye.'² This, clearly, was a sad departure from strict natural realism, and

¹ Villers, in Veitch's *Memoir of Sir William Hamilton*, p. 60.

² Reid's *Works**, p. 810^b.

³ *Id.* p. 814^a.

the critics seized upon it. None more effectively, or more facetiously, exposed it than Samuel Bailey¹ (1791-1870), who vividly pictures Hamilton lecturing to his class, consisting (say) of 100 students, whose eyes are directed towards the master. On Hamilton's doctrine, each student sees a different professor from what is seen by each of the others (indeed, two professors, for each student has two eyes), and, on the principle of the veracity of consciousness (to which Hamilton made constant appeal), he has a right to trust his own perception, so that there are 100 Sir William Hamiltons (not to insist on 200, 'a different object in each several eye') in the professorial garb. On the other hand, according to the doctrine that a distant object is not really perceived at all, but only inferred, no Sir William Hamilton is seen by the students, and the learned professor may literally be described as 'disappearing in the crowd.' These and other Hamiltonian inconsistencies Bailey discards and, in substituting his own view of strict natural realism, declares that our perception of external objects 'is a simple and primary act of consciousness not susceptible of any analysis or explanation,' and that it is 'vain trying to express the fact more simply or fully than by saying that he [the perceiver] perceives the object.'² 'That there are external objects perceived,' he maintains further, 'is a primary fact, which admits neither of being proved nor of being disproved';³ and he holds that this view of external perception is the only one that, on the lines of natural realism, secures absolute consistency.

But Hamilton essayed, further still, to strengthen and support the Reidian realism. He took up Reid's distinction of primary and secondary qualities of matter and worked it out with unparalleled minuteness in note D of his *Reid's Works*² (pp. 825-875, 'Distinction of the Primary and Secondary Qualities of Body'), carefully estimating the evidential value of each. He analyzed the qualities into primary, secundo-primary, and secondary, and laid great stress on the second. His distinctive point lies in the strong and explicit way in which he takes account of the human body as an animated organism, the seat of sensation, and the necessary instrument and condition of external perception—a factor in the perceptive act equally indispensable with the mental factor. Perception (he lays down) is the apprehension, in and through the organism, of resistance and extension. In thus laying our knowledge of resistance and extension (the leading qualities of externality or real being) in the organism, Hamilton anticipated the epistemology of the present day. But, further, one may observe that, while it is so that sensation would be unintelligible if the body were eliminated (man being not merely mind, but mind *plus* body), it is of importance to remember that the body occupies a very peculiar position: it is in one aspect subjective and in another objective. To this fact the psychology of to-day, which is above all things genetic, has become alive. The body as sensitive organism, with the organic sensations, is of the utmost significance in the genesis of the conception of the individual 'self.' The body is to the individual primarily the self, from which the completed notion of self takes its start, and which must still be taken account of even after we have reached the higher and developed idea.

Not yet was Hamilton's work in the interests of natural realism complete: it had a negative as well as a positive side. He did not regard it as enough to establish a position; he conceived it necessary also to beat down all opponents. Hence he carried on a vigorous polemic against representationists of all types—especially against what he called the 'cosmothetic idealism' of Thomas Brown. His criticism is always keen, but not always valid; indeed, not seldom it rests on an obvious lack of ability to realize and appreciate the opponent's point of view. Yet it served the purpose of bringing out Hamilton's own doctrine and of setting in a clearer light certain difficulties and dangers that beset the speculative thinker when engaged with theory of knowledge.

Truth, then, according to Hamilton, rests on

¹ *Letters on the Philosophy of the Human Mind*, 2nd ser., pp. 54-56.

² *Id.* p. 57

³ *Id.*, 1st ser., p. 141.

the testimony of consciousness; from this source emanate such metaphysical principles as those of causality and substance. This is the teaching of common sense. But what gives to consciousness its authority? Simply the fact that it is a necessary and fundamental part of the native structure of the human mind. To impugn the veracity of its primary cognitions or to suppose them false would be 'to suppose that we are created capable of intelligence, in order to be made the victims of delusion; that God is a deceiver, and the root of our nature a lie.'¹ The only valid way of rebutting or disowning the data of consciousness would be to show, if possible, that the primary deliverances are contradictory of each other—either that they are incoherent among themselves or that there is an irremediable conflict in their consequences.

Hamilton was not satisfied with simply buttressing the philosophy of Reid; he put forth doctrines of his own. The centre of his independent speculation was the relativity of knowledge. 'To think,' as he put it, 'is to condition'; and so knowledge of the unconditioned is for us impossible. 'The last and highest consecration of all true religion is an altar—*Ἀγνώστῳ Θεῷ*—"*To the unknown and unknowable God.*"'² Yet, by the necessities of the case, we are driven to the belief in an unconditioned reality, lying beyond the conditioned. But, if the absolute and the infinite are incognizable by us, if they cannot be construed to thought, what are they? The one is simply the negation of the relative and the other the negation of the finite. Of each we have 'a negative notion' and nothing more. For anything further we are thrown upon faith—faith, however, not as irrational and unjustifiable credulity, but in the philosophical sense of the term as a rational trust, the spontaneous adherence of our nature to the conviction that behind all that is relative is the absolute, and that what appears is simply the manifestation, under conditions of finite experience, of what is.

The law of the conditioned is expressed thus: 'The Conditioned is the mean between two extremes,—two inconditionates, exclusive of each other, *neither of which can be conceived as possible*, but of which, on the principles of contradiction and excluded middle, *one must be admitted as necessary.*'³ It testifies, therefore, to the inevitable weakness or limitation of the human faculties, but it does not charge them with being deceitful. On the other hand, the value that is claimed for it is not that it solves all intellectual puzzles, but that it enforces the fact that we must not take the capacity of thought as the measure of existence or maintain the realm of knowledge to be coextensive with that of faith. Which of the contradictory alternatives in any case is to be accepted by us (*e.g.*, whether liberty or necessity in the problem of the will) it cannot say; that must be determined on other grounds—such as the testimony of consciousness. Instances of contradictory alternatives both of which are inconceivable by us are to be found in connexion with space and time. It is impossible to conceive space as absolutely limited, as a complete totality. However far we may in thought push out the boundary of space, and however much we may try to regard space as completed there, we find ourselves constrained to represent to ourselves a space beyond. In like manner, we cannot conceive space as infinitely immense, as boundless. So with time. An absolute beginning of time and an endless duration (an infinite past) are alike inconceivable. But perhaps the application of the conditioned to the principle of causality is, in some respects, the

¹ *Reid's Works*², p. 743b.

² *Id.* p. 15.

³ *Discussions*², p. 15 n.

most interesting, as it shows strikingly Hamilton's departure from the position of the Scottish school on this important point. Reid and his disciples had regarded causality as a necessary principle—a primary positive affirmation of the mind, whose rejection in thought is impossible. But Hamilton refuses to accept this view and maintains that the judgment of causality, though *a priori*, is not original and positive, but derivative and negative—negative as a mental impotence, determined by the law of relativity. It is thus simply a corollary of the law of the conditioned, as applied to a thing thought under the form or mental category of 'existence relative in time.'

'We cannot know, we cannot think a thing, except under the attribute of Existence; we cannot know or think a thing to exist, except as in Time; and we cannot know or think a thing to exist in Time, and think it absolutely to commence or terminate. Now this at once imposes on us the judgment of causality. Unable positively to think an absolute commencement, our impotence to this drives us backwards on the notion of Cause; unable positively to think an absolute termination, our impotence to this drives us forwards on the notion of Effect.'¹

This has not seemed conclusive even to Hamiltonians themselves; and it does not appear to be an undoubted improvement on Reid.

The difficulty with the doctrine of the conditioned in general is that it is impossible to see (1) how it can be legitimately fitted into the philosophy of the Scottish school, which Hamilton so vigorously upheld, and (2) how it can be made consistent with itself or agreeable to fact. A merely negative notion is psychologically impossible. To conceive a thing as existing at all is to that extent to conceive it positively; the conception may be vague, but it is positive. On the other hand, the distinction between knowledge and faith in order to bring back from the side of practical need what is incompetent to intelligence (a heritage from Kant, who inherited it from the Schoolmen) is vicious. Our nature is *one*, else there can be no such thing as truth.

Yet the doctrine of the conditioned, although vehemently attacked by J. S. Mill and others, had no small influence on subsequent British philosophy. It told in two quite different directions. On the one hand, it stimulated Dean Mansel, who accepted it in its entirety and made it the basis of his famous Bampton Lectures on *The Limits of Religious Thought* (London, 1858). On the other hand, it was taken up by Herbert Spencer (who, however, discarded the doctrine of 'the negative notion') and issued in his presentation of the ultimate reality as the unknown and the unknowable, worked out in his *First Principles* (London, 1862). This agnosticism, inherent in Hamilton's teaching, would certainly have staggered Reid.

The Hamiltonian philosophy, excepting the agnostic side of it, was a real power in Scotland during the second half of the 19th century. It lay at the root of the professorial prelections of Hamilton's two former assistants—Thomas Spencer Baynes (1823-87) in St. Andrews, and John Veitch (1829-94) in Glasgow—and of his favourite post-graduate student, A. Campbell Fraser (1819-1915) in Edinburgh. Of these three Veitch came forward as the avowed defender of Hamilton against the criticism of J. S. Mill;² and Fraser carried forward the principles of Reid to this striking theistic conclusion:

'True philosophy is . . . the moral and religious venture which accepts and applies the principles of common sense, in the assurance that, in genuine submission to their inspired authority, we cannot finally be put to intellectual or moral confusion. Faith in God is latent even in the perceptions of external sense, in which Reid found the first example of the operation of this inspiration. Alike in the outer world of the senses, and in

free or responsible agency in man, filial faith, ethical or theistic, may be justified by reasoning, although it cannot be reached by logic as a direct conclusion from premises. It is our primary postulate, and not an object of logical proof; therefore credible in reason while it is not demonstrable.'¹

This thesis is worked out in detail in Fraser's Gifford Lectures on the *Philosophy of Theism* (2 series, Edinburgh, 1895-96, reproduced, in an amended form, in 1 vol. in 1899).

3. But, altogether apart from Hamilton and his modification of Reid, Reid's philosophy during the 19th cent. was powerful abroad. Through Royer-Collard, Jouffroy, and Victor Cousin, it became supreme in France. In Germany it was highly thought of by Fichte; and Schopenhauer said of the *Inquiry*:

'Thomas Reid's book is very scholarly and well worth reading, ten times more so than anything that, taken in all, has been written since Kant.'²

In America it was kept alive by James McCosh, Noah Porter, and others.

III. IN THE 20TH CENTURY.—At the present time the Scottish philosophy, after an eclipse in Great Britain, has come into view again. Not that Reid would now shape the lectures of any professor of philosophy in any of the universities, as he did formerly; but there is a marked tendency in many quarters to refer to him and quote him with respect and to claim his support as something worth having. A filip to a fresh interest in him was given, in the end of last century, by A. Seth [Pringle-Pattison], in his Balfour Lectures on the *Scottish Philosophy* (1890). This was followed by Henry Laurie's *Scottish Philosophy: its Development* (1902), and by T. M. Forsyth's *Scottish Philosophy* (1910); and, quite recently (1915), we have had a book of very judicious *Selections from the Scottish Philosophy of Common Sense*, by G. A. Johnston. It is, further, significant that the 'new realism,' however far from Reid it may be at many points, delights in attaching itself to him on occasion; and it would not be difficult to affiliate Bergson's doctrine of intuition to Reid's teaching. Certainly, modern movements in philosophy are suggestive in this connexion.

LITERATURE.—The works of the various writers of the Scottish school of philosophy have been duly enumerated in the text and need not be restated here. The following books (mostly additional to those mentioned in the text) may be noted.

I. BIOGRAPHICAL.—A. C. Fraser, *Thomas Reid* (in 'Famous Scots' series), Edinburgh and London, 1893; William Forbes, *Account of the Life and Writings of James Beattie, LL.D.*, 3 vols., Edinburgh, 1807; Margaret Forbes, *Beattie and his Friends*, London, 1904; John Small, *Biographical Sketch of Adam Ferguson*, Edinburgh, 1864; John Veitch, *Memoir of Sir William Hamilton, Bart.*, Edinburgh, 1869.

II. EXPOSITION.—James Beattie, *Philosophical Inquiry*, London and New York, 1776; (in Blackwood's 'Philosophical Classics'), Edinburgh and London, 1882; Andrew Seth [Pringle-Pattison], *Scottish Philosophy*, do. 1890; Henry Laurie, *Scottish Philosophy in its National Development*, Glasgow, 1902; T. M. Forsyth, *English Philosophy: a Study of its Method and General Development*, London, 1910; James Seth, *English Philosophers and Schools of Philosophy*, London and New York, 1912.

III. CRITICAL.—Joseph Priestley, *An Examination of Dr. Reid's Inquiry, Dr. Beattie's Essay, and Dr. Oswald's Appeal*, London, 1774; Henry Calderwood, *The Philosophy of the Infinite*, Edinburgh, 1854; Samuel Bailey, *Lectures on the Philosophy of the Human Mind*, 2nd ser., London, 1859; J. H. Stirling, *Sir William Hamilton: being the Philosophy of Perception: an Analysis*, do. 1865; J. S. Mill, *An Examination of Sir William Hamilton's Philosophy*, do. 1865; John Grote, *Exploratio Philosophica*, pt. I, Cambridge, 1865; David Masson, *Recent British Philosophy*, London, 1867.

WILLIAM L. DAVIDSON.

SCRIBES.—'Scribes,' as the title of a distinctive order in Judaism, denotes the character and vocation of a class which flourished between the return from the Exile in the middle of the 5th cent. B.C. and the collapse of the Jewish State under the Romans six centuries later.

¹ Discussions², p. 618f.

² See his *Memoir of Sir William Hamilton*, and also his *Hamilton*, in Blackwood's 'Philosophical Classics.'

¹ Thomas Reid, p. 158.

² *Die Welt als Wille und Vorstellung*, Leipzig, vol. II ch. II, Eng. tr., London, 1883-55.

the critics seized upon it. None more effectively, or more facetiously, exposed it than Samuel Bailey¹ (1791-1870), who vividly pictures Hamilton lecturing to his class, consisting (say) of 100 students, whose eyes are directed towards the master. On Hamilton's doctrine, each student sees a different professor from what is seen by each of the others (indeed, two professors, for each student has two eyes), and, on the principle of the veracity of consciousness (to which Hamilton made constant appeal), he has a right to trust his own perception, so that there are 100 Sir William Hamiltons (not to insist on 200, 'a different object in each several eye') in the professorial garb. On the other hand, according to the doctrine that a distant object is not really perceived at all, but only inferred, no Sir William Hamilton is seen by the students, and the learned professor may literally be described as 'disappearing in the crowd.' These and other Hamiltonian inconsistencies Bailey discards and, in substituting his own view of strict natural realism, declares that our perception of external objects 'is a simple and primary act of consciousness not susceptible of any analysis or explanation,' and that it is 'vain trying to express the fact more simply or fully than by saying that he [the perceptive] perceives the object.'² 'That there are external objects perceived,' he maintains further, 'is a primary fact, which admits neither of being proved nor of being disproved';³ and he holds that this view of external perception is the only one that, on the lines of natural realism, secures absolute consistency.

But Hamilton essayed, further still, to strengthen and support the Reidian realism. He took up Reid's distinction of primary and secondary qualities of matter and worked it out with unparalleled minuteness in note D of his *Reid's Works*² (pp. 825-875, 'Distinction of the Primary and Secondary Qualities of Body'), carefully estimating the evidential value of each. He analyzed the qualities into primary, secundo-primary, and secondary, and laid great stress on the second. His distinctive point lies in the strong and explicit way in which he takes account of the human body as an animated organism, the seat of sensation, and the necessary instrument and condition of external perception—a factor in the perceptive act equally indispensable with the mental factor. Perception (he lays down) is the apprehension, in and through the organism, of resistance and extension. In thus laying our knowledge of resistance and extension (the leading qualities of externality or real being) in the organism, Hamilton anticipated the epistemology of the present day. But, further, one may observe that, while it is so that sensation would be unintelligible if the body were eliminated (man being not merely mind, but mind *plus* body), it is of importance to remember that the body occupies a very peculiar position: it is in one aspect subjective and in another objective. To this fact the psychology of to-day, which is above all things genetic, has become alive. The body as sensitive organism, with the organic sensations, is of the utmost significance in the genesis of the conception of the individual 'self.' The body is to the individual primarily the self, from which the completed notion of self takes its start, and which must still be taken account of even after we have reached the higher and developed idea.

Not yet was Hamilton's work in the interests of natural realism complete: it had a negative as well as a positive side. He did not regard it as enough to establish a position; he conceived it necessary also to beat down all opponents. Hence he carried on a vigorous polemic against representationists of all types—especially against what he called the 'cosmothetic idealism' of Thomas Brown. His criticism is always keen, but not always valid; indeed, not seldom it rests on an obvious lack of ability to realize and appreciate the opponent's point of view. Yet it served the purpose of bringing out Hamilton's own doctrine and of setting in a clearer light certain difficulties and dangers that beset the speculative thinker when engaged with theory of knowledge.

Truth, then, according to Hamilton, rests on

¹ *Letters on the Philosophy of the Human Mind*, 2nd ser., pp. 54-56.

² *Ib.* p. 57.

³ *Ib.*, 1st ser., p. 141.

the testimony of consciousness; from this source emanate such metaphysical principles as those of causality and substance. This is the teaching of common sense. But what gives to consciousness its authority? Simply the fact that it is a necessary and fundamental part of the native structure of the human mind. To impugn the veracity of its primary cognitions or to suppose them false would be 'to suppose that we are created capable of intelligence, in order to be made the victims of delusion; that God is a deceiver, and the root of our nature a lie.'¹ The only valid way of rebutting or disowning the data of consciousness would be to show, if possible, that the primary deliverances are contradictory of each other—either that they are incoherent among themselves or that there is an irremediable conflict in their consequences.

Hamilton was not satisfied with simply buttressing the philosophy of Reid; he put forth doctrines of his own. The centre of his independent speculation was the relativity of knowledge. 'To think,' as he put it, 'is to condition'; and so knowledge of the unconditioned is for us impossible. 'The last and highest consecration of all true religion is an altar—*Ἀγνώστῳ Θεῷ*—"*To the unknown and unknowable God.*"'² Yet, by the necessities of the case, we are driven to the belief in an unconditioned reality, lying beyond the conditioned. But, if the absolute and the infinite are incognizable by us, if they cannot be construed to thought, what are they? The one is simply the negation of the relative and the other the negation of the finite. Of each we have 'a negative notion' and nothing more. For anything further we are thrown upon faith—faith, however, not as irrational and unjustifiable credulity, but in the philosophical sense of the term as a rational trust, the spontaneous adherence of our nature to the conviction that behind all that is relative is the absolute, and that what appears is simply the manifestation, under conditions of finite experience, of what is.

The law of the conditioned is expressed thus: 'The Conditioned is the mean between two extremes,—two inconditionates, exclusive of each other, *neither of which can be conceived as possible*, but of which, on the principles of contradiction and excluded middle, *one must be admitted as necessary.*'³ It testifies, therefore, to the inevitable weakness or limitation of the human faculties, but it does not charge them with being deceitful. On the other hand, the value that is claimed for it is not that it solves all intellectual puzzles, but that it enforces the fact that we must not take the capacity of thought as the measure of existence or maintain the realm of knowledge to be coextensive with that of faith. Which of the contradictory alternatives in any case is to be accepted by us (*e.g.*, whether liberty or necessity in the problem of the will) it cannot say; that must be determined on other grounds—such as the testimony of consciousness. Instances of contradictory alternatives both of which are inconceivable by us are to be found in connexion with space and time. It is impossible to conceive space as absolutely limited, as a complete totality. However far we may in thought push out the boundary of space, and however much we may try to regard space as completed there, we find ourselves constrained to represent to ourselves a space beyond. In like manner, we cannot conceive space as infinitely immense, as boundless. So with time. An absolute beginning of time and an endless duration (an infinite past) are alike inconceivable. But perhaps the application of the conditioned to the principle of causality is, in some respects, the

¹ Reid's *Works*², p. 743b.

² *Discussions*², p. 15 n.

³ *Ib.* p. 15.

most interesting, as it shows strikingly Hamilton's departure from the position of the Scottish school on this important point. Reid and his disciples had regarded causality as a necessary principle—a primary positive affirmation of the mind, whose rejection in thought is impossible. But Hamilton refuses to accept this view and maintains that the judgment of causality, though *a priori*, is not original and positive, but derivative and negative—negative as a mental impotence, determined by the law of relativity. It is thus simply a corollary of the law of the conditioned, as applied to a thing thought under the form or mental category of 'existence relative in time.'

'We cannot know, we cannot think a thing, except under the attribute of *Existence*; we cannot know or think a thing to exist, except as in *Time*; and we cannot know or think a thing to exist in *Time*, and think it *absolutely to commence or terminate*. Now this at once imposes on us the judgment of causality. Unable positively to think an absolute commencement, our impotence to this drives us backwards on the notion of Cause; unable positively to think an absolute termination, our impotence to this drives us forwards on the notion of Effect.'¹

This has not seemed conclusive even to Hamiltonians themselves; and it does not appear to be an undoubted improvement on Reid.

The difficulty with the doctrine of the conditioned in general is that it is impossible to see (1) how it can be legitimately fitted into the philosophy of the Scottish school, which Hamilton so vigorously upheld, and (2) how it can be made consistent with itself or agreeable to fact. A merely negative notion is psychologically impossible. To conceive a thing as existing at all is to that extent to conceive it positively; the conception may be vague, but it is positive. On the other hand, the distinction between knowledge and faith in order to bring back from the side of practical need what is incompetent to intelligence (a heritage from Kant, who inherited it from the Schoolmen) is vicious. Our nature is *one*, else there can be no such thing as truth.

Yet the doctrine of the conditioned, although vehemently attacked by J. S. Mill and others, had no small influence on subsequent British philosophy. It told in two quite different directions. On the one hand, it stimulated Dean Mansel, who accepted it in its entirety and made it the basis of his famous Bampton Lectures on *The Limits of Religious Thought* (London, 1858). On the other hand, it was taken up by Herbert Spencer (who, however, discarded the doctrine of 'the negative notion') and issued in his presentation of the ultimate reality as the unknown and the unknowable, worked out in his *First Principles* (London, 1862). This agnosticism, inherent in Hamilton's teaching, would certainly have staggered Reid.

The Hamiltonian philosophy, excepting the agnostic side of it, was a real power in Scotland during the second half of the 19th century. It lay at the root of the professorial prelections of Hamilton's two former assistants—Thomas Spencer Baynes (1823-87) in St. Andrews, and John Veitch (1829-94) in Glasgow—and of his favourite post-graduate student, A. Campbell Fraser (1819-1915) in Edinburgh. Of these three Veitch came forward as the avowed defender of Hamilton against the criticism of J. S. Mill;² and Fraser carried forward the principles of Reid to this striking theistic conclusion:

'True philosophy is . . . the moral and religious venture which accepts and applies the principles of common sense, in the assurance that, in genuine submission to their inspired authority, we cannot finally be put to intellectual or moral confusion. Faith in God is latent even in the perceptions of external sense, in which Reid found the first example of the operation of this inspiration. Alike in the outer world of the senses, and in

free or responsible agency in man, filial faith, ethical or theistic, may be justified by reasoning, although it cannot be reached by logic as a direct conclusion from premises. It is our primary postulate, and not an object of logical proof; therefore credible in reason while it is not demonstrable.'¹

This thesis is worked out in detail in Fraser's Gifford Lectures on the *Philosophy of Theism* (2 series, Edinburgh, 1895-96, reproduced, in an amended form, in 1 vol. in 1899).

3. But, altogether apart from Hamilton and his modification of Reid, Reid's philosophy during the 19th cent. was powerful abroad. Through Royer-Collard, Jouffroy, and Victor Cousin, it became supreme in France. In Germany it was highly thought of by Fichte; and Schopenhauer said of the *Inquiry*:

'Thomas Reid's book is very scholarly and well worth reading, ten times more so than anything that, taken in all, has been written since Kant.'²

In America it was kept alive by James McCosh, Noah Porter, and others.

III. *IN THE 20TH CENTURY.*—At the present time the Scottish philosophy, after an eclipse in Great Britain, has come into view again. Not that Reid would now shape the lectures of any professor of philosophy in any of the universities, as he did formerly; but there is a marked tendency in many quarters to refer to him and quote him with respect and to claim his support as something worth having. A flip to a fresh interest in him was given, in the end of last century, by A. Seth [Pringle-Pattison], in his Balfour Lectures on the *Scottish Philosophy* (2 1890). This was followed by Henry Laurie's *Scottish Philosophy in its National Development* (1902), and by T. M. Forsyth's *English Philosophy* (1910); and, quite recently (1915), we have had a book of very judicious *Selections from the Scottish Philosophy of Common Sense*, by G. A. Johnston. It is, further, significant that the 'new realism,' however far from Reid it may be at many points, delights in attaching itself to him on occasion; and it would not be difficult to affiliate Bergson's doctrine of intuition to Reid's teaching. Certainly, modern movements in philosophy are suggestive in this connexion.

LITERATURE.—The works of the various writers of the Scottish school of philosophy have been duly enumerated in the text and need not be restated here. The following books (mostly additional to those mentioned in the text) may be noted.

¹ Thomas Reid, p. 183.

² *Die Welt als Wille und Vorstellung*, Leipzig, vol. ii. ch. II, Eng. tr., London, 1883-86.

1. **Origin and development.**—In the sense of secretaries, who kept minutes, wrote letters, and even superintended the royal archives, there had been 'scribes,' or *šopherim*, under the Hebrew monarchy, as under the Persian. These functionaries might be little more than clerks like the Roman *scribae quaestorii* or letter-writers; when attached to the army, as they still were in the Maccabean age (1 Mac 5⁴²), they probably corresponded to subordinate officials like provost-marshals or quartermasters, who might be in charge of accounts and army-lists of men and booty. But at court the *šopher* often held a more responsible position, as a secretary of State. Since his main business consisted in managing the royal correspondence, he was called 'the scribe,' the man who could write. What he wrote, as a rule, was letters for other people. They dictated; he transcribed. It was only after the fall of the monarchy that circumstances arose which led to the development of 'scribes,' in a new and technical sense, as a religious order in Judaism. These circumstances were the consolidation of the Jews as a community of the Law,¹ and the consequent need of expert students who should interpret the Tōrah and apply its authentic decisions to the changing, varied conditions of the people.² It is unnecessary for our present purpose to tell over again the familiar story of this religious transformation. The point is that the *šopherim* of the post-Exilic age were not court officials, but men of the Book, charged with the task not only of copying its contents but of enforcing its administration as a code, of elucidating its bearing upon questions of practical conduct, and of instructing the bulk of the nation on their duties to its regulations. They had to be competent in a variety of ways, but the fundamental requirement for scribes was that they must be proficient in the oracles of the Law.³

Since γραμματεῖς in Egypt covered practically all officials who had to deal with documents, from secretaries to registrars and clerks, as well as military officers, the LXX translators were free to employ this Greek term as a rule for the Hebrew *šopher* in both of the senses already noted. The Vulgate *scriba* led to the English rendering 'scribe,' which in modern times has a connotation narrower than its original scope, and certainly narrower than the range of the Jewish *šopher's* activities. The editing and transmission of the sacred text was only one of his functions. The *šopherim* were *literati*, not mere copyists in the mediæval monastic sense of 'scribes.' They were bookmen, authors. Even their editing involved knowledge, scholarship, and commenting. Furthermore, the supreme importance of the Tōrah for national life led them to be educationalists and jurists. But these functions varied according to the exigencies of the day; now one element, now another, was prominent in the vocation of these exponents of the Tōrah.

The 'scribe' as a professional penman, who took down what was dictated, was of course a familiar figure (Ps 45¹); later he became the *libellarius* of Judaism, who copied scrolls, phylacteries, etc. On the other hand, the scribes who tampered with the text of Deuteronomy (Jer 8⁹) and a private secretary like Baruch (Jer 36²⁰) were more than copyists or clerks of this kind. Both lines of activity continued in the post-Exilic vocation of the scribes, but their functions became still more ramified and specialized as Judaism was driven back upon itself. The conventional idea of the Jewish scribes is twofold: that they were dull drudges, and that they were the deadly antagonists of Jesus. The former is a misapprehension; and to understand the latter it is necessary to survey their rise and scope within post-Exilic and particularly post-Maccabean Judaism.

The origin and the development of the scribes during the post-Exilic period are still uncertain at several points; it is difficult, from the extant data, to determine the changes which passed over them as a class or even the tendencies which gradually shaped them into a class. But the general outline is fairly clear. Previous to the Maccabean movement they seem to have been associated mainly with the priests. During the Exile the interest in national literature as an organ of

continuity and unity stirred the scribes. The Tōrah was compiled and edited by sacerdotal authorities, especially under the influence of Ezekiel, the outstanding priest and prophet of Judaism in Babylonia. Ezra himself was of priestly descent, and Levites (cf. 2 Ch 34¹³) supported him in his endeavour to stamp the Law upon the conscience of the community. Indeed, the very formation of the Priestly Code expressed the conviction that 'in the future the delivering act of God would have to be preceded by a thorough sanctification of His people';⁴ and, as this holiness involved the scrupulous and minute pressure of the Law upon life, the interests of the scribes from Ezra onwards and of the priests coincided, although the former acquired a broader and more popular position in the nation, since the cultus was no longer the be-all and end-all of religion. M. Jastrow² has shown that in a passage like Lv 13-14, as elsewhere in the Priestly Code, the addition of glosses, comments, and illustrations, which characterize the Mishnāh and the Gemārā, can be already traced. At this period the scribe and the priest had much in common, and this affinity continued. Thus Simon the Just (beginning of 3rd cent. B.C.), who flourished among the last of the primitive scribes entitled 'men of the Great Synagogue,'³ was high-priest. For the most part, during this period, and even down to the time of Sirach, a scribe might be a priest, and a priest might be a scribe. Their interests were largely the same, but the scribal interest in the Law-book was naturally wider than that of the priests. The scribes were not yet the rigid canonists that they afterwards became. During the Greek period, in fact, they were often indistinguishable from the 'wise men.' The sketch of the ideal scribe in Sir 33²⁴⁻³⁹¹¹ suggests at any rate that his functions were not invariably associated with the scholastic study of the OT text or confined to Biblical interpretation. The scribal aim, according to Ezr 7¹⁰, was threefold: 'to seek (search, study) the Law of the Lord, and to do it, and to teach in Israel rules and duties.' But Sirach ignores Ezra, perhaps 'because the only public services assigned to Ezra by the record were such as it would have equally depressed Ben Sira to speak of, and grieved his disciples to hear.'⁴ Sirach correlates the Law with wisdom; his scribe has humanist interests as well as personal piety; he travels abroad, associates with courts and kings, and draws the materials of his knowledge and instruction from wider sources than the Tōrah and its sacred tradition; he is a man of culture, with education and experience of the world. This portrait may be a protest against some contemporary tendency in scribism; it is possible to take it as an implicit criticism of elements which seemed to Sirach unduly narrow. But it is safe to infer that hitherto the line of demarcation between scribe and wise man was not sharply drawn, and perhaps that even the exclusive study of the Law had not yet amounted to anything like a characteristic feature of the scribes. It is obvious that the ordinary scribe was not absorbed in the regulations of the cultus; the obligations of the Tōrah were much wider than the sacrificial ritual. Yet neither was he confined to the general study of the Law as an exclusive code of conduct and devotion. The scribal movement as yet had affinities to the wisdom-movement; if we cannot identify the 'wise men' or sages of Judaism at this period with the contemporary scribes, we are still less able to think of them as two independent

¹ Cf. T. K. Cheyne, *Jewish Religious Life after the Exile*, New York and London, 1898, p. 80 f.

companies of teachers. Both made themselves responsible for teaching true 'wisdom' to the people, and both enjoyed a measure of religious intuition; it was not yet a case of tradition *versus* humanism or fresh inspiration.¹ There were scribes who had cosmopolitan interests, and scribism was still unidentified with Biblicism.

Sirach's enthusiasm for the vocation of scribe prompts him to sketch an attractive outline. He claims that the vocation of scribe requires culture and leisure such as are impossible to tradesmen and artisans and peasants; these people, he admits, are useful in their place—no city can get on without them—but (3833-3011)

'None seeks them for advice on public affairs,²
and they hold no rank in the assembly;
they do not sit on the judicial bench,
and have no knowledge of law and justice;
they do not expound the requirements of wisdom,
nor grasp the proverbs of the wise.
What they understand is their handiwork,
and their thoughts are for the practice of their craft.
Not so he who sets himself to the fear of God
and ponders the Law of the most High,
who explores the wisdom of all the ancients
and is absorbed in the prophecies of old,
who treasures the teaching of famous men
and reflects on what is deep,
who probes for the secret meaning of proverbs
and is familiar with enigmatic parables,
who serves great men
and appears before princes,
who travels in foreign lands,
testing what is good and what is evil among men,
who is careful to pray to the Lord that made him
and entrebats mercy from the most High,
who opens his mouth in prayer
and makes supplication for his sins.
If it seems good to God most High,
he shall be made wise with the spirit of understanding.³
He pours out a double measure of wise sayings,
and gives thanks to the Lord in prayer.
He understands parables of the wise,
and meditates on their mysteries.
He sets forth the requirements of wisdom,
and glories in the law of the Lord's covenant.
Many praise his intelligence,
and his name shall never be blotted out;
his memory shall not pass away,
and his name shall live from generation to generation.
The congregation proclaims his wisdom,
and the assembly publishes his praise.
If he lives on, he shall be reckoned happier than a thousand,
and when he dies, his name and fame are ample.

The Maccabean reaction against Hellenism was a turning-point in the evolution of the scribes.⁴ Their vocation was at once contracted and intensified. The aristocratic priesthood lost the confidence of the people owing to their laxity, and the scribes now found themselves in opposition⁵ to the sacerdotal authorities, obliged to uphold and enforce the Law at all costs. One outcome of this development was the popularization of the Law, which was no longer a predominantly sacerdotal interest. Another was the recruiting of the scribes from the ranks of the people; they became more and more a lay order⁶—no longer men of leisure who looked down upon manual labour, but for the most part students of the Law who supported themselves by a trade,

declining to accept remuneration for their labours. This is a decisive change; it marks the rise of the scribes as we know them in the NT and the Mishnāh, where their power and sayings are now chronicled, and the legend of their unbroken succession is urged. To quote only one proof of their significance: we find that the thirteenth Benediction of the *Shemoneh 'Esreh*, which in its present form preserves an interesting memento of the Jewish community at the Maccabean period,⁷ definitely includes the scribes:

'Towards the righteous [*saddikim*] and the pious [*hasidim*], towards the elders of thy people the house of Israel, towards the remnant of their scribes [*sopherim*] . . . may thy tender mercies be stirred, O Lord our God.'⁸ This is an incidental but remarkable proof of the tenacious memory which Judaism cherished of their Maccabean rôle.

Then and thereafter the scribes contributed materially to the preservation of genuine religion under the Law. They deserved the grateful homage of posterity. The new conditions narrowed their horizon;⁹ the older humanistic outlook passed away, and, when the Law, as the embodiment of all that man required to know and read, pre-occupied their minds, the freer spirit of the former scribes waned; but this was the price paid for the intensity with which they enforced the claims of the Law, and the scribes probably did not regret it, in view of their fresh prestige and power within the nation. Cosmopolitan culture was now suspect. Any centrifugal tendency was resisted. Nothing mattered, if they could prevent the religious tone of Judaism from being secularized and preserve its unity from disintegration. Down to the revolt of Bar-Cochba, Greek was not eschewed entirely, it is true. But the stress of their study lay elsewhere.

2. Functions.—According to the *Bābā Bāthra*, 14b, 'the men of the Great Synagogue wrote Ezekiel, the Twelve (prophets), Daniel and Esther. Ezra wrote his own book and the genealogies of the Book of Chronicles as far as (the mention of) himself.' Whatever basis (if any) underlies the rabbinic tradition that the great convocation of Neh 8-10 was an institution called 'the Great Synagogue,' which superintended the codification and administration of the Law for a generation and more, the early 'scribes' did undertake authorship. Sirach, himself a scribe, argues⁴ that 'those who read [the Scriptures] must not only become skilled themselves but must also, as lovers of learning, be able to serve outsiders by speaking and writing.' 'The scribe,' as the man who describes and records things in heaven as well as on earth, was the title of Enoch in the book of Enoch; and the author of 4 Esdras (14²⁰) applied it to Esdras. The scribes, in fact, edited and composed; it is to them that we owe books like Chronicles, Jubilees, the Aramaic Ahikar, and even some of the early Apocalypses—not merely compilations and extracts, but expositions and original works of a semi-Biblical kind. But, as time went on, when the canon was practically closed, and the exigencies of the situation made the Law more and more the business and bosom of the national life, the scribes ceased to produce literature; originality of this kind was not merely irrelevant, it was inconsistent; and their prominent services to practical religion were rendered eventually in what a modern would term (a) the-

¹ Eleazar, one of the great Maccabean martyrs (2 Mac 7:27), was a distinguished scribe, and the *Test. XII Patr.* (Levi 8:5) predicts Maccabean 'priests and judges and scribes.'

² Cf. I. Abrahams, *Annotated Edition of the Authorized Daily Prayer Book*, London, 1914, p. lxx.

³ A partial historical parallel is the Protestant scholasticism which followed the rediscovery of the Bible after the Reformation; it was not altogether devoid of mysticism, and it helped to preserve religion during a transition period, but it could not furnish a permanent basis for the development of a living faith.

⁴ Prolog. 3 f.

¹ Cf. J. Wellhausen, *Israelitische und jüdische Geschichte*, Berlin, 1907, p. 195 f.

² It is this practical knowledge of the world, combined with the sway of a teacher over youth, that probably leads Josephus to call them σοφισταί—not at all, of course, in a derogatory sense. He attributes the popular rising against Herod and his golden eagles to the influence of two Jerusalem scribes. In one account (*BJ* 1. xxxiii. 2) they are called σοφισταί κατὰ τὴν πόλιν, μάλιστα δοκοῦντες ἀκριβοῦς τὰ πάτρια, καὶ διὰ τοῦτο ἐν παντὶ τὴν ἐλευθερίαν ἐξομολογοῦντο δόξαν. . . . τοῖς οὐκ ὀλίγοις σοφισταῖς τῶν ἱερῶν ἐξηγουμένοι τοὺς νόμους. The other account (*Ant.* xvii. vi. 2) describes them as ἐξηγηταί τῶν πατρίων νόμων, ἀνδρες καὶ δῆλον σοφίαις διὰ παιδείαν τοῦ νεωτέρου. But in Sirach's day the scribes had not yet taken so active a part in stirring up the people, and indeed their normal function was always that of teachers.

³ They would look back to a prophet like Ezekiel as their prototype; they would carry on the divine inspiration for teaching men religion, which had been degraded by prophets who had become fanatics, demagogues, and visionaries.

⁴ Cf. *PRF* ix. 553 f.

⁵ Cf. *ib.* 553 b.

⁶ By the time that the Chronicler wrote they must have been formed into guilds or families (cf. 1 Ch 2:3).

ology, (b) education, and (c) jurisprudence, all three revolving round the study of the Law as Tōrah or authoritative instruction.

(a) *Theology*.—The scribes edited, fixed, and transmitted the Hebrew text in an authoritative form, emending¹ it when necessary. In view of the Samaritan schism, this became specially important. They also elaborated and codified a system of common or traditional law, interpreting the written Tōrah, explaining or explaining away its discrepancies, and clearing up its ambiguities; the technical term for this was “to make a fence to the Thorah”: to surround it with a margin of casuistry; to evolve the principles which underlay its words; to develop and apply its decrees, accommodating them to the varied requirements of the time.² This function arose from the valuation of the Law. Wittingly or unwittingly, a man might infringe the Law in a dozen ways, as he ate, as he acted on the Sabbath, and so forth; consequently precautions had to be taken, and additional restrictions set up, to prevent such transgressions. It was an elaborate and delicate business, but the scribes were equal to it, as their record proves. They ‘fenced’ the Tōrah. This amplification of the Law was at first conveyed orally (*παράδοσις*), for there could only be one written Law, but, as the oral law professed to do no more than draw out what was implicit in the Pentateuch, it was supposed to possess Mosaic authority in its punctilious regulations for faith and conduct. The nation was living under very different conditions from those in which the original Law had been drawn up; old regulations had to be modified or even abrogated, and fresh religious sanctions and prohibitions were necessary, in order to preserve the faith from being contaminated. Now it was the scribe’s business to adjust these to the written Law somehow, by reading them into the text or by altering the text, in order to invest them with an authority equal to that of the text. He had also to put the meaning of the Hebrew code into the current Aramaic dialect. The work required ingenuity and mental as well as moral aptitude. Thus Ezra (Ezr 7⁶) is called ‘a ready scribe in the law of Moses,’ i.e. apt in interpretation, skilful, quick-witted, and shrewd. Scribes often differed in their views,³ and the echoes of controversy as well as of diplomatic evasions linger in the Mishnāh, where we can also overhear them often in their fanciful and artificial manipulation of texts, for the sake of edification. The better spirit of their work is described sympathetically by Lauterbach in the *Year-book of Central Conference of American Rabbis*, xxiii. [1913] 249-287, ‘The Ethics of the Halakah.’ Their aims are justifiable historically. Fundamentally the motive of their work was sincere and legitimate. The conception of revelation as embodied in a sacrosanct code left no other alternative open to the religious leaders of Judaism than to claim Mosaic authority for practical inferences and deductions drawn from what this complicated code said or did not say, about minute and central things alike. These regulations were laid down for the sake of a genuine nationalistic piety. But the method involved serious dangers and abuses. It made religion unduly complex and scholastic; it at once encouraged and tampered with scruples; it tended to subordinate the fundamental moral obligations to ritual niceties; and occasionally among its indirect effects were externalism and rigidity.⁴

To be Biblical is not necessarily the same thing as to be spiritual. The attitude of the scribes in the Gospels is the first, though not the only, illustration of this truth upon a large scale.

(b) *Education*.—The equally responsible task of diffusing religious knowledge among the people devolved naturally on those who were responsible for determining the standards of piety; and the scribes, as *νομοδιδασκαλοι* or *πατρίων ἐξηγηται* ἰσχυρων (Josephus), or *ιερογραμματεῖς* or *καθηγήται*, gave themselves faithfully to this task. They imparted their teaching by means of addresses delivered not only in the synagogues¹ but in private houses (their own and other people’s) and in the open air, as well as at the Temple. They were not confined to their headquarters at Jerusalem. Among those who came to examine the mission of Jesus, e.g., were ‘Pharisees and teachers of the law who had come from every village of Galilee and Judæa and Jerusalem’ (Lk 5¹⁷). R. Johanan, according to Jerus. *Shabbāth*, 16, spent several years in Galilee as a teacher, though he was distressed to find the Galileans sadly indifferent to his legalism. The activities of the scribes were wide-spread, within and beyond Palestine, and the weekly reading of the Law in the synagogues furnished them with an opportunity for reaching the common people with religious instruction in the shape of *halākhōth*. If Lauterbach² is right in his hypothesis, these *halākhōth* remained strictly expositions of or comments on the Law, down to the period of Simon the Just, after which abstract *halākhōth*, or independent traditional laws, were more and more taught in Mishnāh form (lacking Scripture proof). The object of the latter was to justify practices and customs which had sprung up in the nation, and which could not be furnished with any precedent either in the Law or in tradition. These later ‘scribes’ first found official authority in the Sanhedrin under Antigonus of Socho. But the change in the form of the *halākhōth* left the educational aim unaltered. The individual under the Law constantly required the scribe to explain his duties and interpret the bearings of the code in any given case. Ezra’s supporters (Neh 8⁸) ‘read in the book in the law of God distinctly, and gave the sense, so that the people understood what was read,’ i.e., they supplied a running commentary to elucidate the text. This expository function was maintained and developed by the later scribes; they busied themselves with *halākhah* rather than with *haggādāh*; ‘what the scribes say’ carried weight in popular esteem, not because they posed as authorities or claimed inspiration, but because they taught what they had received as the orthodox and original meaning of the Law, which had to be evolved from it by means of their tradition. Such was their regular and distinctive rôle. The congregational worship of the synagogues did something to familiarize Jews with the Law, but the masses required an ampler education in the principles and practice of their religion, and generations of expert scribes must have thrown themselves into this mission of popular instruction. Whether or not they took any direct part in the education of children,³ they trained men to their own profession; their disciples or scholars, endowed with a retentive memory and an implicit deference to tradition, carried on their work and were proud to do them honour. The influence which they possessed ultimately among the people

¹ By the 3rd cent. A.D. these corrections of the ancient text were called *tikkune sopherim* (cf. *JE* viii. 386 f.).

² C. Taylor, *Sayings of the Jewish Fathers*, Cambridge, 1897, p. 111.

³ Cf. J. Z. Lauterbach, in *JQR* vi. [1915] 804 f.

⁴ The *halākhāh*, of course, was constantly changing—once scruples start, they go on. But the innovations only added to

the network of the Law, and (theoretically at any rate) the individual ‘dragged at each remove a lengthening chain.’ The *παράδοσις παρὰ* or *προσβύτηρον*, long before it was put into writing (cf. H. L. Strack, *Einführung in den Talmud*, Leipzig, 1908, p. 101 f.), claimed authority as emanating from Moses and regulated the practical life and worship of the devout.

¹ Cf. art. *SYNAGOGUE*.

² *JQR* vi. 23 f.

³ Cf. *ERE* v. 195.

and the deference which they received may be illustrated from two sentences of their severest critic. 'The scribes and Pharisees sit on the seat of Moses; so do whatever they tell you, obey them' (Mt 23²). This was spoken by Jesus to the people. It is not ironical. Jesus recognized the validity of the Law as a divine instruction for the people, and even the need of obeying the scribes in so far as their precepts and principles were true to the spirit of the Law; what He objects to is the failure of the scribes to practise what they preached, i.e. to live up to their ideal (see Ezr 7¹⁰, quoted above). Again, in a different tone He charges them with using their powerful influence and authority to prevent people from becoming adherents of His cause: 'Woe to you jurists! you have taken away the key that unlocks the door of knowledge; you have not entered yourselves, and you have stopped those who were entering' (Lk 11⁵²). The difference between their methods and those of Jesus was plain to any audience. When the people were impressed by the difference between Jesus and the scribes in teaching—'He taught them like an authority, not like the scribes' (Mk 1²², Mt 7²⁹)—the meaning is that Jesus showed an originality and an independence which were foreign to the scribes. He had a direct intuition of God, which made His message convincing.

His teaching is fresher and more instinct with genius than that of the Rabbis, of whose teachings we have records in the Talmud and Midrash.¹²

They taught with authority, but appealed strictly to precedent and tradition. One of the virtues of Johanan ben Zakkai, e.g., according to the eulogy in *Sukkah*, 28a, is that 'he never uttered a word which he had not heard from the lips of his teacher.' But Jesus did not speak in inverted commas. Thus, e.g., none of His parables is even exegetical, whereas most of the scribes' parables start from an OT text. Jesus elsewhere denounced them for their self-righteousness, their hypocrisy, their ostentation, and their unscrupulousness. 'Beware of the scribes! they like to walk about in long robes, to get saluted in the market-places, to secure the front seats in the synagogues and the best places at banquets; they prey upon the property of widows and offer long unreal prayers' (Mk 12³⁸⁻⁴⁰). If the charge of avarice refers to legacies which rich widows were induced to contribute to the support of rabbinical study, the scribes were guilty of the same conduct as disgraced the Roman clergy in Jerome's day. The other charges can be illustrated from the pages of Josephus and of the Talmud. Paul's only allusion to them (1 Co 1²⁰) is in an OT quotation; it echoes the saying of Jesus in Mt 11²³. But not all were degenerate. There were those among the scribal teachers who were not unwilling to keep an open mind or unable to appreciate the prophetic spirit of Jesus Himself (cf. Lk 10²⁵, Mk 12³¹); the scribes seem even to have furnished the primitive Church with some recruits (cf. Mt 13³² 23³⁴),¹³ one of whom at least is known by name (Tit 3¹³: *Ἰννᾶν τὸν γραμματεῖν*).

(c) *Jurisprudence*.—As the Law ruled the Jewish community, it was naturally the scribes (*γραμματεῖς*) who took a leading place in pronouncing judgment upon what was permissible or unorthodox and in

¹² Matthew reads 'their' (*αὐτῶν*); he recognizes Christian *γραμματεῖς*.

¹³ C. G. Montefiore, *The Synoptic Gospels*, London, 1902, ii. 635.

¹⁴ The difficult saying in Mt 13³² may perhaps be intelligible in the light of Is 22¹⁵, where *γραμματεῖς* (A) renders the Hebrew term for 'house-steward'; taken thus, it would tally with the following allusion to stores, the 'scribe' being not a man of the pen but a steward. The 'kingdom' probably denotes the moral and religious experience of Christian disciples, and the 'the old and new things' may refer to the order of grace in nature, as exemplified in the preceding parables.

helping to enforce penalties upon those who broke the Law and tradition. They would exercise a strong indirect influence by their expert interpretations. They would not only discuss and decide cases of casuistry, but also investigate error and even upon occasion sentence an offender. Their ranks, as well as those of the priests, supplied members to the supreme court of the Sanhedrin (*q.v.*) at Jerusalem, which would formally ratify their interpretations as binding on the community. As responsible for the government and orthodoxy of the nation, they extended their jurisdiction to the provinces; thus, e.g., we find that Jesus, whom they suspected of blasphemy and of lax intercourse with disreputable creatures like tax-gatherers, is threatened by their interference even in Galilee, and subsequently is condemned by them in the capital. This administrative authority fell to the scribes after their allies, the Pharisees, had become the governing party in the land. There must have been Sadducean scribes, for both Sadducees and Pharisees appealed to the interpretation of the Law, but the development of the oral tradition and the popularity of the Pharisaic view of the Law gave special scope to the activity of the scribes, and we are not surprised to find 'the scribes and the Pharisees' so closely and constantly associated in antagonism to a prophet like Jesus. After the fall of Jerusalem this judicial power waned.

'After the last desperate struggle of the Jews for liberty under Hadrian, A.D. 132-135, the Scribes, no longer able to find a practical outlet for their influence in the guidance of the nation, writing down the law, which is called the Mishna.'¹

When the Jewish State collapsed, the scribes passed finally into the rabbis.² But under Herod the Great and his immediate successors their judicial authority was in full play. Juristic influence attached to the scribes from an early period in their history,³ and the paramount position of the Pharisees increased it. To what extent it survived the catastrophe of A.D. 70 seems uncertain, although the juridical activities of the scribes must have been restricted then⁴ and less vital than their work at Jamnia and elsewhere on behalf of the Tōrah. It is remarkable that the only mention⁵ of them in the Fourth Gospel (Jn 7⁵²⁻⁸¹)—or, at any rate, in an early Christian fragment which has become attached to the Fourth Gospel—is in connexion with their responsibility for public morals. 'The scribes and Pharisees brought a woman who had been caught in the act of committing adultery.' They asked Jesus for His opinion on the offender, not because they felt uncertain themselves,⁶ but in the hope of drawing from Him a verdict which might convict Him of unorthodoxy. They intervened against the disciples (Ac 4⁵) and against Stephen (Ac 6¹²) in virtue of their judicial authority, and with this mention they pass out of the NT; like the first allusion to them in the NT (Mt 2⁴), it is sufficient to emphasize the fact that they were not literary recluses and to correct the impression, suggested by their English title, that they were no more than religious men of letters.

LITERATURE.—The phases and functions of scribism are discussed in all treatises on the history and religion of Judaism, particularly in connexion with the Pharisees (*q.v.*). Some of the older special literature is chronicled by Schürer (*GH* i. 487f.). Among recent contributions the following are noteworthy: W. D. Morrison, *The Jews under Roman Rule*, Lon-

SCRIPTURE.—See BIBLE, INFALLIBILITY, INSPIRATION, REVELATION.

SCYTHIANS.—I. Name.—Scythian (Σκύθης, derivation unknown) has meant variously (1) a nomad tribe inhabiting the steppes north of the Black Sea from about the 7th to the 1st cent. B.C.; (2) this tribe with the various peoples in and round the steppe that it had subjugated; (3) any barbarian, especially a nomad, from the north-east quadrant of the world;¹ (4) later geographers—e.g., Ptolemy—unwilling to drop the name, found a place for it in N. Asia, but common usage still connected it with the Black Sea; and (5) the Byzantines called new invaders like the Goths and Russians by the classical name of Scythians. In this article it will be used in (1), the narrowest sense. For the nomads of N. Asia the Persian inscriptions and Greek authors using Persian sources employ the term 'Saka,' which is possibly the same word as 'Scyth.'²

2. Geography.—Herodotus gives two mutually irreconcilable descriptions of Scythia.³ The general meaning is that Scythia extended from the Danube to the Don and inland to the edge of the forest, a line running E.N.E. from the Bukovina to about Samara. In the western half were Tyrætes on the Dnepr, and south to north, from Olbia at the mouth of the Bug to the government of Kiev, stretched tribes called Callipidæ, Alazones, Scythæ Georgi, Scythæ Aroteres, all probably representing an older partly agricultural population and subject to the Royal or nomad Scyths. These ranged over the eastern half between the Dnepr, the Sea of Azov, and the Don, and over the northern part of the Crimea, the southern part of which was held by the non-Scythian Tauri. Round the borders of Scythia so defined dwelt Getæ south of the Danube, Agathyrsi in Transylvania, Neuri in Volhynia and the government of Kiev, Androphagi north of Chernigov, Melanchlæni north of Tambov, Budini with a trading settlement, Gelonus, on the middle Volga above Samara, Sauromatæ east of the Don, and Mæotæ east of the Sea of Azov.

3. History.—The tradition of a very early Scythian empire in Asia,⁴ if it has any foundation, probably goes back to Hittite rule. The real historian of the Scyths is Herodotus. He gives three legends as to their origin: the first two, variations of the same tale, represent them as autochthonous and seem really to belong to a settled tribe, not to nomads; in the third story the Massagetæ on the Oxus and Jaxartes, perhaps, as says Aristæas, quoted by Herodotus, themselves impelled by Issedones and Arimaspi farther east, drove the Scyths out of Asia across the Araxes (Volga?) into Europe against the Cimmerians in S. Russia. These were cut in two, part driven

west to join the Thracians, part forced through the Caucasus. The Scyths pursued these and, missing their way, found themselves in Media, which they ruled for 28 years. Then the Medes (q.v.) expelled them by the rising ever after commemorated at the feast called Sacra,¹ and they returned to their own S. Russia. This story finds confirmation in Assyrian records. Asarhaddon's inscriptions (680 B.C.) tell of Gimirrai, north of Urartu (Ararat), attacked from the north by Aḡu-za-ai (or Iṣ-ku-za-ai) and thus forced to invade the vassal state of Man and incur the enmity of Assyria. The latter made friends with the Aḡuzaai and used them not only to drive the Gimirrai west, but in the next generation against the Medes and apparently against Egypt, so that parties of them plundered Ascalon² and held Bethshan, hence called Scythopolis.³ Gimirrai is clearly the Gomer of Gn 10²⁴, and the Cimmerii of Herodotus; Aḡuzaai=Ashkenaz (אַשְׁכְּנַז, miswritten for אַשְׁכְּנַז) and Scyth. The incursion into Palestine is referred to in Jeremiah (4³-6²⁰; cf. Ezk 38-39¹⁶). It is, however, possible that some of these invaders were not true Scyths penetrating the Caucasus, but Sacæ from the east of the Caspian.⁴

So the Scyths returned from Media to S. Russia and re-established their lordship over the slaves whom they had left behind. We know nothing of their history for over a century but the tale of Anacharsis (c. 530 B.C.), who was so attracted by the life of the Greeks now established in colonies along the Euxine coasts that he actually journeyed to Greece, but on his return was slain by his kinsfolk for being untrue to their ancestral customs. According to Herodotus, Darius, king of Persia, about 512 B.C. marched through Macedonia and Thrace, crossed the Danube, leaving the Ionians with orders to guard his bridge for 60 days, and invaded Scythia. Enticed by the Scyths as far as the river Oarus (Volga?), he began eight forts, but, leaving them unfinished, turned west again and was led round the edges of the country, through the lands of the border nations who had refused to help against the invader. Meanwhile the Scyths had tried to get the Ionians to desert and destroy the bridge, but they kept it in being even beyond the date promised. Finally Darius, unable to come up with the Scyths and running short of provisions, abandoned his wounded and baggage and returned hastily to the bridge. Ctesias and Strabo make much less of the expedition, which was probably a more or less unsuccessful demonstration meant to protect the new Persian conquests and magnified to exhibit the poor spirit of the Ionians and the advantages of nomad warfare. In revenge the Scyths made a raid that reached the Thracian Chersonese, drove out Miltiades, and even proposed to Cleomenes of Sparta a joint invasion of Asia. During the 5th cent. Scythian archers were employed as police in Athens. They are often represented on painted vases, but it is hard to distinguish their equipment from that of Persians, Amazons, and the like.

Shortly before the time of Herodotus Scyles, the Scythian king, undeterred by the fate of Anacharsis, had married a Greek wife and adopted Greek ways. He came to a like end, and his successor, Octamasades, is the last of the line whom we can name. We have hardly any glimpses of Scythia during the 4th and 3rd centuries B.C.; in the latter part of the 4th the Sauromatæ were still east of the Don or just crossing; in 179 B.C.

Gatalus δ Σαρμάτης (the first occurrence of this form usual in later Greek writers and universal in Latin), now clearly in Europe, joined a league of Pontic states.¹ Long before this the Scythians' centre of gravity seems to have shifted westwards; their king, Athas, defeated the Triballi on the lower Danube, but was himself defeated by Philip of Macedon (339 B.C.).² In an inscription c. 200 B.C.³ we find the Scythians asking the men of Olbia for protection against the attacks of Galatæ and Sciri, invaders from Central Europe. In its last definite appearance the name Scyth is applied to the people of King Scilurus. Coins suggest that the kings of a Scythian remnant about the Danube mouth regained a certain amount of power and that the last of them, Scilurus, became suzerain over Olbia and extended his dominion as far as the Crimea. Inscriptions show that he had a kind of capital at Kermenchik, near Simferopol, entered into close relations with the Tauri, and threatened the city of Chersonesus. The latter called in the help of Mithridates and thereby defeated Palæus, son of Scilurus.⁴ The Scythian element in the kingdom of Scilurus scarcely amounted to more than a name; and, when Strabo, rejecting the tradition of Herodotus, makes a fresh survey of the north coast of the Euxine, he finds no real Scythians there and speaks only of various Sarmatian tribes.

4. Physical characteristics, customs, etc.—Hippocrates,⁵ discussing the effect of climate upon human physique, describes the peculiarities of the Scythians, whom he finds as little like other men as are the Egyptians. The special points are a close mutual resemblance, a reddish (πυρρός) complexion, a fatness, slackness, and excess of humours, a look as of eunuchs, and in certain cases a sexual indifference that amounts to actual impotence. This disease was well known; Herodotus⁶ says that it was incurred through the sack of the temple of Derceto at Ascalon, but Hippocrates declares it to be a disease just like any other disease, and due to excessive riding. Men thus afflicted took their place absolutely among the women and were called 'Enarees.' He adds that all this applies only to the most noble and rich among the Scythians. The women, he says, always sit in waggons, whereas among the Sauromates they ride astride and take their share even in war.

Herodotus⁷ gives a full account of Scythian customs; almost always he has in view the nomad Scythians, but some details seem to contradict their general scheme of life and are more probably true of the agricultural Scythians near Olbia, whence Herodotus seems to have obtained his information. The life of the nomad Scythians was conditioned by the necessity of tending their beasts; chief of these was the horse, used for riding (alone of the ancients the Scythians used geldings) and also to supply meat and mare's milk, kumys, cheese, butter, and butter-milk (τυρός and βούτυρος are perhaps Scythian loan-words), while the oxen drew the great waggons in which the women lived. They also ate sheep and game, but eschewed the pig. They used some vegetable food—grain, onions, garlic, and wild bulbs; when they could get it, they drank wine, and, unlike the Greeks, they drank it neat. For cooking they used great cauldrons; or they cooked an animal in its own skin, burning the bones at the same time. Of their dress he tells us only that they wore belts and trousers and pointed caps (cyrbasia). Their great weapon was the bow, with arrows and quiver, used from horseback; accordingly it was not a simple self-bow but a rather short bow with a complicated curve compared to that of the north coast of the Euxine. They also used darts, short swords (acinares) or daggers (xyxipetior), and axes (sagaris). For defence they had shields and scale-armour.

Their political organization consisted of an over king, under-kings, nobles, freemen, and slaves. The women of the Scythians themselves rode in the waggons and had apparently much less freedom than those of the other nomad peoples (Sarmatæ, Massagetæ, and the like), and among them we hear of Queens Tomyris, Zarinaia, Amage, and Tirtatao. The kings were polygamous and married foreign women. On his father's death the son took over his wives, excepting of course his own mother. Their warlike tactics are proverbial—retiring before an invader, wasting the country, cutting off his supplies, harassing his rear, enticing him by feigned flight, and gradually exhausting him, while the nomads carry their supplies with them and are perfectly mobile. When they attack other countries, they leave no forces to guard their own, being quite independent of their base and so able to concentrate all their strength upon one point. But, when Thucydides¹ says that, as the most numerous people of the world, they could, united, vanquish any other nation, he exaggerates both their number and their power.

5. Religion.²—The Scythians revered chiefly Tabiti (=Hestia); next to her Papæus (=Zeus) with his wife Apia (=Ge); after them Goetosyros (=Apollo), Argimpasa (=Aphrodite Urania), and Ares. Thamimasadas (=Poseidon) was peculiar to the Royal Scythians. They raised no statues, altars, or temples to their gods, except to Ares. Their general way of sacrificing was as follows: the beast, usually a horse, took his stand with his forefeet tied together; the sacrificer pulled the end of the rope from behind and brought him down; then he called upon the god and strangled the victim. Ares was worshipped in the form of a sword set on a platform of brushwood three furlongs square, heaped up in each district; besides horses and sheep they sacrificed to him one out of every hundred prisoners, pouring his blood upon the sword. The Ares cult suggests the more settled tribes of W. Scythia, where masses of brushwood would be obtainable; the native name is not given, and this points to a different source. The Scythian pantheon tells us very little; we do not know what aspect of the multiform Greek deities answered to the Scythian, nor can we establish the true form of the names of the latter.

6. Witchcraft.—Witchcraft³ played a great part in Scythian life. The wizards divined with bundles of sticks, and the Enarees by plaiting bast. If the king fell sick, it was because some one had sworn by the royal hearth and had broken his oath, thus bringing down upon the king the deity's vengeance. Accordingly the wizards were called in to name the perjurer, and he escaped with his life only if he could adduce two sets of wizards to declare him innocent. If wizards were judged to have brought a false accusation, they were burnt on a pyre set on a cart.

The ceremony for taking oaths and swearing blood-brotherhood is widely spread: the parties mix their blood with wine in great cups, put therein a sword, arrows, an axe, and a dart, and, after praying long over it, drink it together.

7. Funeral customs.—In the case of the kings funeral customs⁴ are very magnificent and cruel; the burials take place in the land of the Gerrhi, near the great bend of the Dnepr, and to this region the king is brought, wherever he may have died. The body is embalmed and put on a waggon. Its attendants disfigure themselves and all whom they meet, as they bring it from tribe to tribe to the appointed place, where it is laid in a great square pit under a roof of wicker-work. They strangle and lay in the vacant space one of the dead man's

⁴ Ib. 71-72.

concubines, his cup-bearer, cook, groom, and messenger, also horses, set by him his cups of gold (they make no use of silver or bronze) and firstlings of all his possessions and over all they raise a great mound. After a year they slay 50 of his favourite servants, free Scythians all, and 50 horses, stuff them and set them in a circle round the mound. An ordinary Scyth when dead is carried about on a waggon to visit his friends, who feast the dead man and his attendants, until, after 40 days, he is laid in his grave.

One or two other customs may be worth mention: that by which a Scyth who has slain an enemy in war drinks his blood and scalps him, the scalp being a voucher in the distribution of booty, and the making into cups of the skulls of private adversaries vanquished in combat before the king show an extreme of barbarism; in iv. 73-75 Herodotus seems to describe three separate customs under one—a ceremonial purification from the taint of a corpse, the usual vapour-bath still popular in Russia, and a custom of intoxication with the vapour of hemp; he adds that the women whitened their skin with a paste of pounded cypress, cedar, and frankincense, which suggests considerable luxury and wide commercial connexions.

This picture of Scythian life is supplemented, and on the whole confirmed, by the results of excavations made in S. Russia during the past hundred years. Though no tomb can be said exactly to correspond to the ritual described by Herodotus, nearly every point can be paralleled from some burial or other. From Podolia and the south part of the Kiev and Poltava governments, south to the Euxine and the neighbourhood of the Greek cities of the Crimea and east across the Dnepr and Don to the valley of the Kuban along the north slope of the Caucasus, we find groups of barrows of every size up to 70 ft. high and 400 ft. across. The best are mostly about the bend of the Dnepr, just where we should seek the land of Gerrhus. The oldest contain skeletons coloured red and a few pots, but the rich contents of the greater number show them to be tombs of nomad people in touch with Assyrian, Iranian, and Greek civilization and dating from about the 7th cent. B.C. to the period of the great migrations. Most of them have been plundered, either just after their construction or by successive generations of tomb-robbers, but a few have kept their treasures, at any rate in part, to reward scientific investigation. We may take as an example the latest great find, made by N. I. Veselovski in 1912-13.¹

The tumulus Solokha is 15 miles south of Nicopol in the middle of the Gerrhus group. In the centre had been the tomb of a woman arrayed in all her finery (now stolen) and supplied with drinking-vessels, a cauldron, and a gridiron, and near by two horses with gold trappings. In the south-east part of the mound, approached by a deep shaft and a covered way, was a larger chamber, containing the body of a king or chief, by him his sword-bearer, and another servant near the entrance. A little to the west was a second pit with the skeletons of five horses and a groom by them. Clearly the queen had died first, and the king had later been put into the same barrow. Other examples show that, if the king had died, his wife would have immediately followed him into the grave. The king's grave-goods were wonderfully rich: he wore a great lion-ended torque and five gold bracelets; some 300 gold plaques with repoussé designs, flowers, beasts, and human figures were sewn on to his pall; above his head lay a bone-handled knife, a rusted sword, a coat of mail, a pair of greaves, a wooden cup to which gold plates had been nailed; by his shoulder lay a bronze Greek helmet; by his right arm two iron lances and a copper mace; by his leg a leather *gorytus* (combination quiver and bow-case); by his right hip two iron swords, one of them with a gold hilt and a peculiar sheath. Not far from his right shoulder was a wonderful golden comb of the finest Greek work, adorned with figures of three warriors; near by stood seven silver cups with men or animals in relief. In niches in the wall of the chamber, among other things, were ten Greek wine-jars, three great cauldrons with beef and mutton bones, and another amphora, a colander, and a silver-mounted drinking-horn; a special

hiding-place held a *gorytus* of repoussé silver, bearing a wonderful representation of Scythians in combat and containing 180 arrow-heads, and a great golden saucer with a central boss, animals in repoussé all round, and an obliterated Greek inscription. The whole may be dated c. 300 B.C.

The general inventory of the other great tombs is much the same and is dictated by the same ideas as the funeral rites described by Herodotus, illustrating them in such details as the presence of wooden tabernacles over the body, the remains of the funeral car and the funeral feast, etc. Discrepancies are the presence of silver and bronze and the rarity of any kind of axe. As to their style, the objects found are (1) a few Assyrian and perhaps Iranian, (2) archaic Ionian, (3) native Scythic, (4) 'finest' and Hellenistic Greek. Some of the last are of extreme beauty, and they are important as being easily dated and as presenting detailed representations of Scythians. Women's gear and things of general use are mostly of this class; weapons (except the *goryti*) and horse-trappings are usually of the other three. The native craftsman, though utterly failing to imitate the finest Greek work, succeeded better with the Ionian style, but imported into it a grotesque element recalling Upper Asia and Siberia, sometimes even China; he was very fond of animals, especially reindeer, and beasts and birds of prey, so foreshadowing the beast style of the great migration period. The most interesting types (both known also in Siberia) are the cauldron and the short sword with a heart-shaped guard; its sheath has a side projection and a separate tip necessary for a special way of suspending it from the belt; just such are shown upon bas-reliefs at Persepolis.

8. Ethnic origin.—The Scythians and Sarmatians used to be regarded as the ancestors of the Slavs; these are rather to be found among their north-west neighbours, the Neuri, the northern tribes adjoining being probably Finns. Niebuhr, and after him Neumann, struck by the many detailed resemblances in custom, took the Scythians to be Mongols or Turko-Tatars. Müllenhoff declared them, on the basis of the few names and words preserved, to be Iranians. No doubt Iranians formed the great bulk of the steppe population before the great migrations; this is proved by the foreign names in Greek inscriptions from Olbia and Tanais, most of which can be explained from the Iranian language of the Ossetes, a people now confined to the central Caucasus, but undoubtedly a remnant of the Sarmatians.² But it looks as if in the true Scyth dominant caste there was an element similar to the Huns, early Turks, and the like; this type is suggested by Hippocrates (*ἐβουνοειδέστατοι*),³ by 5th cent. Greek terra-cottas of Sace from Memphis, showing that the Mongoloid type was already not confined to the extreme north-east of Asia, and by certain representations of natives found in Solokha. These all have beards, but this feature is quickly introduced by any crossing with Iranian blood. If the rulers were non-Aryan, it would explain why many words—e.g., the god names—do not lend themselves to Iranian interpretation, though indeed no suggestions are very convincing. Similar customs too are mostly the product of similar physical conditions. Still the balance of the evidence inclines to the view that, while the steppe-population—e.g., the Cimmerians and agricultural Scythians—was predominantly Iranian, the actual name Scyth belongs to a horde akin to the Turko-Tatars, which made great inroads in the 7th cent., was decadent by the 5th, and gave way in the 3rd to the Sarmatians with Iranian views of religion, of kingship,⁴ and of the freer position of women natural among nomads.

⁴ M. I. Rostovtsev, *Iranism and Ionism*, London, 1913. The author is projecting a general account of things Scythian in English.

The substitution of the Sarmatians was a change of name rather than of population or general mode of life, and the 'Scythic' tombs belong at least as much to Sarmatians as to Scythians.

SE'ADIAH.—Se'adiah b. Joseph, the most prominent *gāōn* of the Jewish academy at Sura, inaugurated a new epoch in all branches of Jewish learning. He was born in Dilāz, Upper Egypt, in 892 and died at Sura in 942. Originally his name

probably was Sa'id (سعيد = Fortunatus), a form which he uses acrostically in some of his earlier writings. Later he adopted the Hebrew form סַאדְיָהּ, or, fuller, סַאדְיָהּ (=Se'adiah; the commonly accepted pronunciation, Sandya, is therefore incorrect). He is often surnamed al-Fayyūmī, i.e. 'of Fayyūm' (the Egyptian province near which Dilāz is situated), for which, owing to a mistaken identification by Se'adiah of Fayyūm with the Biblical Pitom,¹ Hebrew sources, especially those of Karaite origin, usually substitute ha-Pitomi. Earlier mediæval Hebrew authors, particularly Abraham Ibn Ezra, mostly refer to Se'adiah simply as 'the *gāōn*,' without thinking it necessary to mention the name.

1. Life.—Of Se'adiah's origin and family relations very little is known. In some recently discovered documents whose authors were inimical to Se'adiah the claim is made that he was of non-Jewish origin, while he himself traces his pedigree to Shelah² and to the Mishnic teacher Ḥanina b. Dosa.³ None of these assertions has any historical basis. The truth appears to be that Se'adiah was of humble Jewish parentage, his father, a pious and learned man, deriving his livelihood from some trade. A son of Se'adiah, Dosa by name, made a great reputation for himself as a scholar and is often referred to also as *gāōn*.

The circumstances of Se'adiah's youth and earlier education, both Jewish and secular, are likewise a matter of conjecture, as indeed is all our knowledge of the inner history of the Jews in Egypt during that period. It is quite certain, however, that the Karaites (*q.v.*) had settled in various parts of Egypt at a very early time, and that, in their eagerness to make converts to their cause among the Rabbanites, they displayed a considerable literary activity in the various branches of Jewish studies, especially Hebrew grammar, Bible exegesis, calendar, and theology, which in turn served as an incentive to the intellectual elements among the adherents of traditional Judaism to devote themselves to the same courses of study, so as to be able to defend tradition with the same scientific weapons as their adversaries used. Se'adiah, who, as his subsequent career shows, was of a fearless and somewhat contentious character, took up the fight against Karaism while still a very young man, which brought upon him the wrath and persecution of the fanatic devotees of the new creed. It was no doubt the persecution of the Karaites that forced Se'adiah to leave his native country in the year 915 and to emigrate to the East. Here we lose trace of him for a while, but from certain letters of his, written about seven years later, we learn that he had lived in Palestine, probably

in the city of Tiberias, renowned as the seat of the Masorites. There he came in contact with numerous scholars, among them the famous Masorite Moses ben Asher, and a certain 'Abū Kathir Yahya ibn Zakariyya, who, according to the report of the Arabian polyhistor 'Alī al-Mas'ūdī († 957), became Se'adiah's teacher. This 'Abū Kathir, with whom al-Mas'ūdī had a disputation on several religious-philosophic questions,⁴ probably introduced Se'adiah into the field of philosophy, in which he was later to become the first and foremost exponent of mediæval Jewry. Se'adiah's association in the East with the Jewish philosopher David ibn Merwān al-Mukammas must likewise have influenced him in that direction.

In the years 921-923 we find Se'adiah embroiled in the fierce struggle that had broken out at that time between the Palestinian *nasi*, Ben Meir, and the heads of the Babylonian academies, Ben Meir trying to wrest from the latter the supremacy which they held over all Jewry, especially their old prerogative of fixing the calendar, and to restore it to the Palestinian authorities. Being a man of great influence, Ben Meir had almost succeeded in bringing over the communities to his side, and it was only through the energetic intervention of Se'adiah, who sent out circular letters and wrote a special work in defence of the Babylonian cause, that Ben Meir and his following met with a crushing defeat. In reward for this, Se'adiah was joined as an *'allūf* (chief judge, third in rank below the *gāōn*) to the staff of the Sura academy, in which position he remained until 928. In that year the gaonate had become vacant through death, and the then exilarch, David b. Zakkai, appointed Se'adiah to the office. It was not very long, however, before a bitter quarrel broke out between the new *gāōn* and the exilarch on account of an illegal procedure by the latter in a certain lawsuit which was calculated to bring him great profit, and which Se'adiah, as an upright man, would not countenance. The exilarch, as was customary in those times, excommunicated the *gāōn* and appointed another man as his successor (*c.* 930). Se'adiah, by the power vested in him, retaliated in kind and declared David b. Zakkai to be no longer exilarch. Babylonian Jewry was immediately split into two opposing factions, the one siding with the exilarch, the other with the *gāōn*. For two years Se'adiah maintained himself in the office in spite of all opposition, but finally the exilarchal party, headed by the very wealthy and learned Aaron Sargūda (סרגודא), who offered a heavy bribe to the *khalifah* for Se'adiah's deposition, succeeded in having him definitely removed from the gaonate (beginning of 933). Se'adiah then retired into private life, devoting himself entirely to his scientific work (933-937). In the meantime the strife which divided Babylonian Jewry continued unabated and often degenerated into open fights and even street riots. Some of the prominent men of the Baghdād community, finding the situation unbearable, urged a certain Bishr b. Aaron, father-in-law of Sargūda and a man of great influence, to try to bring about a reconciliation between the exilarch and Se'adiah, and Bishr succeeded in effecting this. Se'adiah was reinstated in his office (937), but held it for only five years. The excitement and suffering that he had undergone during the seven years of war with the exilarch had undermined his health and in 942 he died, as is reported, of melancholy, at the age of fifty, two years after the death of David b. Zakkai.

Se'adiah was undoubtedly one of the greatest men that mediæval Jewry ever produced. His universal mind embraced all branches of human knowledge cultivated by Jews and Arabs of his

¹ Ex 111.

² 1 Ch 42.

³ *Abagah*, iii. 91.

⁴ Goldziher, *REJ* xiv. [1903] 41.

time. With him begins a new epoch in the history and development of Jewish learning and literature. He was the first scientific writer in the fields of Hebrew grammar and philology, Biblical exegesis, and synagogal liturgy, the first systematic expounder of Talmudic lore, and above all the pioneer and path-finder in the field of Jewish religious philosophy. His forceful personality left an indelible impress upon his age, and his literary achievements exercised a lasting influence on subsequent generations throughout the Middle Ages, even down to our own time.

2. Works.—It is impossible here to give an adequate appreciation of Se'adiah's very extensive life-work. Besides, most of his writings have come to us in fragmentary form or are known only from quotations in the works of later authors. The following is a general description of his more important works. Those of minor importance or not sufficiently known are referred to summarily.

(a) *Hebrew philology*.—(1) 'Agron, a Hebrew dictionary in two parts with the special view of facilitating versification, preceded by a rhetorical introduction in pure Biblical Hebrew, in which the author briefly summarizes the history of the Hebrew language, deploring its neglect by the Jews of his day, and urges them to devote themselves again to its study and cultivation. Se'adiah wrote this work, his first production so far as is known, in his twentieth year (913), while yet in Egypt. Several years later he issued the work in an enlarged edition, containing also portions treating of the various themes of poetry, under the changed title, *Kitāb al-shīr'al-ibrānī* ('Book on Hebrew Poetry'), and added an Arabic introduction which is of great historical value. Apart from a few very short fragments of the book, only the two introductions, nearly complete, have been preserved and were published by A. Harkavy, in *Studien und Mittheilungen*, Berlin, 1891, v. 40-57. For numerous bibliographical and other details see H. Malter, *Life and Works of Saadia Gaon*, Philadelphia, 1919, s.v. 'Agron.'

(2) *Kutub al-Lughah* ('Books on Language'), a grammatical work in twelve parts, the oldest work known on Hebrew grammar, of which, however, only fragments are extant; see W. Bacher, *Die Anfänge der hebräischen Grammatik*, Leipzig, 1895, pp. 38-62; Malter, *Bibliography*, i. 2.

(3) *Tafsīr al-sab'ina lafzah al-faridah* ('Explanation of the Seventy Isolated Words'). In this little work, which was published several times, the author explains on the basis of later Hebrew (Mishnah) the Hebrew and Aramaic words which occur in the Bible only once or very rarely. The list actually contains the explanation of 91 words; hence the word *sab'ina* must be a scribal error, or represents the original number, which was later increased by the author or others; see Malter, *Bibliography*, i. 3.

(b) *Bible translation and exegesis*.—Se'adiah's translation of the Bible into Arabic, accompanied by extensive Arabic commentaries—the first in the Arabic language—ushered in a new epoch in the history of Judaism and to some extent of civilization in general. For, just as the Septuagint had been instrumental in bringing about that blending of Jewish and Greek thought known as Hellenism, so did Se'adiah's translation and interpretation of the Scriptures prepare the way for the inauguration of the famous Spanish-Arabic period in the history of the Jews during which they had again become the mediators between the Orient and the Occident and themselves made original contributions to all branches of mediæval science. Se'adiah's translation became the standard Arabic Bible for all Arabic-speaking Jews as well as for the Christian scholarly world down to our time.

The translation of the Pentateuch is contained in the Polyglot Bibles of Constantinople (1540), Paris (1645), and London (1657). In the Paris edition the Arabic text was translated into Latin by Gabriel Sionita, and the Hebrew characters of the Latin princeps were transliterated into Arabic, which was the cause of innumerable mistakes in the text. A later edition (Jerusalem, 1894-1901), under the title *תרגום סעדיה*, Hebrew *תרגום סעדיה* (see *JQR* xiv. [1902] 534, n. 1), is based on other MSS, in the possession of Yemenite Jews. A critical edition with Se'adiah's Arabic introduction appeared in Paris (1893) as the first volume of the *Œuvres complètes de R. Saadia ben Josef Al-Fayyūmī*, edited by J. Derenbourg. Genesis and Exodus in a somewhat different recension were published by P. de Lagarde from a Leyden MS in his *Materialien zur Geschichte und Kritik des Pentateuchs*, Leipzig, 1887.

Of the long commentary on the Pentateuch numerous fragments have been discovered among the Genizah MSS within the last twenty-five years and were sporadically published,

partly with English translations, by various scholars. For a detailed description see Malter, *Bibliography*, s.v. 'Bible.'

Of Se'adiah's translations of and commentaries on other Biblical books the following have been preserved:

Isaiah, first poorly edited by H. E. G. Paulus, Jena, 1790-91 (see S. Munk, *Notice sur Rabbi Saadia Gaon*, Paris, 1833, p. 20 ff.). Joseph and Hartwig Derenbourg edited the translation and the extant portions of the commentary as vol. iii. of *Œuvres complètes*, Paris, 1896 (containing also a French translation of the Arabic text).

Psalms.—Extracts with a German translation were published by G. H. A. von Ewald in his *Beiträge zur Geschichte der ältesten Auslegung*, i. 9-74, 154-160. Psalms 1-20 were published by S. H. Margulies (Breslau, 1884); 21-41 by S. Lehmann (Berlin, 1901); 42-49, 84, 87, 88 by T. Hofmann (*Die korachitischen Psalmen*, Stuttgart, 1891); 50-72 by S. Baron (Berlin, 1900); 73-89 by S. Galliner (Berlin, 1903); 107-124 by J. Z. Lauterbach (Berlin, 1903); 125-150 by B. Schreier (Berlin, 1904). Thus only Ps 90-106 are still awaiting publication, which was announced by E. Weil. All these editions, except that of Hofmann, bear the title *Saadia Al-fayyūmī's arabische Psalmen-übersetzung*, and all contain also Se'adiah's commentary on the respective Psalms. A double introduction to this work by Se'adiah was published by S. Eppenstein in *Festschrift zu Ehren des Dr. A. Harkavy*, Petrograd, 1908, pp. 135-160 (cf. *MWJ* viii. [1881] 1-19, 61-91).

Proverbs, translation and commentary, forming the sixth volume of *Œuvres complètes*, edited and translated into French by J. Derenbourg and M. Lambert, Paris, 1894 (cf. Jonas Bondi, *Das Spruchbuch nach Saadia*, Halle, 1888; B. Heller, *REJ* xxxvii. [1898] 72-85, 226-251).

Job, translation and commentary, was first edited by J. Cohn (Altona, 1889) and then again with additional material and copious notes by W. Bacher in vol. v. of *Œuvres complètes* (Paris, 1899), which contains also a French translation by J. and H. Derenbourg.

Daniel.—The translation was edited by H. Spiegel (*Saadia al-Fayyūmī's arabische Danielversion*, Berlin, 1906). The commentary exists in MS. Extracts from it were published by S. A. Poznański, *MGWJ* xlvii. [1902] 415 f.; cf. the Hebrew periodical *Ha-Goren*, ii. [1909] 92-103.

There appeared also translations, partly with commentaries, of *Canticles*, *Ruth*, and *Ether* (cf. A. Merx, *Die Saadjanische Übersetzung des Hohen Liedes*, Heidelberg, 1882; M. Peritz, *Zwei alte arabische Übersetzungen des Buches Ruth*, Berlin, 1900; Poznański, *MGWJ* xlvii. 364-372), but they do not represent the original text of Se'adiah. They are later editions of the *gādn's* works by anonymous authors who often modified and amplified the original wording; for further details see Malter, s.v. 'Five Scrolls.'

(c) *Liturgy*.—In his desire to strengthen traditional Judaism and to further the religious life of the Jews in the Diaspora, Se'adiah set himself the task of collecting all the ancient standard prayers and hymns as well as the liturgical productions of famous synagogal poets (Yannai, Elenzar, Kalir, and others) and arranging them systematically in a so-called *Siddūr* or *Seder* ('Order of Prayers') for the whole year.

In this work, which was first discovered by Steinschneider (1851) in a Bodleian MS and is as yet unpublished, Se'adiah embodied several liturgical compositions of his own. Some of these, among them a lengthy didactic poem on the 613 precepts of the *Tōrah* (תורה, תורה), the so-called '*azharōth*' ('exhortations') on the same subject, and two highly poetical Hebrew prayers (*bakkashōth*), were published in J. Rosenberg's *Kōbēz*, Berlin, 1856; cf. also *Œuvres complètes*, ix. [Paris, 1897] 67-69; J. Bondi, *Der Siddūr des R. Saadia Gaon*, Frankfurt a. M., 1904. A considerable number of liturgical compositions by Se'adiah were incorporated in the various rituals still in use in the synagogues. Some, more recently discovered, appeared in periodicals and other publications. For a detailed enumeration and description see Malter, s.v. 'Liturgy.' Here is to be mentioned only Se'adiah's 'Poem on the Number of Letters' in the Bible, which was repeatedly published and commented upon, by Buxtorf the Elder in his *Tiberias*, Basel, 1620, p. 133 ff., and C. D. Ginsburg, in *The Masoreth ha-Masoreth* of Elias Levita, London, 1867, pp. 271-278, and especially by J. Derenbourg in *Manuel du Lecteur*, Paris, 1871, pp. 139, 235 ff.

(d) *Halākhā*.—Se'adiah's work in this specifically Jewish field of learning was of the greatest importance, setting an example to future generations in the scientific and systematic treatment of the vast Talmudic material. Unfortunately most of his writings in this line have been lost, only three having been preserved, as it appears, in a complete form, while the others exist only in small fragments or are known from extracts and quotations in the works of later authors. So far as can be seen from the existing material, Se'adiah's Halākhic writings were divided into three classes: (1) methodology, (2) interpretation, and (3) codification of the Talmud.

(1) Of the works belonging to the first class we possess only the Hebrew translation of the originally Arabic *Interpretation of the Thirteen Hermeneutic Rules* (פרש"ן סדרה), published first by S. Schechter in the periodical *בית הלל*, iv. [Vienna, 1885] 235-244 and re-edited by J. Müller in *Œuvres complètes*, ix. 74-83. Another methodological work, *Introduction to the Talmud*, no longer exists; cf. L. Ginzberg, *Geonica*, i. 163.

(2) None of the works of the second class (commentaries on the Mishnah and various tractates of the Talmud) has been preserved, with the exception of a very short *Commentary on the Tractate Berakoth*, containing merely lexical notes. It was edited from a Genizah MS by S. A. Wertheimer, Jerusalem, 1908; cf. Ginzberg, p. 164.

(3) About a dozen treatises representing the third group of Se'adiah's Talmudic writings are known by name, but only the *Treatise on Inheritance* (כתבאב אלכואריה) has come down to us, edited by J. Müller (*Œuvres complètes*, ix. 1-53). The treatise is preceded by a philosophic introduction. Of some of the other treatises fragments have come to light—e.g., *On Testimonies and Contracts*, *On Usury* (H. Hirschfeld, *JQR* xvi. [1904] 294, xviii. [1906] 119 f.), etc. Mention must also be made of Se'adiah's *Responsa* (decisions in legal and religious questions), about 50 of which were published by J. Müller, pp. 87-142; cf. Malter, s.v. 'Halakah' D.

(e) *Calendar and chronology*.—The question of calendar was the subject of perpetual controversy between Karaites and Rabbanites, and Se'adiah as the chief exponent of the latter has repeatedly treated of the matter in his polemical writings (see below) as well as in monographs, of which, however, only fragments have been preserved.¹

A treatise on chronology under the title *Kitāb al-Ta'arūḥ* was published by A. Neubauer in *Medieval Jewish Chronicles*, Oxford, 1887-95, ii. 89-110; cf. W. Bacher, *REJ* xxxii. [1890] 140 ff., xlix. [1904] 298 ff.; A. Marx, *REJ* lviii. [1909] 299 f. Two other treatises are known only by the titles; cf. Malter, s.v. 'Chronology.'

(f) *Philosophy*.—Se'adiah dealt with special problems of philosophy in nearly all his extant works, particularly in his commentaries on various books of the Bible. Here we are concerned, however, only with two of his works which represent his religious philosophic system as a whole.

(1) *Tafsīr Kitāb al-mabādī* ('Commentary on the Book of Creation'), so far as known the first scientific attempt to unravel the mysteries of this obscure Hebrew treatise, called *Sifēr Yēṣṭraḥ*, which the popular belief ascribed to the patriarch Abraham. In a lengthy introduction Se'adiah gives a historical account of the various theories of Greek thinkers as to the origin of the universe. The theory of the *Sifēr Yēṣṭraḥ* he identifies with that of Pythagoras, from which it differs only in so far as, in addition to the ten numerals of the latter, it postulates also the 22 letters of the Hebrew alphabet as the origin and essence of creation. Se'adiah devotes much space to the elucidation of this fantastic theory, which he endeavours to harmonize with the teachings of Judaism. He does not, however, subscribe to the views of the *Sifēr Yēṣṭraḥ*, accepting instead that of the *Tōrah*, which teaches a *creatio ex nihilo*. Very interesting is Se'adiah's interpretation of the fourth chapter of the book, according to which the first thing that God created was a certain pneumatic substance, which differed from the visible air that surrounds us by its greater tenuity and by its sublimity. This pneumatic substance, or ether, which he probably adopted from the Stoics, pervades all existence, even the interior of the most solid bodies. It is through the medium of this sublimated air that God is omnipresent. Figuratively speaking, this air is 'the throne of God's Majesty,' the agency of the divine spirit that animates and sustains all creation. Scripture designates it by the term *kibōd* = 'glory,' as it is said (Is 63): 'The whole earth is full of his glory.' By means of it the word of God is communicated to the prophets. The Rabbis of the Talmud coined for it the term *shekināh* (שכינה).

The Arabic text of the commentary was edited with a French translation by M. Lambert, *Commentaire sur le Sifēr Yēṣṭraḥ*, Paris, 1891. A Hebrew translation by an author of the 12th cent. exists in MS only. Portions of another translation are embodied in the *Commentary on the Sifēr Yēṣṭraḥ* by Judah b. Barzillai of Barcelona (1135), ed. S. Halberstam, Berlin, 1885; cf. Malter, s.v.

(2) *Kitāb al-Amānāt wal-'Iṭlādāt*, in the Hebrew translation of Judah Ibn Tibbon (1186), *Sifēr ha-Emūnāt ve-ha-De'ot* ('Book of Philosophic Doctrines and Religious Beliefs'), Se'adiah's most important philosophic work, written in Baghdad during the time of his seclusion (about 933). The Arabic text was published for the first time by S. Landauer (Leyden, 1880), while the Hebrew translation is accessible in seven editions (ed. pr. Constantinople, 1862), some of them with commentaries. J. Furst translated the Hebrew text, with the exception of the last chapter, into German (Leipzig, 1845). Parts of the Arabic text were translated into German by P. Bloch (*Œuvres complètes* und *Wissen*, Munich, 1879, containing the introduction and

the first chapter) and W. Engelkemper (*Die religionsphilosophische Lehre Saadia Gaons*, etc., Münster, 1903, third chapter). An older Hebrew translation, usually called 'The Paraphrase,' with a very peculiar terminology, is as yet unpublished. This translation was the basis of Berechiah ha-Nakdan (c. end of 12th cent.), who epitomized the whole work in two separate volumes, which were edited with an English translation by H. Gollancz under the title *The Ethical Treatises of Saadia*, London, 1902.

One of the main features of this great work of Se'adiah is its fundamental theory that philosophy and religion not only do not contradict each other, but actually support and supplement each other in the propagation of truth. For reason and religion sprang from the same divine source, and neither therefore can teach anything that is incompatible with the teachings of the other. With this theory as a basis, Se'adiah sets out to examine the various philosophic doctrines which seem to be at variance with the teachings of the Mosaic religion and endeavours to prove that the supposed antagonism is due either to fallacious reasoning or to a misinterpretation of the religious documents. In a long introduction he discusses the sources from which all human knowledge is derived and then divides his book into ten sections, in which the following problems are dealt with:

(1) The creation of the world. Four proofs are adduced for the *creatio ex nihilo*, while twelve contrary theories by various Greek and Muhammadan thinkers are refuted with much detail.

(2) Having demonstrated the necessity of presupposing the existence of God as a Creator, Se'adiah proceeds to a discussion of God's unity and uniqueness, as well as the other divine attributes. In this connexion he refutes the Christian dogma of the Trinity as a misinterpretation of the three attributes of life, power, and knowledge.

(3) The purpose of creation was to make all created beings happy. As a means to the attainment of happiness, the divine commandments of the Holy Scriptures were revealed to man. The necessity and reliability of prophecy are defended against the contrary views of a Hindu sect (Brāhmins), likewise the authority of the Biblical law against the contentions of Christian and Muhammadan theologians that it was abrogated.

(4) The question of free will is here minutely discussed. Man is a free agent, hence responsible for all his actions. Se'adiah tries to reconcile this view with the omnipotence and omniscience of God. Numerous passages of the Bible are interpreted in the light of this theory.

(5) Men are now divided into ten classes according to their religious and moral bearing in life. Special effort is made to vindicate the idea of God's justice, seeing that the righteous often suffer, while the wicked prosper (theodicy).

(6) This section contains Se'adiah's system of psychology. Six theories of Greek philosophers regarding the essence of the human soul are discussed. Against these, the author presents his own theory, that the soul is a separate entity created by God at the moment when the body, its habitat, is about to enter this world. He thus denies the pre-existence of the soul. He further investigates the mutual relation of soul and body, defends the idea of the immortality of the former, discusses the phenomenon of death and the state of the soul after death, and finally refutes the theory of transmigration of the soul.

(7) In this section Se'adiah tries to prove the possibility of the resurrection of the dead from the point of view of nature, reason, and the Bible. The closing portion contains the answers to ten questions that have a special bearing on the doctrine of resurrection.¹

(8) Here the author takes up the Jewish doctrine of Israel's ultimate redemption by the promised Messiah, proving it from Bible and Talmud. He argues against those who claimed that the Messianic prophecies were fulfilled during the time of the Second Temple and also against the Christian doctrine of the Messiah.

(9) On reward and punishment in the future world. Se'adiah proves from reason, Bible, and Talmud that all inequalities will be adjusted in the world to come and then devotes much space to the discussion of thirteen eschatological questions.

(10) The tenth section represents Se'adiah's system of ethics. He describes thirteen different theories regarding the course which one should choose for oneself in life and shows that any of these theories, if applied dogmatically and one-sidedly, is bound to prove harmful. Man should live in accordance with his natural inclinations, but keep them under strict control and surveillance, carrying out all functions of life in the proper time and place and refraining therefrom when reason so demands.

(11) *Polemical works*.—(1) *Kitāb al-Radd al-'Anān*, 'Refutation of Anan,' the founder of Karaism (763), written in 915. The book is known only from quotations; see Poznanski, *JQR* x. [1898] 240 ff.

(2) *Kitāb al-Tamyīz*, 'Book of Distinction,' probably Se'adiah's most important and most voluminous polemical work, written in 920 and directed against schismatic teachings of the Karaites. Several fragments were published by S. Schechter, *Schachana*, Cambridge, 1903, pp. 50-51; and H. Hirschfeld, *JQR* xvi. 93 ff.; cf. also Poznanski, *JQR* x. 246-251, 262-274.

¹ The seventh section exists in two entirely different recensions, the one of which is contained in the edition of Landauer (see above), while the other, on which is based also Ibn Tibbon's Hebrew translation, was edited from another MS by W. Bacher, in the *Festschrift zum achtzigsten Geburtstag v. M. Steinschneider's*, Leipzig, 1886, pp. 98-112.

¹ See Malter, *JQR*, new ser., iii. [1912-13] 590-599; cf. art. CALENDAR (Jewish).

(3) *Kitāb al-Radd 'alā Ibn Sākawaihi*, 'Refutation of Ibn Sākawaihi,' of which several fragments have come to light; see *JQR* xiii. [1901] 655-667, xvi. 100, 112; Poznanski, *The Karaite Literary Opponents of Saadia Gaon*, London, 1908, pp. 4-8.

(4) *Kitāb al-Radd 'alā al-Mūtaḥamīl*, 'Refutation of an Overbearing Aggressor,' perhaps the same Ibn Sākawaihi. A fragment was published by Hirschfeld, *JQR* xviii. 113-119; cf. Poznanski, *JQR* x. 254 f.

(5) *Kitāb al-Radd 'alā Hayawaihi (vulgo Hiwi) al-Balḥi*, 'Refutation of Hiwi of Balḥ.' A considerable portion of the book, written in Hebrew rhyme, was recently published by I. Davidson under the title *Saadia's Polemic against Hiwi Al-Balkhi*, New York, 1916, to which edition the reader is here referred for further details.

(6) *Sefer ha-Gālui*, an apologetic work written in Biblical Hebrew and directed against David b. Zakkai and his party. About three years later Saadia added an Arabic translation of and commentary on the Hebrew text and wrote an Arabic introduction in which he sketched the contents of the work. The introduction, in which verses from the original book of Sirach are quoted, and of which only a few lines are missing at the beginning, was published by Harkavy in *Studien und Mittheilungen*, v. 150-181. Part of the same introduction was published from another MS with an English translation by H. Malter, *JQR*, new ser., iii. [1912-13] 487-499. Several fragments of the work itself, both Hebrew and Arabic, appeared in various periodicals; see, for the bibliography, Malter, *Life and Works of Saadia*, s.v.

LITERATURE.—Besides works mentioned in the body of the article, the following may be referred to:

i. **BIOGRAPHIES IN GENERAL.**—W. Bacher, *JE* x. 579-586; S. Bernfeld, *R. Sa'adyah Gaon* (Hebrew), Cracow, 1898; W. Engelkemper, *De Saadia Gaonis vita*, etc., Münster, 1897; S. Epsteinstein, *Beiträge zur Gesch. und Literatur im geonitischen Zeitalter*, Berlin, 1913, pp. 65-148; M. Friedländer, 'Life and Works of Saadia,' *JQR* v. [1893] 177-199; A. Geiger, *Wissenschaftl. Zeitschr. für jüd. Theologie*, v. [1844] 267 ff.; M. Joël, 'Saadia's,' in his *Beiträge zur Gesch. der Philosophie*, Breslau, 1876, Anhang, pp. 34-44; D. Kohn, *Toledot R. Sa'adyah Gaon* (Hebrew), Cracow, 1891; S. J. L. Rapoport, 'Toledot R. Sa'adyah Gaon,' in *Bikkūr ha-Itim*, ix. [1828] 20-37; M. Steinschneider, *Cat. Lib. Heb. in Bibliotheca Bodleiana*, Berlin, 1852-60, cols. 2156-2224. *The arab. Literatur der Juden*, Frankfurt, 1902, pp. 47-69; T. Tal, in *Lezingen gehouden in de Vereeniging voor Joodsche Letterkunde en Geschiedenis*, The Hague, 1887, pp. 1-66; S. A. Taubelles, *Saadia Gaon*, Halle, 1883; I. H. Weiss, *Dor Dor ve-Dorshau*, iv. [Vienna, 1887] chs. 14-16.

ii. **LINGUISTICS AND EXEGESIS.**—W. Bacher, *Abraham Ibn Ezra's Einleitung zu seinem Pentateuchcommentar*, Vienna, 1876, *Leben und Werke des Abuhathai*, Leipzig, 1885, p. 93 ff., *Die Bibelepigraphie der jüdischen Religionsphilosophen des Mittelalters vor Maimuni*, Strassburg, 1892, pp. 1-44, and in Winter and Wünsche, *Die jüdische Literatur*, Berlin, 1897, ii. 133 ff., 243 ff.; L. Bodenheimer, 'Das Paraphrastische der arabischen Übersetzung des Saadia,' in *Monatsschrift*, iv. [1854] 23-33; L. HENRY MALTER.

SEAL AMULETS.—See SCARABS.

SECESSION.—See PRESBYTERIANISM.

SECOND ADVENT.—See PAROUSIA.

SECOND ADVENTISM.—This article will sketch the history of speculation about the return of Christ. Belief in His return has long been a widely accepted Christian tenet, but there have been many different opinions as to the time and manner of His appearing. These varying views fall into two main classes. One type of thinking regards the Second Advent primarily as a spiritual experience already realized through the descent of the Holy Spirit upon the disciples after the resurrection of Jesus—a 'return' repeated in the experience of successive generations of Christians. This interpretation is frequently supplemented by belief in a visible coming of Christ at an indefinite historical moment in the far distant future, after the gospel by its transforming power has gradually brought the world to a state of millennial perfection. The second type of opinion insists that the promised return of Christ has not yet taken place, but may be momentarily expected. In the meantime the world constantly deteriorates. Only by Christ's literal coming can the millennium be established and righteousness made to prevail upon the earth. The latter opinion is commonly designated pre-millenarianism and the former post-millenarianism. Since for pre-millenarians Christ's return is as yet in no sense realized, but is an imminent event greatly to be desired, they have usually been much more diligent than post-millenarians in their efforts to determine the date and manner of the Second Advent. It is mainly with pre-millennial teachings that we are here concerned.

i. **Jewish antecedents.**—Contemporary Judaism furnished a point of departure for early Christian belief in the return of Christ. Even the older prophets had announced the coming of a day when Jahweh would catastrophically intervene in the affairs of the world, much as the Christians of NT times depicted the imminent advent of their Lord Jesus Christ. But this type of imagery was developed most fully in the apocalyptic literature of later Judaism, whence it passed over into Christianity. Dn 7¹³ seems to have been a particularly influential passage: 'I saw in the night visions, and, behold, there came with the clouds of heaven one like unto a son of man. . . . And there was given him dominion, and glory, and a kingdom, that all the peoples, nations, and languages should serve him.' Other apocalyptic writers revelled in descriptions of divine intervention when either God Himself or His heavenly Messiah would visibly appear descending from heaven to earth to inaugurate a new régime. This event was to be foreshadowed by a series of terrifying phenomena. Fearful wars would drench the world in blood, the heavens and the earth would be shaken, and the light would fail from sun, moon, and stars. Resurrection of the dead, the execution of judgment, and the inauguration of a new world were to occur in connexion with the advent of God or of His Messiah. Certain apocalyptists inserted an interregnum of bliss—sometimes 400 years, sometimes a millennium—

between the end of the present world and the final establishment of the new heaven and the new earth. Occasionally attempts were made to fix the date of the end, earlier estimates being revised from time to time in the light of subsequent events. Other seers were less confident of their ability to forecast exactly the hour of coming disaster, since this knowledge was not permitted to mortals, but in the signs of their own times they found ample evidence of the imminence of the event.¹

2. **Jesus on His return.**—Jesus was baptized by John after hearing him announce the imminence of the judgment (Mt 3⁷⁻¹⁰, Lk 3⁷⁻⁹). Apparently the Baptist shared in the apocalyptic thinking of contemporary Judaism and awaited expectantly the impending catastrophe that was to end the old order and establish the new. But whether Jesus was so heartily in sympathy with this view that He predicted His own early return from heaven in apocalyptic fashion is still a debated question. One school of interpreters stoutly maintains that the Gospels correctly represent Jesus as teaching that He would return while men of His own generation were still alive (Mk 9¹).² Other interpreters are of the opinion that Jesus did not announce His early return in apocalyptic fashion, but that the prominence of this idea in the Gospels is due to the work of the disciples, who consoled themselves with this faith after Jesus' death.³ While Jesus did not predict His own coming, He may on this interpretation have entertained current Jewish apocalyptic hopes and have expected an early intervention of God to inaugurate a new heavenly régime upon earth. A third view, more in accordance with popular opinion, is that Jesus, in speaking of His early return, used the apocalyptic phraseology of His time, but attached to it a deeper and more spiritual meaning. He was to return in spiritual power, and the new kingdom on earth was to be established by a gradual process of growth begun during His own career and continued by successive generations of His disciples working under the direction of His spirit.

3. **NT teaching.**—Belief in the Second Coming was popular among the Christians whose opinions are preserved in the NT. An expectation of Christ's early return in glory is frequently expressed in the Epistles of Paul. The Thessalonians are admonished to prepare for the approaching end of the age, waiting for the Son of God from heaven (1 Th 1¹⁰ 2¹⁹ 3¹³ 4¹³⁻¹⁸). The present age is to end in a terrible outbreak of lawlessness to be followed by the coming of the Lord (2 Th 2¹⁻¹²). The Corinthians are advised to delay their litigations, awaiting the judgment presently to be inaugurated by Jesus when He returns. Since the time is short, it is unwise for them to become involved in family relationships such as marriage and the care of children. Within their own lifetime Christ will appear, the dead will be raised, judgment will be enacted, and the new age will be established (1 Co 1⁷ 4⁵ 5⁷⁻⁸ 15²⁴⁻²⁸ 16²²). This glorious day is at hand, and wise Christians will hold themselves in readiness for the imminent advent of the Lord (Ro 13¹² 14¹⁰, Ph 1⁶ 10 4⁵, 1 Th 5¹⁻¹¹ 2¹).

The Synoptic Gospels and Acts show a similar

interest in the Second Advent, which is expected to occur during the lifetime of personal disciples of Jesus (Mk 9¹ 14⁶², Mt 16²⁸ 26⁶⁴, Lk 9²⁷ 22²⁹). Jesus is thought to have had in mind His own return when He spoke about the destruction of the Temple (Mk 13³⁰⁻³⁷, Mt 24³⁴⁻³⁸, Lk 21³⁴⁻³⁶). The agonies experienced in the Jewish revolt of A.D. 66-70, which resulted in the destruction of the Temple, were interpreted as signs of the approaching end. Very soon after this disaster the Son of Man would appear with His angelic host to establish His kingdom upon earth. In the meantime certain preliminaries had to be completed, such as preaching the gospel to all the peoples living around the Mediterranean (Mk 13¹⁰), and the exact date of the end could not be known by mortals, but in Mark's opinion it was so near that the men of that generation ought to be living in constant readiness for its coming (13³⁴⁻³⁷). Similarly, Acts opens with the announcement that the disciples shall see Jesus return in like manner as they beheld Him going into heaven (1¹¹). Peter interprets the Pentecostal endowment of the Christians as a fulfilment of OT prophecies of the last times (2¹⁷⁻²¹), and on still another occasion he admonishes his hearers to repent in preparation for the advent of Christ (3¹⁹⁻²¹).

In Revelation the Second Coming is vividly portrayed. 'Behold he cometh with the clouds; and every eye shall see him' is the persecuted Christian's consoling hope (1⁷). The things seen by John will 'shortly come to pass' and Christ will 'come quickly' (22^{6, 12, 20}). The trials through which Christians are passing in John's own day are regarded as signs presaging the final period of distress to precede Christ's advent. He will come riding upon a white charger and accoutred with heavenly armour. The armies of heaven are to accompany Him, but the sharp sword that proceedeth out of His mouth will itself be sufficiently deadly to strike down all His enemies. The nations of the earth will fall in the terrific carnage to take place at Christ's coming (19¹¹⁻²¹). At this point John introduces a Jewish idea not explicitly mentioned in any other NT book. After His triumph Christ sets up an interregnum upon earth, dwelling with the martyred saints for 1000 years before the final judgment is staged and the New Jerusalem established. The actual date of the expected advent is vaguely indicated by John in his apparent reference to the imperial succession between his own day and the end of the present age (17¹⁰⁻¹⁴). After the death of the present emperor his immediate successor will rule for 'a little while' before the final imperial 'beast' appears who holds dominion until overthrown by Christ. If, as seems probable, John was writing in the nineties under Domitian, he doubtless expected the Second Advent to occur not later than the second decade of the 2nd century.

Other parts of the NT also entertain the hope of Christ's coming. Readers of James are admonished to await patiently the advent of the Lord which 'is at hand,' and the judge 'standeth before the doors' (5⁷⁻⁹). The author of Hebrews expects Christ to appear a second time to them that wait for Him to complete their salvation, and even as he writes the day seems to be 'drawing nigh' (9² 10²³). In 1 Peter Christians are encouraged to suffer persecution, confident in the belief that the end of the present world is near. Suddenly Christ will appear, coming upon the clouds to destroy sinners and receive the faithful in His new kingdom (13⁷ 47 122 171 54). Against sceptics who are losing faith in the Second Advent 2 Peter urges that delay is no sufficient ground for doubt, since with the Lord a thousand years are but as a single day (3¹⁻¹²).

¹ For a more extended statement of Jewish opinion on this subject see R. H. Charles, *A Critical Hist. of the Doctrine of a Future Life*, London and New York, 1913, chs. v-viii.; S. J. Case, *The Millennial Hope*, pp. 80-93; F. Volz, *Jüdische Eschatologie von Daniel bis Akiba*, Tübingen, 1903; Schürer, *GVJ*⁴, Leipzig, 1902-11, II, 579-631.

² E.g., W. Sanday, *The Life of Christ in Recent Research*, Oxford, 1907; E. F. Scott, *The Kingdom and the Messiah*, Edinburgh and New York, 1911; A. Loisy, *Jésus et la tradition évangélique*, Paris, 1910; A. Schweitzer, *Gesch. der Leben-Jesu-Forschung*, Tübingen, 1913.

³ So, notably, W. Wrede, *Das Messiasgeheimnis in den Evangelien*, Göttingen, 1901.

The Gospel of John treats the Second Coming in a unique way. The idea rarely occurs. There is one reference to an hour when all that are in the tombs shall hear the voice of Jesus and come forth to judgment (5³⁸); but this is not the dominant teaching of the book. Elsewhere the return of Jesus is thoroughly spiritualized. He will 'come again' to receive His own at death, but not to introduce an apocalyptic kingdom upon earth (14²¹). The kingdom He establishes is one of 'truth' (18³⁷), which is already inaugurated through His work upon earth. Those who hear His words and believe thereby acquire eternal life immediately, and those who reject incur, by that very act, a present and final judgment (5²⁴). Jesus indeed returns to earth after His death, but His return is a spiritual act affecting the personal religious living of successive generations of disciples and is not to mark a cataclysmic reversal of the present order of existence.

4. **Early patristic opinion.**—Throughout the 2nd and 3rd centuries many Christians continued to cherish the hope of an early visible return of their Lord. They not only reproduced the first disciples' vivid expectation of His early advent, but they frequently dwelt upon the idea of His millennial rule as depicted in Revelation. The *Didache* warns its readers to watch lest they be taken unawares by the Lord's sudden coming, which is to occur in truly apocalyptic fashion.¹ Hegesippus reported that Jesus' brother, James, just before the latter's execution, declared that Jesus was about to come upon the clouds of heaven, and the grandchildren of Jude also defined the Messianic kingdom in similar apocalyptic imagery.² Both Ignatius and Polycarp believed themselves to be living in the last times when Christ would suddenly appear to execute judgment upon the Christians' persecutors and to reward the faithful.³ The so-called *Epistle of Barnabas* represents the last day as at hand, when the present world along with the evil one shall be destroyed by the returning Lord. Almost 6000 years are thought to have elapsed since creation, these years corresponding to the six days of creation week. The seventh day of 1000 years is about to begin with the Second Advent.⁴ Papias also looked for a return of the Lord, when the earth would be made fabulously fruitful.⁵ Hermas describes a beast seen in his vision and marked by four colours, black representing the present evil world, red signifying impending destruction by blood and fire, gold typifying faithful Christians tried by the testing fire, and white denoting the new coming age. The end is thought to be near. Even Jesus had lived in the last times, and in Hermas' day the tower representing the Church was so near to completion that the labour upon it had to be suspended for a brief period awaiting the return of Christ to inspect the structure. But this delay is not to be long.⁶

Among the early apologists, Justin is a confirmed believer in the Second Advent. He finds two advents of Christ predicted by the prophets—the one already past when He came as a dishonoured and suffering man, the second when He shall come from heaven with glory, accompanied by His angelic host.⁷ This consummation is being delayed temporarily to allow more sinners to repent, and Justin thinks that the dispensation of grace may endure even long enough to include

some who are not yet born.¹ But persecution of Christians will continue until Christ comes to destroy His enemies and dwell with the saints 1000 years in Jerusalem.² Irenæus agrees with Barnabas in placing the end of the world and the return of Christ 6000 years after creation. The date of the advent is not fixed more definitely, but the hostility of Rome is to continue until Christ comes to abolish all evil and establish His millennial reign.³ The Montanists⁴ were also enthusiastic believers in the early return of Christ, and their excesses did much to arouse opposition to the doctrine. Tertullian predicts a decline of the Roman power to be followed by the rise of the Antichrist, who will make war upon the Church until Christ suddenly appears, coming in glory upon the clouds to establish the saints in power upon earth. Already men are living in the 'last times.'⁵ Hippolytus fixes the date of the Second Advent at 500 years after the birth of Christ, which is said to have taken place 550 years after creation.⁶ Commodian looks for an early return of the Lord. The impending seventh persecution of the Christians is expected to introduce the tribulation of the last days. Then two Antichrists are to appear in succession, ruling for a short time before Christ's advent.⁷ Lactantius dwells at length upon the events to precede the return of Christ which will occur 6000 years after the creation. He believes that at most the present world cannot endure beyond another 200 years, and the end is to be expected daily.⁸ Other expectant pre-millennialists are Victorinus of Pettau,⁹ Methodius of Olympus in Lycia,¹⁰ and the Egyptian bishop Nepos.¹¹

5. **Early opponents of millennialism.**—The idea of an early return of Christ to establish His millennial reign upon earth gradually grew unpopular as the Christian movement gained in power. While Christians remained few in numbers, and during periods of severe persecution, the only possible triumph for the new religion seemed to lie in the hope of the Second Advent. But, as Christianity became more influential, gradually rising to a position of supremacy in its world, the need for a catastrophic intervention of God disappeared. The Second Advent as a tenet of faith was not necessarily abandoned, but stress was placed upon the power of the Church to effect a gradual transformation of the present world, and the visible return of Christ was pushed far into the future.

The first opposition to Second Adventism seems to have come from the Gnostics, who were averse to the idea of any reunion of souls with restored physical bodies even in a millennial kingdom.¹² The excessive enthusiasm of the Montanists also provoked opposition to millenarianism, even causing the book of Revelation to fall into disfavour in certain circles. This is probably the reason for its rejection by the Alogi and apparently also by the Roman presbyter Caius, who calls it the work of the heretic Cerinthus.¹³ But Origen was the first Christian writer to attempt a thoroughgoing refutation of vivid and literalistic Second Advent hopes.¹⁴ He did not reject the Biblical writings commonly cited in support of these hopes, but he offered an allegorical type of interpretation by which all Scripture could be made to yield a spiritual meaning, teaching that the present world was to endure indefinitely, being

gradually transformed by the power of the Christian gospel into a new ideal order of existence. The anti-millennial polemic was taken up by Dionysius of Alexandria. He did not completely reject the book of Revelation, but he did affirm that it was unintelligible to him and that it was not the work of John the Apostle.¹ Until the time of Athanasius the book of Revelation remained in disfavour with the churches of Syria and Palestine, while Origen's method of dealing with the Second Coming prevailed in the East.

Second Adventism was given a new turn by the Donatist Ticonius in his commentary on Revelation. He maintained that the return of the Lord would not occur until the true Church—meaning the Donatist Church²—had established itself in the world, successfully resisting both paganism and the false Church Catholicism. The book of Revelation was allegorically interpreted as a detailed forecast of this conflict. Although Ticonius, who wrote about the year 380, expected Christ to reappear soon, he made the intervening history of Christianity, gradually attaining perfection in its conflict with the world, the process by which Christ's kingdom was to be established upon earth. This notion was transformed and restated by Augustine.³ He dismisses the view that Christ is yet to come to inaugurate a millennial reign upon earth. The Kingdom has already been established by Christ's first advent, when He bound Satan (Mk 3²⁷), and His coming 'continually occurs in His church, that is, in His members, in which He comes little by little and piece by piece, since the whole Church is His body.' When the Church has reached the climax of its growth, the present world will be transmuted by a fiery bath transforming corruptibility into incorruptibility and revealing the New Jerusalem which is from heaven 'because the grace with which God formed it is of heaven.' The work of Augustine (*q.v.*) virtually eliminated all realistic Second Adventism from the main stream of Roman Catholic thinking, and his views have also been widely current in Protestant circles.

6. Revival of interest in adventism.—When taken literally, Augustine's identification of the Church with the ideal earthly kingdom of Christ implied that the millennium would close about A.D. 1000, and that the final coming of Christ in judgment might then be expected. The approach of this date awakened a revival of interest in Second Advent hopes, and for several years thereafter more or less vivid expectations were frequently entertained; *e.g.*, the efforts of the Crusaders to gain control of the Holy Land owed not a little to the feeling that the imminent end of the world made it necessary for Christians to be in possession of that sacred territory when the Lord returned.

At the close of the 12th cent. a noteworthy interpretation of adventism is given by Joachim of Floris, who looked for the return of Christ to inaugurate His millennial reign upon earth in the year 1260.⁴ This date was determined by reckoning the 1260 days of Rev 12⁶ as the equivalent number of years that the true Church would remain concealed before the end. Stirring events of Joachim's own day, such as the aggressions of the Saracens, the Crusades, and the rise of the monastic orders, all became signs of the times fulfilling the predictions of the book of Revelation. Joachim's writings were regarded by his admirers as a new Scripture, and so incurred the hostility of the papacy; but his views gained wide currency among the Franciscans, who found the hostile papacy also prefigured among the signs of the last times

in Revelation. The various Protestant movements took up this notion with avidity. Also the disturbed conditions preceding the Reformation tended to increase the conviction that the Second Advent was approaching. Militz of Kromeriz, a forerunner of John Hus, looked for the end between the years 1365 and 1367. In the next century the Hussite wars strongly stimulated advent hopes among the Bohemians, resulting in the rise of the Taborite movement and the formation of the sect known as the Bohemian Brethren.¹ The Thirty Years' War gave fresh stimulus to these hopes and called forth from the famous Comenius the prediction of an early return of Christ. Wyclif (*q.v.*) also regarded the papacy as the power of Antichrist, and other signs of the times were taken to imply the nearness of Christ's advent. The reformers in Germany and Switzerland often spoke of the Antichrist papacy, but they did not as a rule draw the logical conclusion that the literal Second Advent was imminent. Millenarianism was branded as a Judaistic heresy by both the Augsburg and the Helvetic Confessions.²

In the British Isles adventism was advocated more freely, the book of Revelation furnishing a basis for new speculation on the date of the Lord's return. John Napier³ predicted the coming of the end between the years 1688 and 1700. In the next generation Joseph Mede⁴ concluded from the data in Revelation that the present course of history would close about the year 1660. Isaac Newton⁵ refrained from specifying an exact date, but he looked for an early consummation of the present age. William Whiston⁶ less cautiously fixed first upon the year 1715, then upon 1734, and later upon 1666, as the date for the inauguration of the millennium. The same type of interpretation was advocated in France by Pierre Jurieu,⁷ who sought to comfort the persecuted Huguenots by predicting the downfall of the Antichrist Roman Church in the year 1689. In Germany the Lutheran prejudice against adventist speculation was overcome by the Pietists. C. Vitringa,⁸ who drew largely upon the English interpreter Mede, was specially influential in reviving German interest in this subject. But J. A. Bengel⁹ did most to confirm that interest. From the figures and images of Revelation he concluded that a preliminary millennium would be inaugurated in 1836, when Satan would be bound for 1000 years. Then would follow the millennial kingdom proper, closing with the end of the world and the final judgment. Bengel exerted a powerful influence not only in his native land but also in England, where his commentary was translated at the special request of John Wesley. Thus advent speculations attained increasing popularity in various Protestant circles and have persisted down to modern times. The general method of the interpreter is to discover in Revelation a forecast of the entire history of Christianity up to his own day, noting especially those predictions that are believed to point to events of his age which convince him of the nearness of Christ's return to inaugurate the millennium.

7. Millenarian sects.—During the last two centuries advent teaching has occasionally furnished an incentive for the formation of separate sects.

Even as early as the time of Cromwell the Fifth Monarchy movement appeared as a religious-political party devoted to 'King Jesus' and ready to fight in order to prepare the world for His coming. In Germany at Elberfeld the Ronsdorf sect, founded in 1726, included a group of people who held themselves in readiness for the revelation of the new kingdom from heaven in the year 1730. The Shaker communities which trace their origin to Ann Lee, who emigrated from England to America in 1774, consisted of communistic groups who lived in the expectation of the near end of the world and the early return of Christ.¹ In the next century under the leadership of Christoph Hoffmann,² a new sect known as the Friends of the Temple, or People of God, emerged in Germany. Believing that Christ was about to return, they proposed to rebuild the Jerusalem temple in preparation for His coming. The beginning of the 19th cent. witnessed the rise of strong millennial sects in Great Britain. A movement was begun by Edward Irving, a popular Scottish Presbyterian preacher in London, which came to be known as the Catholic Apostolic Church (or the Irvingites). In 1823 Irving published a book³ which attracted considerable attention and led to the holding of a series of yearly conferences at the home of Henry Drummond, a wealthy London banker living in Albury. From these beginnings grew the idea of forming a new spiritual Church ready to receive Christ at His coming—an event which Irving had predicted for the year 1864.⁴ A kindred movement arising in Ireland and England between the years 1827 and 1831 received the name of Plymouth Brethren (or Derbyites). Its aim was to restore the simplicity and purity of primitive Christianity in preparation for Christ's imminent return. An elaborate scheme of events to take place in connexion with the end of the world was derived from the imagery of Daniel and Revelation.⁵

The year 1830 marks the beginning in America of the Church of Jesus Christ of the Latter-Day Saints (or Mormons). The founder, Joseph Smith, is alleged to have received a new revelation from God instructing him to found a new community that would constitute a present city of Zion ready for Christ when He returns to set up His millennial reign. In the meantime the spiritual gifts of apostolic times were to be revived, and the original conditions of life in the early Church were to be restored. This movement began at Fayette in the State of New York, but the sect finally settled down to await the advent of Christ at Salt Lake City in the State of Utah.⁶ A group of adventist sects resulted from the work of William Miller of Low Hampton, New York. He began public preaching in 1831, boldly proclaiming that Christ would presently appear in visible form to establish His millennial reign. This event was first predicted for the year 1843, but was later postponed to 22nd Oct. 1844. The failure of this prediction led to dissensions, and a branch known as the 'Seventh-Day Adventists' was formed in 1845, while the original body took the name 'Evangelical Adventists.' A separatist body of Seventh-Day Adventists was organized in 1866, bearing the name 'Church of God.' The cause of separation was unwillingness on their part to regard one of their revered teachers, Mrs. Ellen Gould White, as an inspired prophetess. Another branch of adventists, formed in 1861, is known as 'Advent Christians.'

Two kindred bodies are the 'Life and Advent Union,' organized in 1862, and the 'Age-to-Come Adventists,' organized in 1888. Of similarly recent origin is the Russellite movement, resulting from a propaganda of the late 'Pastor' C. T. Russell, who in 1886 began a series of volumes on the general subject of 'the millennial dawn.' He maintained that the return of Christ and the inauguration of the millennium had taken place invisibly in the year 1874, and the end of the world was to occur in 1914. His disciples interpret the outbreak of the world war in 1914 as the fulfilment of their founder's prediction.

8. Modern non-sectarian adventism.—During the last half century some of the most vigorous forms of adventist propaganda in Great Britain and America have been conducted, not by separate sects, but by leaders within the different Protestant communions. These teachers revel in the study of prophecy, particularly in the interpretation of Daniel and Revelation. When studied with the adventist insight, these books and other Scriptures are found to yield specific predictions of all the outstanding events in history. Fulfillments of Scripture in recent times are emphasized and used as justification for predicting the early return of Christ and other happenings incident to a catastrophic end of the world. In the year 1878 this type of interpretation received a strong stimulus in England from the publication of the widely used book of H. Grattan Guinness,¹ who, on the basis of an extensive reckoning of data, predicted that the end of the present world will occur not later than the year 1923. Contemporarily with the work of Guinness similar teachings were being advocated with vigour in America. In New York in 1878 a group of adventists representing membership in ten different Protestant bodies met for a 'prophetic conference.' An active literary propaganda on behalf of belief in the early advent of Christ was also begun, typical works of that time being J. A. Seiss, *The Last Times* (Philadelphia, 1878), and W. E. Blackstone, *Jesus is Coming* (New York, 1878, 1908). Advocates of these opinions took fresh courage with the outbreak of the world war in 1914. The horrors of the war, readily suggesting the predictions of apocalyptic prophecy regarding the agonies of the last times, revived an expectation of the end of the world. In the autumn of 1917 a group of English clergymen issued a manifesto declaring that in their opinion the signs of the times gave clear indications that the visible return of the Lord was at hand. In Canada and the United States the same view found wide acceptance and was made the subject of numerous 'prophetic' conferences, tracts, and books.

SECRET SOCIETIES (Introductory).—In whatever ways religious brotherhoods have been evolved in primitive societies, their main purpose, as at higher levels, has been to attain a closer link, on the part of those composing them, with the divinities, for the ultimate benefit of society. While the social units of the family, the clan, the tribe, have a protective value for those individuals within them and are usually consolidated with the help of religious and magical rites, additional protection and closer communion with divinity is sometimes sought by closer groupings of men, although the form of these groupings may have been determined by other causes (see below). Such fraternities are common among savage tribes. Their purpose is to ensure closer connexion with gods or spirits and greater power in dealing with them. Ritual performances at stated times are gone through. Some moral and religious teaching is connected with the initiatory rites. Such fraternities are frequently engaged in promoting law and order, all the more so because of the mystery which surrounds their actions. Admission is usually gained after severe and protracted initiations and by large payments. The element of mystery which surrounds the doings of these fraternities, their assemblies, and the actions of their members, is an essential feature of their existence in certain areas. It has added to the respect in which they are held and has led to the heightening of the mystery as a means of adding to the prestige and influence of the societies. With the aid of masks, dresses, and sacred objects which no uninitiated person may see with impunity, the members of the society show that they are in intimate relationship with gods or spirits or that these are actually among their ranks. Ultimately, where law and order are concerned, they rule by terror, with the natural result that their powers are abused. These fraternities are found mainly among the N. American Indians, with whom their religious functions are most in evidence, and among the Melanesians and W. African tribes, with whom the aspects of maintaining law and order are more apparent. They are also found in some parts of Polynesia.

Most students of these religious associations now believe that there is some connexion between them and the totemic clan system, especially in N. America. Where totemism is declining, or where the ritual of a totem clan is diffused among other clans, or where amalgamation of totemic clans has taken place, a new grouping may occur—the religious fraternity with ritual borrowed from that of the earlier clans. The connexion is genetic as well as psychological. F. Boas says:

'The close similarity between the clan legends and those of the acquisition of spirits presiding over secret societies, as well as the intimate relation between these and the social organization of the tribes, allow us to apply the same argument to the consideration of the growth of the secret societies, and lead us on to the conclusion that the same psychical factor that moulded the clans into their present shape has moulded the secret societies.'¹

As the clan system loses its rigidity, the esoteric fraternity is made possible. At all events, as J. G. Frazer says, we can hardly doubt that the totem clan and the fraternity are akin.

¹ 'The Social Organization and the Secret Societies of the Kwakiutl Indians,' *Report of U.S. Nat. Mus. for 1895*, Washington, 1897, p. 662.

'They have their root in the same mode of thought. That thought is the possibility of establishing a sympathetic relationship with an animal, a spirit, or other mighty being . . . from whom [a man] receives . . . a gift of magical power.'¹

But these fraternities have some connexion also with the wider tribal organization, especially, according to Webster, where the government of the tribe by headmen is passing over to a more autocratic form of government by chiefs. Here the societies, as in Africa and Melanesia, provide social restraints and enforce law. The point of connexion here as well as with the totemic clan is the elaborate ritual of initiation at puberty to tribal or totemic mysteries, which occurs also as a main aspect of these fraternities. All were once initiated, and all are sometimes still initiated into the lower grades of the association. But sometimes membership in all the grades is limited, as it certainly is in the upper grades which possess the inner mysteries and 'control the organization in their own interests.'² The grades now correspond to the system of age-classifications with their respective initiations, as found where no such fraternities yet exist. The real difference between totem-clan and fraternity is that the latter ignores the rigid limits of the former. The totem system is hereditary—a man is born into his totem clan and the members are kinsmen. The fraternity may be partly hereditary, but far more usually entrance to it is not dependent on birth, the members are not necessarily kinsmen, but voluntary associates. Admission depends on purchase, on a man's status or prowess, or on the connexion between a candidate and the spirit-guardian of the group, usually through a vision.

In totemism and tribal organization we find much that is common to the secret associations and *vice versa*—e.g., age-classifications, on the one hand, and grades, on the other; the secret lodge; the *sacra* (dresses, masks, ritual objects, the bull-roarer which frightens off non-members of totem-kin or religious association); elaborate initiation rites; and the possession of supernatural power by the members, generally used for the public good.³

In parts of Melanesia where totemism flourishes the fraternity is unknown; where it does not exist, the latter is found.⁴ Similarly the fraternities of the Pueblo Indians spring directly from the union of totemic clans into the tribe, the clans still existing as fraternities and preserving their ancient ritual, but adding new members from without the clan. 'The snake dance is simply a form of clan totemism having special modifications, due to environment, to fit the needs of the Hopi.'⁵

LITERATURE.—This is mentioned in the notes. See also A. van Gennep, *Les Rites de passage*, Paris, 1909, p. 101 ff.; L. Frobenius, *Die Masken und Geheimbünde Afrikas*, Halle, 1898. J. A. MACCULLOCH.

SECRET SOCIETIES (African).—I. INTRODUCTORY.—1. Definition.—In its strictest sense the term 'secret society' is applied in Africa to the body of persons concerned in the admission, by means of initiation ceremonies, of youths (or maidens) to full tribal or adult rights. The words are also applied to purely religious confraternities (which often serve social ends), to bodies with mixed religious and social functions, and to purely social organizations. Any survey of the facts must reckon not only with this looseness of termi-

⁵ J. W. Fawcett, *DBREW* (1909), p. 1002.

nology, but also with the circumstance that a society which is secret in one area may be found in another with precisely the same functions, rites, and general environment, save that the element of secrecy is lacking.

It will be seen in the course of the survey that the features which bring the societies to a common denomination are not any community of function, but the identity, from a formal point of view, of the rites of the associations which practise initiation or make it a condition of entry into the society, and the identity of the character of the relations which these societies, in respect of one or more points, maintain, as a rule, between themselves and the profane world. The secrecy which they uphold as a means of separating themselves from the non-initiated may refer to almost any point in the complex. Primarily, no doubt, it is to the non-public nature of the rites of initiation that the term refers, or to the veil which is drawn over the nature of the proceedings of fully-initiated members; but it may imply no more than the knowledge of a password or other sign of the duly admitted associate of a confraternity, or the limitation of membership to one or other sex, or even the use of a mask or masks by one or more members, when they appear in public.

It must be borne in mind that for a society with social or political aims secrecy is well-nigh indispensable. Such a society, especially where, as is normally the case, the power, by the operation of a system of age grades, of seniority by purchase, or in some other way, is concentrated in the hands of the few, is in reality a long step in the direction of aristocratic government; the secrecy in which its deliberations are wrapped not only enhances its power by confining the knowledge of its projects to a limited circle, but also casts a glamour round it, which tends to make it more formidable by obscuring the real limits of its power; add to this the fact that supernatural allies are claimed by or ascribed to such a society, and there is no further need to look for explanations of their common element of secrecy.

The same considerations apply to the more purely religious associations; and to them must be added the fact that the right to prepare a charm, to use a spell, to call upon a deity, or to officiate as a priest is a form of wealth, jealously guarded and purchasable at a price. Diviners, doctors, and priests, even more than the ordinary man, have an interest in keeping their secrets inviolate; and it is not surprising to find that their attitude is that of possessors of a trade secret, to be divulged only to those who themselves become members of the gild. In the Ibo area we find, in fact, that the blacksmith and the doctor, like the ordinary man, form their own societies and admit candidates under like conditions; indeed the process of equalization has gone so far that the *ozo* ('blacksmith') title is simply the highest in the hierarchy and does not imply any expert knowledge of the blacksmith's craft.

There is, however, another reason for the secrecy with which many societies surround themselves; and it is perhaps the original reason. All rites of initiation, all membership of any society whatsoever, imply a certain amount of separation from the outside world, a certain affiliation to a new world; this aspect is specially prominent where it is a question of admitting a youth to full tribal rights, a rite expressed from the native standpoint in the guise of a belief in his death and resurrection in the initiation bush. Rites of sacralization imply separation from the profane world; the separated person becomes tabu, for he is a danger to those who do not share his sanctity and is himself endangered by contact with the outside

world, until he is restored to it by rites of desacralization.

This ground for secrecy may also play a part where to our eyes purely political considerations are concerned. The paramount chiefs of Sierra Leone undergo a period of separation, just as do youths in their progress to manhood, before they assume the reins of power; this is, however, an intrusion, from the European point of view, of the religious sphere into the realm of politics.

2. Sources. — It is generally recognized that anthropological data collected by the casual voyager are far from reliable even in matters which, so to speak, lie on the surface. It is not surprising, therefore, that much of our material on secret societies fails to attain anything like a reasonable standard of accuracy; for not only is the traveller as a rule debarred from actually seeing what he undertakes to report, but the information which he gathers, usually through an interpreter, from the native population is of necessity derived from non-members where a rule of secrecy is imposed upon a society; and it only needs a little experience in such matters to discover that the wildest reports as to the powers of members are current in the mass of the population. Where the observer has confined himself to a record of the simple occurrences that passed under his own eyes, he may indeed attain a higher standard of accuracy; but his account is inevitably one-sided. It is clear that we have only inadequate accounts of Mumbo Jumbo (Mama Dhiombo); inquiry must show that he acts as a representative of a society, of which he may be the most conspicuous, but is not necessarily the most important, member: his duties are not confined to those appearances which have struck the observer; for he exercises functions inside the society; he may be the operator at the festivals of circumcision or excision.¹ In any case he is only a portion of the institution; our descriptions fall as far short of the truth as would the observations of a traveller who described the functions of the man in possession without mentioning that his authority is delegated, that he is the humble embodiment of the judicial power of the State.

A conspicuous example of the errors into which some authors have fallen is afforded by Gôlbéry's account of Poro;² he says that it is found among five Fula-Susu peoples between the Sierra Leone River and Cape Mount. His location is accurate; but the tribes are neither Fula nor Susu; nothing seems to have been recorded of any society among the Fula, who probably have not in the area mentioned by Gôlbéry even the isolated villages found in the Timne country. The Susu are separated by the Timne, Limba, and Koranko from the area mentioned; of these three tribes the only one which has Poro is the Timne; but the Timne areas in which the society is found are not those in contact with the Susu; and it is certain that the Timne themselves have borrowed Poro; finally, the Susu society is the well known Simo, now decadent.

II. DISTRIBUTION. — In the survey of societies which follows nearly all those for which we have full reliable evidence are noticed; but they are scarcely a tithe of those mentioned by the authorities or known on good evidence to exist. Secret societies appear to abound in French Niger territory and Upper Senegal, but we have so far only a summarized statement of their nature. They are equally numerous in Senegambia and French Guinea; a score of them can be mentioned by name as existing in Sierra Leone—not of course all so important as Poro and Bundu; and we have good accounts of one or two societies of the Kru. From Liberia to the Slave Coast there is a great gap either in our knowledge or in the chain of secret societies, which are represented by only a few religious associations like those which practise the cults of Abirewa and Yewe. Much remains to

¹ Cf. below, II. 3.

² S. M. X. de Gôlbéry, *Fragments d'un voyage en Afrique*, Paris, 1802, i. 114-122.

be learnt of the Yoruba societies, and most of those of the Edo peoples are mere names. The populous Ibo area, again, is comparatively bare of societies, if we except the dancing and gymnastic maskers and the 'titles'—a kind of age grade in which a rise in rank is attained by payment, often on a considerable scale. From Calabar through Kamerun to the Congo we find societies in swarms: they are found south of the Congo also, but to what extent is not clear. In the interior the Baya and other tribes have initiation schools, and secret societies are reported from the west of Tanganyika. Initiation schools exist among the Yao, Baronga, Basuto, and many other S. African tribes. The Ruanda have an apparently isolated secret society of a religious type; age grades are fully developed among the Masai, the Wanyika, and other tribes of the east, and among the Kru in the west; they are also found among the Ibo, the Edo, and many tribes of the Guinea Coast, but play a smaller part in the life of the people; the grades of secret societies, in so far as these embrace the majority of the population, may be in effect age grades, though arrived at in a different way.

For an adequate survey of the secret societies we must consider them not only from the point of view of outward form and function, but also in their origin, both topographical and psychological. For such a study the materials are at present too scanty; we can only sketch the distribution of some of the main types.

1. Poro.—The Poro society is found in three tribes—Bulom, Mendi, and Timne; but it seems clear that it is indigenous only in the first, or possibly the first two, for it is not known over a considerable part of the Timne area. The Bulom people speak a language of the same type as the Timne—with classes of nouns and prefixes—but there is no doubt that they preceded the Timne in their occupation of the area; the Mendi are at present, linguistically, an offshoot of the Mandingo group, somewhat aberrant in type; but it is more than possible that the main stock of the Mendi was originally allied to the Bulom and drifted away from them in language owing to foreign influence. Another member of the Bulom family, Kisi, has already made some progress in the same direction. It may be regarded as fairly probable that the Poro society has not come to this area from without, but is a native institution; the mention of *Purru campus* by Ptolemy¹ suggests a great antiquity for it.

(a) Bulom.—There is little reliable information as to Bulom Poro; but it appears to differ considerably from Mendi Poro.

The *yafe* is said to eat the candidates, whose heads he first breaks; when they are about to come out, the *yafe's* belly is beaten, i.e., a heap of clothes is made and tied tightly, and dragged round the town by the members, who beat it with sticks: some of them call on the *yafe*, who remains in the bush, to hand over the children whom he has taken. The boys are then carried into the town, and the adult members return to the bush; here they uproot trees or break off branches, to represent the efforts of the *yafe* to escape. The boys are kept for three nights in a special house and then put in the *bari*, or meeting-house; they may now walk out accompanied by an initiated member, but must wear long caps to protect their heads, which are said to be very soft, and they must carry on conversation through their guide, for they are yet ignorant of the ordinary language. Finally they receive new names, and Taso (one of the dignitaries of the society and the speaker of the *yafe*) releases them from the restrictions and enables them to come into everyday life again.²

(b) Mendi.—An account of Mendi Poro (or Poi) is given by Allridge.³

Candidates are brought or come to the 'bush' (*kamera*) and are introduced, through a mat door, by a messenger (*wigak*), who puts questions as to their ability to perform impossible

feats, and after three attempts they are drawn inside; the bush is divided into compartments, and the same ceremony is gone through a second time. Here the candidate says which section of Poro he elects to join; there are three of these, divided in two cases into subsections; one is for chiefs and has the actual power, one for dignitaries, and one for the mass of the people. When the time comes for the candidates to reappear, the 'devil' marches round the town collecting gifts and then returns to the bush, where dead silence is kept for a time; it is said that the 'devil' has fainted. While he is in the town, all non-members must shut themselves in their houses; the 'devil' makes doleful sounds on a reed covered with spider's web, and these are explained by saying that the 'devil' is about to give birth to the candidates, for he becomes pregnant when they go into the bush. The twisted fern ropes worn by the boys are fastened in the top branches of trees when they come out, and it is said that the 'devil' has gone that way to the sky. When the boys come out, they are allowed to seize live stock, etc., for one day only.

One of the Poro dignitaries is known as Taso; he wears a hat decorated with the skulls and thigh-bones of his predecessors and surmounted by an inverted cone of feathers. When Taso dies, he must be buried in the bush; as no woman may see his dead body, the women withdraw from the town till the funeral is over. Certain women, however, who have fallen sick through penetrating the mysteries of Poro, are initiated into the society, and henceforth enjoy certain privileges.

Poro is said to be put upon fruits and other objects when medicine or some symbol of the society is put on or near them to forbid their use.

(c) Timne.—There are three kinds of initiation ceremonies in the Timne Poro society, corresponding to the occasions when candidates are introduced.

(1) The first form is used when the *banika* (a screen of grass on the right of the road leading from the village, with the *fari*, a similar screen opposite to it) is to be rebuilt. Quite young children are eligible, and the rites last only one day, or, at most, two or three. The messenger, Raka, seizes the candidate, who is known as *amaku akbar*; another name is *egbibe Araka* ('captive of Raka'), but this is a forbidden term. Boys initiated in this way receive no Poro marks; it is probable that they have previously been circumcised; but, if not, it would be necessary to perform the operation as a part of the ceremonies. Raka usually comes in the day-time to carry off the boy, who remains behind the *banika* till about six in the evening. When the rebuilding is finished, water is brought, the boys are washed, and loin-cloths and kerchiefs are put on them; after they have been perfumed, they are taken back to the town and sit in the *bari* for two or three nights, holding *kasimori* (short canes with cloth on each end) in their hands. Rice is brought, and the new members are shown by the initiates (*ansimori*) how to eat, for they pretend to put the *kasimori* into the rice and to be quite helpless, at any rate in some areas.

(2) The second form is also an abbreviated rite; the candidates must be at least five or six years old; it is used when some important person is performing ceremonies and is known as *bankalo*, from the name of the house to which the candidates are taken by already initiated men and boys, who push them three times and at the fourth attempt make them enter, right foot first. When they are taken to the Poro bush, the candidates lie face downwards and are marked: cold ashes are used to outline the herring-bone pattern which is cut between the shoulders with a hook; this is called *angkal* and should meet on the breast-bone; near the waist, at the foot of the line down the spine, is a small triangle. A new name is then given to the candidate, who is called *sakokant* (Poro member in the bush) or by the women *soybaninga*. Each night they return from the Poro bush to the *bankalo* till the marks are healed, which should take about a week. When they are to be taken out, the door of the house is opened at 6 a.m. and each candidate holds by the waist the one in front of him; the leader is called *Banabum*; all but him stoop forward as they proceed to the *banika*. Here they stand facing the older members and are washed and dressed as in the former rite. Instruction in Poro law has already been given. They return to the *bari*, holding *kasimori*, and sleep there two or three nights, after which they are released.

(3) The main Poro bush is known as *amporodis* ('Poro kills'); the candidates are seized by Raka or the *krist* ('devil'), and the first boy taken is called *atsipi amporo*; a guardian (*kumra*) is appointed to look after each lot of boys; only wholly uninitiated persons are taken, not those who have undergone either of the previous rites; no woman or uninitiated person may see them, and they live in the *kamambari* (house in the Poro bush) behind the *banika*. Poro at this stage is called *amfak*, 'wrapped' (i.e. not public). They are told by Pa *kachi* (=Taso) that the *krist* has eaten them and that nothing may be told to the women; in this form of initiation the candidate is not pushed in through the door by the *ansimori* (initiates). After some months in the bush they make hats of the inner bark of a tree (*Thalia penicillata*, Linn. or *Palueta thyrsiflora*, Benth.) put in the ashes and plaited; taking boys out of Poro

¹ Iv. 1. 10.

² See also *Freetown Royal Gazette*, v. [1825] 225, vi. [1820] 185; *Proc. Roy. Irish Acad.*, 3rd ser., xv. 361.

³ *The Sherbro and its Hinterland*, London, 1901, pp. 124-138.

is called *atai asandir* ('drying of the hats'). Poro now ceases to be *amfok*, and the candidates wear black (in some localities white) cloth. They come out holding each other by the waist like the *ambankalo* and are taken out in the same way; they are now *ansimori*.

Women who have got mixed up with Poro are also initiated and receive marks; only married women appear to be eligible. They are called *mambori* ('tortoise-shell') and receive new names like men.

The Poro bush is usually on the road to the west of a village, but may also lie between the two parts into which many villages, especially in Muhammadan areas, are divided. The dignitaries of the society differ from chiefdom to chiefdom.

In one place, in addition to the chief, who is the head, the following personages figure in the rites: Sumano, Kagbinti, Faramancha, Kashi, Yamba, Raka Banabum; there may be more than one of the lower grades. Sumano is elected by all the members and initiated into his functions at the *borom-asar* (hut for the worship of ancestors, with stones representing the dead); he appears to be the principal judge when a case comes before the Poro society. Kashi is said to be chosen by his predecessor and initiated at the *borom-asar*, and he offers sacrifices to consecrate his cap, which is adorned with the skulls and thigh-bones of offenders against Poro law. He is a doctor, and is said to help women in difficult labour; he is subject to certain tabus; he is said to have a kind of magical fire that will fly through the air and kill people, provided he knows where his intended victim is; he must not lie down till this *tumpan* returns, or he may be killed by it himself. Raka's body is spotted with white clay, and he carries a fibre shield and a sword.

The central figure of the society, the *kriſi*, has no distinctive dress; he speaks through a horn of corkwood with spider's web over the hole; he is said to enter a box only large enough for a child. They say that the *kriſi* eats candidates or gives birth to them, and, when Soko (Poro) men run, they say the *kriſi's* belly shakes. He is said to have a son, Bunu, who is always crying out.

Poro members appear (i.) in order to dance or plunder the property of an offender, (ii.) to bury a member, and (iii.) to seize candidates; they accompany the *kriſi*. The members have also a certain amount of control over the chief. In the Timne country the Poro society (and the corresponding Ragbenle society in non-Poro areas) is the upholder of the chief's power. Singularly few tabus are incumbent on the members, beyond the prohibition to communicate Poro secrets; they may not abuse a member as *limpi* ('uncircumcised'), nor throw water over one, nor tell one that he has not been initiated. The only other tabu is on the use of the old name of a man. Of the important legislative and judicial functions of Poro little is known beyond the information, not necessarily very reliable, given by Golbéry and other old writers. Poro appears also to play a certain rôle as a mutual assistance society, and a member can call upon his fellow-members for aid in difficult work, precisely as in other parts a man can call upon those of his own age grade.

Although there is some reason to believe that the Human Leopard society stands in some relation to Poro, where both exist in the same area, it is certain that Poro is found beyond the limits of the Leopard society, and equally certain that the Human Leopard society exists to-day in areas, like the Bulom shore, where Poro is unknown. The Timne tradition clearly points to their having obtained Poro from the Bulom, who occupy the coast south of Freetown, but have now dwindled on the coast to the north till few if any communities exist that have held themselves distinct from the invading Timne. The non-existence of Poro in this area at the present day suggests that it is to the Mendi that we should look for the origin of the society. Some light may perhaps be thrown on the matter when examples of the secret Poro language are available for study.

How far the whole male population was in former days enrolled in the society it is difficult to judge. At the present day the spread of Muhammadanism and Christianity exercises a restraining influence; but even in non-Muhammadan areas in former days, as the rules regarding

secrecy imply, there must have been men who were not members of the society.

2. Cannibal societies.—Although the Human Leopard society is commonly regarded as a thing apart, it is merely one of many magico-religious societies; its rites have developed in a special direction. It has been said that this society is not more than fifty years old, and this may well be true of it in its present form; but the *borfima* was originally a Mendi war-medicine formed of the viscera of dead enemies, to which a cult was addressed. At the present day the *borfima* is composed in part of the remains of human victims, in part of other objects; blood from a candidate is rubbed on the *borfima*; he takes an oath by it to preserve secrecy; fat from the *borfima* is also rubbed on his skin together with the mashed leaf of a tree called *nikili*; the mark of the society is cut upon the upper thigh or the buttocks. Victims are sometimes provided by members, sometimes seized by a man dressed in a leopard-skin; the corpse is shared out, portions being sent to absent members, but not farther than can be reached before daybreak; a man who has a *borfima* must eat of the victim; others can do so if they wish; as a rule a man who has no *borfima* does not touch the blood of the victim. The head of the victim is the perquisite of the chief; generally speaking, chiefs join the society in order to obtain *borfima*, which is believed to bring favour with the government and riches; the victim's head gives them authority over their people.

A cannibal society of another type is seen in the Nga of the Aduma (Ogowé River), which exists for the purpose of eating the bodies of dead members, if our information is to be relied on.¹

3. Tenda.—In French Guinea the Tenda have secret religious societies which form the sole means of government; there appears to be no doubt that their object is to render worship to certain divinities and to obtain their protection; from one point of view the term 'secret society' is a misnomer; for the whole tribe and even slaves who have been reared in the country are initiated, practically without exception. There is, however, an element of secrecy within the society, for there are three grades, apart from the dignitaries, and the lower grades are said to be completely ignorant of the rites of the higher grades; there are, moreover, one or more secret languages. It is uncertain how far women are initiated; but, when members are on the march, they utter a distinctive cry to warn the women of their coming; it may therefore be inferred that they are at most incompletely initiated.

The three degrees are distinguished by their dress or ornaments; admission to the lowest grade coincides with the rite of circumcision, about the age of nine or ten, so that the society appears to partake of the character of a puberty group as well as of a religious association. But the rite of initiation is largely a family matter in the case of males. Admission to the second degree follows about the age of fifteen; the candidates are absent in the bush for several weeks and on their return they are separated from their families, with whom they have hitherto resided, and take up their quarters near the chief. The rite is begun by a sacrifice and consists in the tatuing upon the cheek of the tribal mark; after this any man of the village of the candidate may beat him with a stick; each village which uses the *opedu* (initiation ground) then marshals its candidates, and on their way home they are again liable to be beaten; they are lodged in a hut some 200 yards from the village, and the previously initiated members of their grade await them there. When, a fortnight later, the new initiate returns to the village, he is privileged for the first six days to insult and beat any woman whom he meets. The admission to this grade constitutes the real initiation into the ranks of the adult males, for the youths are told in advance that it involves death and subsequent resurrection; promotion to the next grade takes place when the new initiates reach the hut mentioned above: there is therefore only one group of the second grade in existence at any one time, viz. those who were initiated at the last gathering in the *opedu*; they are promoted as soon as the next group

¹ See also below, 25, Ngil.

of the first grade is advanced to the second grade, which does not happen every year. The head of the society in each village is known as *nemba*, but he never appears in public in this capacity; his agents are the *lukuta*; the *akore* are another class of functionary and, like the *lukuta*, are to be found in each village, from two to eight in number according to its size. The *lukuta*, who may not be seen by women save at certain seasons, appear in public in a bark dress which completely covers them; their function is to carry out the decisions of the *nemba*, to supervise the sacrifices offered by the women before the farming season, to secure the observance of customary law in criminal matters, etc. The *akore*, on the other hand, wear no disguise, but must observe silence when they proceed on a mission; they are concerned with quarrels between husband and wife, but an important part of their functions is to accompany girls after the ceremony of initiation, which consists in the excision of the clitoris, performed by a man.

It must also be remarked that, though the chief of a village is not necessarily one of the dignitaries, he plays an important rôle; it is probable that he nominates the dignitaries, and he can certainly issue orders to them. Moreover, among the Bassari, one of the constituent tribes of the Tenda nation, communal houses are provided for the *faleg* (second grade), the *dyarar* (third grade), and the *dyarar asonkaf* (older unmarried men of this grade). The girls of the village are free to enter these houses and pass the night there, but whether only after initiation at the age of seventeen is not made clear. War and even simple quarrels are forbidden when the initiation rites are proceeding, in the months of June and July.¹

4. *Belli-Paaro*.—For the Vai, Gola, and adjacent tribes we have not only the good modern account of Büttikofer,² but also narratives by Barbot³ and Dapper,⁴ which go back about 250 years and show us how little change has come over the institution in the intervening centuries. *Belli-Paaro* is the Vai name for the boys' initiation school, to which the *Sande* of the girls corresponds; and, though we learn from Dapper of judicial proceedings and ordeals with which are associated the *Belli-mo* (i.e. 'Belli man [or priest]') and others, it seems clear that the institution is primarily an initiation school; that this is so may be inferred from the fact that *Belli-Paaro* and *Sande* are treated as co-ordinate and complementary.

Boys may enter the bush of their own free will; otherwise they are carried off by the *sora* or *soba*, who is perhaps known to the women under the name *njana* and appears to be regarded as an ancestral spirit. Circumcision is usually performed in the first year of life (by a woman), but a boy not yet circumcised must undergo the rite on entering the *Belli*. He is informed that he is killed by the spirit when he enters the bush, but returns to life again and receives a new name and the tribal marks. There is a considerable amount of real education, not only in dance and song, with, perhaps, acrobatics, but also in the use of weapons, in the endurance of hunger, thirst, and pain, together with a knowledge of the tribal religion and customary law. Residence in the bush may last from some months to several years, and the release takes place at the end of the rainy season, in October to November, when there is abundance of food for the celebrations. When they come out, the boys wear bark caps, which come down over their eyes; they pretend to be ignorant of the life to which they return. The *sora* appears in a leaf dress and wooden mask and performs all sorts of dances.

No one who has not been through the bush enjoys civil rights, according to Dapper, who also says that the school is held only once in twenty or twenty-five years; he adds that the candidates are killed and roasted in the bush and incorporated in the company of spirits. If a man is accused of theft, murder, or other crime, the *Belli-mo* administers the poison ordeal to him.⁵

5. *Kru*.—Although the *Kru* tribes lying to the east of the Vai and Gola have given up circumcision and have no schools of initiation, their territory is not without interest from the point of

view of secret societies. In the first place, they have a well-marked system of age grades, under which two classes, the patriarchs and the *Sedibo*, are the legislature and executive of the nation, with classes of youths and boys below them; admission to all except the lowest class is gained by payment, but the fees are small, and practically every male joins the *Sedibo* as soon as he marries. Side by side with these classes are secret societies for magico-religious and judicial purposes, such as the hunting out of witches, the detection of thieves, etc. The *Kwi-Iru* ('children of departed spirits') admit males of all ages except the very young; a 'father' presides over the society, who is not visible or known except to members and who wears a mask during the day. The society comes out at night to find witches, who strip naked and visit houses or dance upon the graves of their victims. Persons found wandering abroad are seized by the *Kwi-Iru* and put on the top of a house in readiness for the *sass-wood* ordeal next morning; it is of interest to note that this is one of the functions of the *Belli-mo* among the Vai. The *Kwi-Iru* society is employed by the *Sedibo* in its official capacity.

A second society is known as the *Deyabo*; *Deyan* men are said to be possessed.

A novitiate of three months is necessary, during which continence must be practised; a grass loincloth is the only article of clothing, and the candidate eats and sleeps apart. As a test a fowl's head is cut off and its blood put upon the candidate's eyes; the head is then thrown into the bush, and the candidate must find it, under the penalty of having his symptoms of possession—apparent changes in his behaviour—declared to be unreal or simulated. The candidate then changes his dress and occupies himself with the discovery of charms, the discovery of thieves, etc. The societies are in fact associations of diviners such as are common in other parts of Africa.⁶

6. *French territories*.—We have little or no detailed information as to the secret societies in the French territories of the Niger and Upper Senegal; but M. Delafosse² has published an excellent summary, which makes it clear that they are numerous in this area. Delafosse classifies them under three heads: (1) social and non-secret, (2) social and religious at once, and (3) purely religious.

(1) The first class celebrates its ceremonies in public, though its meetings for discussion are private, but the societies embraced in it correspond so exactly to the secret societies proper of other areas that it is necessary to include this kind of society in our survey. Each society is under a genius; it is composed of two or more age grades; it is confined to one sex and concerns itself with circumcision or excision rites. Thus there is one grade for the uncircumcised, who dance dressed in leaves or grass and use the bull-roarer, known as the 'dog' of *Ntomo* (the name of the society); above them comes the grade of the circumcised, much more important; the adult males form another grade, and it is incumbent upon them to assist each other in all cases; there is a very powerful grade composed of men in middle life; and finally the grade of old men. The women, on the other hand, have only two grades.

(2) In the case of religious societies grades are unknown, all members being on the same level. There are special burial rites for members, who have their own passwords; women are admitted, but only rarely. The rites are semi-secret and confined to initiates; but some ceremonies are public. To this class belongs the *Mandingo* society known as *Kore*, which exists for sexual purposes; among the *Senufo* is a society which prepares its members by a seven years' initiation for authority in the tribe.

(3) The last class is composed of societies devoted

⁵ Probenius, *Die Marken und Geheimbünde Afrikas*, pp. 116-120.

to certain cults or to the practice of certain magico-religious rites. Some are confined to one sex, some initiate both sexes indiscriminately; some are absolutely secret, some secret for women only, while non-initiated men may follow their doings. As examples of these societies may be mentioned the Mandingo Tyi-wara, which practises the non-secret cult of the genius of agriculture, and the Koma society, formed to resist enchanterers (*suba*). Masks are worn by the representatives of the genius and his satellites; special instruments of music are in use, and the meetings are held at night in the sacred bush.

In the absence of detailed information it is useless to attempt to discover the centre or centres of origin of these different types or to speculate as to the ethnical conditions that have given rise to them.

7. *Yewe*.—If initiation societies exist on the Gold and Ivory Coasts, little or nothing has been recorded of them, and the almost complete absence of masks from these areas supports the view that there is a real gap in the distribution of societies. In Jaman masks are used in connexion with the cult of Sakrobudi,¹ and girls are dedicated to certain 'fetishes' at Krobo.² In Dahomey, however, an important religious secret society took its rise, which has since spread over parts of Togo-land. This is the cult of *Yewe*, which appears to be a mixture of the worship of Xebieso, Voduda, and Agbui. The area is remarkable for the number of different languages spoken in it, often by quite small communities, and it is probable that the secret languages, of which more than one are used by the priests according to their original divinity, are in reality survivals of otherwise extinct local forms of speech preserved for a special purpose. Both sexes are admitted to the society, which has three grades: *Husunuo* for males, *Yevesiwo* and *Vodusio* for females, and *Hundeo* or *Hunuvio* for both sexes.

The initiation ceremony consists in drinking water; certain emblems are also exhibited, such as a piece of iron wrapped in a cloth, which represents *Yewe*, a double axe, the emblem of *So*, a ram's horn, a holed stone, a long stone, and a bent iron. These are dipped in holy water, and the candidate is touched with them; the drinking of the water is sometimes explained as the taking of the god into the body of the candidate. A female candidate is shaved, washed, and rubbed with oil; she then receives a new cloth and a new name in place of her old one; during her sojourn of six months in the bush she learns the use of poisons and the secret *Yewe* language, known as *Agbui*, which is said to be spoken as an ordinary language in *Aveketi*, near Dahomey. When the time comes for the candidate's release, a feast is made, and presents are offered to the priest.

It is incumbent upon members to assist each other in every way and to inform against all who speak ill of *Yewe* and his followers. Among the reasons which lead people to enter the service of *Yewe* is the freedom from restraint and even from ordinary law enjoyed by the members, who thus escape, *e.g.*, the penalty for non-payment of debt, which consisted in being buried alive or, at best, in death. If it is desired to compel an influential man to join the community, a small pot is buried in one of his fields; when this is dug up later, he has no choice but to become a priest. From motives of policy the chiefs endeavour to stand well with the *Yewe* society, even if they are not members. If a non-member insults a female member, the latter becomes *alaga* (a wild woman); she lives in the bush all day, returning to the *Yewe* house at night; if she is not 'brought home' soon, she is said to change into a leopard, and her enemy is soon compelled to make terms. In like manner the aid of *Yewe* may be invoked in legal cases by throwing over the defendant's head a ring

¹ R. A. Freeman, *Travels and Life in Ashanti and Jaman*, London, 1898, p. 148.

² D. Kemp, *Nine Years at the Gold Coast*, London, 1898, p. 165.

made of oil-palm and other leaves; this compels the *Yewe* priest to take the matter up, and as a result the loser is compelled to pay three times the amount of the original demand, which is extorted from him, if necessary, by torture.

There is no doubt that the *Yewe* cult is alien to a large part of the area in which it prevails, and the complex is probably of comparatively recent origin; but there is good reason to believe that some at least of the elements which go to form it are of considerable antiquity.¹ This rise of a new cult is by no means an isolated phenomenon; for in recent years there have been similar manifestations on the Gold Coast, where the *Abirewa* 'fetish' gained great influence for a time; in like manner in Nigeria the cult of *Isinegba* has come down from the north. There can be no doubt that, generally speaking, this spread of a religion is a common occurrence in Africa; but, whereas one cult attains great influence and social importance, another, like the cult of *Esu* in the Yoruba-Edo area, has little beyond a kind of magical significance and brings no further profit to its votaries than the sense of protection against the evils of this life which the putting up of the image of *Esu* outside the house brings.

From the point of view of the present article, stress must be laid upon the fact that, before a man can take up the worship of a deity, a rite of some sort must as a rule be observed, which may range from a full-blown ceremony of initiation, parallel in every respect to that of an initiation society proper, to a simple transfer of a piece of earth in a pot to symbolize the transference to a new owner of the right to call upon the divinity represented by the piece of earthenware. The explanation of the secrecy of the rites lies on the surface: the social importance of the cult is increased and the authority of its officers enhanced by shutting the door upon the outside world.

It is perhaps not without significance that on the Gold Coast and in adjacent areas, where secret societies of the ordinary type appear to be wanting, these mushroom religions seem to attain their greatest development.²

8. *Ogboni*, *Oro*, *Egügü*.—In the Yoruba area we find a political secret society supported by a secondary organization with police duties; the latter has a parallel in the *Zangbeto* society of Porto Novo and more or less close analogues in parts of the Ibo area and the Congo. The government of the country is in the hands of the *Ogboni*, or elders; they are the heads of important families, but are accepted for membership only if reliable and capable men; the rank is said to descend from the oldest brother to the youngest, provided the latter is old enough and otherwise qualified. The *Eda* image is the amulet of the society, and a human sacrifice is offered on it at the initiation of a candidate, who is sometimes called upon to drink the blood of the victim. She is their goddess and is equated with *Odudua* of Benin city. The *Oro* society, composed of males only, carries out the decisions of the *Ogboni*, more especially among the *Egba*; members indicate their coming by swinging the bull-roarer, and, as soon as they hear this, all women must shut themselves up in their houses under pain of death, though they may see the instrument by day and even carry it. Criminals are usually disposed of in such a way that nothing more is seen of them than their clothes, high up in the branches of forest trees, where they were torn off as *Oro* hurried their wearers through the air;

¹ H. C. Monrad, *Bijdrag til en Skildring af Guinea-Kysten*, Copenhagen, 1822, describes the proceedings of a woman who feels herself insulted by her husband or some other person, and they bear a close resemblance to those of the *alaga*.

² *Zeitschr. für afrikan. und ocean. Sprachen*, III. [1897] 167-185; Frobenius, *loc. cit.*

in this case Oro is said to have devoured the bodies. When the body is found on the ground in the bush, no one is allowed to bury it. The central figure of the Oro society wears a white mask and a long gown hung with shells; his voice is heard from morning till night on the days on which he appears.

Egūgū is another secret society of the Yoruba and, according to some, is associated with the Zangbeto of Porto Novo.¹ Egūgū appears at an annual festival, a kind of All Souls' Day, and also at burial ceremonies, and is the police power of the Yoruba;² in the territory of neighbouring tribes the mask also appears as a kind of diversion, without any significance, for the purpose of obtaining money for its wandering owners. The mere appearance of a mask does not justify us in speaking of a secret society; in the Ibo territory the *maun* come out at burial ceremonies, but there is nothing worthy of the name of a secret society associated with them, though all knowledge of the fact that the masker is only a man is kept in the strictest manner from the women of the tribe; when, a few years ago, the ritual prohibitions of a portion of the Ibo nation were abolished by sacrifices in the presence of the Ezenri, the one point which it appeared important to the men to retain was the concealment of the real nature of the *maun*, though among the prohibitions thus summarily abolished was that of marriage with one's sister and similar fundamental ordinances.

9. *Ovia*.—According to R. F. Burton,³ Oro was in existence at Benin; but this seems to be a misinterpretation of what the author saw. Okiason or Akpoka was the name given to men who used to wander at night during a certain season of the year, carrying an axe or, according to another account, a hammer, with which they used to kill people to procure certain portions of the bodies with which the king made 'medicine.' There is, however, no evidence of the use of a mask by members of this body. It is perhaps more probable that what Burton saw was the *Ovia* celebrations, which Fawcaker⁴ saw at Gwatō and described as the 'dance of the great devils,' adding that no one ventured out at night when they were about for fear of being killed or maltreated. As the *Ovia* society at the present day dances in public only in the day-time and performs nocturnal rites in the *Ovia* enclosure alone, with the exception of one night, it seems probable that the author was misled, if he did not confuse the *Ovia* members with the Okiason.

According to tradition, *Ovia* was a woman, the wife of a certain king of Yoruba land, who was hated by her mates; by a trick they caused her to fall into disfavour with her husband, who turned her away, whereupon she began to weep and melted into water. She ordered that no woman should know the secret of her cult or enter the *Ovia* camp; hence she is worshipped by men only, and women hold aloof from the rites, except on two occasions: when the ceremonies are about to begin, at the beginning of the dry season, women come to the camp of *Ovia* to rub the house; and on one night during the subsequent rites they enter the camp and sing while the men dance; they also understand, unofficially, the secret language which is spoken by the men whenever they are wearing their dresses. Although the mask of the chief figure of the society is known as the 'mother' mask, he is always addressed as 'my father,' and the women in their songs speak of him as *ogie* ('prince'); there is therefore some doubt as to the facts, and it would be rash to lay any stress for purposes of interpretation on either the male or the female character of the principal figure.

There are four grades in the society: a boy joins at the age of seven or eight and remains one year in *Oyo*, the first grade, paying in kind to the value of perhaps ten shillings; a sacrifice is offered, and the boy marks his face with chalk; he is henceforth an *Owiovia* ('son of *Ovia*'); he remains seven years in the second grade, *Igbe*, admission to which costs only sixpence;

the other two grades, equally easily attained, are *Ixino* and *Urewa*. The head man of the village is usually but not necessarily the head of the society; the second man wears the *Ovia* hat and, on certain occasions, a net mask and other ritual apparel. He, like the third man in the society, is selected for his knowledge of the rites.

The camp of *Ovia* consists of an enclosure, a house, and a small screened portion of the bush, where the elders meet to discuss during the ceremonies. In the *Ovia* house are kept the musical sticks (*akpasiko*), bull-ropers (*eniloria*), and, when the rites are in progress, the dresses, consisting of long clothes with a net mask, and enormous hats decorated with red parrots' feathers. Both in the nocturnal dances and in the procession of the masked *Ovia* round the village, which women are allowed to see, prayers are offered for the welfare of the community, and a ceremony is performed, for male children only, to prevent them from suffering from convulsions; when the child is handed back to the mother, she pours water on his head; otherwise she may not touch him. In the other daylight dances the *Ovia* mask does not appear, but the other members dance in their hats and masks every morning and evening in their own village.

The *Ovia* society clearly differs in a marked degree from any of those which have hitherto come under notice; it wears masks but is not a bugbear for the women; it has neither legislative nor police functions; although *Ovia* receives a cult of a kind at ordinary times, a shrine being kept outside the house of such people as worship him (or her), the object of the annual celebration does not appear to be the recognition of a divinity, for the annual rites in honour of Ake, e.g., largely made up of sacrifices, may be regarded as the normal type of this description of rite. There is some evidence for the view that the object is to avert evil and bring good, for all the supplications emphasize this aspect; but it seems improbable that any such customs could have grown up round such a nucleus. On the whole it appears more probable that the ceremonies are connected with the growth of crops, though next to no evidence can be produced in favour of this view; at most we can quote a passage in one of the songs to the effect that 'our prince shall grow like a young palm-tree.' In accordance with this interpretation is the saying that *Ovia* 'dies' when the ceremonies are at an end.

10. *Other Edo societies*.—Innumerable masks are found in various parts of the territory of the Edo-speaking peoples, some isolated, some associated with organized groups, some appearing in connexion with initiation ceremonies, some at certain seasons of the year, some on the occasion of funeral rites, some apparently quite sporadically; but few, if any, are of much significance, and little information has been or, probably, can be obtained about them; the masks are the property of individuals, who readily dispose of them for a few shillings apiece. Their local character is shown by the fact that at Otua, where, as elsewhere in this area, age grades are of some importance in the life of the community, only one quarter of the ten or twelve of which the town is composed has a certain set of highly decorative and somewhat costly masks, for use when, every three years, a new 'company' comes in. They dance at any time they please for the next three months, and women and children are not permitted to approach the *elimi* house; but beyond this there is no special element of secrecy.

At *Igar* maskers, one male, the other female, appear at the initiation of girls, which consists merely in a festival to celebrate their putting on clothes for the first time; cowries are given to the maskers. The wearer of another mask is permitted to kill any goats that he sees, and this feature recalls the licence permitted to the newly-circumcised in many parts of W. Africa; it seems not improbable that such celebrations are only a faded reproduction of customs practised at an earlier date. The maskers are called *alimi* ('dead people').

11. *Ibo societies*.—When we pass eastwards to the Ibo area, masks are equally common; some are associated with burial rites and do not appear to

¹ *Annales de la propagation de la Foi*, v. [1851] 194.

² Frobenius, *loc. cit.*, and *Und Afrila Sprach*, Berlin, 1912, I. 55; Baudin, in *Les Missions catholiques*, xvi. [1884] 257.

³ Abeokuta and the Cameroons Mountains, London, 1863, I. 195.

⁴ *Narr. of Capt. James Fawcaker's Travels on the Coast of Benin, W. Africa*, London, 1837.

belong to any organized society; others are worn by dancers, who have no functions, however, resembling those of the members of secret societies of other areas; all maskers appear to be known indiscriminately as *mauh* ('dead people'); many, if not all, of them appear during the day, and the only element of secrecy is the concealment of the knowledge of their identity from the women. So much of the Ibo life has been borrowed from Benin that we may conjecture that these masked figures do not represent anything that ever played a more important part in tribal life. It is possible, however, that the societies to which they may have belonged have been overshadowed by the rise of the custom of taking 'titles.' These correspond roughly to generation grades or age grades, for originally a man took his first title after the death of his father; by a series of changes, however, of which the tradition is preserved, a man rises from grade to grade by payment, the only limitation being that he must have attained maturity; but even in this case the rule is not universal; for, apart from the fact that a father may purchase a title for his son, some of the titles, or at any rate their material benefits, are inheritable. In practice the system of titles provides the most profitable and indeed the only method of investing money, if we except the purchase of wives; in a rich community like Awka the highest grade may cost hundreds of pounds, and, as all subsequent members contribute the like amount, naturally in kind, not money, and their instalments are shared among the existing members, the result is the creation of a system of annuities.

From another point of view, these titles correspond to trade guilds; for the highest grade is that of *ozo* ('blacksmith'); it may be mentioned that a large proportion of the population of Awka is composed of blacksmiths, and it is possible that the customs, which have there attained perhaps their greatest development, also came from there originally, or were at the very least deeply influenced in their evolution by the fact that the blacksmiths of Awka, like the doctors (another grade) of the neighbouring town of Nibo, wandered far and wide over the face of the country in the practice of their trade, the doctors indeed without let or hindrance even in time of war. The Awka ceremonies have clearly influenced those of the towns immediately to the west of the Niger; but from the fact that the Udo bush figures largely in the Awka ceremonies and that an Udo (bush) was also of some importance in the rites of Benin connected with the worship of beads, it might be argued that Benin was the centre of origin; but much stress cannot be laid upon the point, for there is no evidence that the blacksmiths of Awka were in the habit of visiting Benin. The native explanation of the meaning of the first grade is that it indicates the freeborn status of the holder, and this is perhaps the most likely origin for this group of customs.

12. Egbo.—Although the Egbo society of Calabar is one of the most famous secret societies, we are singularly ill-informed as to the initiation ceremonies; there are, according to some authorities, ten or eleven grades, which are attained by purchase; but of the rites which actually admit the purchaser to the mysteries of the grade nothing seems to have been recorded. In some respects the society resembles the hierarchy of the Ibo titles; but there is an important difference; for the Egbo society is represented by a masked figure and thus stands nearer such societies as Poro. One tradition says that Egbo originated in a market situated between Calabar and Kamerun, where the traders decided to form it as a means of upholding order; but, quite apart from the fact that

the African market is by nature orderly, this can hardly explain the existence of the masked figure, a non-human personage, nor yet the circumstance, reported by one author,¹ that Egbo comes out only at full moon, apart from circumstances of civil disorder. Each grade is said to have its own 'spirit' and its own day; on the day of the highest grade all houses have to be shut, and any one who wishes to go out must purchase the right.

The most striking and probably the most important side of the Egbo society was its judicial procedure;² a non-member had to purchase the protection of a member before his claim could be brought before the society; or he might even give himself to an important chief as a slave as a means of ensuring success. The intervention of the society could be secured by touching a member on the breast or by striking the big Egbo drum. In any case, the power of the society once invoked, a meeting had to be called and the case heard. When judgment was given, a representative of the society proceeded at once to the house of the loser; and not until the penalty had been exacted might any one of the inmates of the house leave it, even though they were wholly innocent of the matter in respect of which the charge was brought.

Like Poro, the Egbo society protected by its symbol the property of any one who put it in their charge; and here we see a side of the institution which recalls the tabu.³

13. Ndembo and Nkimba.—In the Lower Congo area the main societies, sometimes under other names, are Ndembo and Nkimba. There does not seem to be any ground for regarding the former as a puberty society; for both sexes join, and some persons pass through it several times. According to J. H. Weeks,⁴ the object of joining is to escape from disease or malformation.

The candidate feigns death in some public place and is carried to the bush, where his body is said to decay till only one bone is left, which is kept by the doctor, who is supposed to raise him again from the dead. He receives a new name, is taught to eat, to feign complete ignorance, and to use a secret language, the vocabulary of which, however, is very limited.

There is more doubt as to the position of Nkimba, but good authorities assert that it has nothing to do with circumcision. Unlike Ndembo, mutual assistance is one of the objects of the society. It also aims at inuring youths to hardship; some societies (for there are many of the name, all restricted to males) check the power of the chiefs; in some cases the licence permitted to the members is the attraction, for they are allowed to assault travellers and rob them, in accordance with the principle that the candidates are separated from this world and therefore not amenable to ordinary law.

The candidate is drugged, dressed in a palm-leaf apron, whitened with clay, and taught a secret language, far more extensive than that of Ndembo; he also learns botany and spells, and hunts witches.

Like the Ndembo, the society is under a *ngana* ('doctor'); there is therefore some ground for regarding it as different in character from an initiation school, especially as it is not necessary for all members of the tribe to pass through it; on the other hand, it is not necessary to suppose, with Weeks, that its objects were originally identical with those of Ndembo, unless the derivation of the name from *lamba*, 'to deliver,' should be well founded. It is, however, of some importance that Nkita, which is a local name for Nkimba, also means a power that inflicts disease and malformations.

⁴ *Among the Primitive Bakongo*, London, 1912, p. 169.

Nearly the whole of our information regarding the Congo and Kamerun area is tainted with suspicion owing to the contradictions of the various authorities and still more to the new facts brought to light about the Fang societies by H. Trilles.¹ From his study it appears that there is a sharp line of demarcation between societies of priests and societies of sorcerers or witches. Both are secret, in a sense, but the meetings of the former, though closed to the profane, are held openly, and their place of meeting is known; sorcerers, on the other hand, who have a different kind of initiation, meet in private, for to be known as a sorcerer involves the poison ordeal and probably death. Totems, or animal protectors, are associated with both kinds of society; but the priest has an animal species forbidden to him *qua* priest, while the sorcerer has an individual animal familiar; the life of the priest is in no way bound up with his animal species, that of the sorcerer is linked to that of his familiar. There are human victims, whose blood is mixed with that of one of the 'totems' at the initiation of the priest, but only this ritual cannibalism is practised by the society; the sorcerers practise food cannibalism, and the rites may have in view magical purposes as well. Perhaps the most important difference is that the society of priests has a species of animal tutelary sacred to it, as it were, a totem, while the sorcerers are guarded by a spirit, possibly of a dead human being, as the name *engungure* is the same for both. Each society has an inferior grade of initiates, who assist in all the rites, but are not priests or sorcerers; the initiation of youths is distinct from the initiation rites already mentioned and precedes them.

It is clear at the outset that some of the distinctions drawn by Trilles cannot be applied to other areas—e.g., the use of a protecting spirit by sorcerers only—but it is uncertain over what extent of territory his criteria will apply; it is probable that the features which he describes are not confined to the Fang, for it is common for elements of culture to spread laterally, without distinction of tribe, over a wide area. Until more exact data are to hand, it is impossible to deal at length with the societies of the region from the Cross River to the Congo.

It remains to be seen how far the distinctions drawn by Trilles are valid; for, although he distinctly states² that Ngil is a sorcerers' society, he also appears to imply³ that it is a priests' society; and he formulates the same opinion without ambiguity in another work.⁴ It seems clear that Ngil comes into the village openly, to detect thieves and murderers and punish unfaithful wives; not only so, but an initiate of Evodu, which is recruited in the three societies, Ngil, Ngan, and Akhun—themselves made up of devotees of Bieri, the national god, whose cult is confined to the warriors—acts, at least sometimes, as operator in the circumcision rites;⁵ and Ngil must therefore, as the author says, be a grade of priests. On the other hand, it is affirmed with equal decision that the rites of initiation into Ngil include obscene practices, which are cited as a mark of sorcery. Further inquiry is needed before the distinction drawn by Trilles can be regarded as established.

14. Gabun.—North of the Congo, in the Ogowe region, are found secret societies too numerous to describe in detail. It has already been mentioned that masks appear at burial rites in parts of W. Africa; among the Balimba, Malanda is specially associated with funeral rites and the dead.

Fourteen days after the death of a member of a family a house is built on the edge of the bush by men only; a male figure is carved; the corpse disinterred, the brains are mixed with chalk and the body is tied to the side wall, while the image is at the closed end of the house. Women are warned not to look at Malanda, and the elders announce his coming in the morning. Twenty boys sit down on a long log; when they are exhausted, they are blindfolded and taken to the bush house; here a bundle known as *yaka*, consisting of brains and chalk, is opened and the new mixture added; this is then used as an ointment and smeared on the breasts of the candidates, vertically for those who are not 'witches,' horizontally for 'witches.' A six-foot pit is dug with a tunnel leading under the wall, into which the corpse is put; the skeleton is exhumed later, divided vertically, and the two portions are laid apart parallel to each other; the boys, formed into two companies, step over the remains, and an oath of secrecy is administered to them.⁶

15. Ngil.—The account of the initiation ceremonies is not free from obscurities, but it is clear that the same rites are undergone both by associates of the society, whose course of training is short, but includes two stages, and by the candidate for the position of Ngil, selected some six years younger than the age at which associates join, and trained to the work by constant association with the actual Ngil, whom he accompanies when a summons calls him from the bush.

After candidates of both classes have undergone various trials, they are secluded in the bush and are tortured by ants, flogging, etc. Those who pass these tests undergo a second period of seclusion, during which they provide a victim, sometimes a younger brother, but more often a mother, sister, or daughter (it is not explained how a candidate at the age of eighteen can do so); a euphoria is cut down and the stump hollowed; into this is allowed to drop the blood of the victim, sacrificed by the novice himself and mingled with the sap; the members drink of the mixture, and then the victim is cooked and eaten. During this rite the novice is partially intoxicated with the sap of a tree called *ara* and a sort of fungus; but it is somewhat singular that there is no mention of any belief in death and resurrection.

It has already been mentioned that Evodu (possibly the origin of Voodoo, but cf. Dahomé *vodun*, 'fetish') is a higher grade; the highest of all is called Kouh; it is said to have only three members—rulers of the waters, of the winds, fire, and fecundation, and of the earth and men respectively. In the view of Trilles¹ the higher grades are clearly priestly in their character; and the Kouh grade comes near, if it is not actually identical with, the divine king of J. G. Frazer; it is therefore a curious and interesting problem to ascertain whether the Ngil society is really one of priests or of sorcerers, or whether it combines features of both.²

16. South-east Congo.—Masked figures play an important part in the south-east Congo, but it is not clear how far we can speak of a real secret society; from the reports of the earlier authors the mask appears to be the property of certain families; among other functions the Mukish is a rain-maker, prepares counter-magic, expels evil spirits, and exercises judicial functions; it might therefore be supposed that it is a case of a witch-doctor with special powers; it must, however, be remembered that the *ngana* presides over the Ndembo and Nkimba; and, as it is expressly stated that Mukish directs a circumcision school, there is no reason for questioning the justice of the epithet 'secret society' in connexion with this masker.

17. Imandwa.—The Ruanda of E. Africa have an important society, the Imandwa, primarily religious in its nature, as it depends on the worship of *imandwa* (men, birds, etc.) and *angombe* (a grove, also a mortal hero); the aim of members, however, is to obtain success in life and other social objects, and all are sworn to secrecy. A sponsor is necessary, who becomes the representative of the *angombe*; other members invited to be present become the *imandwa* of the *angombe*; the profane are kept at a distance while the ceremonies are proceeding.

The candidate is thrown into the air, and a threat is made to cut him up; he receives a new name and enters into a blood-bond with his sponsor. The rites completed, the new initiate is transferred back to the world of men, and a feast is celebrated. Some time after another series of rites is held, which the missionary to whom we owe our knowledge of the society terms 'confirmation.'³

18. Labi.—The duplication of initiation ceremonies mentioned above, though unusual, is not without parallel, for the Baya and other tribes of the hinterland of Kamerun proceed in the same way.

A boy joins the Labi at the age of eight or ten; they have their own villages and their own farms; their secret language, made up in part of contributions from the dialects of other tribes, is intertribal in character; and candidates carry a basket shield covering the body from the head to the knee. After six months' instruction they are taken to the river and dropped through traps made of leaves; when they are half-asphyxiated, they are fished out again and wounded with a spear so guarded with a bark sheath that the point penetrates less than half an inch. The eyes, nose, and ears of the Labi are then washed to indicate that their senses have undergone a change. At a later stage the Labi return to the bush, covered by their shields, and receive a physical and moral education; when they again come out, they are free to marry.⁴

19. Area south of the Congo. — Ordeals like those recorded for the Baya are a frequent feature of initiation ceremonies outside Africa. More elaborate kinds have been found among the Bushongo by Torday; candidates have to pass through a tunnel in which are a human leopard, a blacksmith with a furnace and hot iron, and other tests of courage. More commonly, especially in S. Africa, the ordeals consist in frequent beatings (explained as intended to harden the boys) and fasts.

Among the Basuto the candidates are associated together as a company with a young chief; they are brought back from the fields, where they hide, by armed warriors, and huts are built in the bush for them; after circumcision they are exercised in the use of arms; tribal rules are inculcated, and they undergo long fasts; the initiation over, the huts are burned, and the initiates leave them without looking round, for they are leaving their old life behind and are now at liberty to visit their families, especially their mother's brother, who gives them a spear and a heifer. Until they marry, they live in the men's house near the chief's hut and are assigned to works of public utility. In some at least of the tribes the solidarity of the company thus initiated is very marked; they may not eat food alone if some of their fellows are near, and they may not give evidence against a companion; the young chief chooses his councillors from them. An uninitiated man is reckoned as a child and may neither inherit property nor marry a wife.¹

20. Masai, etc. — When we come to tribes like the Masai, the rites are less complicated, but the system has hardened into a hierarchy of age grades—so much so that a youth cannot be circumcised unless his father has joined the appropriate class, that of the old men. It is possible, however, to vary the age of circumcision on other grounds, such as poverty. There appears to be a good deal of uncertainty as to the number of age grades; either they vary from place to place or, what is perhaps more likely, each company, composed of the initiates for a period of five years (the interval between two series of rites), may also bear names, as in Nigeria, and these names have been confused with the more fundamental age grades. Apart from a few days of seclusion there is little or nothing in the age grades of the Masai which would justify the epithet 'secret.'

The Wanyika, on the other hand, have a well-developed political organization, on the basis of age grades, which seems to deserve the name better; some of the grades are in reality castes, for the *babasi* (wizards) form the highest rank; the next below them, the *fisi*, perform judicial functions and swear criminals on the hyena, from which they take their name, and protect the crops with the emblem of the hyena.²

21. Women's societies. — Apart from societies open to both sexes there are associations open to women only, some (probably the great majority) of the nature of initiation schools, others social or magical in their functions. For obvious reasons less information is available about women's societies: women do not inform the male inquirer of their doings, and female anthropologists in W. Africa have been few.

In Sierra Leone the female initiation society is known as Bundu; there is reason to suppose that it was originally a Mendi institution; from them it passed to the Timne; they in their turn are handing it on at the present day to the Limba, among whom the practice is confined to certain areas, together with the clitoridectomy which is the central feature of the rites of Bundu. Initiation schools for women are also found among the Vai and Gola, on the Lower Congo, among the Basuto and other S. African tribes, the Wayao of British Central Africa, and in all probability over a wide area of French Guinea and Senegambia;

¹ D. Kidd, *The Essential Kafir*, London, 1904, p. 206; H. A. Junod, *The Life of a South African Tribe*, do. 1912, i. 71-99.

² A. C. Hollis, *The Masai*, Oxford, 1905, p. 294 f.; *Brit. E. Africa Report*, 1897, p. 10; M. Merker, *Die Masai*, Berlin, 1904, p. 60 ff.

but reliable information is to hand for the Tenda people only. Both among the Wayao and among the Masai the stages of female initiation are regulated to some extent by the age of the candidate, though the age grade is less important for women than for men. The women's society not unnaturally exercises a certain amount of control over men, especially married men; males are of course forbidden to approach the bush and culprits have to buy themselves free on pain of falling victims to disease.

Among the Mpongwe an influential society exists, in some respects like the political organizations of the men. It is known as Njembe and appears to be feared by the men; it claims to discover thieves, but its main object is said to be to protect women against hard usage on the part of the male portion of the community.

There are also a certain number of magical and religious societies membership of which is confined to women; among the Timne the Raruba society sprinkles the farms with 'medicine' in order to procure good rice; the Attonga society of the Bulom is concerned with the cult of ancestors. Societies have also been recorded among the Ibibio.

Among the Mendi a society exists to which both men and women are admitted; but two distinct sides appear to be confined each to one sex; the male Humoi society has a 'devil' on which oaths are taken; the female Humoi society punishes offences against the marriage regulations known as *simongama*, as well as breaches of its own rules; in such cases the male offenders enter the house of the women's society.

III. THEORIES OF ORIGIN. — Secret societies have been discussed in three monographs. The first author to deal with them was Leo Frobenius, whose main thesis was the manistic nature of the secret society; he based this contention largely upon the feigned death and resurrection of the novice and also upon the rôle played by masked figures, interpreted as visitants from the spirit world, if not actually ancestral ghosts. He was followed by H. Schurtz, who referred age grades and secret societies to the operation of a 'gregarious instinct,'¹ assuming as axiomatic the essential identity of phenomena such as the men's house, age grades, initiation schools, and religious confraternities; he failed to observe that the identity of the rites is conditioned by the identity of their aim—to transfer a human being from one condition of life to another—and not by the functional homogeneity of the societies; a gregarious instinct no more explains the existence of secret societies than it explains the existence of armies; in each case we have to look for the ulterior motive which suggests to man the desirability of combining with his fellows. Hutton Webster starts with the idea that secret societies are everywhere lineal descendants of primitive initiation ceremonies, and he regards as degenerate many forms which may equally well be rudiments awaiting the opportunity for further development.

A different course is taken by van Gennep, who puts aside the questions of origin and function and shows that the rites on which stress has been laid owe their identity to the primitive conception of initiation, which persists in the great religions in the notion of rebirth, and not to the character of the society to which they admit the novice.

It is clear, from the survey of societies in the preceding pages, on which side the truth lies. There can be little doubt that the contention of Frobenius is in part justified, though it may be

¹ This instinct, however, is well marked among the Chinese of the present day, who appear to form societies merely for the sake of forming them.

questioned whether it is true of the majority of societies that they are founded on a primitive type, in which an ancestral spirit figured as the genius or the presiding deity of the society, or in which, it may be, the unity of the society expressed itself in the belief that its spiritual power was concentrated in a human being possessed by, or reincarnating, such a spirit. If it is true that the spirit which protects a society is often, as among the Vai, expressly affirmed to be ancestral, there does not, on the other hand, appear to be good ground for treating the fiction of death and resurrection as a proof of the manistic element in secret societies; for the same feature is found among tribes which, unlike the natives of Africa, lay no stress on the cult of the dead and do not appear to connect their initiation ceremonies in any way with their dead ancestors. In any case, if this feature is manistic in Africa, it should be possible to produce evidence of explicit native beliefs on the subject, instead of inferences from rites and other controversial evidence.

If, with Webster, we assume the clan initiation ceremonies to have been the prototype of secret societies, it does not follow that we must admit the lineal descent of all societies from such rituals; for nothing seems clearer than that in primitive society one institution is formed on the model of another, already known.

To take a concrete case, Ibo women have societies, with few functions, the very names of the dignitaries of which are derived from the corresponding dignities (quite distinct from the 'titles' mentioned above, II, 21), which in some parts are under the *obi*, the rulers and judicial authorities of a town. Not only so, but the names of the men's titles themselves are clearly derived from the neighbouring Edo, a memorial of the time when the effective authority of the king of Benin extended as far as the Niger.

Not less important is the fact that in some regions secret societies exist side by side with initiation schools, though the latter are in this case commonly found in the less pretentious guise of a circumcision bush, the ritual of which is limited to the actual operation, a period of rest for the healing of the wound, and a few rites when the new initiates rejoin the society as men (or women). The question is of course complicated by the fact, just pointed out, that institutions travel from tribe to tribe; in fact a big river is often a more important frontier for customs than the boundary between tribe and tribe, even when they belong to entirely different linguistic stocks. But the actual diversity of form and function in societies with secret rites is too great to make it a tenable hypothesis, apart from good evidence, that they have all been derived from a single type, though it is of course true that earlier types of cult societies must necessarily have influenced the development and form of later types. It is also necessary to recognize that the form no less than the functions of a society may undergo radical change, as we see in the case of the Human Leopard society, originally a warriors' league, which may possibly have had its rise in rites intended to protect the slayer against the evil influences of the slain.

We may perhaps sum up the position by saying that to trace all secret societies to a single origin is probably as mistaken as to trace all forms of religion to a single source or to seek to unlock all the mythologies by a single key. It seems clear that age grades, burial clubs, initiation schools, religious confraternities, occupation groups, and magical societies have all contributed to the mass of diverse elements grouped under secret societies; it cannot be definitely laid down that any one of these took an earlier type as a model; as we find all in their rudimentary stages in various parts of Africa, we must, unless we suppose that these rudiments are derived from the fully developed

societies of other tribes, suppose that they are the seed from which, in other areas, secret societies have been evolved, and that all are equally primitive, though not necessarily equally old. As a conspicuous case of a society which cannot be reduced to a late form of the primitive initiation society may be cited the maskers that appear at burial ceremonies or are concerned, like Malanda, with a cult of the dead. Not only is there nothing in the proceedings of this society or of the simpler forms to suggest that they are derived elements, which figure in funeral rites as intruders from another sphere, but we find simpler forms still, in which the mask itself is missing and the genesis of the custom becomes plain.

In parts of the Kukuruku country in Nigeria, after a man's death a masked figure appears in the town to perform certain rites; in the case of a hunter he carries a gun; a skull of some animal is put on the ground at a little distance, and the masker imitates the actions of the hunter in tracking it; as he retires a dog is sacrificed and he steps over the corpse, perhaps to signify that the dead man, whose representative he is, has now to leave the society of his fellow-men; the explanation given by the natives is that it is killed to make the ground smooth for the dead man, alluding probably to the journey of the soul. Although but a single masker figures in the scene, there is already the germ of a society; for, before he appears, a swarm of boys dash across the open space in which the scene is enacted, carrying green branches, but for what purpose does not appear.

In this scene we have the germ of a dramatic representation, perhaps, or the nucleus of a society specially concerned with funeral rites, such as we meet in the Yoruba and Congo areas; but even this simple ceremony is not the most elementary form; for the representative of the dead man wears a red costume and a net mask; he is differentiated from his fellows. Farther to the south, again, among the Edo proper also, the dead man has his representative, but only on the last day of the burial rites.

One of the family puts coral beads on his neck, and many cloths around his loins, with a white cloth on the top; while the rest of the family are dancing, this *nodirai* sits down; he may not sleep till day breaks, under pain of dying himself; at daybreak a ceremonial gate is made by the young men; the 'father' is summoned and takes his seat on a chair from which they raise him; all proceed along the road, and the young men pass round his head sticks which they afterwards throw into the bush.

Here we find the same elements as in the Kukuruku area; the dead man has his representative; at the end of the ceremonies the figurehead is conducted from the house, passing through the gate to typify his separation from the living, and is then divested of his manistic character by the ordinary rite of purification, which consists in passing sand, an egg, a chicken, or some other object, round the head, and throwing it away.

In the Ibo country and probably elsewhere, when the time arrives for 'second burial,' the dead man is summoned to the house, and a chalk line is sometimes drawn from the *ajoiwu*; the customs just mentioned are the obvious counterpart of those of the Ibo; the dead man, who is conceived of as hovering near as long as the rites are in progress, must be sent to his own place—a familiar rite in Indonesia—and one way of doing so is to send him on his way symbolically by means of a human representative.

Intermediate between the rites just described is a ceremony from another part of W. Africa, where we see perhaps the germ of the mask.

The Ishongo of French Congo have a secret society, *Bwiti*, which is found among the Bavili and many other peoples as well, and corresponds to the *Bieri* of the Fang, who include in it a cult of ancestors, represented by a skull, and of the totem, represented by some portion of its body; it is in a sense a national cult of the Fang, all warriors being initiated into it.² Among the Ibo, a dance is held during the funeral ceremonies; at night all lights are suddenly extinguished; dead silence falls upon the dancers, and one of them calls the dead man by name; an answer comes from the edge of the bush, where an initiate of the society has

¹ J.E.A.I. lxvii. [1917] 299f.

² Trilles, *Totémisme*, pp. 4, 212, 259.

concealed himself. At other times the corpse is paraded round the village—a custom found among the Ibo and other tribes, though not in the same form; an initiate of the society raises the dead man on his shoulders and covers himself from head to foot with plaited palm-leaves, so that only the face of the corpse remains visible; women look on and applaud, but how far they penetrate the secret is left uncertain.

Here, then, we have in its clearest form the beginnings of disguise, and it is no long step from using the dead man to represent himself to taking a mask to wear as his representative; the mere fact that precisely in this part of Africa the corpse is left unburied several days suggests that, with the coming of a speedier burial, the rites would take some other form which must necessarily imply the representation of the dead man by some other means. It seems clear that the secret society associated with the cult of the dead, or with burial rites, can be traced back to its very beginnings.

But, even in the relatively few cases where the spirit of the secret society is specifically declared to be ancestral in its character, we cannot assume that it was acquired in the same way as the masked figure of the burial society was, on the hypothesis just suggested, developed. Where the spirit is not ancestral, it is far simpler to suppose that it was acquired on the analogy of the personal protective deity; it is not without interest that the *atet tot* of the Timne of Sierra Leone, although it is reckoned among the *wanka* (protective charms) by the native, is really a woman's *krifi* (spirit or genius), and that she acquires the right to it precisely as though a secret society were in question; although it appears to be primarily a kind of fertilizing spirit, it also keeps thieves at a distance and in this way recalls the tabu side of a secret society's activities.

There can be very little doubt that some, at least, of the judicial and police societies have originated in societies which are concerned with burial ceremonies and the cult of the dead. There need be no hesitation in accepting such an origin for Oro and Egūgū, the Yoruba societies; for not only are both specially associated with burial ceremonies, but other societies of less importance, like Eluku, are obviously of similar origin, and other burial rites, such as *iyaku* and *ipeku*, are clearly of the same order without having developed a fully-fledged secret society; the object of all these ceremonies is to dismiss the dead man to his own place—and in this they seem to correspond to the Edo and Ibo custom of 'second burial'—and celebrate the funeral ceremonies; it is uncertain how far participation in the rites is limited, in the simpler forms, to relatives or others nearly related to the deceased; but there is evidence to show that they are specially connected with occupation groups (hunters, farmers, etc.)—a conclusion to which the Kukuruku facts also point; and from this stage to the secret society proper the path is not a long one. The name Oro is given apparently to the spirit of the deceased, which is deemed to inhabit the house till the rites are performed, as well as to the human participants in the rites; Oro is worshipped annually by each household at home, and there is also a presiding Oro of the town; the parallel with the ancestor-cult of the Ibo is therefore fairly close. In some of the rites a figure dressed in white appears when people assemble and call upon the dead man; this is the case among the Owu section of the Egbo in the rite known as *igba irana*. No such usage has been recorded among the Oro rites; but the Oro shout, *mā mū*, is heard in the house of the dead man, and the essential identity of the rites may be inferred.

The existence of two or more societies conjointly among the Yoruba is explained by the fact that they were originally localized societies or cults,

Egūgū at Oyo, Oro among the Egba, and Eluku (Agemo) at Ijebu; as communication became easier, these customs spread to a greater or less degree, and their judicial side assumed a greater importance until finally their funerary significance became altogether obscured. How far the same process will enable us to account for the existence of other judicial societies, like Poro and Egbo, it is difficult to say; only the record of the intermediate stages in the Yoruba customs enables us to lay down the course of development undergone by Oro and Egūgū; the continued existence of these intermediate steps is conditioned among the Yoruba by the relatively large size of the tribe—at the present day perhaps 2,000,000, including aberrant dialects—compared with that of other tribes which have developed analogous institutions.

It must be admitted that the tutelary genius theory of the spirit of the secret society is not completely satisfying as an explanation, for the simple reason that the initiation school must, unless appearances are deceptive, be the most primitive type of African secret society; if this is so, it is a mere assumption that the tutelary genius of individuals was known at the time when the initiation school came into being. It should be observed, however, that, where a spirit is associated with initiation, viz. in the Sudanese area in the main, we also find the tutelary genius in a well developed form; where, on the other hand, as in Bantu regions, the tutelary genius appears to be unknown, the spirit of the initiation school is also absent; we cannot be sure that the tutelary of the initiation society is not an afterthought or derived from other ideas. When we look at the societies of the Fang, we see another starting-point—not remote in itself from the tutelary spirit, perhaps even the germ of the idea in other areas—for the tutelary of the secret society; here each society of *ngana* has a 'totem' (*be mvame*), just as each individual *ngana* has his *mvame*—in each case a species of animals, plants, etc.; we need not here inquire how far it is accurate to apply the term 'totem' to this conception; it is sufficient that the society has assumed a protector on the analogy of already existing tribal groups; for we must suppose that clans preceded societies of priests. Even if the example has not been widely followed, the analogy holds good; for it proves that some secret societies have deliberately assimilated themselves to other groups by securing a protector.¹

At present too little is known of migration in Africa generally, especially in West Africa, and too little in the way of analysis of culture has yet been accomplished for it to be possible to say how far we can refer the origin of secret societies, in whole or in part, to the clash of cultures; but it is certainly worthy of note that Kamerun, the territory in which the Bantu languages meet the Sudanese, is one of the main foci of these associations. Similarly in the Senegambian and Western Coast area, a second area of high development, we have the point of contact between the Sudanese prefix languages, which correspond in structure to Bantu, and the non-inflecting group, of which the Mandingo tribes are the main representatives. But even a brief discussion of the question is not possible within the limits of this article.

IV. CLASSIFICATION.—From the formal point of view, secret societies naturally fall into three classes according to whether they are confined to males or to females or are open to both sexes; generally speaking, the religious or magical society tends to be open in this respect; initiation schools are naturally the reverse; but no rule can be laid

¹ The relations between totemism, secret societies, and the belief in tutelars are a matter for further inquiry. Interaction may well have occurred at more than one point.

down, for even societies like Poro, which are commonly regarded as a means of keeping the women in subjection, admit them under certain circumstances. The position of societies with regard to the admission of one or both sexes may turn out to be a valuable means of discriminating between such bodies according to their origins.

Less important in a way, but from the practical point of view equally if not more weighty, is the question whether the members of a society are all equal or are ranged in grades, attained by purchase or by seniority; for where graduation according to rank or seniority obtains we come near the beginnings of an oligarchy.

From the point of view of origin, again, it is of much importance to know whether the society is supposed to be under the guardianship of a spirit, human or non-human, or has as its leader and director a doctor or magician, recognized as a human being by initiated and uninitiated alike.

From one point of view, to classify societies according to the rites which serve to admit the novice to membership is to have regard to the function, and not the form, of the society, notably in the case of initiation schools, in which these rites alone form the *raison d'être* of the society; but, from another point of view, classification according to the ritual ordinances of the society is a merely formal procedure. It is of importance, e.g., to know how far circumcision or other mutilations are necessary antecedents to or steps in the admission to full membership; for there is at least a probability that such societies, whatever their function, were at the outset bodies concerned with the admission of youths to the privileges of manhood. It must not, however, be forgotten that such matters are in the hands of the elders of the tribe; and in at least one case the rite of circumcision has been separated from the initiatory ceremonies for reasons of policy; we cannot therefore argue that no society which does not practise the rite, or a substitute for it, can be regarded as equivalent to or derived from an initiation school. Conversely, especially where circumcision is performed as a rule about the age of physiological puberty, it may well have happened that a society which embraced the manhood of the tribe for any reason would come to arrogate to itself the right of circumcising the youths and thus take on the aspect of an initiation school.

From the point of view of function, the classification is comparatively simple, though in practice the lines are by no means clearly drawn, as can be seen by reference to more than one example quoted above. The form of all societies except the age grades is religious, inasmuch as there appears to be, except possibly in a few initiation schools, a spirit leader of the society; and, even where the overt reference to religious ideas is absent, as in simple circumcision rites, there is always in the foreground the ever-recurring idea of holiness, which demands the separation of the candidates from the outside world. If, therefore, we undertake to classify the societies according to their functions, it must be understood that these religious elements are deliberately put in the background, and that only the actual aims, which are not necessarily the same as the avowed aims, of the association taken into account.

Broadly speaking, the societies fall into two main groups—religious and social; but it must be observed that the ultimate object of nearly all is worldly prosperity or political power; for, whatever be the facts as regards primitive races in other parts of the world, the Negro is religious, not from any obvious need or overwhelming desire to satisfy a spiritual side of his nature, but in order to secure himself from bodily ills, to add to his wealth in

wives, children, and material property, to fortify himself against his enemies, human or non-human, and to secure the favour of those in authority over him, in the present day more particularly of the white man. But these ultimate objects are attained through a series of intermediate devices such as the acquisition of a tutelary deity, either personal or collective (in the sense of the genius of a society), the obtaining of 'strong medicine,' the acquisition of secret knowledge, and the like. Classifying the societies according to these immediate aims, we may divide them broadly into these two classes; but, as has already been pointed out, there are many with a mixed character. To the purely religious societies belong the Yeweworshippers and the adherents of the Imandwa cult; the cult of Bieri among the Fang differs from these in being national, but confined to the warriors. We may perhaps add a third type, the burial societies, with aims probably allied to the worship of ancestors, though their object is somewhat obscure. Side by side with the religious societies, and operating with the same class of forces, are the magico-religious societies with, in some cases, agricultural objects; of a different type are the Human Leopard society and its congeners; other societies, especially in the French Niger territory and in the Congo, practise protective rites against the arts of diviners, witches, and other workers of evil; others, again, have in view the averting or cure of diseases or malformations or the driving away of evil spirits by making it appear to them that the area is already occupied by a spirit, viz. the masker.

The initiation societies may perhaps be placed midway between the purely religious and the purely social groups, the more so as the element of religion is a varying one in them and sometimes, according to our authorities, completely absent. Their primary purpose is no doubt to change the child into a man or woman.

To the social type of society belong the age grades of the Kru, Masai, Galla, and others, and the corresponding type of society, admittance to which is by purchase, such as the 'titles' of the Ibo; intermingled with these are some societies which may almost be classed as castes, in so far as they are limited, at least in theory, to certain occupations, such as blacksmiths. It will be remembered that blacksmiths occupy in many areas a peculiar position, like musicians in the Western Sudan; they are occasionally a pariah class, but more often, as among the Ibo, have succeeded in making their society the head of the hierarchy formed by the 'titles.' In more than one case the blacksmith is the operator in the initiation rites; this is probably the case in the society, among others, commonly known as Mumbo Jumbo, which is more properly termed Mama Dhiombo; here there can be little doubt, from the report of a recent author, that the blacksmith is the initiator of girls and performs the operation of clitoridectomy.¹ To these occupation groups belong also the diviners' society of the Kru, classified, from another point of view, among magico-religious societies, perhaps the *ngana* of the Congo, and even from one aspect the witches or wizards. It has already been pointed out that the rites of initiation of doctors, priests, and diviners follow closely the type of secret society ceremonies; so, too, do the rites of coronation of kings and chiefs and those of admission to Muhammadan confraternities and similar institutions.

There is a large and important class of legislative, judicial, and, in general terms, political societies, of which Poro and Igbo may be mentioned as the best known. These in some aspects come very

¹ C. Montell, *Les Kru*, Paris, 1915, p. 237.

near the age grades of such tribes as the Wanyika. An interesting variant of this type is seen in the Ogboni society of the Yoruba, with its subsidiary, Oro, which is the executive force. With the relation between Ogboni and Oro may be contrasted the relation subsisting between the Poro society and the paramount chiefs of Sierra Leone, who in non-Poro areas have in like manner the Ragbenle society at their back, though it is far less powerful, partly because it is far more restricted in numbers. The chief is often the head of Poro, but it is not precisely his executive staff; for, while the society supports the chief and, as a body, carries out decisions approved by him, it also claims the right to restrain him under certain circumstances, though it does not go so far as to depose an unworthy chief. The relations between Ragbenle and Poro are somewhat obscure; for there is some antagonism between them, quite apart from the fact that a chief is as a matter of customary law associated with either one or the other; it is a recognized rule that a Poro chief cannot rule in a chiefdom where the Ragbenle society holds the reins; on the other hand, there is a method by which he can divest himself of his Poro quality and thus fit himself for his duties. Possibly this antagonism arises from the fact that Poro, as has been pointed out above, is an alien society, whereas Ragbenle is probably a native institution. This does not explain how it comes about that Poro and Ragbenle are mutually exclusive; if Ragbenle existed when Poro was imported, it is not apparent why it should have altogether vanished from the territory where the chiefs are connected with Poro. In some cases these police forces seem to exist independently, as among the people of Porto Novo, where the night guard is the Zangbeto society. In the Ibo country west of the Niger the Onotu, 'dignitaries,' are the executive for many purposes; they are sometimes reinforced by a police force known as Anikanwadu; but the element of secrecy is here very slight.

In all the cases so far passed in review it may be assumed that the society is, so to speak, in full vigour; we can discern rudimentary forms, but there is nothing to lead us to suppose that there is any decadence at work. When, however, we find the Yoruba Egügü appearing, in the Ibo country or at Freetown, among the descendants of the freed slaves brought to Sierra Leone, whose original home was the Slave Coast, we are at once confronted with a new feature; the awe-inspiring figure of the secret society has become the diversion of the populace, though even now the enjoyment has in it something of the feeling, so evident in some of the diversions of our own children, that there is an element of danger.

In the same class perhaps, though the decay has not proceeded so far, are many or most of the dancing societies of the Ibo, which turn out on a day of festival to make a show and perform feats of gymnastics, such as climbing a palm-tree, dressed up as monkeys, and descending head first with the most ridiculously lifelike imitation of the real animal. In E. Africa the masker's rôle is slightly different, for he has become the court fool; and the same tendency is to be seen in parts of the Congo territory.

Finally, outside all the groups already indicated, we find the secret societies of boys and girls among the Yoruba and Edo, formed, without serious purpose, in imitation of the societies of their elders, but carried on less in sport than in a spirit of deadly earnest, though without conscious aim.

V. *ELEMENTS OF THE COMPLEX.*—It is apparent that there can be no large common element in societies so variously constituted and with such diverse ends as those surveyed here; but there are

certain features which demand notice, if only because some authors have drawn conclusions from them which the facts do not warrant.

(a) *The men's house.*—Stress has been laid upon the existence of the men's house by Webster, who argues that its presence indicates that in the past secret initiation ceremonies have been practised. Now, in the first place, the men's house is in many cases not in the bush or remote from the village, but in the very centre of the village; it is the meeting-place of the men, who have far more leisure than the women for sitting down and talking; it is sometimes the guard-house; in any case it does not resemble the temporary structures, destroyed after the rites are over, which serve for the initiation of youths. Not only so, but in the Ibo country, where the men's house does not, strictly speaking, exist, each compound has its men's house (*obu* or *ogwa*), though women are not forbidden to enter. Moreover, in this area the function of the men's house proper is fulfilled by seats of rough logs in an open space at the meeting-point of important roads; here men, and sometimes women, sit in the cool of the evening, smoking and discussing things in general; it cannot seriously be maintained that this village meeting-place is necessarily a decadent feature, derived from the initiation bush, which, be it noted, exists side by side with the meeting-place. Webster regards the men's house as designed, among other things, to enforce the separation of the young men and maidens, despite the fact that it is in some cases, notably among the Masai, the spot where the unmarried of both sexes practise free love; so far from initiation necessarily meaning that the youths are cut off from sexual indulgence, it very often means that then for the first time they are free to choose temporary mates; but, above all, Webster's argument disregards the fact that initiation rites are coincident, not with physiological, but with social, puberty; in fact in some tribes sexual intercourse is permitted both before and after the rites, but not during them.

The existence of a bachelors' house indicates that the inmates have entered upon another stage of life; there is no longer room for them, perhaps, in the paternal dwelling, or, if there is, their freedom of action is hampered. That this is so is clear from the fact that among the Ibo, where the bachelors' house is unknown, the bachelor's house is an ordinary feature. Here the youth lives at his ease, and entertains his female friends, to whom his father's house is forbidden as a resort for sexual purposes; if his mother chance to die before he marries a wife, she is buried in or near her son's house. It is certain that it cannot be interpreted in the same way as the common dwelling.

It is possible that the men's house has in some places developed into the temple; but the house dedicated to a god answers a natural need; it is found in areas where the men's house exists quite apart from it; it is situated in the village, not without; and there is no reason for deriving it from any more remote origin than the need of housing a deity, of having a place where he may be sought with offerings and prayers.

(b) *Seclusion in forests.*—Other authors have laid stress upon the fact that the masked figure emerges from the bush, and that the forest conceals the *arcana* of the secret society. But to emphasize this point is to ignore the conditions; there may be some slight evidence of tree-worship in Africa, but the placing of the initiation school of youths among trees is not one of the proofs. For, in the first place, over large parts of W. Africa there is no open country; all is either bush or town; if, therefore, it is necessary to escape the gaze of the profane, it can be done only by seeking quarters

in the bush. The use of a leaf dress is equally meaningless in this connexion; for the tribes which do not use skins had of necessity to use vegetable products for clothing; to this day bark-cloth is woven, and for some magical operations banana-leaves are assumed as a garment; but this does not mean that the tree from which the bark is taken is sacred, still less that the banana is the object of a cult. Still farther from the truth, if possible, is the argument that the bull-roarer is evidence of tree-worship.

The real meaning of initiation rites, and consequently, among others, of the rites of secret societies, has been admirably set forth by van Gennep (*Les Rites de passage*) as first a transition of the novice from the world of the profane to the sacred world; then, after a period of instruction and ceremonies destined to mark the revolution that is coming over the nature of the candidate, a rite of separation from the world in which he has been living; then another one of reintegration into the world of the profane. Here, then, we have the explanation of the pretended death and resurrection, of the secret language, of the new name, of the ignorance feigned by the novice when he is restored to his relatives, and, finally, of the mutilations which will form a permanent memorial and proof of the change that has been undergone.

It must not, however, be supposed that these rites present themselves to the Negro under this aspect; to take only one example, circumcision, which is by no means universally practised, is not viewed by the native as anything but the removal of a useless or even hurtful appendage; but such transformations of belief are a commonplace in the history of primitive creeds.

A full analysis of the ceremonies would take us too far; but it may be pointed out that among the rites of separation is the carrying off of the novice, unresisting and even willing, to seclusion in the bush; this is sometimes preceded, sometimes followed, by a pretended death, which in some areas may possibly be produced by drugs. Widely spread too is the custom of wearing white paint, all clothing being discarded; this is worn in some areas as a mourning colour also; it is doubtful if we should interpret it as a means of assimilating the novice to the spirit world.

(c) *Tabus*.—During the period of residence in the bush a number of food tabus are enforced; the Ndembo, e.g., may eat neither fish nor flesh; water may be used to rinse the mouth, but not otherwise. It may be noted in passing that some of the rites of reintegration consist in the public breaking of these tabus; the Ndembo member swallows an egg as part of the ceremony of the return to the village. He also touches a girl's hand; for one of the things most strictly forbidden to the novice is to touch a woman or to see a woman's face; the women therefore avoid the novice or hide their faces; this is a general rule which applies to other than initiation schools.

In connexion with the banning of women by the majority of societies, a curious fact may be mentioned (as it is rare to hear anything of the origin of the societies, parallels may be numerous, though it would be unwise to assume that this is the case). Both the Ovia society of the Edo and the Egbô society of Calabar are said to have been founded by women; in fact Egbô is said to have been a women's society at first; and to this day an old woman of the ruling family helps to bring the Egbô spirit back, when it flees from a town at the death of an important member. It is not necessary to take these stories at their face value; they may be no more than etiological myths to explain why women are now excluded, and they may be deformed in the telling; but native traditions of origin have hitherto been unduly neglected. There is a vague story that women brought Poro to the Tinné country; but here we are on somewhat different ground, for there is no question of the origin of the society, and women are admitted to it under certain circumstances at the present day.

There are certain cases—in the Yewe society,

e.g.—where the novice must not only observe food tabus, but must drink water as part of his initiation; for by so doing he receives the god into his body.

(d) *Education*.—In some cases symbolic rites are performed to indicate that the eyes of the novice are now open; but a more general feature is the instruction in tribal lore and customs, in the duties of tribesmen, or of members of the society, and, generally speaking, the education of the candidate in native morality, as well as in the arts of dance and song. In this connexion the ordeals, of which examples have been given above, are of much importance.

(e) *Dress, lustral rites, etc.*—During the period of residence in the bush it is often permitted to the novices to come out, wearing a special dress; and during these excursions, sometimes after the final departure from the bush, they are at liberty to seize domestic animals at will.¹ It has been suggested that this is indicative of the fact that the novices are outside the law, because outside the community; but the custom is practised on other occasions, such as an interregnum in the course of marriage rites, after a theft in the market, and so on; and, though these customs are not all African, the whole group of rites needs to be surveyed before any final theory can be put forward.

There is less uncertainty as to the meaning of the ignorance feigned by the novices when they leave the bush; it is of a piece with their use of a secret language; they have been separated from this world and have come into it again; and, like infants, they have everything to learn. In fact, in an Akikuyu rite the novice undergoes a ceremony of rebirth and lives on milk, though, oddly enough, the rite takes place before circumcision; but in this tribe changes have been made in the rites by the old men.

Another series of rites—washing, donning of new clothing, burning of the bush huts—is partly to separate the novice from his life in the other world, partly to fit him to re-enter the everyday life of the tribe.

(f) *Secret language*.—Specimens of the languages have been recorded in Nigeria, on the Congo, and elsewhere. Broadly speaking, we may say that we find languages of three types: (1) old languages retained for cult purposes only, (2) languages made up in part of words from other dialects, in part of other elements, (3) languages in which the ordinary language is changed by the addition of a prefix or suffix, by a change of class in the noun, by a change of vowel, or a change of consonant. In this connexion it should be remembered that a kind of back slang is found at more than one point in Africa, notably among the Swahili and the Ibo.

(g) *The masker*.—Despite a vastly increased knowledge of Africa, there are many points of detail on which we are not much better informed than when Frobenius published his monograph in 1898. We can say that masked figures are associated with many societies in French territories since opened up, but in most cases we have few or no details. On the whole, however, it may safely be said that from Senegambia to the Ivory Coast, and from the Slave Coast through Kamerun to the Congo and beyond, with extensions of unknown depth in the hinterland of the Ivory Coast, masked figures are found which, at least in some cases, represent the tutelary spirit of the society with which they are associated. How far this applies to the masked figures of the Tenda, which are not the central figures of the society, but merely the executive power—and this is probably not a solitary instance—it is difficult to say; but it is certain that

¹ E.g., see C. Larnet, *Une Mission au Soudan*, Paris, 1901 pp. 69, 68, 77, 82, 101, 127, 143.

in a large number of cases (Poros, Oros, many of the Kamerun societies, etc.) a supposed spirit occupies the chief place.

In a small number of tribes, notably the Vai and Gola societies, the spirits of their ancestors are associated with the societies and initiation rites, though how far they are identified with the masked figure is not quite clear. In parts of Kamerun, on the Congo, and perhaps over the greater part of S. Africa there does not seem to be any masked figure, and we may perhaps infer that there is no tutelar; the boys are in charge of a *ngaha*; the power is said, in the case of the women's society of the Ogowe, Nyembe, to reside in the society as a body. We can hardly argue that the masked figure has disappeared owing to external or internal causes. There are therefore two, if not three, types of society from this point of view.

It is of some importance to note that, so far as the distribution of personal tutelary deities is known, it coincides, to a large extent, with the area in which societies have their tutelary geniuses; of course the absence of a society tutelary where no society exists does not disprove a causal relation in other areas. It is clear that such a conception may have been developed in a society which had originally no central figure at all, or one which associated the ancestors with their initiation schools, or had other ideas, such as are perhaps indicated by the earth figures of animals used by some of the Central African tribes; in this connexion it may be noted that similar practices are found among the Fang, whose societies seem now to be of a well-developed religious type.

There is of course no necessary connexion between the wearing of a mask and the idea of a tutelary, though in many parts of the world the wearing of masks is associated with the impersonation of deities, demons, or the spirits of the dead. But, so far as Africa is concerned, some masks are definitely connected with the dead (Ibo, etc.), while others, equally unconnected, so far as can be seen, with a secret society, have no apparent animistic significance; this is the case with many of those worn in connexion with circumcision. It is a notable fact that in some areas (and those the most remote from European influence, such as the bend of the Niger) women do not fear masks; they may know who is inside and see the masker dress and undress. How this state of things has arisen it is difficult to see. Among the Ibo, where the mask is associated with the dead—it is known as *manu*, 'dead person'—women at ordinary times do not dread it, though they may not know who is inside; at certain times of the year, however, maskers pursue them and they flee in terror. Among the Senufo and Mande public masks are worn at circumcision and for harvest work; society masks, not to be seen by women, are worn at burial, during the actual rites of circumcision, at harvest festivals, during the building of furnaces, etc.; we are at present ignorant of the origin of this state of things; but it seems to denote either that the masks are of different origin—some derived from outside, some of genuine native origin—or that, if both are home products, they are not at the same period of development.

Frobenius has argued that Oceanic masks have created or influenced those of Africa; this means a considerable antiquity for the Oceanic masks; but, if the view put forward by Rivers to account for the secret societies of Oceania is correct, we could hardly admit them to be of an age to warrant this hypothesis even if Oceanic influences were otherwise proved; there may of course have been Oceanic masks before the rise of the present societies, but, in view of the wide distribution of

masks—Australia alone is almost completely lacking in them, though the ceremonial garb of the Central tribes comes near masking—it seems unnecessary to derive African masks from elsewhere until it has been made clear that their technique makes their external origin probable.

Prima facie it seems likely that one aim of the initiation society would be to bring the new 'man' into relation with the ancestors of the tribe. To discuss the relation of initiation ceremonies to the belief in reincarnation is beyond the limits of this article.¹

It has been pointed out above that we have every reason to regard the masker who figures in burial rites as an original type; but it is equally true that a masker is associated with the simplest circumcision rites, where there is no question of a society; it is true that in certain cases circumcision is associated with the cult of ancestors; the novices who rub themselves with white clay mix with it the ashes of their ancestor's bones in the Gabun area; but, generally speaking, we have no reason to regard the association of the rite with the ancestral cult as very close. It might therefore appear that we have here a second origin for the use of the mask; the argument would be difficult to meet if there were any reason to suppose that circumcision was an original possession of the Negro race; but among both Sudanese and Bantu tribes there are many which either do not know the rite at all or regard it with dislike if they do know it (Tamberma, Moba, Bassari, Gurunsi, Baganda, etc.). It is by no means clear how the rite spread; but it is at least permissible to suppose either that the use of the mask came with the rite or that it was developed after the rite was borrowed from elsewhere. In this connexion the public character of some circumcision masks, noted above, is very significant. In neither case are we compelled to regard the use of the mask at circumcision as a primitive African custom independent of the cult of the dead. At the same time, it must be recognized that the circumcision mask has probably served as a starting-point for the masker of the initiation schools, who has in certain instances been associated, possibly as an after-thought, with the cult of ancestors. There is no reason to suppose that the mask is in Africa frequently associated with the cult of divinities; nor, except in the Congo, is there any suggestion that the masker represents a non-human spirit; it is hardly possible to see the starting-point of the use of the mask in a belief confined to a small area.

In so far as initiation societies are independent of circumcision (it should not be forgotten that the substitutes for circumcision—the knocking out of the teeth and the like—are not associated with a mask), and in so far as the mask has played a part in the formation of initiation schools, we have, it may be, a mask of indeterminate origin; in all other cases the probability is that the mask is ultimately referable to a cult of ancestors or at least of the dead. The figure who wears the mask appears to be the protector of the society, assumed on the model of the totem, or of the individual tutelary, except in the case of simple religious societies, where the masker may represent the god of the society.²

VI. INFLUENCE OF THE SOCIETIES.—We know too little of the rise of the great empires of Africa to say how far the bond of unity created by intertribal societies helped in welding together the various parts. The support given to Timne chiefs by the Poros and Ragbenle societies suggests that their influence may at times have been

¹ See art. INITIATION, TRANSMIGRATION

² Cf. also art. MASK.

important. Less open to question is their stimulus to the growth of an organized police, which we find at more than one point; but it is in the general government of the tribe that their most important function lay in many areas; thus there is no doubt that Egbo was the equivalent of a judicial body with far more influence than the ordinary chief; and the same may be said of Poro. Even a religious association like the Yewe society exercises great social influence. In the case of age grades the government of a tribe is naturally vested in the highest ranks.

Not without importance too is the rôle played by the societies in setting up a feeling of solidarity apart from ties of tribe or kinship; mutual aid among members of the societies is a normal feature; and, if this aid sometimes aimed at defeating justice, the final result was probably not much worse than in areas where societies were unknown and the votes of the judges were bought by the highest bidder. It is a normal feature of Negro life that certain people, e.g., the father-in-law, can call upon their sons-in-law and others for aid in farm work and other recurring or occasional tasks; where age grades exist, a man can in many cases call upon the men of his own grade or company for similar assistance; and no one who has seen the helplessness of the individual in some tribes before the ravages of wild animals among his crops will underrate the importance of mutual aid. Even where the secret society has not directly brought about this state of things, it may well have served as a model for other societies; it is certainly not without significance that both among the Yoruba and on the Congo, two of the chief areas of secret societies, co-operative societies for wife-purchase and other ends have been described by various authors.

How far the virtues of the unsophisticated native are due to the training received in the initiation schools is perhaps an open question, though many authorities lay stress upon the excellence of the teaching. At the same time it should not be forgotten that tribes without any such means of influencing the minds of the young show an equally high state of morality; by this is to be understood not necessarily sexual morality, which varies enormously from one part of a tribe to another, but the general respect for the native code of morals, such as honesty, truthfulness, and like virtues, which in contact with European influence disappear only too quickly.

SECRET SOCIETIES (American).—In the social economy of the tribes of America, as among primitive peoples elsewhere, secret societies are important agencies. Such societies are invariably the vehicles of esoteric rites, and normally of an exoteric display, in the form either of public ceremonies or of badges or other symbols by means of which their members are identified. In their simplest and earliest forms such rites are those which mark the progress of the individual from status to status in his own clan. Above them in generality of relation are rituals symbolizing the creation or cementing of ideal kinships between the members of different clans or tribes. In a third category are to be placed the still more general 'religions' which rest, one might say, upon a conversion rather than an initiation and in which the social relationship is nearly obliterated; they are mysteries universalized to such a degree that they may be regarded as veritable revelations or dispensations. None of these three stages has clear-cut boundaries: the clan rite melts into the tribal, the tribal into the intertribal, and the intertribal rite into the religion; indeed, the self-same rite may at an early period of its history be a clan rite and in its last development a general religion.

1. Social background.—In American Indian tribes are found various types of societies, broadly divisible into social societies, or institutional divisions of the tribe, and 'esoteric fraternities,' or secret societies. Organizations of both types are vehicles of religious mysteries, though it is naturally in the secret society that the sense of cult becomes eminent.

In a manner the tribe itself may be regarded as a secret society having several degrees or 'lodges,' through which the tribesman passes in natural course. The most significant passage is from childhood to maturity, at the period of puberty. Puberty rites, especially fasting and vigil, are almost universal among the American tribes, but formal initiation into tribal mysteries is not so common as in other parts of the world or, we may presume, as it once was in America. The annual rites of the California Maidu, in which the fast of the youth was accompanied by instruction in tribal lore and myth by the old men and was followed by a dance of the neophytes, is one of the few clear-cut instances of tribal initiation. The *huskannu* of the Virginia Indians, described by early writers, was probably a similar rite; one of its curious features was the administration of an intoxicating drink—a veritable water of Lethe—which was supposed to take from the youth all memory of his former life. The Yuchi Indians, confederates of the Creeks, had a puberty initiation accompanied by rites strongly suggestive of the Creek *Busk*, or festival of the new fire, at which all old scores were supposed to be settled and

in a large number of cases (Poros, Oros, many of the Kamerun societies, etc.) a supposed spirit occupies the chief place.

In a small number of tribes, notably the Vai and Gola societies, the spirits of their ancestors are associated with the societies and initiation rites, though how far they are identified with the masked figure is not quite clear. In parts of Kamerun, on the Congo, and perhaps over the greater part of S. Africa there does not seem to be any masked figure, and we may perhaps infer that there is no tutelary; the boys are in charge of a *ngana*; the power is said, in the case of the women's society of the Ogowe, Nyembe, to reside in the society as a body. We can hardly argue that the masked figure has disappeared owing to external or internal causes. There are therefore two, if not three, types of society from this point of view.

It is of some importance to note that, so far as the distribution of personal tutelary deities is known, it coincides, to a large extent, with the area in which societies have their tutelary geniuses; of course the absence of a society tutelary where no society exists does not disprove a causal relation in other areas. It is clear that such a conception may have been developed in a society which had originally no central figure at all, or one which associated the ancestors with their initiation schools, or had other ideas, such as are perhaps indicated by the earth figures of animals used by some of the Central African tribes; in this connexion it may be noted that similar practices are found among the Fang, whose societies seem now to be of a well-developed religious type.

There is of course no necessary connexion between the wearing of a mask and the idea of a tutelary, though in many parts of the world the wearing of masks is associated with the impersonation of deities, demons, or the spirits of the dead. But, so far as Africa is concerned, some masks are definitely connected with the dead (Ibo, etc.), while others, equally unconnected, so far as can be seen, with a secret society, have no apparent animistic significance; this is the case with many of those worn in connexion with circumcision. It is a notable fact that in some areas (and those the most remote from European influence, such as the bend of the Niger) women do not fear masks; they may know who is inside and see the masker dress and undress. How this state of things has arisen it is difficult to see. Among the Ibo, where the mask is associated with the dead—it is known as *maun*, 'dead person'—women at ordinary times do not dread it, though they may not know who is inside; at certain times of the year, however, maskers pursue them and they flee in terror. Among the Senufo and Mande public masks are worn at circumcision and for harvest work; society masks, not to be seen by women, are worn at burial, during the actual rites of circumcision, at harvest festivals, during the building of furnaces, etc.; we are at present ignorant of the origin of this state of things; but it seems to denote either that the masks are of different origin—some derived from outside, some of genuine native origin—or that, if both are home products, they are not at the same period of development.

Frobenius has argued that Oceanic masks have created or influenced those of Africa; this means a considerable antiquity for the Oceanic masks; but, if the view put forward by Rivers to account for the secret societies of Oceania is correct, we could hardly admit them to be of an age to warrant this hypothesis even if Oceanic influences were otherwise proved; there may of course have been Oceanic masks before the rise of the present societies, but, in view of the wide distribution of

SECRET SOCIETIES (American).—In the social economy of the tribes of America, as among primitive peoples elsewhere, secret societies are important agencies. Such societies are invariably the vehicles of esoteric rites, and normally of an exoteric display, in the form either of public ceremonials or of badges or other symbols by means of which their members are identified. In their simplest and earliest forms such rites are those which mark the progress of the individual from status to status in his own clan. Above them in generality of relation are rituals symbolizing the creation or cementing of ideal kinships between the members of different clans or tribes. In a third category are to be placed the still more general 'religions' which rest, one might say, upon a conversion rather than an initiation and in which the social relationship is nearly obliterated; they are mysteries universalized to such a degree that they may be regarded as veritable revelations or dispensations. None of these three stages has clear-cut boundaries: the clan rite melts into the tribal, the tribal into the intertribal, and the intertribal rite into the religion; indeed, the self-same rite may at an early period of its history be a clan rite and in its last development a general religion.

I. Social background.—In American Indian tribes are found various types of societies, broadly divisible into social societies, or institutional divisions of the tribe, and 'esoteric fraternities,' or secret societies. Organizations of both types are vehicles of religious mysteries, though it is naturally in the secret society that the sense of cult becomes eminent.

In a manner the tribe itself may be regarded as a secret society having several degrees or 'lodges,' through which the tribesman passes in natural course. The most significant passage is from childhood to maturity, at the period of puberty. Puberty rites, especially fasting and vigil, are almost universal among the American tribes, but formal initiation into tribal mysteries is not so common as in other parts of the world or, we may presume, as it once was in America. The annual rites of the California Maidu, in which the fast of the youth was accompanied by instruction in tribal lore and myth by the old men and was followed by a dance of the neophytes, is one of the few clear-cut instances of tribal initiation. The *huskanaw* of the Virginia Indians, described by early writers, was probably a similar rite; one of its curious features was the administration of an intoxicating drink—a veritable water of Lethe—which was supposed to take from the youth all memory of his former life. The Yuchi Indians, confederates of the Creeks, had a puberty initiation accompanied by rites strongly suggestive of the Creek *Busk*, or festival of the new fire, at which all old scores were supposed to be settled and

tribal activities begun anew. Garcilasso de la Vega¹ describes an interesting Inca rite of initiation for young nobles.

Age classes for both men and women are found in many tribes, each class forming a separate society with its own characteristic functions and dances and with its own appropriate initiation. Closely associated and in part identical with these were the military societies, whose membership was determined in part by age, in part by war record. Among the Plains peoples of N. America from four to twelve such societies occur in single tribes. One of the most famous was the Dog Men society of the Cheyenne, whose members came to be known as 'Dog Soldiers,' renowned for courage and endurance. Again, there are societies of a purely nonvital nature, often with membership of both sexes, whose main purpose is entertainment or the preservation of some custom. Societies made up of tried warriors and of men approved in counsel have a political turn, dominating the affairs of the tribe and often establishing, by their habit, an ideal of decorum. Thus the Raritesharu of the Pawnees regards itself as the earthly counterpart of the star council forming the constellation Corona Borealis.

The members of this society are chiefs, and they 'are permitted by the star chiefs to paint their faces with the blue lines [symbolizing the heavens] and to wear the downy feather [symbolizing the breath of life] on the head. The members of this society do not dance and sing; they talk quietly and try to be like the stars.'²

Societies of the type sketched are the natural outgrowths of tribal life, though frequently they are borrowings from neighbouring tribes. They commonly possess rites—dances and songs—peculiar to themselves. Entrance to membership is not automatic, but is more or less a matter of qualification and selection and is accompanied, as a rule, by ceremony. Thus, while their general nature is that of tribal degrees, they approach in character the secret societies in stricter sense.

As distinguished from the social societies, the secret societies (or 'fraternities,' as they are often called, although membership is often of both sexes) are such as have in charge some religious mystery. To be sure, in a life where nearly every activity is accompanied by religious observances this is not a clear criterion; and, in fact, the secret societies tend to assume a social importance, i.e. to become priesthoods. Thus, the Bow priesthood of the Zuni is not only a society charged with its own esoteric ritual, but it has in charge the military affairs of the pueblo. The various fraternities which execute the rain-dances may similarly be regarded as priesthoods endowed with special appeals to the gods of rain and vegetation. Perhaps most such societies are the custodians of presumably therapeutic powers, ministering to the health or luck, not only of their own membership, but also of their tribes-fellows. Nevertheless, there is a fair distinction of these societies from those of a more social cast; their secret ceremonies tend to take the form of a teaching and transmission of a mystery, their public ceremonies the form of a dramatic display, and they demand of their initiates a special qualification, often in the nature of a supernatural sign or an exceptional experience.

The origin of secret societies is various. Where tribes are formed by the agglomeration of small groups or clans, the separate clans retain, in the tribal organization, the distinctive rites which they brought to it, forming the priesthood or sect of these rites; and, even after the clan system has broken down, ritualistic precedence is likely to be confined to descendants of the original bringers of

the rites. The relation of the societies to the clan system appears most distinctly, perhaps, among the Iroquois, in some tribes of whom each clan had its own society. In general, the societies flourish as the clan organization decays, forming, as it were, a kind of mystery creed in substitution for the older gentile religion—though, even in a community where the societies are so important as in Zuni, in certain cases membership to office still depends on clanship. The whole development is curiously reminiscent of the ancient mysteries of Eleusis, which, long after they had become open to the whole Attic State, and indeed to strangers, were still in the hands of the hierophantic Eumolpidae and Kerykes.

But, while there is this residual relationship of the secret society to the clan, as an institution the societies seem rather to represent a new social order breaking through the rigid *encadrement* which clanship produces. The societies not only bring together members of the same tribe who are of different clans, but pass from tribe to tribe and even from linguistic stock to linguistic stock, vastly broadening the members' sense of relationship and introducing a spiritual kinship and a religious solidarity far beyond the reach of secular organization. As reflecting this function, the conditions of eligibility cease to be physical or political and become spiritual or supernatural. Sometimes a revelation to a group of people is the cause of the formation of a society. A curious illustration is that of the Struck-by-lightning fraternity of Zuni, which originated in 1891 when five men, one a Navaho, and two women were rendered senseless by lightning striking the house in which they were—their common experience leading to their formation into a theurgical society. Among the Omaha all persons who have seen a buffalo in a dream become members of the Buffalo society, endowed with therapeutic powers. Membership in the various animal societies of the N.W. Coast Indians is commonly determined by some supernatural encounter with the beast-being that gives its name to the society. Again, a man may join a society as a consequence of being restored to health by its medicine—as is the case with the Zuni skatophagic Galaxy fraternity. An individual is not necessarily restricted to membership in a single society, and in some cases, at least, the membership includes nominal Christians.

Thus the secret society holds a middle place in the Indian's religious economy between the more primitive group-rites reflecting clan and tribal organization and those broader intertribal dispensations, or 'religions,' for which the societies seem to prepare the way by their emphasis upon spiritual kinship rather than blood-relationship or political subordination.

2. **Ritual form and content.**—The formal rites of the societies are of a magical, therapeutic, and devotional character, with a turn for entertainment which assumes the form of dramatic portrayal. Purgation, continence, and fasting are the common preparations for initiation into and participation in these rites. Ceremonial lodges are erected or maintained for the secret rites; the public rites take place in the open. In the pueblos the several societies have their separate *kivas*, or underground chambers, while the public dances take place in the plazas. Masking and mummery are found from the east to the west, their highest developments occurring among the totemic tribes of the north-west of North America and in the pueblos of the south-west; among the ancient civilized peoples of Mexico and Peru; and among the tribes of north-western Brazil, although many other South American tribes, even including the Fuegians, have mask ceremonies. Symbolic paint-

² *RSB* W., pt. 2, p. 235.

ing of face and body, costuming, and the elaboration of ceremonial emblems are universal. A survey of the rites and usages brings before one constant suggestions of the Dionysiac development of the Greek theatre. The Kwakiutl of British Columbia divide the year into a sacred and a profane period; during the former personal names and indeed the whole social organization of the tribe are changed; the members of the societies—the 'seals,' or *mystaw*—form a group by themselves; initiates are supposed to be spirit-seized and in a kind of Bacchic frenzy tear the bodies of animals with nails and teeth or, in the case of the 'cannibals,' bite into the flesh of human beings (formerly slaves were slain and eaten). Again, in the pueblos of the United States the ceremonials centre in persons who personate and may, indeed, be said to embody gods and ancients, whose legendary acts they depict; and it is interesting to observe that satirical mockery and clownish acts, often obscene, are introduced into the festivals.¹

The content of mysteries varies indefinitely. In the pueblos the most important ceremonies are dramatic prayers for rain and corn, accompanied by portrayals of the struggle of man with primal monsters. Feats of legerdemain, especially arrow-swallowing and sword-swallowing, are features of many performances, representing that acquisition of theurgic power which is one of the chief aims of society membership. Not all members are equally endowed, and two ranks are maintained in many societies, the higher being composed of the doctors. Knowledge of herbs and of such true medicinal art as primitive peoples possess is commonly imparted, a frequent name for the organizations, among the whites, being 'medicine societies.' Of these the most carefully studied, and perhaps the most elaborate in organization, is the Grand Medicine society, or Midé'wiwin, of the Ojibwa, a society both ancient and wide-spread in the Algonquian tribes. It is a secret society of four degrees, or 'lodges,' each higher degree taken by the initiate imparting to him added therapeutic and magical powers; these powers consist in a practical knowledge of herbs, in powers of communion with the supernatural—powers that might be described as clairvoyant, clairaudient, mediumistic, prophetic; and it is rather curious to find much of the paraphernalia and repertoire of the spiritualistic sect in use by the Midé shamans—all these powers centring in the idea of help and healing from a more than human source.

The mythologic background of the Midé mysteries may be characterized as the portrayal of the path from earth to heaven, as it was established in creation and as it is perpetuated in the ordinations of the creative powers. Knowledge of this 'Way' is the source of spiritual accomplishment. A similar idea underlies the important mystery of the Plains tribes, which is best known from Alice C. Fletcher's Pawnee version.² This extraordinary ritual—perhaps the most elaborate evolved by any American Indians—is not the possession of a secret society, in any formal sense, but has been passed from tribe to tribe by participation and preserved by priestly tradition. It presents surprising parallels to the Eleusinian mysteries—or to what is known of the latter.

The essentials of the rite are a mystic representation of the union of Father Heaven and Mother Earth and the resultant birth of a Spirit of Life, primarily a Corn-spirit. This event is in part a kind of theogenic myth, but in a nearer sense it is regarded as a forthtelling of animal procreation and human parenthood—i.e., it is a dramatic prayer for food and children; and thus it becomes a symbol of the perpetuity of life, tribal and individual.

The rite is undertaken only in the open season, spring, summer, or autumn, when life is astir. It falls, like the

Eleusinian mysteries, into three parts: first, a period of purification and of the preparation of the *saera*; second, a journey, in which the party of the 'Father,' bearing the *hako* (the sacred articles) and singing the 'songs of the Way,' are led by the Corn-spirit to the abode of the 'Son'; and third, the final ceremonies, consisting in part of a public festival, in part of a secret mystery—a dramatic portrayal of the birth of a sacred child. It is interesting to note that the *saera* include winged wands—emblems of the evangelists, mediating between Earth and Heaven—and an ear of corn, the symbol of the spirit of fruitfulness and life.

As in Greece the season of the mysteries was a season of truce, so the *Hako* was a ceremony of peace. War parties turned aside when they saw the bearers of the winged wands, and the bringing of the ceremony from tribe to tribe was a kind of pact of peace, symbolized by the 'Father' of the one tribe adopting as his 'Son' that man of the other to whom the rite was borne; chiefs commonly personated these rôles.

The further step, found in the classical mysteries, of symbolizing a life to come does not appear in this ceremony. It is not, however, without parallel in American mysteries. Zuñi boys are initiated into the Kotikili society, membership in which is necessary in order that a man may enter the dance-house of the gods after death. The initiation ceremony appears to symbolize a re-birth; girls are rarely initiated. The Omaha Shell society centres in a mystic revelation of the gift of life—first, of successful hunting, food, in this world; second, assurance of happy entrance into a life to come.

3. Religious sects.—The demarcation between such intertribal mysteries as the *Hako* ceremony and the somewhat more open sects or dispensations usually called 'religions' is a wavering one. Thus the 'Drum religion' of the Ojibwa appears to have originated in the peace-pact ceremony between this people and the Sioux. It has developed, however, into something more; it has become a religion not only of peace, but of righteous living.

Wiskino, owner of one of the sacred drums which are the symbols of this religion, said: 'I will keep this drum in my house. There will always be tobacco beside it and the drum pipe will always be filled. When I smoke at home I will use the pipe that belongs to the drum. My friends will come to my house to visit the drum. Sometimes my wife and I will have a little feast of our own beside the drum, and we will ask the drum to strengthen us in our faith and resolution to live justly and to wrong no one. When my wife and I do this alone there will be no songs. Only special men may sing the songs of the drum, and my part is that of speaker.'¹

But, in the majority of cases, aboriginal 'religions' are the outcome of prophetic revelations and, in so far as they are reformatory, may even be hostile to the older rites. When Handsome Lake, the Seneca prophet, undertook to reform his tribe's religion, the societies were ordered to dissolve and the old mysteries to be discarded. Gradually, however, they re-asserted themselves, and the older religion came to be regarded as a sort of Old Dispensation in contrast to the New Religion. Kanakuk, the Kickapoo prophet, whose revelation was to lead to a land of peace and plenty in this world and show the 'Way' to happiness in the next, enjoined a similar break with old traditions; and in a degree this is true of the 'religions' of all the famous Indian prophets—Tenskwatava ('the open door'), Smohalla, Wovoka—men whose primary intention appears to have been a doctrine of Messianic salvation, but whose followers, under the press of white encroachment, have been led to regard it as the credo of a pan-tribal revolt in this world as well as of spiritual freedom in the next. Cf. artt. COMMUNION WITH DEITY (American), PROPHECY (American).

LITERATURE.—The most comprehensive survey of the general subject of secret societies is H. Webster, *Primitive Secret*

¹ Cf. art. DRAMA (American).

Societies, New York, 1908. H. Schurtz, *Altersklassen und Männerbünde*, Berlin, 1902, and A. van Gennep, *Les Rites de passage*, Paris, 1909, give admirable analyses of special phases of the subject. For N. America see esp. J. G. Frazer, *Totemism and Exogamy*, London, 1910, iii. 457-498, 'Secret Societies among the Indians of the United States,' and pp. 499-550, 'Secret Societies among the Indians of North-West America'; *Bull. 30 BE*, artt. 'Military Societies,' 'Secret Societies'; *The Mythology of All Races*, x. *North American*, Boston, 1910 (H. B. Alexander); and, for detailed reports, esp. *RBEW* vii. (1891), 'The Midéwiwin' (W. J. Hoffman); xi. (1894), 'A Study of Siouan Cults' (J. O. Dorsey); xiv. (1896), 'The Ghost-dance Religion' (J. Mooney); xv. (1897), 'Siouan Sociology' (J. O. Dorsey), 'Tusayan Katsinas' (J. W. Fewkes); xxi. (1903), 'Hopi Katsinas' (J. W. Fewkes); xxii. (1904), 'The Hako' (A. C. Fletcher); xxiii. (1904), 'The Zuñi Indians' (M. C. Stevenson); xxvii. (1911), 'The Omaha Tribe' (A. C. Fletcher and F. La Flesche). The writings of F. Boas are the first authority for the customs of the Indians of the North-West Coast, esp. 'The Social Organization and the Secret Societies of the Kwakiutl Indians,' *Rep. U.S. National Museum for 1895*, Washington, 1897; while a summary of the subject for this interesting section is given by E. Sapir, 'The Social Organization of the West Coast Tribes,' *Trans. of the Royal Soc. of Canada*, ix. [1915]. The writings of F. Cushing, J. W. Fewkes, and M. C. Stevenson describe the societies of the Pueblo Indians; and for the societies of the Plains tribes Clark Wissler, 'Societies of the Plains Indians,' *Anthrop. Papers of the Amer. Mus. of Nat. History*, xi. [1916], is the most comprehensive study. For a survey of the *Hako*, comparatively considered, see H. B. Alexander, *The Mystery of Life*, Chicago, 1913. Important articles are *American Anthropologist*, new ser., xi. [1909], 'Secret Societies of the Seneca' (A. C. Parker), and xii. [1910], 'The Great Mysteries of the Cheyenne' (G. B. Grinnell). For Central and S. America the materials are scattered in many sources, old and recent. A select bibliography, classified by regions, will be found in *The Mythology of All Races*, xi. *American (Latin)*, Boston, 1910 (H. B. Alexander). A number of artt. describing mask and similar ceremonies will be found in the *Comptes rendus* of the Congresses of Americanists, Paris and elsewhere, 1878 ff. Among recent descriptive works of special pertinence may be named, Th. Koch-Grünberg, *Zwei Jahre unter den Indianern. Reisen in Nordwest-Brasilien, 1903-1905*, 2 vols., Stuttgart, 1909; Karl von den Steinen, *Unter den Naturvölkern Zentral-Brasiliens*, Berlin, 1897; and Thomas Whiffen, *The Northwest Amazons*, New York, 1916.

H. B. ALEXANDER.
SECRET SOCIETIES (Melanesian and Polynesian). — 1. Melanesian. — Secret fraternities abound in Melanesia. Initiation is an arduous process, and women are rigorously excluded. The members of these fraternities do not appear to have a secret cult, but they are regarded as being in close association with ancestral ghosts. These are represented by the members, clad in special dresses and masks, terrifying to the uninitiated. Like the African societies, these fraternities are powerful in maintaining law and order; and, apart from the power of the chiefs, they form the tribal government, holding courts, exacting fines—the delinquent being visited by the masked persons—and imposing tabus on certain places and on fruit-trees.¹ Possession of a sacred enclosure (*tareu*) was general among these societies, with a lodge-room where the dresses were prepared, where the members met, and whence the spirit-personators emerged. No woman, uninitiated man, or boy might approach the *tareu*.

Among these fraternities the Duk-Duk of New Britain, the Solomon Islands, and the Bismarck Archipelago is well known.

Its chiefs decide when the ceremonies are to begin and the number of boys to be initiated. These are then collected on the beach, where preliminary ceremonies take place, including striking the youths so that they sometimes faint or even die. Then they are taken to the *tareu* with their entrance fee, and there admission to the society takes place. To each candidate is appointed a Duk-Duk guardian, and they learn about the masks and dresses, dances, and secrets. All this continues for some weeks, and then Duk-Duk is supposed to be sick and near death, and the dresses are burnt.

Where crimes against native law have been committed, Duk-Duk exacts fines, though this frequently degenerates into gross extortion. But the people fear Duk-Duk so much that they submit. For the same reason the tabu of Duk-

Duk on fruit-trees, which may be had for a fee, is widely respected.¹

Another society is the Ingiet, or Iniat, of the Bismarck Archipelago, with many local branches, each presided over by a *tena kikiuana*, or magician, whose help is available in time of sickness. He possesses knowledge of the spirits and power of controlling them, also the secrets of the dances and of magic ritual; and by his magic he can cause death.

The members of the society meet in a place called *maraiot*, in which the dances take place, but which the uninitiated may not visit on pain of death by the spirits. A special part of it is visited by the *tena* alone and contains the images of the fraternity, the abode of dangerous spirits. Certain foods are tabu to members. The nature of this fraternity is little known, though witchcraft seems to be its main purpose. Initiation takes place in the bush, where the youths are fed with certain foods which are tabu to them ever after. These are pork, shark, turtle, and dog, and may represent earlier totems.²

In the eastern islands of Torres Straits the Bomai-Malu organization has two divisions—'shark men,' who are the principal men of the order, and another class of singers and drum-beaters. At the ceremonial ritual songs and dances take place, and there is an exhibition of masks to the newly-initiated, who are also taught religious and social duties. The society punishes sacrilege or breaches of discipline.³

2. Polynesia. — In Polynesia something analogous to these fraternities was that of the Areoi of the Society and neighbouring islands. The origin of the Areoi was the subject of myths and was connected with the gods.

The brothers of Oro, Orotetefu and Urutetefu, were made by him the first Areoi. One of them had transformed himself into a pig and a bunch of feathers as gifts to Oro, afterwards assuming his original form, though the gifts remained. A pig and a bunch of feathers were therefore important offerings in the Areoi festivals. At first there were ten Areoi, nominated by the two brothers, and chosen from different islands, with power to admit others to the order. The principal Areoi in later times bore the same names as they. The tutelary deities of the fraternity were Oro and his brothers.

There were seven classes of ascending rank in the society, indicated by different tatus, and numerous servants attended each class. Wives of the Areoi were also members, but infanticide had to be practised by all members according to the orders of Oro's brothers, who lived in celibacy.

Admission to the order was supposed to be directed by divine inspiration during a long novitiate. Then the candidate, in an excited state, appeared at one of the public Areoi exhibitions and, having been approved, was given a long period of probation. He received a new name and had to murder his children. During his stay in the lower grades he learned the sacred songs, dances, and dramatic exhibitions. Admission to the various grades was costly, and the higher grades were most expensive of all. Admission took place in the *marais*, or men's houses, a sacred pig being put in the hands of the postulant and offered to the gods. Then the tatu marks were put on him, and feasting, dances, and pantomimic displays followed.

The mysteries of Oro were celebrated by the fraternity, the hymns describing the life of the gods, but the highest secrets and cult were known to members of the upper grades alone. The members were believed to be allied to the gods, yet they indulged freely in lusts. They were supported by chiefs and people, and for them was reserved the fabled sensuous Elysium of the future, Rolutunoanoa, on a mountain in Raiatea. Special ceremonies marked the death and funeral of a member. After elaborate sacrifices the members set out for other islands to perform their plays, or *upaupa*—dramatic recitals of the divine myths, with dances and hymns, often of an obscene character. Special houses were erected, and the members were sumptuously entertained by the chiefs at the expense of the people.⁴

SECTS (Buddhist).—In none of the older books—the four *Nikāyas*, e.g., or the *Sutta Nipāta*—is there any mention of sects. Divisions or dissensions in the order are referred to as follows. He who stirs up such dissensions is guilty of a 'black act' (*kammaṃ kaṇhaṃ*).¹ When diversities of opinion exist, it is not a suitable time for effort or energy in self-training.² Four reasons—not complimentary—are given for members of the order approving of such divisions.³ In one passage 'ten points' (*dasā vatthūni*) are given as constituting such a division in the order (*saṅgha-bhedo*). These are: the setting forth as truth what is not truth, and *vice versa*; as a rule of the order what is not such a rule, and *vice versa*; as the word or the practice or the precept of the Master what he had not said or practised or enjoined, and *vice versa*.⁴ The same ten points are elsewhere stated to result in harm to the laity.⁵ Here it is said that by means of these ten points members of the order drag others after them, draw them asunder, hold separate sessions of the chapter at which the formal business of the order is conducted, and recite the *Pātimokkha* (the 227 rules of the order) at such separate sessions. This is a step towards the foundation of a sect. It is not merely a difference of opinion; it is also an innovation in the conduct of business. But there is no question so far of a sect in the European sense—i.e. of a body of believers in one or more doctrines not held by the majority, a body with its own endowments, its own churches or chapels, and its own clergy ordained by itself. In the *Vinaya* we get a little farther, but it is still no question of a sect. Devadatta (q.v.), to whose schism the 17th *khandaka* is devoted, did not originate a sect of Buddhists; he founded a separate order of his own, whose members ceased to be followers of the Buddha. At the end of the chapter, or *khandaka*, devoted to this subject we are told of the Buddha being questioned by Upāli as to what amounts to a division in the Saṅgha (the order). The reply is the repetition of the above-mentioned ten points, but with eight other points added—points in which *bhikkhus* put offences against a rule of the order under a wrong category, calling a minor offence a serious one, and so on. Thus we get eighteen occasions for dissension in the order, leading up to the holding of separate meetings of the chapter of the order.

Unfortunately we have no historical instance of this having actually happened. There is, however, a case put in illustration of the working of one of the later rules. It occurs in the 10th *khandaka*,⁶ the whole of which is concerned with this matter of dissension in the order. There may be some historical foundation for this case, but it is more probably, like so many others, purely hypothetical. It is as follows:

A *bhikkhu* (no name is given) thought he had broken one of the rules (which of the rules is not specified). His companions in the settlement thought he had not. Then they changed their minds: he thought he had not broken the rule, they thought he had, and, when he refused to adopt their view, they held a formal meeting of the order and called upon him to retire—in fact, expelled him. The *bhikkhu* then issued an appeal to other members of the order dwelling in the vicinity, and they took his side. All this being told to the Buddha, he is reported to have said to the expelling party that they should not look only at the particular point in dispute; if the supposed offender be a learned and religious man, they should also consider the possibility of his being so far right that, in consequence of their action, a dissension might arise in the order. He also went to the partisans of the supposed offender and told them, in like manner, that they should consider, not only the particular question, but the possibility of their action leading to dissension. Now the party of the supposed offender held their chapter meetings within the boundary; the other party, to avoid meeting them, held their meetings outside the boundary. The story ends¹ with the restoration, at his own request, and at a full chapter held within the boundary, of the expelled *bhikkhu*.

It should be remembered that the order was scattered throughout the countryside, which was divided, for the purpose of carrying out its business, into districts, each about equal in size to two or three English country parishes. Meetings were held as a rule once a fortnight, and every member of the order dwelling within the boundary of the district had either to attend or send to the chapter the reason for his non-attendance. The meeting was quite democratic. All were equal. Each member present had one vote. The senior member present presided and put the resolutions to the meeting; but he had no authority and no casting vote. He was simply *primus inter pares*. If, then, as in the case just put, a meeting of some only of the resident members in a district was held outside the boundary, all the proceedings of such a chapter became invalid. It will be seen, therefore, how very important the fair fixing of such boundaries (*simāyo*) was to the preservation of the freedom and self-government of the order.

Another fact should also be remembered. No one of the 227 rules of the order refers to any question of dogma or belief or metaphysics. No member of the order had any power over any other (except by way of personal influence) in respect of the opinions which the other held. There was no vow of obedience. Of all religious orders mentioned in the history of religions the Buddhist was the one in which there was the greatest freedom, the greatest variety, of thought. One consequence of this, we find, was that, as the centuries passed by, an increasing number of new ideas, not found in the earliest period, became more prevalent among the members of the order. The rules of the order concern such matters of conduct as were involved in the equal division of the limited personal property, held socialistically by the order, among its several members. They are mostly sumptuary regulations or points of etiquette.² Beliefs or opinions are left free. And this spirit of freedom seems, as far as we can judge, to have survived all through the centuries of Buddhism in India and China.

About 100 years after the Buddha's death there was a formidable dissension in the order, which led to the well-known Council of Vesālī. This dissension was raised by a party of the *bhikkhus* resident there who put forward their ten points (*dasa vatthūni*). It is quite possible that they chose the number ten, and made use of the technical term 'ten points,' in deference to the tradition of the older, and quite different, ten points explained above. Their points were ten relaxations in the sumptuary rules of the order. The manner in which the contest was carried on by both sides, and was finally settled, is related in full in the last chapter (a supplementary chapter) in the *khandakas*.¹ In this, the oldest, account of the matter there is no mention of the starting of any sect. Each individual on both sides was at the beginning of the controversy, and remained at the end of it, a member of the Buddhist order.

The next work to be considered is the *Kathā Vatthu*, edited for the Pāli Text Society, and translated under the title of *Points of Controversy*. The book, probably of gradual growth, was put into its present shape by Tissa in the middle of the 3rd cent. B.C.; and it discusses about 200 questions on which different opinions were then held by different members of the order. About a score of these are questions as to the personality of a Buddha; another score are on the characteristics of the *arahant*, the fully converted man, who has reached, in this world, the end of the Ariyan 'path.' Three questions are on the nature of the gods, and four on the nature of the Saṅgha. The rest are disputes on points of cosmology, psychology, or ethics. The whole gives a valuable picture of the great diversity of opinion in the order, sometimes on questions which now seem unimportant, but for the most part on matters of the greatest interest for Buddhists who wished to understand, in detail, the scheme of life unfolded in the more ancient books. No one will dispute the evidence of this collection of 'points of controversy' as to the abounding life of the new movement and the wide liberty of thought involved in its teaching. But opinions may differ as to the advantages and disadvantages of the complete absence of any authoritative power in the order. We can find in the 'points of controversy' the germs of almost all the astoundingly divergent and even contradictory beliefs which grew in power and influence through the succeeding centuries, and which, though always put forward under the name of Buddhism, resulted in the fall of Buddhism in India, and in its transformation in Tibet, and still more in Japan, into rival sects. The only authority recognized by both sides in each of these 'points of controversy' is the actual wording of the more ancient documents of the Pāli canon; and in many cases the controversy turns on diverse interpretations of ambiguous terms in that wording. Of course all the supposed disputants in the book are members of the one Buddhist Saṅgha. There is no mention of sects, or even of differing schools of thought.

Unfortunately, after the date of the *Points of Controversy* there is a gap of many centuries before we get any further evidence. The few books still extant which date nearest to the canon are four or five centuries later; and they—e.g., the *Divyavadāna*, the *Netti*, and the *Milinda*—do not consider the matter worthy of their attention. Then suddenly, in the 4th and 5th centuries of our era—i.e. about 1000 years after the founding of Buddhism—we find the famous list of eighteen 'sects' supposed to have arisen and to have flourished before the canon was closed. These are

at first simply lists of names.¹ The list is first found in Ceylon; but similar lists of a later date—three of them from Tibetan, five from Chinese, sources—have also been traced.² Each list contains eighteen names. But the names differ; and the total amounts to nearly thirty. All the lists agree that the Theravādin, 'those who hold the opinions of the Elders,' was the original body out of which the others gradually arose. The order in which they are said to have thus arisen is set out in tabular form in the introduction to the *Points of Controversy*.³ A few details of the opinions maintained by some of these schools, or tendencies of thought, are given either along with the lists or in the commentary on the *Points of Controversy*. These are curt and scrappy, often obscure, and not seldom contradictory. But one general conclusion we may already safely draw. Precisely as in the earliest days of Christianity the most far-reaching disputes were on the details of Christology, so among the Buddhists the most weighty ones were on the personality of a Buddha; and the greatest innovations came, in India, from the pagan region in the extreme north-west.

Apart from these questions of doctrine there is a remarkable silence about other differences. There is not a hint of any difference in church government, in dress, in ritual, in public or private religious observances, in finance, in the custody of buildings or property, in the ordination or the powers of the clergy, or in the gradation of authority among them. This silence is suggestive.

Now in the oldest regulations of the order a whole *khandaka* deals with the duties of the brethren towards other brethren who propose, on their travels, to stay at any settlement occupied by the order.⁴ It is entirely concerned with questions of courteous treatment on both sides—that of the residents and that of the 'incoming' or 'outgoing' *bhikkhus*. Every member of the order is to be equally welcomed. No inquiry is to be made as to opinion. The relation is to be one of host and guest. The story told by the Chinese pilgrims to India shows that in the 4th cent. of our era, and again in the 7th cent., these customs were still adhered to.⁵ At the time when the pilgrims were in India monasteries had taken the place of the older settlements. Brethren belonging to different 'sects' (according to the lists of eighteen above referred to) were found dwelling in the same monastery.

If we take all this evidence together, it is possible to draw only one conclusion. There were no 'sects' in India, in any proper use of that term. There were different tendencies of opinion, named after some teacher (just as we talk of 'Puseyites'), or after some locality (as we used to talk of 'the Clapham sect'), or after the kind of view dominant (just as we use 'Broad' or 'Low' Church). All the followers of such views designated by the terms or names occurring in any of the lists were members of the same order and had no separate organization of any kind.

The number eighteen is fictitious and may very probably be derived from the eighteen moral causes of division set out above. As the so-called sects were tendencies of opinion, the number of them was constantly changing, and at no time or place which we can fix were more than three or four of them of any great importance. Two or three could, and did, exist at the same time, not only in the same monastery, but in the same mind.

⁵ All the passages relating to this matter have been tabulated and summarized by the present writer in an art. in *JRAS* 1891.

¹ Tr. in *Vinaya Texts*, iii. (SBE xx.) 386–414; see also art. *COUNCILS* (Buddhist).

The expression of these ideas was at first in Pāli. Very little of this has survived. But later there are Sanskrit books, mostly as yet not edited, containing detailed statements of the most trustworthy kind of the views of the Sarvāstivādins (*q.v.*), and perhaps of some others.

The condition of things is very much the same in all Buddhist countries at the present day, and even in China. In Ceylon,¹ *e.g.*, there are said to be three 'sects'—the Siamese, the Burmese, and the Rāmañña. They all belong to the same order (Saṅgha). The Siamese—so called because its members were originally ordained by Siamese *bhikkhus*—admit only high-caste laymen to the order and habitually wear their upper robe over the left shoulder only, differing in both these points from the early Buddhists. The members of the other two confraternities reject both these innovations, and the Rāmañña *bhikkhus*, who are very few in number, claim to be particularly strict in the observance of all the ancient rules. But the religious and philosophical opinions of all three are practically the same. We have no information as to the financial arrangements. Probably each *bhikkhu* recognized by any of these three confraternities would be legally entitled to his share in any land or other property held by the order as a whole. They may, and do, take part together in public religious services, such as the preaching of *Baṇa* (the Word). They hold separate meetings of the chapter for the admission of new *bhikkhus*. The laity look upon them all with equal respect, considering them as members of the one Saṅgha. There is said to be, in quite recent years, a tendency in the Siyama Samāgama (the Siamese confraternity) to break up into, or give rise to, other small confraternities. In Burma² there have been continual differences of opinion (*e.g.*, on the question of boundary, *simā*). Certain *bhikkhus* have also claimed a superior orthodoxy on the ground that they had been trained either in Ceylon or by others who had been admitted there. But nothing is known of the establishment of any sect apart from the order; and the old differences have now been settled. Of Siam and Annam we know very little; the conditions there seem to have resembled those in Burma.

In all these countries discussion has tended to recur to the ancient faith. In China³ the deification of the symbols of the old ideas, begun already in India, has been carried on until Chinese Buddhism, to a careless observer, seems to have relapsed altogether into polytheism. But that is true only of the multitude. The more thoughtful members of the order, even in China, have been able always, in different degrees, to see behind the deified symbols. There are practically only two schools of thought—the mystics and the Amidists (the believers in Amitābha). Every member of the order belongs more or less to both schools; and at the present day the whole order, being thus both mystic and theistic, has arrived at more or less of unity, even of opinion. But the history of the differences and innovations all through the centuries shows as yet (the present writer cannot say what further research may not discover) no evidence at all of any 'sects' in our sense of the word. The order has been, and still remains, one.⁴

In Japan⁵ the case is different. There is a Japanese work, apparently of the 19th cent. of our era, giving an account of twelve separate sects—separate either in dress, in beliefs, in church government, or in finance. We have this little

work in two European translations, one into English by Bunyū Nanjio,¹ and one into French by R. Fujishima.² Its author or authors are lamentably deficient in even the most elementary knowledge of historical criticism; and they do not make clear whether, or how far, all these sects are really existing now. But it gives the names and dates of the teachers who introduced each of the sects from China and the names of the books (mostly Chinese translations of late works in Buddhist Sanskrit) on which they respectively rely. The oldest of these works is the *Abhidharma-kośa-vyākhyā*, of about the 12th cent. of Indian Buddhism, and the latest is the *Sukhāvati-vyūha*, of unknown date. It is curious to note that these authorities breathe the same spirit. There are differences on minor points, but not such differences as are adequate in themselves to explain to a European the breaking up into different sects. Lafcadio Hearn unfortunately refuses to say anything about it.³ Possibly the formation of a new sect was the expression of personal devotion to a new teacher. Or possibly the real cause of division was not so much religious or philosophic differences as difference in systems of church government. But the fact remains that in Japan there are sects. The Saṅgha has been broken up. See also artt. HINAYANA, TIBET, SARVĀSTIVĀDINS.

SECTS (Chinese).—I. *INTRODUCTORY*.—There are eight religions in China: (1) Confucianism, the most ancient, grew out of the religion of the mythical past in the days of Yao and Shun (2356 B.C.); (2) Taoism, the philosophic, mystic, and magical, arose about the 6th cent. B.C.; its founder, Lao-tse, was contemporary with Confucius; (3) Buddhism was introduced by the Chinese emperor who invited missionaries from India in A.D. 61; (4) Muhammadism: Muhammad's maternal uncle came to China as religious ambassador in 628; in 757, after helping to put down a serious rebellion, 4000 Uigur Muslims settled in China; this was five years after al-Mansur had founded Baghdād, the city of the Khalifas, which was destroyed by the Mongols in 1258; (5) Nestorian Christianity: Alopen, with a group of Syrian missionaries, arrived at Sian-fu in 635; they were encouraged by the Government and spread widely; (6) Manichæism came from Babylon about this time; (7) Lāmaism appeared in China in the Mongol dynasty (1280-1368); (8) Wāhhābi Muslims arrived in 1787.

These were the main streams of religion, but each had many sects.

II. *HISTORY AND ENUMERATION*.—I. General.—By a secret sect one generally understands an esoteric religion known only to the initiated. In almost every country, and in connexion with most religions, there have been secret sects, with their mysteries, initiatory rites, and so forth. In China also they have existed for many centuries. Sometimes they have implied a protest or revolt against established authority which demanded uniformity of opinion and practice in religion and politics. The secret sects are chiefly religious, and the secret societies chiefly political; but the two are intimately

⁵ All the passages relating to this matter have been tabulated and summarized by the present writer in an art. in *JRAS* 1891.

¹ Tr. in *Vinaya Texts*, iii. (SEE xx.) 386-414; see also art. *COUNCILS* (Buddhist).

then reigning emperor. It is mentioned in the 15th cent. as making common cause with rebels, and its members were severely persecuted. It had gradually grown to be a great power and could lead out armies. Because of the violence of the persecution it rose and helped to bring about the downfall of the Yuen (Mongol) dynasty. It sent thousands of its members against the Mings during the great insurrection and largely sapped that dynasty and led to its downfall. It was said to have no fewer than 2,000,000 adherents in Shantung, Shansi, Honan, Shensi, Szechuen, and Chihli.

(d) *Lo Hwai*.—These include the *Sien-tien* ('Pre-Celestial') and *Wu-wei* sects, which are either identical or closely connected.

The members of the *Sien-tien* sect claim that it dates back to before the very earliest days of Chinese history, and that its founder was the primeval power which ruled the universe, *Wu-kih*, without beginning or end.

The papers of the sect relate how *Wu-kih* in far remote antiquity himself came down to earth to save men and spirits from the ocean of suffering. At different times he sent Buddhas and prophets to bring salvation to men. Later he spoke to the Buddhas of the suffering people and said, 'There are countless millions to be saved. . . I do not know who will descend to the earth and lead my children of both sexes to their home.' Then the patriarch *Lo*, moved with compassion, said, 'I will descend into the world and live there to bring salvation to your children and lead them back to their home.' The ancient father, joyful and cheered, handed to the patriarch *Lo* his instructions. He accepted them and descended to the earth, there cleared the waste, and made the doctrine shine clear and bright.

This was in the 16th century A.D. *Wu-kih*'s earthly name was *Lo Hwai*; his clerical name *Wunkung* ('striver after the eternal'). He was born in Shantung, studied religion under wise Buddhist teachers, and settled in the cave of the White Cloud Mountain near Nanking, where he accepted the Buddhist commandments and received ordination. He went to Peking and published a book which showed that salvation was for every one, lay or clerical. He held meetings in Peking, but was arrested; he gave proofs of supernatural power. The MSS give a most interesting account of a discussion which he had with a foreign priest from Tibet; it shows us that the prophet's religion does not attempt to bring salvation to its adherents by making them indulge in active worship of saints and deities with offerings of food and incense, with drums and lights. They have no images, no temples, no prayers; they seek perfection and bliss exclusively in 'words of truth uttered by heaven and earth,' i.e. by the study of *Sūtras* explaining the natural order which bears sway within the all-embracing and yet empty universe, the only temple which this sect acknowledges. To be admitted to the 'realm of *Wu-wei*' and abide there is the ideal aim of the members. Identification with the world's course is the chief principle of the *Sien-tien* sect. We read in the MSS that heaven and earth, mountains and rivers, are its gods, winds and clouds its incense, thunderclaps its drums, sun and moon its sacrificial lamps, flowers and fruits its meat-offerings, seas and lakes its drink-offerings, and the universe its temple.

The practices of the sect are not quite in accord with its principles. It builds no temples or altars, nor does it make any carved or painted images of its gods or saints. Each member worships in his own house before a burning oil-lamp the god of his choice, presenting burning incense-sticks and offering sacrifices of fruit and vegetables, in spite of *Lo Hwai*'s teaching that these are superfluous. Each member is required to occupy himself with his own perfection without forcing perfection upon others; so active propagandism is rare. Any one who professes the principles of the sect is simply admitted as a member; nothing is required of him but a solemn promise to keep the Five Com-

mandments of Buddha; no other ritual or form of initiation has to be gone through. The various groups which constitute the sect are simply guided by the more learned and older members; there are no religious ranks or titles; the members call each other brothers and sisters. It is essentially a domestic religion. The members, mostly well-to-do people, meet where they please, men with men and women with women. There are larger meetings, where the adherents recite Buddhist *Sūtras*, formulas, and numerous names of Buddha, to promote self-perfection and salvation; but they do not beat hollow drums or metal balls. There is also pious conversation, particularly about the Five Commandments. The chief of these is, 'Thou shalt not kill anything that has life'; therefore vegetarianism is an absolute principle of this sect. The members also buy caged birds, fish, and other animals, and set them at liberty, whilst reciting part of a *Sūtra*, and loudly proclaiming the deed to the gods and spirits of sky, water, and earth, that they may enter it to their credit in the book of rewards and punishments.

The members of the *Sien-tien* sect show marked sympathy for Christian doctrine; many of them are acquainted with the gospel; to some *Wu-kih* is the same as *Jahweh*; some identify *Jesus* with *Lo Hwai*, their latest Messiah, sent down to the world from the Most High for the salvation of men, who worked miracles there, suffered at the hands of the authorities, died, and ascended to heaven. They generally show themselves eager to be informed about the Christian faith.

Edkins¹ says that in some places the sect has temples, but they are destitute of images and contain only the common Chinese tablets to heaven, earth, the emperor, parents, and teachers. He also says that they exhibit more depth and reality in their convictions than is common in other sects in China.

(e) *Eight Diagrams*.—This sect flourished principally in the north of China—in Honan, Chihli, and Shantung—and we hear of it chiefly in connexion with great rebellions, especially those of 1786 and 1813. It is one of the great sects which included or were closely connected with several others—e.g., Red and White Yang. One protocol says that the *Eight Diagrams* is 'also called the *Lung-hwa Society*.' It is subdivided into eight great sections, distinguished by the names of the diagrams. Each section had its own ruling chief, one of whom was the general head of the sect. A Government decree says of it that the Great Light is worshipped every morning, and that the members recite formulas and *Sūtras* in order to escape dangers by sword and arms, fire and water.

In 1786 there was a great heresy hunt in Honan and Chihli, where this sect flourished. This was followed by a rebellion which, prisoners confessed, was caused by exasperation at the terrible persecutions. Many thousands of members were tortured and killed, and others were banished as slaves to Central Asia. But even in exile the brotherhood continued to flourish. Again in 1813 the *Diagram* sects in despair rose in open rebellion and stormed the palace in Peking; they were butchered in myriads. Their leader was held in high honour by them. He taught his followers a formula which he considered of the utmost importance—'Unbegotten Father and Mother in the home of the Immaterial Void.' He urged them to repeat it morning and evening; it would ward off all danger from arms, fire, and water, and ensure the success of every undertaking.

(f) *Lung-hwa*.—The following account, taken from De Groot, is given in great detail, not because

¹ 'The *Wu-wei* Sect,' in *Trans. R.A.S. China Branch*, vi. (1858) Oct.

connected with one another in China. Most of the chief secret sects have at one time or another been involved in politics, and taken a large part in many revolutions, or have been supposed to do so by the Government. Many were almost purely religious, the members living ascetic lives, abstaining from meat, and trying to acquire merit. Some originated in the early ages, and nearly all have grown out of the old Taoism, Buddhism, and ideal Confucianism, as is seen by their names. The Mahāyāna, Maitreya, White Lotus, Perfect Intelligence, are manifestly more Buddhist; the Eight Diagrams is more Taoistic and Confucian.

We find a very large number of sect names, but the number of parent sects is small. Each larger community had many offshoots, which frequently took other names; and the same sect seems to have been known by different names at different times. When scattered by persecution, they took new names to mislead their persecutors.

The Buddhist element, with some admixture of early Christianity, seems to have predominated; and that is natural when we consider that Buddhism, both primitive and higher, preached a doctrine of salvation for all, in this life and the life to come, and thus satisfied the yearnings of the people. It taught that love to all that lives and breathes and the performance of good works were the means of obtaining this salvation, which was for any one who chose. So there arose lay communities whose members helped one another on the road to salvation. There were communities for abstaining from animal food, so as to avoid taking life, for rescuing animals from death, for the worship of particular saints, etc.; but the aim of all was the same, viz. the attainment of salvation. In the early days salvation was sought in the conventual life, but the State destroyed thousands of the monasteries and forced the inmates out into the world. The search for truth and immortality, however, was not easily suppressed; those whom the State tried to suppress formed the sects and because of persecution were obliged to hold their meetings in secret. Apparently dispersed and destroyed, they sprang up under another name. Their rites consisted chiefly in reciting formulas and Buddhist *Sūtras* and in burning incense, their practices in vegetarianism and the performance of good works. If the State had left them alone, they would have been harmless, but persecution more than once forced them into rebellion.

There have also been in China societies, like the famous Heaven and Earth Society (Tien-ti Hui) and the Kwo Lao Hui, which are confessedly of a political nature with revolutionary objects, though there is much that is Buddhist in their origin and symbolism. They are of the class of religious societies which the State persecutes for heresy, which therefore closely fraternize for mutual help, and which are denounced by the State as hotbeds of rebellion and mutiny.

It will be well here to give a list of the principal secret sects known in China, bearing in mind that about many of them very little is known, as the Government has burnt their books again and again, and that probably they include some which are only branches of a larger community. De Groot¹ mentions the names of 68. The chief ones were: (1) Mahāyāna, (2) Maitreya, (3) Pai-lien, or White Lotus, (4) Pai-yun, or White Cloud, (5) Hung Yang (one of the Lo Hwai sects), or Red Ocean, (6) Pai Yang, or White Ocean, (7) Sien-tien, or Pre-Celestial, (8) Wu-wei, or Non-acting (natural), (9) Fen-liang, or Incense-Burners, (10) Kin Tan Kiao, or Pill of Immortality, (11) Mi Mi Kiao, or Very Secret, (12) Pah-kwa, or Eight Diagrams, (13) Lung-hwa.

¹ *Sectarianism and Religious Persecution in China*, index.

Of secret societies we may mention: (1) Tien-ti Hui, Triad or Heaven and Earth Society, (2) Taipings, (3) Kwo Lao Hui, (4) Reform Society.

A large part of our knowledge of the sects is gleaned from Government persecution decrees. These reveal some interesting phenomena of Chinese religious life; they tell us with what undaunted zeal the sects sent out their branches in different directions, how indestructible they were, how powerful an organization bound together the numerous fraternities, how strong must have been the influence of the religion which effected all this, and how the sects, arming in self-defence, often made the Sons of Heaven tremble upon their throne.

2. The principal sects.—(a) *Mahāyāna*.—Just as Christianity arose out of Judaism and in its early days was referred to as a Jewish sect, so the Mahāyāna sect arose out of primitive Buddhism. The doctrines of primitive Buddhism, as taught by the first disciples of Śākyamuni, were afterwards known as the Hinayāna (*q.v.*), the Smaller or Southern Vehicle, because largely followed in Ceylon and Burma in the south of Asia. The new school of Buddhism was called Mahāyāna (*q.v.*), the Greater or Northern Vehicle, because followed mainly in the north of Asia, China, Tibet, and Japan. Its chief sacred book, *Ki Shin Lun* ('Awakening of Faith'), was written by Āśvagoṣa (called in Chinese Ma-ming Pusa) about the end of the 1st cent. of the Christian era. This is about the same size as the Gospel of Mark and is of immense importance. From it we find what striking contrasts there were between the old and the new Buddhism.

(1) The old Buddhism was atheistic; the new was theistic; (2) the old Buddhism taught salvation by man's own efforts; the new trusted also in the help of God; (3) the old Buddhism believed that men should retire from this evil world and seek their own salvation; the new believed that the highest virtue consisted in living in the world and seeking to save others; (4) the old Buddhism believed in the necessity of possible countless transmigrations before final deliverance; the new taught that men passed into paradise immediately after death, without transmigration.¹

(b) *Maitreya*.—This must have originated from the study of a remarkable prophecy of Śākyamuni Buddha, which strongly reminds one of the Jewish prophecies of the coming Messiah. In the 'Diamond Sutra' (*King Kang King*), ch. vi., he speaks to this effect:

'Five hundred years after my death, there will rise another Teacher of religion (Maitreya) who will produce faith by the fulfilment of this prophecy. You should know that He will plant the root of His teaching, not in one, two, three, four or five Buddhas, nor in ten thousand Buddhas, but plant it at the root of all the Buddhas; when that One comes, according to this prophecy, then have faith in Him at once, and you will obtain incalculable blessings.'²

(c) *White Lotus (Pai-lien)*.—This is the most notorious of all the sects. It seems to have been identical with the White Ocean and Incense-Smelling sects and to be closely connected with others, such as Perfect Intelligence and Mahāyāna. De Groot says:

'Possibly it is the greatest religious corporation in China, embracing all the others, or at least the chief ones.' It has flourished over a very wide area, if not over the whole realm. 'It has for centuries had a leading part in China's history, both as the chief object of persecution and as the mightiest rebel power.'

It existed in China as early as the 4th century. The goal of its members, like that of most of the sects, was salvation in the western paradise. The patron saint was Maitreya, the coming Buddha, the Messiah, for whom all longed, and who was to bring deliverance from oppression and persecution and restore the Church of Buddha to its ideal glory. For several ages we hear little of it, but in the 11th cent. the sect was patronized by the

¹ See Richard, *The New Testament of Higher Buddhism*, p. 48.

² *Id.* p. 131.

many of the weary combatants in the battle of life, familiar with poverty and hardship, also feel inexpressible longings to know what and who God is. Such must have founded and developed the various so-called secret sects of China and by their manifest faith in what they teach have drawn into communities multitudes of followers. It is among these sects that the movement of religious thought is most active.

3. The principal secret societies.—(a) *The Triad Society, or Tien-ti Hui* (Heaven and Earth Society).—This was always confessedly of a political nature with revolutionary objects; but it has also a Buddhistic religious character and has to be reckoned among the religious societies which the State persecuted for heresy. It was first heard of in 1789. William Stanton¹ gives a full account of this society. He says that its membership consisted of about equal numbers of Cantonese, Fukienese, and Hakkas. Its flag bore the legend 'Rebel against the Manchus, restore the Mings.' By 1832 its influence was felt from Formosa to Hunan, from Kiangsi to Kwangsi. In 1850 its members helped the Taiping movement. The Taiping rebellion was not a Triad rebellion, but the Taiping leaders availed themselves of the help of the society. For more than a hundred years this society has been a source of constant anxiety to officials.

(b) *The Taiping rebels*.—Religious persecution was the main cause of this rebellion. The first signs appeared in Hunan in 1836; by 1850 the insurgents numbered 8000 in Kwangtung alone. It is sometimes said to have been a Christian movement. The leader, Hung Siu-tsuen, had imbibed some Christian ideas from a pamphlet written by a Christian, a convert of Dr. Milne of Malacca; and the writings of Hung Siu-tsuen are certainly tinged with Christian ideas and contain confused allusions to Biblical characters, mixed up with heathen and Confucian philosophy. But it was really a rebellion against the persecuting dynasty—'the effort of a desperate people to throw off a yoke of bloody intolerance and tyranny.'² If it had been successful, there would probably have been religious freedom; but it was washed out in seas of blood and such devastation as converted large parts of the country into a desert.

(c) *The Kwo Lao Hui*.—This society arose about 1891 and was inimical to the foreign reigning dynasty. Hunan, Hupeh, and Szechuen were hotbeds of the movement. Very many of the Government soldiers joined it, with the result that the Government feared to try its strength with it lest the soldiers should go over to the other side.

(d) *The Reform Society*.—Another society, small but of great importance, was the Reform Society, which arose in 1894-95. A few earnest and brilliant young men read Mackenzie's *History of the Nineteenth Century*, and other books on Western civilization and progress, translated by the Christian Literature Society, and were filled with a desire to introduce reforms into China. Leading statesmen and scholars in Peking and the provinces studied these books eagerly, as did also the young emperor Kwang-su. A Reform Society, consisting of more than a score of the leading Hanlins, was formed in Peking, as well as branches in Shanghai and Wuchang. The leading spirits were Tan Tsu-tsung, Kang Yu-wei, and Liang Ki-chiao. Tan, the son of the governor of Hupeh, was an earnest Christian. Kang Yu-wei, called 'the Modern Sage of China,' had thousands of student followers; he wrote a series of brilliant reform edicts, which the emperor issued. Liang was a distinguished journalist, who spread widely

over China the ideas of reform. The reactionary party in Peking was greatly alarmed at the rapid spread of these ideas and persuaded the empress dowager to seize the reins of government. The emperor was made a prisoner, the office of the reformers was sealed up, and six of the leaders were executed, among whom was Tan Tsu-tsung. Kang Yu-wei and Liang Ki-chiao narrowly escaped with their lives.

III. PERSECUTION OF SECTS.—Many writers about China have said that Confucianism is most tolerant to other religions; but a very little investigation shows how mistaken they were, and that, on the contrary, it persecuted on principle. For fifteen centuries the State insisted on the necessity of stamping out heresies. Sound doctrine was regarded as harmony with *Tao*, or the course of the universe. This *Tao* has no co-equal; hence there is no room for any second set of rules; if by chance another set should arise, it is necessarily 'not correct' and must be suppressed. The Confucian classics might be called the only Bible for religion, politics, and ethics during almost twenty centuries—the treasury of dogma, outside of which no truth ever was, is, or will be.

1. From the time of Mencius.—The sage Mencius, who lived 200 years after Confucius, laid upon all future ages the duty of persecuting heresy, and he himself violently attacked heretics. He declared that heresy was everything which departed from the teachings of the Sages, and particularly of three of them, viz. Yu the Great, Cheukung, the principal author of the *Yih King*, and Confucius, and that their teaching must be rigorously upheld for all time. According to Chinese logic and the immutable Confucian doctrines, the Government is bound to doom to death all religions, customs, and ethics which are not mentioned in the classics and, so far from being tolerant, is bound to be absolutely intolerant, not only of religious sects, but also of the great systems of Taoism and Buddhism.

This was the teaching, but was it carried out? A cursory glance at the Government edicts and the reports of officials for 2000 years reveals a tale of almost incredible horror—of persecutions in which men, women, and children, innocent and guilty, were barbarously destroyed, the total mounting up to millions. Buddhism, as an imported religion, suffered more than Taoism. It was at times in favour, and even patronized by the emperor; at other times it was violently persecuted, its temples and gods were destroyed, and priests and nuns scattered.

2. From the 5th to the 17th century.—The persecutions during these centuries were specially fierce during the Tang and Ming dynasties and were mostly directed against the Buddhists. Some were at the instigation of individuals—of Fu-yeh in 624; of Yao-tsung, under the emperor Ching-tsung, 705-710; of Han-yu in 819; and of a Taoist doctor, Chao Kwei-chin, in 844.

(a) *Tang dynasty*.—It was impossible for the Government to root out Buddhism and Taoism, so its policy was to repress and weaken, to make it difficult for people to enter the monastic life or to build temples. About 845 the emperor decreed that more than 4600 monasteries and convents should be demolished, and that the 260,000 monks and nuns should return to secular life; their best lands were to be confiscated and the slaves divided among the families that paid ground-tax twice a year. The result was to scatter the devout priests and nuns who were zealous for their religion and to encourage the formation of secret associations throughout the country. It was further ordered that whoever surreptitiously shaved, as priests and nuns did, should be sent back to secular life, that

¹ *The Triad Society*.

² De Groot, p. 555.

the Lung-hwa is more important than other sects, but because we have access to a manual which fully sets forth its constitution, aims, and practices. Our intimate knowledge of other sects is scanty, and this is probably fairly typical. This sect, though one in aims and principles with the Sien-tien, is very different in many respects. Its institutions are entirely moulded upon Buddhist monasticism; it possesses everything appertaining to a complete religious system—founder, prophets, pantheon, commandments, moral philosophy, initiation and consecration ceremonies, religious ritual, writings, a theology, a paradise, and a hell—everything borrowed partly from Mahāyānist Buddhism, partly from old Chinese philosophy and cosmogony.

(1) *Organization.*—The Lung-hwa sect is thoroughly ritualistic. The founder is supposed to be the patriarch Lo Hwai, although it existed long before he lived on earth. The aim is that of the other sects, viz. salvation. It possesses a much larger number of adherents than the Sien-tien sect, and they are drawn chiefly from the middle and lower classes. They worship a number of gods and goddesses and make carved and painted likenesses of them. At the head are Wu-kih and two others, generally represented as three old men, each holding in his hand the Eight Diagrams arranged in a circle. The meetings are most often held in the chief apartment of an ordinary dwelling-house, called the vegetarian hall. The Amoy branch of the sect, to whose MSS we have access, is living near Foochow, whose title He has received Buddhist ordination. Other pious men, who devote themselves to salvation work and perform ceremonies for the redemption of dead members and their relatives. Those next in rank are heads of communities; then come those who travel about and edify the members. These three ranks are celibate, but dress like the laity. Then follow other ranks down to the ninth degree, to which all novices belong. Most members quickly rise to the eighth or seventh degree. All ranks but the highest can be attained by both men and women, in accordance with the great Mahāyāna principle that the way of salvation is open to all. They look upon one another as brothers and sisters. Each parish has a leader who has charge of the altar bearing the images. The hall is kept very clean, in striking contrast to the dirt of the people's homes; for they say that the holy doctrine of purity may be housed and practised only in clean surroundings. In strict obedience to the Mahāyāna command to propagate the doctrines and principles of salvation, they are zealous in enlisting new members. Many are widows who give themselves, heart and soul, to devotion and piety.

(2) *Initiation.*—The admission of candidates is considered very important, as it opens the door to salvation in paradise. In Amoy the ceremony is called 'taking refuge.' Each candidate must be introduced by a well-known member—the 'introductory master'—to warrant his good faith, in order to guard against the danger of exposing the sect to treason by admitting untrustworthy people. Their books fully describe the most interesting initiation-ritual, of which only a short account can be given here.

As a rule several candidates are admitted at once. They first place an offering of fruit and vegetables before the altar, and the leader offers incense and candles and humbly invites the saints to enter their images and so attend the ceremony. Then comes a short sermon on the excellence of Buddha, followed by an examination of the candidates. The leader exhorts them to cast themselves into the arms of the Three Refuges—'Buddha, Dharma, and Sangha'; believe in them and admit them into your hearts. Ye may not seek or find them outside yourselves.' The candidates have now entered religion, and the way of salvation lies open before them, but they cannot make the slightest progress in it except by faithful obedience to the principal commands which are now to be solemnly accepted. These Five Commands are (1) against taking life (this is most important because of the belief in transmigration, according to which any living creature may contain the soul of one who in a former life was a man); (2) against stealing; (3) against unchastity; (4) against lying; (5) against the use of spirituous liquors and of certain plants. The candidates are then taught the special *Sūtra*, consisting of 28 characters, called the 'Dharma Jewel,' and they call down a curse upon themselves if they lose this jewel. When they have taken the vow, the introductory master addresses them, exhorting them never to sin against the Three Refuges or the Five Commandments, never to allow themselves to lose anything of the Dharma Jewel; 'Then, O disciples, the vow ye have taken will become for you a lake of lotuses red and white, across which you will travel to the West, to go out and go home into the company of the Buddhas. To those who refine their conduct nothing but Heaven belongs, Hell is not their share a second time. May your six roots (perception of eyes, nose, mouth, ears, body, and mind) remain pure and clean, and the five parts of your bodies (sinews, bones, skin, flesh, and hair) enjoy quietness and health, your homes be pure and happy, the inmates enjoy rest and peace. May all your undertakings be crowned with success, may happiness and blessedness come down upon you in profusion.'

A general *Sūtra* reading brings the initiation to a close. The wishes just pronounced are written down in the form of a prayer; the paper is lighted at one of the candles and placed on the ashes of the incense-burner. This prayer reaches its destination, the gold lotus throne of Wu-kih.

There are also rituals for initiation into the higher grades, in which the candidates take further vows.

(3) *Meetings.*—The meetings do not generally take place at fixed dates, and, if persecution threatens, none may be held for months together or the members may meet only at night. There are thirteen worship days in honour of special saints, among them being the patriarch Lo, the god of heaven, Kwanyin, the sun, Śākyamuni, the lord of hell, the moon, and Amita Buddha. On these days, in the early morning, cups of tea are placed on the altar to refresh the saints. When enough people are present, the service begins. Rice, vegetables, fruit, and tea are placed on the table in front of the altar, with fragrant incense. The members arrange themselves in long rows, men on one side and women on the other. With closed eyes and the palms of their hands pressed together before their breasts, they recite formulas and extracts from the *Sūtras*, one of them tapping on a hollow wooden bowl at every syllable and on a metal bell at the first word of every strophe. Then, two by two, first the men and then the women, they come forward and salute Buddha and the saints, touching the floor nine times with their foreheads. After this the dishes are removed, and they sit down to eat this vegetable meal.

(4) *Ceremonies for the dead.*—At some of their services there are ceremonies to convey departed souls to the Paradise of the West. A small barge composed of bamboo and paper is made; after *Sūtra* readings and invocations the ship is burned. 'Thus, through fire and flame, the Bark of Wisdom plies across the Sea of Transmigration to the promised Paradise where the Highest Intelligence prevails.' At some meetings members recite the *Sūtra* of 'Repentance of the Thousand Names of Buddha,' the object being to obtain pardon of sins by exciting internally, at the invocation of each name, a feeling of deep repentance.

(5) *Private worship.*—Members also recite *Sūtras* in their own homes. Most of them have only learned by heart the sound of the characters and do not know their meaning; but this does not matter; there is mighty salvation-working power in them, and perhaps there are myriads of unseen spirits listening to the recital and obtaining salvation thereby. The Mahāyāna code commands that they shall be recited in all times of sickness or when the realm is in danger; in times of rebellion; on the birthdays of parents, brothers, and religious teachers; during conflagrations and inundations, when storms harass ships, or giants and devils bring distress; also when one is struck by disasters or punishment; during epidemics, etc. Many women in their homes recite them before the image of Kwanyin, having first washed their faces and hands and put on clean clothes. Sometimes they place a cup of dry tea on the altar, and, when the recital is over, pour hot water on the tea and drink it as highly beneficial to health; or they put it away as medicine for future use. Sometimes a short invocation to Buddha or the saints is used and has the same power. It is quite usual to vow to recite, say, 1000 *Sūtra* fragments if a prayer is granted. The sectaries use rosaries to count the number of recitals. For those who cannot read or learn there is an easy way of obtaining salvation: they repeat hundreds and thousands of times the name of a saint, especially that of Amita Buddha. There are ceremonies for saving the dead by prevailing on Kwanyin to convey them to the western paradise—most interesting, but too long to be given here.

These accounts of the practices and beliefs of some of the sects are enough to give an idea of what sectarianism in China is and to point out the religious spirit which has created it and kept it alive in spite of cruel persecution. The sects have often been ranked by foreigners among the various secret societies and seditious clubs which were at work at the overthrow of the reigning dynasty; but this is largely untrue and unfair. In the MSS of the sects quoted above there is not one word about resistance and revolt, but much about being faithful to the powers that be.

Edkins,¹ writing of the books of the sects in Shantung, said that there was much therein in favour of loyalty and no word against the Government. He said that they were of a mixed Buddhist, Taoistic, and Confucian character, containing admonitions to goodness, to loyalty, to devotion and submission to parents, to chastity, together with exhortations to abstain from the killing of living beings, from sins of the tongue and pen, from spirituous drinks and opium. The smaller religious sects all have one goal in common; they spring, partly at least, out of the common desire to know the Infinite and the Eternal. Not only do men who rank as philosophers feel after God, but

¹ Chinese Recorder and Missionary Journal for 1888.

many of the weary combatants in the battle of life, familiar with poverty and hardship, also feel inexpressible longings to know what and who God is. Such must have founded and developed the various so-called secret sects of China and by their manifest faith in what they teach have drawn into communities multitudes of followers. It is among these sects that the movement of religious thought is most active.

3. The principal secret societies.—(a) *The Triad Society, or Tien-ti Hui (Heaven and Earth Society)*.—This was always confessedly of a political nature with revolutionary objects; but it has also a Buddhistic religious character and has to be reckoned among the religious societies which the State persecuted for heresy. It was first heard of in 1789. William Stanton¹ gives a full account of this society. He says that its membership consisted of about equal numbers of Cantonese, Fukienese, and Hakkas. Its flag bore the legend 'Rebel against the Manchus, restore the Mings.' By 1832 its influence was felt from Formosa to Hunan, from Kiangsi to Kwangsi. In 1850 its members helped the Taiping movement. The Taiping rebellion was not a Triad rebellion, but the Taiping leaders availed themselves of the help of the society. For more than a hundred years this society has been a source of constant anxiety to officials.

(b) *The Taiping rebels*.—Religious persecution was the main cause of this rebellion. The first signs appeared in Hunan in 1836; by 1850 the insurgents numbered 8000 in Kwangtung alone. It is sometimes said to have been a Christian movement. The leader, Hung Siu-tsen, had imbibed some Christian ideas from a pamphlet written by a Christian, a convert of Dr. Milne of Malacca; and the writings of Hung Siu-tsen are certainly tinged with Christian ideas and contain confused allusions to Biblical characters, mixed up with heathen and Confucian philosophy. But it was really a rebellion against the persecuting dynasty—"the effort of a desperate people to throw off a yoke of bloody intolerance and tyranny." If it had been successful, there would probably have been religious freedom; but it was washed out in seas of blood and such devastation as converted large parts of the country into a desert.

(c) *The Kwo Lao Hui*.—This society arose about 1891 and was inimical to the foreign reigning dynasty. Hunan, Hupeh, and Szechuen were hotbeds of the movement. Very many of the Government soldiers joined it, with the result that the Government feared to try its strength with it lest the soldiers should go over to the other side.

(d) *The Reform Society*.—Another society, small but of great importance, was the Reform Society, which arose in 1894-95. A few earnest and brilliant young men read Mackenzie's *History of the Nineteenth Century*, and other books on Western civilization and progress, translated by the Christian Literature Society, and were filled with a desire to introduce reforms into China. Leading statesmen and scholars in Peking and the provinces studied these books eagerly, as did also the young emperor Kwang-su. A Reform Society, consisting of more than a score of the leading Hanlins, was formed in Peking, as well as branches in Shanghai and Wuchang. The leading spirits were Tan Tsu-tsung, Kang Yu-wei, and Liang Ki-chiao. Tan, the son of the governor of Hupeh, was an earnest Christian. Kang Yu-wei, called 'the Modern Sage of China,' had thousands of student followers; he wrote a series of brilliant reform edicts, which the emperor issued. Liang was a distinguished journalist, who spread widely

over China the ideas of reform. The reactionary party in Peking was greatly alarmed at the rapid spread of these ideas and persuaded the empress dowager to seize the reins of government. The emperor was made a prisoner, the office of the reformers was sealed up, and six of the leaders were executed, among whom was Tan Tsu-tsung. Kang Yu-wei and Liang Ki-chiao narrowly escaped with their lives.

III. PERSECUTION OF SECTS.—Many writers about China have said that Confucianism is most tolerant to other religions; but a very little investigation shows how mistaken they were, and that, on the contrary, it persecuted on principle. For fifteen centuries the State insisted on the necessity of stamping out heresies. Sound doctrine was regarded as harmony with *Tao*, or the course of the universe. This *Tao* has no co-equal; hence there is no room for any second set of rules; if by chance another set should arise, it is necessarily 'not correct' and must be suppressed. The Confucian classics might be called the only Bible for religion, politics, and ethics during almost twenty centuries—the treasury of dogma, outside of which no truth ever was, is, or will be.

1. From the time of Mencius.—The sage Mencius, who lived 200 years after Confucius, laid upon all future ages the duty of persecuting heresy, and he himself violently attacked heretics. He declared that heresy was everything which departed from the teachings of the Sages, and particularly of three of them, viz. Yu the Great, Chen-kung, the principal author of the *Yih King*, and Confucius, and that their teaching must be rigorously upheld for all time. According to Chinese logic and the immutable Confucian doctrines, the Government is bound to doom to death all religions, customs, and ethics which are not mentioned in the classics and, so far from being tolerant, is bound to be absolutely intolerant, not only of religious sects, but also of the great systems of Taoism and Buddhism.

This was the teaching, but was it carried out? A cursory glance at the Government edicts and the reports of officials for 2000 years reveals a tale of almost incredible horror—of persecutions in which men, women, and children, innocent and guilty, were barbarously destroyed, the total mounting up to millions. Buddhism, as an imported religion, suffered more than Taoism. It was at times in favour, and even patronized by the emperor; at other times it was violently persecuted, its temples and gods were destroyed, and priests and nuns scattered.

2. From the 5th to the 17th century.—The persecutions during these centuries were specially fierce during the Tang and Ming dynasties and were mostly directed against the Buddhists. Some were at the instigation of individuals—of Fu-yeh in 624; of Yao-tsung, under the emperor Ching-tsung, 705-710; of Han-yu in 819; and of a Taoist doctor, Chao Kwei-chin, in 844.

(a) *Tang dynasty*.—It was impossible for the Government to root out Buddhism and Taoism, so its policy was to repress and weaken, to make it difficult for people to enter the monastic life or to build temples. About 845 the emperor decreed that more than 4600 monasteries and convents should be demolished, and that the 260,000 monks and nuns should return to secular life; their best lands were to be confiscated and the slaves divided among the families that paid ground-tax twice a year. The result was to scatter the devout priests and nuns who were zealous for their religion and to encourage the formation of secret associations throughout the country. It was further ordered that whoever surreptitiously shaved, as priests and nuns did, should be sent back to secular life, that

¹ *The Triad Society*.

² De Groot, p. 555.

the religious teacher should be severely beaten, and both teacher and pupil sent to exile with hard labour for three years. All exhibitions of exorcism and witchcraft and the use of holy candles and holy water were forbidden, and those practising such things were condemned to exile on the distant frontiers.

(b) *Ming dynasty*.—It was during this dynasty, in 1511, that the famous 'Law against Heresies' was promulgated.

'It was specially enacted to keep the laity free from pollution by heretical doctrines and practices, and to destroy everything religious and ethical which was contrary to the Confucian standard.'¹

This law declared that the leaders of sects should be punished by strangulation; the less prominent were to be beaten with long sticks—a very severe punishment, which most often resulted in death. Others were to be banished to the frontiers and to wear cangues for life, which of course meant beggary, as the wearing of a cangue prevented any kind of work; others were to be sent as slaves to Muslim *begs* in Central Asia, for the rulers knew how Muslims hated Buddhists and Christians; others were to be banished to malarious regions in S. China. The Government raged blindly against religious communities in general without any discrimination between degrees of heresy. The prefects were ordered to ransack villages and hamlets for heretical sects and prosecute them under fear of severe penalties if they were lax. Also rewards were offered to heresy hunters. Some sects were specially mentioned, as White Lotus, Red Yang, etc. The 'Law against Heresies' has always been considered to be in force against Christians. This terrible law was taken over unaltered into the penal and civil code of the Manchu dynasty.

In 1394 members of the White Lotus sect were threatened with death. In 1458 the emperor Yung-tsong decreed that any who had taken the tonsure without Government sanction were to be sent into 'everlasting banishment to the garrisons,' and 690 Tibetans were sent away. Monasteries were again demolished and images destroyed; it was even ordered that the bones and teeth of Buddha, with other holy relics, should be burned outside the walls. Later it was decreed that no young men should enter the clerical state, and that the Buddhist monasteries should be allowed to crumble to ruins, all permission to repair them being withheld.

In the middle of the 16th cent. the White Lotus sect came into full activity, and orders were given rigorously to attack it. It was branded and outlawed for ever as a political body of the utmost danger to the Government; from that day it was delivered unconditionally to the persecution of a merciless mandarin. The patience of the sects was thoroughly exhausted; for centuries the Government had trodden down, harassed, and persecuted their members; so at last they broke out into open rebellion.

De Groot has fully proved that the Ming dynasty, in oppressing and persecuting the non-Confucian religions, conducted itself quite systematically and with rigid determination.

3. From 1664 to 1912.—There was very fierce persecution under the Manchu dynasty, and especially under two of the very ablest and most illustrious emperors, Kang-hi and Kien-lung. Kang-hi published a great encyclopædia and a famous dictionary. Kien-lung, the conqueror of Burma, Nepal, Tibet, and Kashgaria, rivalled his grandfather in this respect and published histories and other works. But they were both fiendish persecutors of every form of heresy, and the cause of the first great outbreak of the White Lotus sect. De Groot

¹ De Groot, p. 135.

says that Kang-hi was the cause of the death of nearly a million people.

It is impossible to mention here the numerous edicts and waves of persecution which swept over the land, but it is a tale of incredible cruelty and horror; none were too obscure to escape. The Government records themselves reveal a picture of awful persecution, of tremendous rebellions called forth by these cruelties—rebellions smothered in blood. The people saw their revered religious leaders and elders, their parents and children, brothers and sisters, dragged into dungeons, beaten, tortured, strangled, beheaded, cut to pieces alive, banished; harmless religionists had prices set on their heads and were hunted down as dangerous beasts. Simple membership of a sect was punished with deportation and slavery. These persecutions were often inspired by fear, for the Government almost identified heresy with sedition and rebellion.

Many sects are mentioned by name in the persecution edicts: Eight Diagrams, White Lotus, Mahāyāna, Muhammadans, Wāhhābīs, Lo Hwai, Christians. Christians were persecuted as members of a heretical sect, thus coming under the 'Law against Heresies,' which was not specially directed against them; but later special edicts were promulgated against them as followers of a foreign religion, and therefore rebels.

From 1794 to 1802 there was a great heresy crusade, especially in the five provinces of Szechuen, Hupeh, Honan, Shensi, and Kansu. The people were slaughtered by hundreds of thousands, and the country was 'pacified,' as we read in *An Account of the Pacification of the Religious Rebels*.¹ In the next reign it was the same, and the cruelties and horrors provoked the great Muhammadan rebellion, in quelling which millions perished and large portions of the country were devastated. The next emperor, Tao Kwang, followed the same course; we hear of persecutions of the Tribute Rice Society, Red Yang, White Lotus, etc. White Lotus at times seems to be almost a general term for secret sects. These new persecutions in their turn gave rise to the Taiping rebellion; and so the tale goes on. We have the Government records up to 1875, and they still reveal fresh edicts against the sects. From 1861 to her death the great empress dowager, during the greater part of the time, was responsible for the action of the Government, and the usual edicts continued to be issued to the end.

From 1842 onwards European Powers interfered to protect the Christians, and forced the Chinese Government to sign treaties of toleration, giving Christians the right to live unmolested in the exercise of their religion. So from that date the 'Law against Heresies' did not apply to them. But, in spite of treaties, much persecution went on and was winked at, and often encouraged, by officials. In 1900 there was the outburst against foreigners and Christians, instigated by the empress dowager, and known as the Boxer Rising.

TIMOTHY RICHARD.

SECTS (Christian).—A sect, strictly speaking, is a group of people following some leader, whether his influence be permanent and world-wide (e.g., Calvin) or local and temporary (e.g., Antoinette Bourignon). The group may maintain its footing within an organized communion, like the Clapham Sect; it may, actively or passively, take up separate existence, like the Jansenists. The subject has been clouded by heresiologists in all ages, who heaped together nicknames in two or three languages, sometimes coining new titles, so that an obscure group known only for a score of years may be labelled in several ways—after their founder, after another leader, by the name which they themselves chose, and by two or three epithets flung at them by their enemies. Epiphanius, Philastrius, Theodoret, Prædestinatus, have had many imitators such as Ephraim Pagitt; and even modern compilers are more content to give alphabetical lists of hundreds of sects in the United Kingdom and the United States than to offer any clue to their relations, their importance, or their doctrines. The present article will deal chiefly with such minor parties as claim notice and are not described elsewhere in this Encyclopædia, either separately or in art. **HERESY (Christian)**. It will, however, be necessary in telling of the twigs to observe their ramification and to mention afresh some of the larger branches from which they are the offshoots.

I. EARLY.—Information for the first 300 years was long due chiefly to four Greeks—Clement at Alexandria, Hippolytus at Rome, Irenæus at Lyons, and Eusebius at Cæsarea—though Tertullian at Carthage adds something for the West. But Syriac, Armenian, and Arabic scholars are enabling us in a few cases to go behind these hostile reporters and to learn at first hand. In this nascent period Christian thought was much influenced by previous religions and philosophies, and three groups show clear traces of Judaism, Zoroastrianism, and Buddhism; to these Ebionite, Manichæan, and Gnostic classes we may add the Monarchian.

The primacy of Jerusalem was lost by the catastrophe of A.D. 70, and no leader arose with the influence of James. Therefore the Christians of Jewish origin were soon out-numbered, and, since many of them clung to an observance of their Law, they came to be regarded askance. Even the fact that they had an ancient Aramaic gospel, *Secundum Hebræos*, when it became known by Jerome translating it, intensified the disposition to regard them as schismatics or heretics, who added to the sacred four an unnecessary fifth. Nor was much gratitude shown, except by Origen, to Theodotion, who revised the LXX, or to Symmachus, who made a new Greek version of the OT. Eusebius indeed took umbrage¹ at a commentary by Symmachus, regarding it as an attack upon Matthew, with a bias against the Virgin Birth; but probably it was a commentary on the Aramaic gospel.

Jewish thought ran in other channels than did Greek, and the difference was well marked in the domain of wedded life, which Jews insisted on, but Greeks and Copts disparaged. The Jewish Christians² admitted with most Jews that sacrifice was necessarily obsolete, but they circumcised, and prayed towards Jerusalem. Apparently they did not appreciate the writings of Paul, with his polemic against the Law. The points that did interest them emerge in the *Periodoi Petrou*, source of the *Clementine Homilies* and *Recognitions*, and

in the *Anabathmoi Jacobou*. The test-question was what they thought of Jesus; the Greeks discerned two groups: the Nazarenes, who agreed with them, and the Ebionites, who were content to acknowledge Jesus as the Messiah and to say nothing as to pre-existence or deity.

Much less is known as to how these Jewish Christians appeared to the old Jews: the references in the *Mishnâh* and the two *Gemaras* have been sifted by R. T. Herford.¹ Among the Minim must be included the Jewish Christians, expressly said in A.D. 550 to be purely Palestinian, not Babylonian. The cleft between them and the old Jews was so deep that Rabbi Tarphon would not enter their houses or read their books, laying it down that a copy of the Law written by them should be burned, as they were worse than idolaters. About A.D. 200 they met in their own synagogues, clad in white, barefoot, with phylacteries, and read the Law. About 350 they had discarded the Law, and declared that only the Ten Words had been given at Sinai. To Jesus they attributed such utterances as 'I am God,' 'I am the son of man,' 'I will go up to heaven.' Many discussions are reported as to the duality of the Godhead, with comments on OT passages; the influence of the Epistle to the Hebrews can readily be recognized. Orthodox Jews were advised, 'If the son of the harlot say to thee, There are two gods, reply, I am He of the Red Sea, I am He of Sinai.' For a remarkable body largely recruited from Jewish Christians see art. **ELKESAITES**. Another body just outside the Christian border was the Dosithean, followers of a Messiah to the Samaritans, nearly contemporary with Christ. They continued to emphasize the Law, especially on points relating to the Sabbath; they were known in Persia, and in Egypt as late as A.D. 588.

In the Euphrates valley arose several blends of religion. The Mandæan (*q.v.*)² still survives near Basra, as army chaplains reported with surprise in 1917. Manichæism (*q.v.*) had a powerful influence in the Roman Empire. An old soldier, Acuas, from the Persian wars taught it in Palestine about A.D. 273,³ and its aftermath appeared in sporadic mediæval sects.

At the beginning of the Christian era fusion of belief was taking place very generally in Egypt, Syria, and Asia Minor. It was to be expected that some thinkers would take up a few Christian elements, and many schools developed,⁴ though there were Gnostics who had no Christian tinge, such as the Borbori, or dirt-eaters.

Alexandria had three famous Gnostic teachers. The indigenous system of Pleroma (*q.v.*), emanations of pairs, redemption by re-absorption, was tinged with Christianity by Basilides and Valentinus (*qq.v.*). Carpocrates also deserves notice, for Irenæus tells us that his followers coined and appropriated the term 'Gnostic.' He was indebted to Plato rather than to Egypt, and distinctly taught one supreme God, whence emanated the makers of the world. Into this came souls which had previously dwelt among Ideas, having had fellowship with God; pure souls, such as Homer, Pythagoras, Plato, Aristotle, Jesus, Paul, strove to recall those Ideas and resist the influence of the world, even by magical arts; among the influences that would enchain them was to be ranked the Law of Jahweh. Transmigration of souls enabled all to rejoin the supreme God, who might welcome a few elect souls direct. Such teaching was developed by his son, Epiphaneus, and others, on the topic, What were the influences to be resisted;

² See art. **EBIONISM**.

if all human actions are indifferent, the true Gnostic ought to experiment with all, so as to find out what really helped him. In some quarters this doctrine served as a pretext for immorality, which was then charged by Christians against all Carpocratians, and by outsiders against all Christians. One party of these antinomians, rejecting the theory of a demiurge, was named Antitactæ by Clement.¹

Marcus was perhaps an Alexandrian, but he taught in Asia Minor, and is known chiefly through Irenæus, who had to do with the Marcosians in the Rhone valley. He introduced many Pythagorean speculations with numbers. On the authority of women who repented and returned to the Church, Irenæus charged them with conjuring tricks in worship and with immorality; though they denied this. Hippolytus with independent knowledge in Rome deliberately reiterated the charge. They lingered into the 4th century. Men and women were chosen by lot to prophesy or to baptize; their rite for this was to pour oil and water on the head, in the name of the unknown Father of all, truth the Mother of all, and Him who came down upon Jesus.

Antioch was the centre of Saturninus, who was heir of Simon Magus through Menander.² He was frankly dualist, conceiving Jahweh as the chief of the seven creators made by the good God, and Christ as sent by Him to depose the seven. Bad men, made by the rival god, were redeemable by Christ on condition of stern abstinence from all sensuous pleasures. It obviously followed that Christ was not of flesh and blood at all, but appeared only in the likeness of man.

This line of thought was developed by Tatian, and, because he used water at the Lord's Supper, his followers were labelled *Hydroparastatæ* or *Aquarii*, and, by distortion, *Saccophori*, *Accaphori*; while a sect of *Encratites* (*q.v.*) affiliated to him. His services to Aramaic Christianity in preparing the *Diatessaron* facilitated his views spreading down the Euphrates and paved the way for the great development of Christianity in Persia termed by the Greeks *Nestorianism* (*q.v.*). This great communion, with its mission-work in mid Asia, China, and down the Persian Gulf to the coasts of India and Ceylon, deserves to be more deeply studied in its own documents.³ In this period only one exponent claims attention, Bardaisan of Edessa. He is known to us chiefly at second hand through Greeks, and it is agreed that we cannot reconstruct his theology from them, even with the added light from Ephrem; but his disciple Philip summarized his views in *The Book of the Laws of the Countries*, available now in Syriac. Bardaisan was of high rank, perhaps once a priest in the great temple of Atargatis at Mabug (Hierapolis). A Jewish colony produced a Syriac version of the Hebrew Scriptures, different from the Aramaic targums; the earliest converts to Christianity were doubtless won from this circle, and Bardaisan joined them. He seems to have won over some followers of Cucojo, who had built upon foundations laid by Valentinus.⁴ His influence with the royal house of the Abgars greatly improved the standing of Christians in the kingdom. On its subjugation by the Romans, and a persecution by Caracalla, he went as a missionary to Armenia and wrote a history of that land which became the basis of Greek accounts. He also took advantage of an embassy from India to publish some knowledge of Indian religions, and thus prepared the

way for the later missions. Accessory to this main work of propagation was his devotion to Christian song. Pliny vouches that there had been hymns before, but it was Bardaisan who deliberately wrote and collected 150 Christian hymns to match the 150 Psalms of Jewish worship.¹ Only Greek ignorance has attributed to Arius the honour discerned by Hahn as due to the Syrian, the *primus hymnologus*. Later ages kept up the tradition, so that the Syrian communion is the richest in this department of worship. Of Bardaisan's own writings none survives, unless the splendid 'Hymn of the Soul' in the *Acts of Thomas* is due to him; this is not distinctly Christian, though open to a Christian interpretation. His son, Harmonius, followed up his work, and the Christianity of Edessa was of this school till Ephrem of Nisibis settled there about 363 and set himself to transform it parallel with Nicene orthodoxy, writing new hymns to the Bardaisanian tunes.

In the 4th cent. the Gnostic theory of archons, or rulers, over the various heavens was blended with Ebionite teaching so as to identify the seventh archon with Jahweh and to make the devil his son. The leader was Peter of Judæa, a hermit near Jerusalem, who was excommunicated by Epiphanius.² His teaching and several books were taken by Eutactus to Armenia, where they had some vogue; but no more is heard of these Archontici.

Another Syrian had transferred his energies to Rome about 140, preceding Tatian. The teachings of Cerdo are reported by Irenæus and by Hippolytus. In his day there was no canon of Christian literature, and he perhaps began one by an edition of Paul's letters (evidently collected by some one with a purely Aëgean outlook) accompanied by the historical introduction furnished by Luke. The Jewish Scriptures were nothing to him, for the God of the Jews was not the God proclaimed by Christ. He seems to have stereotyped the dogma, already denied in the Johannine Epistles, that Christ had no flesh, only an astral or docetic body. Cerdo seems to have gathered no party, but those who sympathized with him in the unorganized state at Rome found a leader in Marcion;³ possibly some Marcionite teachings have been ante-dated and attributed to Cerdo.

In opposition to all the dualist schemes of Gnostics and Manichæans, some Greeks emphasized the unity of the Godhead, and the name Monarchian has been generalized to cover all such schools. The problem to be solved was the relation of Christ to God; two solutions were offered—a dynamic and a modal.

The former was first taught in Rome by Theodotus of Byzantium, a close student of Euclid, Aristotle, and Galen, who eschewed allegory and interpreted Scripture on straightforward lines. His view was that Jesus was an ordinary man till the Spirit entered Him at baptism. This idea was elaborated by a namesake, a banker, who, to meet He 2¹⁶, suggested that Melchizedek was the heavenly mediator for angels; this permitted the name Melchizedekites to be attached to his followers. He attempted a separate organization in Rome and was fortunate enough to obtain as bishop a confessor, Natalius; but the latter repented and was reconciled to Zephyrinus. The same views were taught in Rome by Artemon, but nothing more is heard of the movement after 250.

A vague account of some Alogi is given by Epiphanius two centuries later; he describes them as disbelieving the Logos doctrine as taught in Jn 1; he links them with the former Theodotus,

¹ Strom. iii. 526 ff.

² From a misreading of this man's name seems to have been coined the title of an imaginary sect, the Adrianistæ.

but gives no details of place or of positive tenets. It does not appear that any one has quoted in this connexion the saying by Paul of Samosata: 'The Word is greater than Christ, for Christ became great through wisdom.'¹ As to the earlier state of Jesus, the Antiochene bishop declared:

'Mary did not bring forth the Word, for Mary was not before the ages, but she brought forth a man on a level with ourselves. It is the man who was anointed, not the Word. . . . By his unflinching, unblenched will and resolution, he made himself like unto God; and having kept himself free from sin, he was made one with Him.'²

The same line of thought is found a few years later in an argument professedly addressed to Mani by Archelaus, a Syrian bishop, which has come by tortuous channels not likely to modify the thought on this head:

'Doubtless Jesus was less than John among those born of women, though in the kingdom of heaven he was greater. . . . Tell me on whom the Holy Spirit came as a dove, who is it that was baptized by John. If he was perfect, if he was Son, if he was Power, the Spirit could not have entered even as kingdom cannot enter kingdom. . . . It was the Christ of God that descended on him who was Mary's son.'³

Archelaus infers that the Christ may descend on any man who lives a life like Jesus; he agrees with the doctrine of Mani on this point, though he denies that Mani is such a man:

'The Spirit dwells in a man, and descends and stays . . . and this often happens, even as you were professing lately that you yourself are the paraclete of God.'⁴

From such a clear utterance we may look back and discern the same doctrine held in the days of Justin.⁵ Tarphon (Trypho) mentions the theory, held not by himself but by others, that Jesus can be shown to have been born as a man from men, and be proved to have been raised to the dignity of Messiahship by election. There is even an isolated passage in *Hermas*,⁶ which may indeed be inconsistent with other passages in the same book, that is quite clear to the same effect:

When Jesus had laboured with the Spirit and had co-operated with it in everything, behaving boldly and bravely, then God chose Him as a partner with the Holy Spirit and took the Son as adviser, 'for all flesh, which is found undeiled and unspotted, wherein the Holy Spirit dwelt, shall receive a reward.'⁷

A different theory had been worked out in Asia Minor by Praxeas and Noetus. Holding the thorough deity of Christ and the absolute unity of God, they completely identified the two. They charged Hippolytus and Tertullian with being Ditheists and were in return labelled *Patropassians* or *Theopaschites*. By personal visits Praxeas won a few followers in Rome and many in Carthage. Epigonus, a disciple of Noetus, won in Rome Cleomenes and Sabellius of Libya, who spread the theory in Africa.⁸ Beryllus of Bostra seems to have held kindred views, which Origen convinced him were untenable. And the same Father opposed some views held in Arabia, that the soul dies with the body and will share in its resurrection.⁹

All sects thus mentioned, except the last, crystallized on some point connected with the person of Christ. But the actual lowering of Christian life and the growth of a bureaucracy brought forth a conservative revivalist, Montanus of Ardaba in Mysia.¹⁰ He emphasized some original features that were being dropped—e.g., that the end of the age might be speedily expected (whereas Gnosticism was concerned rather with beginnings), that faith was more important than knowledge, that a high standard of morals must

be maintained by rigid discipline, that the Spirit still spoke through many believers. On the other hand, he laid stress on martyrdom, virginity, widowhood; and he invented a distinction between venial sins after baptism, which could be forgiven by the Church, and mortal sins, which could not. It is singular that most of the old features which *Montanism* (*q.v.*) sought to preserve were therefore opposed and driven out, while nearly all the innovations of its founder were afterwards adopted by his opponents. Two of his helpers were Maximilla and Priscilla, whose names were used to denote sections of his followers that were said to have women not merely as preachers but also as priests and bishops. Because some at Ancyra seen by Jerome used cheese with bread at the Lord's Supper (or probably at a love-feast), they were called *Artotyritæ*. Others who practised meditation, and, like the Hindus, found special attitudes to promote this, were mocked at as *Papalorhynchitæ* or *Tascodrugitæ*; the latter word has been deformed into *Ascodrugitæ*, *Ascodrupitæ*, *Ascodruti*, *Abrodiei*, *Ascitæ*; the former gave rise to variants, *Passalorhynchitæ*, *Dactylorhynchitæ*.

A fresh impulse was given to the demand for purity of life when the churches had leisure to recuperate after the Decian persecution. Many had apostatized, and the question became urgent on what terms they might be re-admitted to fellowship. A lenient policy was adopted in Rome, where the question was fought out. The leader of the stern party, Novatian, was chosen rival bishop, and soon the whole Christian community ranked itself on these lines. N. Africa and Asia Minor were strongholds of the puritan Novatianists (*q.v.*), and this geographical alignment suggests that they absorbed most Montanists. They regarded the others as apostate, incapable of regenerating any one by baptism; and therefore they baptized any candidate for admission, disregarding any previous ceremony performed by an 'apostate.' The same issue arose after the Diocletian persecution, and matters came to a head in N. Africa, where rival bishops were elected at Carthage. The stern party, or Donatists (*q.v.*), probably absorbed the local Novatians; they held their own, though the State patronized the others. Not till the Vandal invasions of the 5th cent. did both parties cease to be important. Various hard names flung at the Donatists were *Montenses*, *Campitæ*, *Rupitæ*, and *Cotopitæ*, *Cothopithæ*, *Cutzupitæ*, or *Gotispitæ*.

II. ALONGSIDE ESTABLISHED CHURCHES.—When Constantine recognized that the Christians were the most virile party in his empire, and decided to found a new capital near the provinces where they were strongest, he initiated a State policy of uniformity which created new sects by the score. The Greek world speculated, the Roman emperor strove to crush independence of thought, till the Arab gave both something else to think about. The rivalry of Alexandria, Antioch, and Constantinople expressed itself in theological formulas; each city fathered a great division of the Christian world, which has its representatives still. Very few doctrinal questions arose elsewhere, and even the Pelagian controversy came to its height among the Greeks. All other divisions turned on the personality of Christ.

As Illingworth says, neither the universality nor the unity of human personality was adequately understood in pre-Christian ages.¹ Greek thought was first forced to the problem by the absolutely unique case of Jesus Christ, and had no general theory as to the personality of an ordinary man. Origen was the first great thinker, and Alexandria

¹⁰ See *ERE* viii. 823.

continued to lead in speculation until the views of Arius threatened to wreck Constantine's hope of a united empire. The development for the next two generations has been described in art. **ARIANISM**; three leaders deserve mention afresh. **Ætius** of Antioch, bred in the strictest school of Aristotle, urged that Christ must be radically unlike God, and gathered a party of **Anomœans**, or **Exucnians**. His most illustrious follower was **Eunomius** of Cyzicus, whom he won at Alexandria about 350; and this man organized their sympathizers, consecrating new bishops; with his death in 395 the sect died out.¹ **Theophrastus** of Cappadocia taught within their bounds that there were limits to God's knowledge, which was absolute only as regards current events;² his followers were named **Agnoëtæ**.

From the theories propounded by and against **Apollinaris** and his followers³ were coined the titles **Dimœritæ**, **Anthropolatræ**, **Sarcolatræ**, **Vitaliani**, **Synusiastæ**, **Polemiani**, **Valentiniani**. The extreme anti-Arians at Alexandria separated under **Coluthus** in 319, but were induced to reunite in 324 by **Hosius**.

The latter leader with his friend **Potamius**, in Spain, still confronted with great missionary tasks, put out a manifesto urging that speculation should cease, and that all non-Scriptural terms should be disused; this led to the Synods of **Ariminum** and **Seleucia** in 359, when **Acacius** of **Cæsarea** led most of the Greeks to allow that the Son was like the Father, and thus provided for the Semi-Arians the new name of **Homœans**. But his influence waned within ten years.

An extraordinary interlude towards the end of the 4th cent. was connected with the name of **Origen**. **Epiphanius** of **Salamis** devoted some attention to him in his treatise on heresies and visited Palestine to destroy his influence. With **Jerome** at **Bethlehem** he succeeded, but **Rufinus** at **Olivet** had been a pupil of **Didymus**, who filled **Origen's** chair; and **John**, the patriarch of **Jerusalem**, regarded **Epiphanius** as intruding in his province. One result was that **Rufinus** returned to Italy and translated many of **Origen's** books into Latin, editing them freely. The controversy was complicated by **Dioscorus** and other **Nitrian** monks supporting the **Origenists**, while the **Scetan** monks went so far in their opposition that **Theophilus**, the patriarch of **Alexandria**, led soldiers to attack some monasteries and nearly lost his life. The one point that emerged was that **Origen** had denied that God had a human form, so that the **Scetan-Jerome** party could be called **Anthropomorphites**. As **Chrysostom** sided with **John**, the contest rapidly became personal, and **Theophilus** proved recreant to the traditions of **Alexandria**. As soon as **Chrysostom** was ruined by **Epiphanius**, the whole dispute died.

Older theories were revived, **Photinus** of **Sirmium** teaching afresh the Unitarian views of **Paul** of **Samosata**, and **Marcellus** of **Ancyra** reviving the doctrines of **Sabellius**. In 381 the Council of **Constantinople** pronounced against them, and also condemned a new theory of **Macedonius**,⁴ late bishop of the city, who had begun to develop a doctrine of the Holy Spirit, whom he held to be a creature, ranking with the angels. It is the first sign of interest in the question which much later was to serve as a pretext for the rupture of East and West. Some of his followers were said by **Philastrius** to be unsocial at meals, and were therefore named **Adelophagi** by **Prædestinatus**.

As Christ was thus studied and dissected, till the reality of His human career was obscured by theories as to His nature, religious feeling turned

to His mother. Some Thracian women who had migrated to Arabia revived in her honour the custom of offering cakes to the Queen of Heaven (*g.v.*) and were termed **Collyridians** (from *κόλλυρις*). Though their worship was condemned (as of women only?), the impulse to Mariolatry was strong. **Helvidius** of **Rome** maintained that after the birth of **Jesus Mary** bore children to **Joseph**; he and all who opposed the rising tide were blamed by **Epiphanius**¹ as **Antidicomarianites**. This led to the great controversies of the **Nestorians** and the **Eutychians**.² That section of the **E. Syrian Church** which has submitted to **Rome**, under the **Syro-Chaldaic** patriarch of **Babylon**, is now known as the **Chaldean**.

The political problem of the emperors was to hold together **Egypt**, **Syria**, **Asia Minor**, with the earlier conquests of **Rome**. About the year 500 these were submerged by northern invaders, **Theodoric** ruling from **Ravenna**; the **Goths** were won by **Arian** missionaries, and it was a question whether the cities still in their midst, with **Athanasian** churches, would succumb or would leaven their conquerors. The conversion of the **Franks** was a great step towards solidifying the West, and the emperors saw that it was advisable to conciliate **Rome**. They secured this by doctrinal concessions only at the expense of grave disaffection throughout the East. In **Egypt** there was indeed a State Church upheld by force, a manifest token being that the patriarch of **Alexandria** was also governor of the province; but nearly the whole population scoffed at it as **Melkite**. The people were heartily **Monophysite** and were so disgusted with the time-serving of their patriarch **Mongus** that some abjured his authority and became known as **Acephali**.

Apart from these extremists, the **Copts** continued to subdivide on various questions as to the body of **Jesus**. That this did not function naturally, but only by constant exercise of the will to lay aside divine attributes, was a view put forward at **Alexandria** by **Julian** of **Halicarnassus** and supported by the **Syrian Philoxenus** of **Mabug**. When the **Coptic** patriarch died, **Julian** put forward **Gaius** as a candidate and secured him the post. Their followers were thereupon nicknamed **Aphthartodocetæ** or **Incorrupticolæ**; but the tenet as stated by **Stephen** **Niobes** was that, because Christ united the two natures, humanity obtained the privilege of being uncreate. This raised the question whether the human nature of **Jesus** had been created or was uncreate, and the opponents called one another **Actistetæ**, **Ctistolatræ**. The party which held that Christ's body was ordinary was headed by **Severus**, who, though for six years patriarch of **Antioch**, had experience of **Rome** and of **Constantinople**, and was **Alexandrian** by education and residence. In the contest for the **Coptic** patriarchate of **Alexandria**, when **Theodosius** failed to hold the post, their party was styled **Phthartolatræ**, **Corrupticolæ**. On their line of thought came next the question whether Christ's mind was ordinary, or whether He was potentially omniscient and simply declined to know certain things. The **Kenotists**,³ who took the second alternative, were known as **Agnoëtæ**, or were called after their leader, **Themistius Calonymus** the deacon. When these bodies, including the **Esaiani**, numbered about a dozen, they were dismissed in despair by cataloguers as **Diacrinomenoi**, **Hesitantes**.

Another cause of fission in **Egypt** late in the 6th cent. was still the relation of the three persons of the Trinity. **Damian**, the **Coptic** patriarch, taught that, while the three unitedly were God, each separately was not; his adherents were known

sometimes by his name, sometimes as *Angelitæ*, from *Angelium* their chief church, or they were laughed at as *Tetraditæ*, *Condobauditæ*. Their chief opponent was John Philoponus, lay philosopher, who so emphasized the distinction of the three natures that the unity escaped notice, and his enemies readily styled him a Tritheist. He became involved also in a dispute on the resurrection with Conon of Tarsus, who held that the bodily form would not be resumed, only the material. On this line of thought the *Christolytæ* held that the body and soul of Christ fared as most do, and that only the divine nature ascended to heaven.

From a very different standpoint, another party earned the name of *Tetraditæ*; some Palestinian followers of Origen about 542, who followed up his doctrine of pre-existence and attributed divinity to the soul of Christ before the Incarnation, preferred the name *Protoclistæ*. In reaction the *Isochristi* taught that ultimately all would become like Christ; because in the course of the controversy two different monasteries became ranged against one another, they are also known as *Neolaurites*. The Abyssinian Church has steadily followed the Copts and has contributed nothing of more than local acceptance.

Theodosius, the Coptic patriarch, in 543 consecrated at Constantinople the Syrian Jacob as bishop of Nisibis. For thirty-five years he organized and ordained throughout Syria, so that the Monophysites of that land are often called *Jacobites*.¹ Not much original thought is recorded of this section; the works of Barsanuphius, an anchorite of Gaza, may be worth consulting; they are ascetic and doctrinal; those of Timotheus *Ælurus* of Alexandria were translated into Syriac and thence into Armenian; large numbers of sermons, hymns, and letters by Severus of Antioch are extant, and others by Jacob of Sarug. Philoxenus of Mabug about 508 revised the *Peshitta* in a most literal fashion, and a century later Thomas of Harkel edited the revision at Alexandria, adding the critical marks of Origen.

In 540 an Armenian council was held, which pronounced for Monophysitism and incorporated in the *Sanctus* the test phrase 'who was crucified for us.' Under Heraclius this was abandoned, but from 728 communion with the Jacobites was restored. There are also remarkable relics of the Adoptian view, for the anniversary of Christ's birth is not observed, except for some mention on the great feast of the Baptism, 6th Jan.; the Julianite view of an incorruptible body was combined with this, as assumed in baptism. The Paulicians (*q.v.*) always objected to their rivals' worship of the Cross (Armenian, *Chazus*); therefore the term *Chatzitzarii*, *Chazinzarians* (*Staurolatræ*) seems to denote no small sect, but the Established Church of Armenia as viewed by the Paulicians.

Justinian sought to reconcile the Monophysites and so cement together the empire that his generals had re-conquered, and he called the fifth ecumenical council at Constantinople in 553 to ratify a compromise—his condemnation of Theodore of Mopsuestia, Theodoret, and Ibas in the 'Three Chapters.'² The whole West disagreed, however, and the assent of Rome was won only by retaining its bishop in exile, and on his death by nominating Pelagius, a pliant successor. He was excommunicated by nearly all the West, the lead being taken by Paulinus of Aquileia, but after his speedy death the scandal began to heal. The great influence of Rome gradually secured the acceptance of the council, so that the dissentients were presently termed schismatics. The Lombards encouraged the bishops of Aquileia to revive their former title of 'patriarch'; not until 698 was the

division healed, when the whole cause was unintelligible. Two rival lines of bishops, however, bore the mere title of patriarch till 1751.

Timotheus of Constantinople, in his *Reception of Heretics*, about the end of the 6th cent., describes some Melchizedekites of Phrygia, who observed the Sabbath day; as they touched no one, they were popularly called *Athingani*. This reads as if they observed the Jewish rules of cleanliness, but the information is too scanty to trace their origin and tenets.

In the last days of Greek power the emperor Heraclius asked whether the will of Christ was single or double. The Monothelete controversy¹ occupied the attention of the theologians for half a century; all the while Islām was driving the Greek troops out of Egypt and Syria, with the hearty good will of the natives, so that the State Church there fell irretrievably. The community which held longest to the single will dwelt on Lebanon, and is known as Maronite. It speedily fell out of touch with Greek thought, reverting to the Syriac language, in which the liturgy is still chanted; but under Muslim rule the people speak Arabic. In the 12th cent. the Maronites adopted Dithelism as the price of Crusading help, but they were not thoroughly organized under Roman influence till 1743. Until recent troubles there were nearly 250,000 on Lebanon, with 70,000 more in Syria, Cyprus, and Egypt; about 2000 monks of St. Anthony and 1100 secular priests are under their patriarch. A curious result of all these divisions is to be seen in the title 'patriarch of Antioch,' borne to-day by six rivals: besides the Græco-Arab or Melkite and the Syrian Catholic, a Latin is to be found at Aleppo, a Greek at Damascus, and a Syriac at Diarbekr.

The views of Pelagius as to the effect of sin on mankind² were canvassed in the West behind his back; he himself set them forth at Bethlehem and Lydda, and was supported by Julian of Eclanum and Theodore of Mopsuestia. His follower Celestine, ordained at Ephesus, was at last condemned there in 431. But the Greeks declined to follow Augustine, and presently were classed as Semi-Pelagians. One of the classical works on heresy, written in the West, in its catalogue of wrong opinions, leads up to predestination, which is then stated, and opposed from the Semi-Pelagian standpoint. And the famous test of Catholic doctrine, that it has always been believed by everybody everywhere, was formulated to indicate that Augustinianism was a heresy. From Marseilles (Massilia), the headquarters of these Western leaders, they were often called *Massilians*, *Mas-salians*, or *Messalians*; the controversy was closed in 529 at Orange in that district. Before then the opinions of Augustine against free will had been exaggerated by monks at Hadrumetum to the pitch of antinomianism; after them was coined the title *Adrumetians*.

Lucifer of Cagliari in Sardinia stemmed the tide of laxity, somewhat on the lines of the Donatists, opposing the restoration to office of those who had given scandal; but his objection was on the score of Arian doctrine more than of apostasy. The protests of his followers were last heard in 384.

In S. Gaul and Spain, where the West Goths spread, we hear much from the 5th to the 7th cent. of certain Bonosians, organized with bishops. Apparently they followed Bonosus of Sardica, who flourished from 392 to 430. At first he simply taught that Joseph and Mary had children, but he was finally classed with Marcellus and Photinus. As his views were accepted in Spain, we infer that he held the old Adoptianism.

² See ERE iv. 191 f.

continued to lead in speculation until the views of Arius threatened to wreck Constantine's hope of a united empire. The development for the next two generations has been described in art. **ARIANISM**; three leaders deserve mention afresh. Aëtius of Antioch, bred in the strictest school of Aristotle, urged that Christ must be radically unlike God, and gathered a party of Anomœans, or Exucutionians. His most illustrious follower was Eunomius of Cyzicus, whom he won at Alexandria about 350; and this man organized their sympathizers, consecrating new bishops; with his death in 395 the sect died out.¹ Theophrastus of Cappadocia taught within their bounds that there were limits to God's knowledge, which was absolute only as regards current events;² his followers were named Agnoëtæ.

From the theories propounded by and against Apollinaris and his followers³ were coined the titles Dimœritæ, Anthropolatræ, Sarcolatræ, Vitaliani, Synusiastæ, Polemiani, Valentiniani. The extreme anti-Arians at Alexandria separated under Coluthus in 319, but were induced to reunite in 324 by Hosius.

The latter leader with his friend Potamius, in Spain, still confronted with great missionary tasks, put out a manifesto urging that speculation should cease, and that all non-Scriptural terms should be disused; this led to the Synods of Ariminum and Seleucia in 359, when Acacius of Cæsarea led most of the Greeks to allow that the Son was like the Father, and thus provided for the Semi-Arians the new name of Homœans. But his influence waned within ten years.

An extraordinary interlude towards the end of the 4th cent. was connected with the name of Origen. Epiphanius of Salamis devoted some attention to him in his treatise on heresies and visited Palestine to destroy his influence. With Jerome at Bethlehem he succeeded, but Rufinus at Olivet had been a pupil of Didymus, who filled Origen's chair; and John, the patriarch of Jerusalem, regarded Epiphanius as intruding in his province. One result was that Rufinus returned to Italy and translated many of Origen's books into Latin, editing them freely. The controversy was complicated by Dioscorus and other Nitrian monks supporting the Origenists, while the Scetan monks went so far in their opposition that Theophilus, the patriarch of Alexandria, led soldiers to attack some monasteries and nearly lost his life. The one point that emerged was that Origen had denied that God had a human form, so that the Scetan-Jerome party could be called Anthropomorphites. As Chrysostom sided with John, the contest rapidly became personal, and Theophilus proved recreant to the traditions of Alexandria. As soon as Chrysostom was ruined by Epiphanius, the whole dispute died.

Older theories were revived, Photinus of Sirmium teaching afresh the Unitarian views of Paul of Samosata, and Marcellus of Ancyra reviving the doctrines of Sabellius. In 381 the Council of Constantinople pronounced against them, and also condemned a new theory of Macedonius,⁴ late bishop of the city, who had begun to develop a doctrine of the Holy Spirit, whom he held to be a creature, ranking with the angels. It is the first sign of interest in the question which much later was to serve as a pretext for the rupture of East and West. Some of his followers were said by Philastrius to be unsocial at meals, and were therefore named Adelophagi by Prædestinatus.

As Christ was thus studied and dissected, till the reality of His human career was obscured by theories as to His nature, religious feeling turned

to His mother. Some Thracian women who had migrated to Arabia revived in her honour the custom of offering cakes to the Queen of Heaven (*q.v.*) and were termed Collyridians (from *κόλλυρις*). Though their worship was condemned (as of women only?), the impulse to Mariolatry was strong. Helvidius of Rome maintained that after the birth of Jesus Mary bore children to Joseph; he and all who opposed the rising tide were blamed by Epiphanius¹ as Antidicomarianites. This led to the great controversies of the Nestorians and the Eutychians.² That section of the E. Syrian Church which has submitted to Rome, under the Syro-Chaldaic patriarch of Babylon, is now known as the Chaldaean.

The political problem of the emperors was to hold together Egypt, Syria, Asia Minor, with the earlier conquests of Rome. About the year 500 these were submerged by northern invaders, Theodoric ruling from Ravenna; the Goths were won by Arian missionaries, and it was a question whether the cities still in their midst, with Athanasian churches, would succumb or would leave their conquerors. The conversion of the Franks was a great step towards solidifying the West, and the emperors saw that it was advisable to conciliate Rome. They secured this by doctrinal concessions only at the expense of grave disaffection throughout the East. In Egypt there was indeed a State Church upheld by force, a manifest token being that the patriarch of Alexandria was also governor of the province; but nearly the whole population scoffed at it as Melkite. The people were heartily Monophysite and were so disgusted with the time-serving of their patriarch Mongus that some abjured his authority and became known as Acephali.

Apart from these extremists, the Copts continued to subdivide on various questions as to the body of Jesus. That this did not function naturally, but only by constant exercise of the will to lay aside divine attributes, was a view put forward at Alexandria by Julian of Halicarnassus and supported by the Syrian Philoxenus of Mabug. When the Coptic patriarch died, Julian put forward Gaianus as a candidate and secured him the post. Their followers were thereupon nicknamed Aphthartodocetæ or Incorrupticolæ; but the tenet as stated by Stephen Niobes was that, because Christ united the two natures, humanity obtained the privilege of being uncreate. This raised the question whether the human nature of Jesus had been created or was uncreate, and the opponents called one another Actistetæ, Ctistolatræ. The party which held that Christ's body was ordinary was headed by Severus, who, though for six years patriarch of Antioch, had experience of Rome and of Constantinople, and was Alexandrian by education and residence. In the contest for the Coptic patriarchate of Alexandria, when Theodosius failed to hold the post, their party was styled Phthartolatæ, Corrupticolæ. On their line of thought came next the question whether Christ's mind was ordinary, or whether He was potentially omniscient and simply declined to know certain things. The Kenotists,³ who took the second alternative, were known as Agnoëtæ, or were called after their leader, Themistius Calonymus the deacon. When these bodies, including the Esaiani, numbered about a dozen, they were dismissed in despair by cataloguers as Diacrinomenoi, Hesitantes.

Another cause of fission in Egypt late in the 6th cent. was still the relation of the three persons of the Trinity. Damian, the Coptic patriarch, taught that, while the three unitedly were God, each separately was not; his adherents were known

Spain produced one leader in Priscillian¹ about 375. His opinions are certainly distorted by his opponents, who flung at him such epithets as Gnostic and Manichæan. Pamphlets of his discovered in 1885 show that he was a mystic, precursor of Santa Teresa. What really annoyed his neighbours was his asceticism, especially his strong views on the relation of the sexes, which he thought should be purely spiritual, whence the names *Abstinentes*, *Spiritales*; his world was not yet ripe for lay celibacy, and he was condemned at Saragossa, and finally beheaded at Trèves (385), the first victim of a new law against heretics. From Augustine we hear of a few Africans who lived as he advised, in foster-families, receiving adopted children; he called them *Abelonii*, *Abeliani*, *Abeloitæ*. If there be any truth in the tales told to Epiphanius about the Adamiani, reported to worship naked in the hot baths, and to maintain their virginity, they also may have reduced Priscillian's views to practice. A very different position was taken up by Jovinian of Milan, who opposed celibacy, fasts, the exaltation of martyrdom, the classification of sins; condemned at Rome and Milan, he was banished by the emperor. A pamphlet that he issued was controverted by Jerome,² whose abuse is our chief source of information. In the same way we hear of another Spaniard, Vigilantius, who wrote against prayers to the saints and other heathen practices, against celibacy of the clergy and monasticism; Jerome's wit coined for his followers the names *Dormitantes*, *Nyctages*. Vigilantius continued working at Barcelona unhindered.

Less fortunate had been Aërius of Pontus half a century earlier, known to us only through Epiphanius.³ Not only had he opposed fasting and prayers for the dead, but he asserted that bishops and presbyters were one order, one honour, one dignity. He was excommunicated, and his followers were driven into practical communism till their extinction. Audæus of Syria was another contemporary reformer and missionary to the Goths of Scythia; but to quartodeciman and very ascetic practices he joined the theory that, as man was made in the image of God, therefore God must have a material shape; his Anthropomorphite followers are heard of till about 500. Of the Apostolici, or Apotactici, in Asia Minor we know only from Epiphanius that they were celibate communists, using the *Acts of Andrew* and *Acts of Thomas*; from the nickname *Saccophori* it would appear that they were mendicants. In the Theodosian law against heretics they were grouped with Eneeritæ.

Mesopotamia, Syria, and Armenia saw during the 4th and 5th centuries a mystic movement of the Massilians, who sacrificed even self-support to constant prayer, and the means whereby the Holy Spirit entered and perfected, giving full knowledge of divine things and of the future. They were known also to the Greeks as *Euchites* (q.v.), *Euphemites*, *Choreutes*, or, after some leaders, as *Adelphians*, *Lampetians*, *Marcianites*, *Eustathians*. Akin to them seem to be the *Hypsistarians*, or *Cœlicolæ*, in Asia Minor, though they attracted attention by their worship of light, their rules as to food and the Sabbath, their opposition to images. The *Agonyclitæ* of the 7th and 8th centuries, who would not kneel at prayer, but preferred to stand, and often to dance, were forerunners of the dervishes, as also of many revivalist bodies in the 18th, 19th, and 20th centuries, known derisively as *Jumpers*.

Quarrels between the patriarch of Constantinople and the pope of Rome as to jurisdiction over

the Jugo-Slavs led to the formulation of charges on each side, when the name *Azymites* was used by the Eastern to blame the Roman use of unleavened bread at the Mass, and the Western retorted with *Fermentarii*. Trivial as the allegations were, the rupture of 1054 was complete and final. Fresh causes of difference have been added, notably one in the 14th century. The monks of Athos had adopted the Hindu methods of contemplation, which were attacked by Barlaam when sent to inspect them; the *Hesychasts* held that they could attain the vision of that uncreated light which was revealed on the mount of transfiguration, while Barlaam declared that this infringed on the accepted doctrine of God. After debates before the emperors (1341-51) the Eastern Church adopted the *Hesychast* view.

Since the establishment of the Holy Roman Empire it might appear that sects in W. Europe were few. But this view is superficial, as will appear by a comparison with the modern Roman Catholic Church. This is often regarded as homogeneous, but is in fact highly complex; its different branches are often as remote from one another as most Protestant bodies. In the same Canadian city will be found churches frequented by Irish and churches frequented by French, with decided antipathy, although the language and ritual used are the same in both. An English town will be worked partly by secular priests, partly by a regular order; their relations are as fraternal as those of Methodists with Presbyterians. The various monks, canons, and friars are traditionally rivals, not only of the seculars, but of one another, and they have been supplemented by numerous modern foundations. In England alone there are 19 chief superiors of the principal religious orders and congregations, while a single archdiocese has 31 different congregations of women, even overlapping in the same towns.

Thus in the Middle Ages we have to consider three sorts of movement—(1) those always independent of Rome, (2) innovations adopted and moulded by Rome, (3) reforms discountenanced by Rome. (1) Of the first class there were dualists inheriting Eastern doctrines, like the *Bogomils* and *Cathari*, and pantheists like the *Brethren of the Free Spirit* (q.v.). With the last should be classed the followers of Amalric, though he lived and died in the Roman communion. Lecturing in Paris, first on philosophy and then on theology, he developed the principles of John the Scot. Three propositions attributed to him were condemned by the university, and then, on appeal, by the pope, so that he formally recanted them: God is everything; a Christian must believe that he is a member of Christ; to those constituted in love no sin is reckoned. He died about 1207, and his followers seem to have advanced rapidly. They taught that the Son inaugurated a second era, in which the Mosaic Law was abolished (and this became the pretext for antinomianism); that the third age, that of the Spirit, was just beginning with God incarnate in them; that hell was a consciousness of sin, and that the believer was freed from this by his regeneration, which was the promised resurrection. But these versions of their mystic pantheism come only from the records of the Inquisition, which began to work among them in 1209. The Lateran Council condemned them six years later, and in 1225 Pope Honorius and the Council of Sens condemned afresh the great work of John the Scot.¹ The Amalrician philosophy filtered into several of the *Béguine* sisterhoods.

¹ For the whole movement consult A. Jundt, *Hist. du panthéisme populaire au moyen âge et au xiv^e siècle*, Paris, 1875; and B. Hauréau, *Hist. de la philosophie scolastique*, 1 vols., do. 1872-80.

¹ See art. PRISCILLIANISM.

² In *Jovinianum*.

³ *Hæc*, lxxv.

(2) For the great leaders whose programmes were accepted, and whose followers were organized with the sanction of Rome, see art. **RELIGIOUS ORDERS** (Christian).

(3) In the third class fall several millenarians¹—Wyclifites, Hussites, Brethren of the Common Life, Waldenses, all described in separate articles. There remain to be noticed various evangelical groups following leaders who cared little about remaining in outward communion; they were chiefly of the 12th century.

Tanchelm preached in the Netherlands till 1124, Eudo de Stella in Brittany till 1148; but three disciples of Abelard (*q.v.*) produced more famous results. Peter of Bruys, a priest, taught for twenty years in S. France; the authorities who neglected to suppress him were thus adjured:

'In your parts the people are re-baptized, the churches profaned, the altars overthrown, crosses burned; on the very day of our Lord's passion meat is publicly eaten, priests are scourged, monks imprisoned and compelled by terrors and tortures to marry.'²

When Peter was lynched, his work was continued by a Cluniac monk, Henry of Lausanne, at first with some episcopal sanction, as the scandalous lives of many clergy needed checking by public opinion; but Bernard of Clairvaux (*q.v.*) suspected his work, and after about fourteen years had him imprisoned in 1148. Arnold of Brescia did similar work in N. Italy, France, Switzerland, and in 1145 obtained a commanding position at Rome; ten years later he was sacrificed to the pope by the emperor. The Arnoldists maintained themselves, chiefly in Lombardy, for some two centuries; they contemptuously rejected the clergy as of bad life and therefore unable to administer useful sacraments; they equally rejected the theory of the efficacy of any sacraments. Their stress on the laying on of hands is an obvious corollary from their attempt to revert to primitive models as depicted in the Acts of the Apostles.

About 1183, when the French troops were trying to suppress the Brabançon brigands, they were followed up by volunteer bands linked into a brotherhood on the basis of a revelation; they wore a leaden image of the Madonna of Puy, and their distinctive mark was a white cowl, whence they were named Capuciat. The name was speedily transferred by Thomas of Walsingham to the English followers of Peter of Pattishall, an iconoclast who advised that it was needless to bare the head before the host.

With the 13th cent. the virility of the papal system waned. When emperor and pope quarrelled, the Italian physician Marsilius, eminent at the university of Paris, produced a work, *Defensor Pacis*, which put plainly for scholars, politicians, and theologians the truths hitherto maintained chiefly by the Waldenses. A democrat and Bible student, he would take away all clerical power and wealth, subjecting even bishops and pope to the civil power; as a historian he showed the growth of papal power and denied any Petrine prerogative. Ludwig of Bavaria naturally protected with the sword one who protected him with the pen; he was crowned emperor in Rome in the name of the Romans; he deposed Pope John XXII.; he installed a new pope, Nicholas V. But his adoption of the principles of Marsilius was premature, and in a way was but an episode in the Guelph-Ghibelline strife. The book was a different matter; not only did it circulate among scholars, but it was rendered into French, Italian, and English. Not only was it known to Wyclif, the Parisian promoters of the general councils, and Luther, but even to the commonalty it showed

that great scholars could demand a reformation in head and members, to sweep away usurpation, in the name of the apostles.

III. **MODERN**.—With the Reformation of the 16th cent. the ostensible unity of Western Christendom disappeared. The Roman communion was soon strengthened by new orders, notably the Jesuits (*q.v.*); and it has discountenanced other new movements, such as the Jansenist and Modernist.¹ But, whereas during the Middle Ages force could usually be invoked² to crush teachers of whom the Curia disapproved, in modern times that has been possible only in certain localities, especially under the banners of Spain and Austria. Each century has seen great new leaders, all of whom are separately treated in the present work, as also are some minor teachers; but of the first age only three seem to need mention here.

Nicolaus von Amsdorf (1483–1565) exaggerated Luther's insistence on faith, saying that good works, when done on purpose to win salvation, were absolutely harmful; he was disowned by most of his communion. Younger in years but more antique in thought, Heinrich Nicolaes (1502–80?), an Amsterdam merchant, seems to have been introduced by David Joris to mediæval mystics. Taking up headquarters at Emden (1540–60), he taught that he was an incarnation of God in Christ to found the *Familia Caritatis*, whose members themselves partook of divinity and could become perfect. It was elaborately organized on the hierarchical pattern, but adherents were allowed to conform outwardly to any Church. Thus Plantin of Antwerp became a convert, and printed most of his books. These were all rendered into English, for Nicolaes and Vitel of Delft did much work in Essex and London, especially after 1570. Fifty years later Edmond Jessop published a popular account based on good authority, in his *Discovery of the Errors of the English Anabaptists*, which shows development of the Familist movement. Even in 1652 the books of 'H.N.' were reprinted, but very few new adherents were won. The Friends have always found much that was congenial in the Familists, and the most sympathetic studies are by Robert Barclay³ and C. Fell Smith.⁴ John Cameron (1577–1625) taught in ten cities, and his system was popularized by his pupils, especially Moyse Amyraut.⁵

On the whole, minor sects could maintain themselves in Europe only under special conditions; Poland and Holland gave a certain amount of toleration, and England later. New countries naturally afforded refuges, and thus were predisposed for the appearance of new sects. To guard against this, the Inquisition was peculiarly active in the New World.

It might be expected that new lands under Protestant control would be sectarian museums, but this is hardly the case; in Victoria only 8054 people returned themselves in 1911 as outside the well-known Churches. Canada has become the home of refugees from all N. Europe, and displays many immigrant sects; but it seems to have originated none. The United States is so large, so old, so active, and so well investigated, that the whole modern period can best be studied with this continent in view.⁶ The facts dovetail with every

⁵ *ERE* i. 404.

⁶ The regular censuses of 1900 and 1910 contain much valuable information. On the latter a popular book has been published by H. K. Carroll, *The Religious Forces of the United States*, New York, 1912; but, while it professes to be 'revised and brought down to 1910,' it is difficult in many places to tell whether the figures are not even of 1890. Moreover, the accuracy of the figures has often been doubted, and grave

permanent European movement of the last two centuries. That America chiefly reproduces, and only slightly modifies, the conditions of the Old World will be evident by enumerating the 22 denominations which have more than 50,000 communicants each. They are named here in order of their size: Roman Catholic, Baptist, Methodist, Lutheran, Presbyterian, Disciples of Christ, Protestant Episcopal, Congregationalist, Reformed, United Brethren, German Evangelical, Latter-Day Saints, Evangelical bodies, Eastern Orthodox, Friends, Christian Connection, German Baptist Brethren, Adventist bodies, Church of Christ (Scientist), Unitarians, Universalists, Mennonites.

The 'other Protestant bodies' in 1906 had not 250,000 members; their church property was small and heavily in debt; their permanence is uncertain, for, though 42 new sects appeared in twenty years, by immigration, division, or organization, yet 15 disappeared, and 30 more decreased so rapidly that many are probably extinct already. They have four times as many ministers as most Protestant sects, and have multiplied remarkably since 1890, especially in Pennsylvania, Ohio, Massachusetts, and Illinois. A fifth of them are in a thousand isolated groups with no distinctive principles, and they are classified in the census report as 'Independent Churches.' They indicate the presence of new life, but the results are too amorphous to be described. Even among the others, from the 78 'Christian Israelites' up to the tens of thousands of Winebrennerian members in the 'Church of God,' many appear negligible in practice, for on their own official showing they do no work at home or abroad.

Since the adoption of the constitution in 1789 perfect religious freedom has been assured throughout the United States. This arose not only from the highly miscellaneous character of the population, but from the fact that two States had been deliberately founded in order to secure homes for those who respected the rights of conscience. The French of Canada, Acadie, Louisiana, the Spanish of Mexico and California, the Dutch of New Amsterdam, the Swedes of New Jersey, and the second wave of English in Virginia, indeed belonged to their respective Established Churches, but these have not been the determining factors. The Pilgrim Fathers (*q.v.*) of Plymouth and the Puritans¹ of New England have had their story often told. Even more important for our theme are Rhode Island and the Providence Plantations, with charters, first from the Commonwealth, then from Charles II., assuring a welcome to all; the Jews found guaranteed to them here not merely an asylum, but equal opportunities. This tiny province was so hemmed in by intolerant Puritans that it offered no scope to develop its principles, and the wider application was made by William Penn, whose work is too little appreciated in England. In 1677 he was joint-proprietor of West New Jersey, and, desiring population, he joined George Fox and Robert Barclay in a journey to the lower Rhine, Hanover, Brandenburg. Becoming proprietor of Pennsylvania in 1681, he decided to make it a greater Rhode Island. Numerous German pamphlets were written, and the response was beyond expectation; before long there were

more than 50,000 German sectarians in the province, with hardly one Reformed or Lutheran minister.

'Still throughout his peaceful country
Traces linger of all lands
Which here sent their early settlers
In strange headgear and quaint costumes.'¹

After long obscurity their story has at last been told.²

Caspar Schwenkfeld (1490-1561) was a Silesian noble, a lay reformer influential with the Duke of Liegnitz.³ Influenced at first by Hus and Tauler, he approved the early doings of Luther; but, when the latter threw in his lot with the princes, he feared that the promotion of purity of life was being subordinated to the construction of a new ecclesiastical machine. He therefore published his *Ermanung dess missbrauchs etlicher fürnempster Artikel des Evangelii*—a treatise on the abuse of the Gospel for the security of the flesh; and in 1525 at a discussion with Luther and Bugenhagen he charged the former with receding from his own doctrine in the preface to the Magnificat, 'No one can understand God or God's word, unless he has it directly from the Holy Spirit, and no one has it unless he experiences and is conscious of it.' Fully agreeing with this, Schwenkfeld laid such stress on inner experience that he quite disused, and advised the disuse of, baptism and the Lord's Supper, as not being any means or vehicle of grace; thus he took no part in the Zwinglian or Anabaptist controversies.

'God must Himself, apart from all external means, through Christ touch the soul, speak in it, work in it, if we are to experience salvation.'⁴

He was reluctant to accede to any confessions, objecting to the many new formulas, and also challenging the old Greek definitions as to the person of Christ with some arguments in 1539 'that Christ according to His humanity is to-day no creature, but absolutely our God and Lord.' This doctrine of the deification of the flesh of Christ was central with him, and his followers took from it their own title, *Confessors of the Glory of Christ*. Theologians also disagreed with his doctrine of 'a double word of God, namely, an inward, eternal and spiritual word, and an outward and perishable word of the scriptures or letter.' He further challenged the external mechanical view of justification by faith, as though men had bought an indulgence from Christ and thereupon continued in sin; he taught that the elect are not esteemed justified before God entirely through imputation, but are actually made just; that the Lord is our righteousness not as outwardly believed in, but as enjoyed in faith by His inward working and life.

As the Duke of Liegnitz found that he was falling out of line with other reforming princes, Schwenkfeld left in 1529, and after five years at Strassburg went to Swabia. His followers were recruited largely from Anabaptist and Boehmenite circles, and included many of the upper ranks. He did not attempt to organize them or to ordain ministers, warning that no outward unity or uniformity in doctrine, ceremonies, rules, or sacraments could make a Christian church.

errors have been discovered during 1918. The official Bureau of the Census, in the department of Commerce and Labor, conducted special inquiries into religious conditions in 1906 and in 1916. Few of the last returns, so far as they relate to the minor bodies, are available for this article, which draws largely from the Report on *Religious Bodies*, 1906, pt. I. 'Summary and General Tables,' pt. II. 'Separate Denominations, History, Description, and Statistics'; *Bulletin* 103, 'Religious Bodies, Introduction, Summary, Diagrams,' Washington, 1910. So far as the returns of 1916 have been published, they show no general change in the situation.

¹ See art. PURITANISM.

'When we come together, we pray with one another . . . we teach and also converse with one another, and ask questions concerning Christ, and afterwards in writing respecting the divine Trinity, the kingdom of God. . . . We busy ourselves also with the right understanding and exposition of holy scripture according to the mind of the Spirit. . . . The true knowledge of Christ must be expected not only out of the scriptures, but much more from the gifts of grace revealed by the Father; yet so that this revelation should always be in unison with and unite with the witness of the scriptures.'¹

Persecution from all parties not only limited their numbers to about 5000, but also exterminated them outside Swabia and Silesia. The Jesuits from 1719 attacked them there and greatly depressed them till Frederick conquered the duchy and restored their property. Meanwhile many fled; some took refuge with Count Zinzendorf in Saxony and helped to rejuvenate the *Unitas Fratrum* (1722-35). Some 200 from Görlitz, just across the border from Herrnhut, went by Hanover and England to Philadelphia, settling about ten miles north. Barclay thinks that Fox was indebted to Schwenkfeld for some of his leading ideas, which were taught (1624-30) by Hans de Rijs and other Waterlander Mennonites near Amsterdam, and may have reached England by way of the General Baptists; but he offers no evidence on the last point. They were so unconscious of any external connexion that in the colony of the English Friends they maintained their German speech and worship, and indeed still belong to the 'Pennsylvania Dutch.' In 1895 they founded a board of missions to propagate their faith in the United States and elsewhere; lately the fields have been India, China, and Japan. In 1910 they numbered 306 communicants.

Jean de la Badie² (1610-74) was another noble trained by the Jesuits, successively a Catholic canon, Huguenot professor at Montauban, pastor at Orange, Geneva, London, Middelburg. By 1668 he was suspended, and he began a separatist church, which migrated to Amsterdam. His most prominent adherent was Anna Maria van Schürmann of Utrecht, whose *Eukleria*³ contains the best exposition of his views. These included the usual separatist tenets, with a belief in the gift of prophecy and communism; no distinction was drawn between the days of the week, all being spent in the loftiest way possible. A remarkable departure from Calvinism was that, as marriage is between the regenerate alone, their children are free from original sin. About 60,000 people were supposed to sympathize with these views, but, when Gilbert Voet, rector of Utrecht university, drove the leaders into exile, only a few score went with them from 'the garden of souls planted at Amsterdam' to be watered at Herford, and, after transplantation to Bremen, to fruit at Altona. Cornelis van Sommelsdyk, whose sisters were in the community, offered his castle of Thetinga in W. Friesland, but, before the gift took effect, la Badie died at Altona in 1674. Anna van Schürmann then led the wanderers, between 300 and 400, to the castle, where they settled down to a happy community life, of which in 1677 William Penn gives a glimpse in his *Travels*.⁴ Anna died next year, and in 1679 a colony of Labadists was taken to America by Pieter Sluyter. More converts were made there, one of whom presented Bohemia Manor at the head of Chesapeake Bay. Sluyter's rigid rule of the community was distasteful, and

his traffic in slaves and other chattels brought the movement into disrepute, so that the settlement broke up in 1722. Its more spiritual side has been depicted by Whittier in *Andrew Rykman's Prayer*.¹ Sommelsdyk had become governor of Guiana, and in 1680 he invited a second colony, which faded away soon after his death in 1688. The communist life at Thetinga ended soon after these emigrations; the last Sommelsdyk died in 1725; and with the death of the last 'speaker' seven years later the movement practically ended. Yet a few Frisian Labadists still journey annually to the ruined castle; in the crypt of Vieuwert church, hard by, the bodies of five or six of the community are exhibited, and at Franeker town hall many portraits, pictures, and books of Anna van Schürmann are preserved.

The community had been offered a home on the island of Nordstrand by Antoinette Bourignon, whose influence had been in the Netherlands and in Holstein; she also was buried at Franeker in 1680.² Her system was distinctly personal; she was the 'bride of the Spirit,' the 'woman clothed with the sun,' the 'channel of revelation.' Yet she was original only on one point: the human nature of Christ was dual, and one part was liable to sinful corruption; similarly every man has a dual nature, one part being distinctly good; as the will is entirely free, any one may throw the balance on the right side and obtain perfection here. Her teachings were digested by her disciple Pierre Poiret, and published in 7 vols. at Amsterdam in 1687, *L'Economie divine, ou système universel*. An English version of her *Traité admirable de la solide vertu*, published in London in 1699, indicates influence in Britain; George Garden, who had been professor at King's College, Aberdeen, and minister of St. Nicholas Church in that city, was deposed from the ministry in 1701 for maintaining Bourignonist doctrines; in 1711 the General Assembly of the Church of Scotland framed for all probationers an abjuration of these tenets. Thereafter the movement won no more adherents.³

Penn's journey in 1677 introduced him to Spener, who for seven years had borrowed from the Rynsburgers (*q.v.*) the idea of colleges of piety, which spread from Frankfort through Saxony. The new zeal for Bible study made the Pietists widely known and rather unpopular. The Frankfort Land Company therefore bought from Penn a block of land north of Philadelphia between the Schuylkill and the Delaware, as a Pietist settlement. F. D. Pastorius led out the first emigrants in 1683; the name of Crefeld was transplanted by some Mennonites to their new settlement; others were Krisheim, Sommerhausen, Germantown. By 1688 Pastorius saw that these Pilgrim Fathers to Pennsylvania had made their footing sure; his Latin ode to their descendants has been Englished by Whittier:⁴

'Think how your fathers left their native land,—
Dear German-land! O sacred hearths and homes—
And, where the wild beast roams,
In patience planned
New forest-homes beyond the mighty sea,
There undisturbed and free
To live as brothers of one family.'

Among the curious bodies that migrated from Germany was one group which declined this family life. John Kelpius, a graduate of Altdorf, had drunk deep of the Rosicrucian cup; after intercourse in London with the Philadelphians⁵ he headed a band of 40 men—pilgrims, students, peasants—to Germantown. It is remarkable that

¹ See art. PURITANISM.

theology, up to the massive folio of the Mennonite martyrology. Books of mystic theology were also published, setting forth the Platonic view that man was originally male and female, and that the unity would be regained in the body of Christ.

Conrad Beissel had a brother Johann Peter, who lived at Gimbshelm in the Palatinate, a few miles north of Worms, west of the Rhine. This district was a hotbed of sectarianism in the early 18th cent., and correspondence between the brothers brought about a great pietistic revival and organization. The accession of a new Count Palatine in 1743 led to persecution, and by 1751 most of the community emigrated to Pennsylvania; some joined the Ephrata group, and others founded a new colony on the Bermudian in York county, where it gradually lost its peculiarities.

By 1786 Ephrata had abandoned its communist principles, and the two regular orders were dying out, never having numbered more than 300. In 1814 the secular congregation was organized and incorporated as the German Seventh-day Baptists; but apparently even by adding four regulars they numbered only 50. The centre of gravity shifted to Schneeberg, now Snow Hill, where there is a valuable library. A third church exists at Salemville; the total membership of the antique community is 194.

It is curious that, whereas the province was founded to secure religious freedom, the State in 1794 passed a Sunday law under which this harmless people was persecuted at intervals for half a century. Whittier forgot that they were Seventh-day Baptists when he put into the lips of Sister Maria Christina of Ephrata what he mistakenly styled the *Hymn of the Dunkers*, in which he also transferred to dawn what was really a midnight service; but the spirit is right.

'Lo! rising from baptismal flame,
Transfigured, glorious, yet the same,
Within the heavenly city's bound
Our Kloster Kedar shall be found.
He cometh soon! at dawn or noon
Or set of sun, He cometh soon.
Our prayers shall meet Him on His way:
Wake, sisters, wake! arise and pray.'

George Whitefield and Wesley's missionaries ministered chiefly in their own tongue, but an atmosphere of revival was produced in which Swiss and German settlers were rejuvenated, so that new bodies were born which still survive: five claim brief notice.

Some Swiss immigrants of 1750 were affected by a revival twenty years later, and the converts were immersed in the Susquehanna, whence they became known as River Brethren. In many respects they suggest a Mennonite origin. They are chiefly in Pennsylvania, Ohio, and Kansas, and number 3427; they maintain missions in Rhodesia.

Another Swiss Mennonite, Martin Böhm, co-operated with P. W. Otterbein, a Prussian Reformed minister, in another revival deeply influenced by Methodist evangelism. This led to a conference in 1789, and the formation in Maryland eleven years later of the United Brethren in Christ. The body now has become mainly English-speaking, and numbers about 225,000 members in 23 northern States, in two groups, one conservative, one modern. They subscribe nearly \$100,000 for missions in Japan, China, the Philippines, Porto Rico, and Sierra Leone.

A Lutheran revivalist, Jacob Albright, under similar influences paralleled their work in his own communion, winning converts who organized in 1807; after his death they took the title, Evangelical Association of North America. They too have become mainly English and Methodist; they number 133,313 in all the northern States; at a

cost of \$28,323 they maintain missions in Japan, China, and Germany.

The German Evangelical Protestant Church originated about the same time and is still growing; two-thirds of its 36,156 members are in Ohio and Pennsylvania, Cincinnati being the centre. A mission in India is sustained by \$27,183.

John Winebrenner was a Reformed pastor at Harrisburg in 1820, but had to retire owing to his evangelistic proclivities. In 1830 he and five friends founded the Church of God, with Baptist doctrines and Methodist polity. There are 22,511 members, chiefly in Pennsylvania, Ohio, Indiana, subscribing \$2036 for a mission in India.

The outbreak of the French Revolution led to a recrudescence of religious thinking and the formation of a few sects with some permanence: three lay movements deserve attention. In the north of Sweden the population was so sparse that one parish covered 6500 square miles: the lack of priests caused the rise of 'readers,' and these gradually developed a decided hostility to a paid ministry, and a great complacency. It is not clear that they survive in their native home. In Norway the peasant Nielsen Hauge (1771-1824) proved a very Bunyan, and the strength of his movement may be judged by the emigration to the northern States in America, where Hauge's Synod of Norwegian Lutherans was organized in 1846; to-day there are 14,730 communicants. On the other hand, Baroness Krüdener (1766-1824), who attracted much attention in religious circles throughout Central Europe, was driven by the civil authorities from Paris and Switzerland to Riga, Petrograd, and the Crimea; but she never visited the New World. Her influence was that of the evangelist and healer; her only attempt at constructive work, an eirenicon between Protestants and Catholics in Switzerland, failed completely. Her followers soon died out. No new sect made good its footing on the Continent, though some continued to linger on till the increasing uniformity of the 19th cent. made existence almost impossible.

Another series of emigrations began with the wave of revolution in 1848. C. F. Spittler of the Basel mission sent a celibate colony of mechanics to Jerusalem. From their *Brüderhaus* they hoped to evangelize the world, but the missionary fervour seems to have been deflected to archaeology and patriotism. A small remnant of the Hussites (*q.v.*), who had survived in Moravia and had not been influenced by Zinzendorf, migrated to Texas in 1848; there they are known as the Evangelical Union of Bohemian and Moravian Brethren; they still use their native tongue for worship. Some German-Swiss went to America in 1850, and are known as the Apostolic Christian Church, numbering about 4500. Germany saw a New Apostolic Church founded in 1862, which migrated entire to America a generation later; it numbers about 2000. The adoption of general military service in Europe caused two Mennonite colonies to quit Russia for S. Dakota about 1874. The *Brüderhof* had originated in Tirol early in the 16th cent., and, when expelled from Moravia, had remained encysted for over three centuries, with German speech and communist customs. The *Brüdergemeinde* were of more recent origin in Russia, and are of the Baptist genus.

In 1885 two bodies of Swedish dissenters found it wise to leave home; the Evangelical Free Mission and the Evangelical Mission Covenant are now chiefly along the northern border of the United States. Fifteen years later the Church of the Lutheran Brethren and a body of Finns followed the example, and by 1903 there had also departed some Slovak Lutherans.

The perpetuation of sects on American soil is

in 1694 they found no meeting-house in all the province, except those of the Friends. On the Ridge they soon erected a log-house 40 ft. square, truly oriented; it included a hall for worship, a school-room, 40 cells, with an observatory on the roof. Here the band entitled themselves *The Contented of the God-loving Soul*. Kelpius himself, however, desired a more solitary life, and Whittier¹ has well sketched how

' . . . painful Kelpius from his hermit den
By Wissahickon, maddest of good men,
Dreamed o'er the Chiliaist dreams of Petersen.

Deep in the woods, where the small river slid
Snake-like in shade, the Helmstadt Mystic hid,
Weird as a wizard over arts forbid,

Reading the books of Daniel and of John,
And Behmen's Morning-Redness, through the Stone
Of Wisdom, vouchsafed to his eyes alone.'

Some of the 40 forsook the brotherhood before the death of Kelpius in 1708; a few lingered on till the death of Matthaëi in 1748. The philosophy of Kelpius was best represented to English readers in the works of 'Robert Fludd'² (1574-1637), who built on the foundations of Paracelsus. He taught that there are three realities, God, the world, man; that man and the world correspond in all respects and act mutually, so that natural law rules absolutely in the spiritual sphere; that man and the world proceed from and will return to God. The subject was complicated, being advertised and at the same time discredited by a hoax in 1615, when J. V. Andreae published at Cassel anonymously *Fama Fraternitatis*, a history of an imaginary secret society said to be 200 years old. It does not appear that the speculations of Fludd were ever reduced to practice except by the followers of Kelpius.

George Keith, an Aberdonian Friend, himself tintured with these mystic views through Helmont, found spiritual religion at a low ebb in Pennsylvania and at length drew off several followers. On his return to carry out a similar reform in London, where he failed and presently conformed to the Established Church, the leadership fell to H. B. Koester, a learned Westphalian, and he organized the body by the first baptismal service held in the province. But at the end of 1699 he returned to Germany, and the Keithians melted into the English Baptists in Pennsylvania, some ordinary, some Seventh-day.

While most of the German princes suppressed new sects, there was one illustrious exception, Casimir of Wittgenstein-Berleburg, about 40 miles east of Cologne. Hither flocked the converts of the untiring evangelist E. C. Hochmann of Lauenburg (1670-1715), and of the mystic chemist J. C. Dippel (1673-1734). Under the leadership of J. F. Haug several scholars made in 1726-42 a revision of the German Bible, in eight folio volumes with abundant notes and illustrations. Despite its heavy cost, this Berleburg Bible became very popular with the nonconformists, both in Germany and in Pennsylvania, though it was greatly undersold by the Canstein Bibles from Halle.

Another outgrowth of the Collegiant and Pietist movements became manifest in 1708. At Schwarzenau in Westphalia five men and three women had met at the mill of Alexander Mack, and had come to the conclusion that they must found a new Church by baptism. One was chosen by lot to baptize Mack, who in turn baptized the others; the procedure was closely akin to Smyth's foundation of the General Baptists at Amsterdam in 1609, except in the detail that the Germans adopted immersion. Many other collegia found their way

to the same point, and little companies of German Baptists arose, in no way connected with the Mennonites or with the German Anabaptists. As the State disapproved of all dissent, twenty families went out to Germantown in 1719, and four years later, on Christmas Day, Peter Becker organized the first German Baptist Brotherhood in the province, partly from the immigrants, partly from new converts. Six years later Mack himself arrived, and within a few years all the communities from Germany came over, some of them numbered by hundreds. Thus they were enabled to maintain their own customs, love-feasts, feet-washing, the kiss of charity, and a generally austere life, aloof from all politics. The English population has always regarded these Dunkers, Dunkards, or Tunkers with good-humour as harmless and amusing. The annual minutes from 1742 show that they were pioneers in education, and published Sunday-school books when Raikes was a child; since 1870 this activity has been strongly developed. Their ministers are in three classes, the highest being termed 'bishops'; a few in the cities are paid, but in the country service is gratuitous. Since 1876 they have undertaken missionary work, now maintained in Scandinavia, France, Switzerland, India, China. The progressive policy, however, led to strain, and in 1882 a few of the 'Old Order' left on the one hand, more of the 'Progressives' on the other, the main body being now styled 'Conservatives.' Since 1908 these have adopted the official title, *Church of the Brethren*; they number 61,101 communicants, there being 8089 Progressives and 4411 of the Old Order.

In 1725 some Welsh Seventh-day Baptists came to settle near one of the German Baptist churches, and this resulted three years later in a remarkable movement headed by Johann Conrad Beissel, once a journeyman-baker in the Palatinate. He believed in the power of the press, and began with a German book on the Sabbath,¹ then encouraged both Benjamin Franklin and Christoph Saur to begin printing. He made a new settlement on the Cocalico, and imbibed ideas both from the Labadists and from the Rosicrucians. Uniform cells were built, monastic garb was adopted, evangelistic pilgrimages were undertaken. A large community building was erected at Ephrata, providing cells for the brethren on the ground-floor, then a hall for devotions, and cells above for the order of 'spiritual virgins.' This was soon outgrown, and many new buildings arose, making the Ephrata community famous for its architecture, its industries, and its piety. The organization was rather complicated, for a brotherhood of 40 was instituted, while there was also a secular congregation distinct from the two regular orders. Mysticism became ever more rife; e.g., the stateliest of the edifices had doors only 60" x 20", because 'narrow is the way that leadeth unto life,' and iron was not used because, according to the Rosicrucian philosophy, it symbolized darkness and night.

Zinzendorf tried in 1741 to amalgamate the many German sects in America, but found that the tenacity which they had developed under persecution resisted his efforts. There was a struggle between the industrial and the pietist elements in Beissel's community, leading to the victory of the latter and the disuse of many mills. Both, however, co-operated in producing the German Bible, the first in a European tongue to be printed in the New World; Saur obtained his type from Frankfurt, but his paper bears the watermark of the community, and to them he sent back the sheets to be bound. Soon the Ephrata press published hymn-books and many other works on religion and

¹ In *The Pennsylvania Pilgrim*.

¹ *Mystyrion Anomias*, Philadelphia, 1728, tr. into English by Michael Wohlfarth, 1729.

theology, up to the massive folio of the Mennonite martyrology. Books of mystic theology were also published, setting forth the Platonic view that man was originally male and female, and that the unity would be regained in the body of Christ.

Conrad Beissel had a brother Johann Peter, who lived at Gimbshelm in the Palatinate, a few miles north of Worms, west of the Rhine. This district was a hotbed of sectarianism in the early 18th cent., and correspondence between the brothers brought about a great pietistic revival and organization. The accession of a new Count Palatine in 1743 led to persecution, and by 1751 most of the community emigrated to Pennsylvania; some joined the Ephrata group, and others founded a new colony on the Bermudian in York county, where it gradually lost its peculiarities.

By 1786 Ephrata had abandoned its communist principles, and the two regular orders were dying out, never having numbered more than 300. In 1814 the secular congregation was organized and incorporated as the German Seventh-day Baptists; but apparently even by adding four regulars they numbered only 50. The centre of gravity shifted to Schneeberg, now Snow Hill, where there is a valuable library. A third church exists at Salemville; the total membership of the antique community is 194.

It is curious that, whereas the province was founded to secure religious freedom, the State in 1794 passed a Sunday law under which this harmless people was persecuted at intervals for half a century. Whittier forgot that they were Seventh-day Baptists when he put into the lips of Sister Maria Christina of Ephrata what he mistakenly styled the *Hymn of the Dunkers*, in which he also transferred to dawn what was really a midnight service; but the spirit is right.

'Lo! rising from baptismal flame,
The same,
Bound
Found.
He cometh soon! at dawn or noon
Or set of sun, He cometh soon.
Our prayers shall meet Him on His way:
Wake, sisters, wake! arise and pray.'

George Whitefield and Wesley's missionaries ministered chiefly in their own tongue, but an atmosphere of revival was produced in which Swiss and German settlers were rejuvenated, so that new bodies were born which still survive: five claim brief notice.

Some Swiss immigrants of 1750 were affected by a revival twenty years later, and the converts were immersed in the Susquehanna, whence they became known as River Brethren. In many respects they suggest a Mennonite origin. They are chiefly in Pennsylvania, Ohio, and Kansas, and number 3427; they maintain missions in Rhodesia.

Another Swiss Mennonite, Martin Böhm, co-operated with P. W. Otterbein, a Prussian Reformed minister, in another revival deeply influenced by Methodist evangelism. This led to a conference in 1789, and the formation in Maryland eleven years later of the United Brethren in Christ. The body now has become mainly English-speaking, and numbers about 225,000 members in 23 northern States, in two groups, one conservative, one modern. They subscribe nearly \$100,000 for missions in Japan, China, the Philippines, Porto Rico, and Sierra Leone.

A Lutheran revivalist, Jacob Albright, under similar influences paralleled their work in his own communion, winning converts who organized in 1807; after his death they took the title, Evangelical Association of North America. They too have become mainly English and Methodist; they number 133,313 in all the northern States; at a

cost of \$28,323 they maintain missions in Japan, China, and Germany.

The German Evangelical Protestant Church originated about the same time and is still growing; two-thirds of its 36,156 members are in Ohio and Pennsylvania, Cincinnati being the centre. A mission in India is sustained by \$27,183.

John Winebrenner was a Reformed pastor at Harrisburg in 1820, but had to retire owing to his evangelistic proclivities. In 1830 he and five friends founded the Church of God, with Baptist doctrines and Methodist polity. There are 22,511 members, chiefly in Pennsylvania, Ohio, Indiana, subscribing \$2036 for a mission in India.

The outbreak of the French Revolution led to a recrudescence of religious thinking and the formation of a few sects with some permanence: three lay movements deserve attention. In the north of Sweden the population was so sparse that one parish covered 6500 square miles: the lack of priests caused the rise of 'readers,' and these gradually developed a decided hostility to a paid ministry, and a great complacency. It is not clear that they survive in their native home. In Norway the peasant Nielsen Hauge (1771-1824) proved a very Bunyan, and the strength of his movement may be judged by the emigration to the northern States in America, where Hauge's Synod of Norwegian Lutherans was organized in 1846; to-day there are 14,730 communicants. On the other hand, Baroness Krüdener (1766-1824), who attracted much attention in religious circles throughout Central Europe, was driven by the civil authorities from Paris and Switzerland to Riga, Petrograd, and the Crimea; but she never visited the New World. Her influence was that of the evangelist and healer; her only attempt at constructive work, an eirenicon between Protestants and Catholics in Switzerland, failed completely. Her followers soon died out. No new sect made good its footing on the Continent, though some continued to linger on till the increasing uniformity of the 19th cent. made existence almost impossible.

Another series of emigrations began with the wave of revolution in 1848. C. F. Spittler of the Basel mission sent a celibate colony of mechanics to Jerusalem. From their *Brüderhaus* they hoped to evangelize the world, but the missionary fervour seems to have been deflected to archaeology and patriotism. A small remnant of the Hussites (*q.v.*), who had survived in Moravia and had not been influenced by Zinzendorf, migrated to Texas in 1848; there they are known as the Evangelical Union of Bohemian and Moravian Brethren; they still use their native tongue for worship. Some German-Swiss went to America in 1850, and are known as the Apostolic Christian Church, numbering about 4500. Germany saw a New Apostolic Church founded in 1862, which migrated entire to America a generation later; it numbers about 2000. The adoption of general military service in Europe caused two Mennonite colonies to quit Russia for S. Dakota about 1874. The *Brüderhof* had originated in Tirol early in the 16th cent., and, when expelled from Moravia, had remained encysted for over three centuries, with German speech and communist customs. The *Brüdergemeinde* were of more recent origin in Russia, and are of the Baptist genus.

In 1885 two bodies of Swedish dissenters found it wise to leave home; the Evangelical Free Mission and the Evangelical Mission Covenant are now chiefly along the northern border of the United States. Fifteen years later the Church of the Lutheran Brethren and a body of Finns followed the example, and by 1903 there had also departed some Slovak Lutherans.

The perpetuation of sects on American soil is

assisted by the perpetuation of European languages for worship, a factor hardly realized by English readers. To mention only the chief tongues, there are 4,500,000 Church members who never worship in English, but only in German, Polish, French, Italian, Norse, Swedish, Spanish, Bohemian, Slovak, Lithuanian, or Dutch; while 3,000,000 more use these tongues jointly with English. Americans in 1918 for other reasons began a vigorous campaign for the use of English solely; if this succeeds, some of the smaller bodies are likely to merge with others to which they are really akin.

While sects originally European can often be studied best on American soil, there are also others which arose west of the Atlantic. Henry Alline, of a Rhode Island family which moved to Nova Scotia, did great evangelistic work between 1775 and his death in 1784. He is said to have held the view that the Creation was after the Fall, in which all souls had personally shared; but this was never adopted by any number, and his Allinite converts formed the raw material for the ordinary Baptist churches that soon grew to great strength in the province. Of more permanent sects which claim fewer than eight per thousand of the population there are a number of small bodies to be found chiefly in Indiana, Oregon, Kansas, Ohio, Maine, Massachusetts, Iowa, Pennsylvania, Nebraska, Washington, New Hampshire, California, Oklahoma, Vermont, and Illinois. Altogether they aggregate 35 per 1000, and seven of them may be noticed.

The great revival caused reactions against New England orthodoxy. A Methodist in Virginia, a Baptist doctor in Vermont, and Presbyterians in Kentucky and Ohio independently discarded all theologies and concentrated on the Bible. By 1806 they were aware of one another, and their adherents entered into friendly relations, adopting as their name only the Biblical term 'Christians,' which others either pronounce with the first *i* long, or expand into Christian Connection. Ohio and Indiana contain half their 90,718 members; N. Carolina and Virginia are the stronghold of a southern group which separated on the question of slavery in 1854. One of the original leaders passed over to the Disciples of Christ;¹ and, after long confusion of the two bodies by outsiders, actual union took place in 1917. The polity being congregational, with conferences chiefly advisory, no great difficulty presented itself.

In 1831 William Miller of Low Hampton, New York, began lecturing on the second advent of Christ, which he expected in 1843. His influence extended from Lake George over New England, but after the non-fulfilment of his second prediction a conference at Albany in 1845 revealed differences which led in time to the formation of seven sub-divisions of Second Adventists, of which only two are at all numerous.² The mortality of the soul is held by 25,816 'Advent Christians'; 29,000 observe the seventh day of the week as Sabbath and have other Jewish proclivities as to diet and prophecy; they are very aggressive, spending about \$400,000 a year on missions all over the world. The 'Adonai Shomo,' an Adventist community formed in Massachusetts in 1876, expired in the first six years of the present century.

About 1880 Mrs. Beekman, an Illinois lady, announced herself as the spiritual mother of Christ in the Second Coming, and identified Him with G. J. Schweinfurth. This man accepted the honour, and for about twenty years found three or four hundred people to form the Church Triumph-

ant. This too was dead by 1906. This evanescent movement recalls the handful of Dumfriesshire people who from 1784 till the death of Elspeth Buchan in 1791 believed that she was 'the woman clothed with the sun.'¹

The American civil war revealed the existence of many conscientious objectors to fighting. A Methodist minister, J. V. B. Flack, preached to these, and in 1864 a convention was organized almost on this one issue, for all questions of faith and polity were set aside in view of the diverse origins of the adherents. As the war was forgotten, members dropped off, and the Independent Churches of Christ in Christian Union are important only in Ohio, Missouri, Indiana, and Iowa, with some 18,000 members in 1906; next census may show them flourishing again.

In 1867 several Baptists and Methodists in Arkansas and Illinois withdrew and united; twenty years later they adopted a confession and rules; they number about 913, and call themselves the Social Brethren Church. Other secessions from the Methodists are the Heavenly Recruit Church of 1885; the Apostolic Holiness Union of 1897, near Cincinnati, with mission work; the Missionary Church Association of 1898, near Berne in Indiana; the Christian Congregation of 1899, near Kokomo in Indiana; the Apostolic Faith Movement of 1900, near Los Angeles; the Church of Daniel's Band, near Michigan and in Canada; these together seem to number about 5000 members, if they still exist.

In 1873 the Protestant Episcopal Church lost two bishops, who founded the Reformed Episcopal Church (*q.v.*) on an ultra-evangelical basis. A seminary was planted at Philadelphia, and mission work was undertaken to the southern negroes and in India. Work was extended in 1877 to England, and, as there was another small body of similar origin from the Established Church in 1844, known as the Free Church of England, the two united in 1918. The resultant Free Reformed Episcopal Church of England uses a revised version of the Book of Common Prayer, and is dividing the country into dioceses. One of its bishops has long ministered in a small iron building, and there appears no great probability of any extensive growth.

The Reformed Catholics arose in New York during 1879, but show little vitality. They may be compared with the Old Catholics of Europe,² who received accessions from 1898 onwards in the German provinces of the Austrian Empire. This *Los von Rom* movement seems, however, to have been anti-Slav, and reinforced Protestants quite as much, the tendency being to pave the way for these provinces to join the German Empire; this having been practically attained by other means, it is doubtful if the movement will continue. In America the Reformed Catholics, after absorbing the Old Catholics, number only 2100 communicants. Parallel movements have taken place in the province of Quebec and in the Philippines.

Another remarkable reaction of America on England is the Old Baptist Union. In Rhode Island General Baptists arose during the interregnum, and by 1729 were strong enough to form a yearly meeting. In the same year a similar step was taken by others in Virginia and N. Carolina, planted by 'Messengers' from England. Not all of these adopted Calvinism, and the remnant are known as Original Freewill Baptists, numbering now nearly 40,000. The northern group decided in 1880 to replant their principles in England, disregarding both the parent body,

² See art. SECOND ADVENTISM.

which had dwindled to a handful of Unitarian churches, and the New Connexion of Evangelicals. They retained as their banner the Confession of 1660, but in organization revived the term 'bishop' for their presiding officers. After a generation they claim about 35 churches in England, 15 in America, and 7 missionaries abroad; but the English churches seem kaleidoscopic, and the census returns of 1910 show no trace of any in America, though in 1906 there were 649 General Six-Principle Baptists.

We now return to denominations in Britain and begin with the Religious Societies.¹ Under Charles II. several young Churchmen of London and Westminster, scandalized at rampant evils, betook themselves to their ministers for advice. Getting none useful, they joined in a weekly meeting for worship and the study of the Bible, and presently adopted rules. On the practical side they relieved the poor, freed prisoners, helped students and orphans; by 1678 it was needful to have two stewards for these purposes. Against popery they established special services at St. Clement Danes, conducted by eminent city divines, and by the close of the reign of James II. there were 39 of these societies in or near the two cities. To avert gossip and suspicion of their being Jesuits in disguise, they explained their aims and methods to the bishop and obtained his goodwill. With the accession of William and Mary they widened greatly, opening up relations with Francke of Halle and helping to found societies in other parts of the United Kingdom. Specially notable were those at Dublin (soon numbering 300 persons), at Cambridge, and at Oxford: they published their prayers that these ancient and famous nurseries of piety and learning might by the conduct of those students designed for holy orders render themselves renowned in the world. These societies were of laymen, like that founded by Francis of Assisi or the Collegiants; with the patronage of Queen Mary they increased to more than 100 in England and Ireland. They established more than 100 free schools in London, and subscribed to the colonial work of the Society for the Propagation of the Gospel. A remarkable off-shoot was the Societies for Reformation of Manners, which supplemented the positive work of the original, by helping to enforce the laws against Sunday traffic, music-houses, and brothels; dissenters were admitted as members of these newer bodies. The Religious Societies, like the Pietists, had to defend themselves from the charge of being a society within a society, of refining upon a reformed Church; they replied that they bound themselves to attend the common prayer and to communicate monthly, and that all new rules were to be approved by three clergy; they were also advised to choose a clergyman as director of each society, who should often attend the weekly meetings. They flourished for more than thirty years after the accession of Queen Anne, publishing their own hymn-books, until from one of their number, the Holy Club of Oxford, arose leaders who developed them even more, and made 'the wine ferment too strongly for the skins' of the parent Church.

Thirteen Oxonians, known in derision also as Methodists, founded four distinct bodies, led by Benjamin Ingham, the Countess of Huntingdon,² George Whitefield, and John Wesley.³ It is curious that the pioneer steps in these movements, taken by Benjamin Ingham of Ossett (1712-72), should be the least known. He had Anglican orders, and was one of the party which in 1736

went out to work in Georgia; on the way he met some Moravian missionaries, who transformed his ideals. Returning to England, he was one of those who in May, 1738, founded a new religious society in Fetter Lane, where the Moravian influence was strong. After a visit to Herrnhut he returned to Yorkshire, and, finding no access to pulpits of the Established Church, preached in any available place or in the open air. By 1740 he had been formally excluded from public service in the diocese; and by that year he had founded 50 societies, linking them to the Moravians. The second phase of his career opened with his marriage in 1741 to Lady Margaret Hastings, sister of the Earl of Huntingdon; this led to the conversion of the countess, and the spread of religion among the aristocracy. Seven years later he issued at Leeds a hymn-book for the use of the societies, but in 1753 he severed his connexion with the Moravians. After a year or two, while his local work was in harmony with Wesley, he took the momentous step of definitely organizing a new connexion—the Inghamites. His plan was largely modelled on the Moravian, and over the 80 new societies which he had gathered he was appointed general overseer. In this capacity he ordained to the ministry two of his helpers, William Batty and James Allen—a precedent followed only in 1783 within the circle round the countess, and only in 1784 by Wesley. For the new body the *Kendal Hymn-Book* was edited by Allen in 1757, and this date perhaps represents the culmination of the work. Hearing how Sandeman was developing the work of Glas in Scotland, Ingham sent Batty and Allen to examine it. They heartily appreciated it, and in their attempt to leaven the Connexion were most successful. He published at Leeds in 1763 a *Discourse on the Faith and Hope of the Gospel* to arrest the change, but this failed to provide any clear programme that justified separate existence. The organization broke up, the societies became Sandemanian, Methodist, or Baptist, and it does not appear that any second general overseer was appointed. To-day the original church may still be found at Salterforth, near Barnoldswick; also six more congregations within three miles of Colne, where in 1908 a new building was erected; the old graveyard at Wheatley Lane in Pendle Forest has many relics. The only other English congregation is at Kendal; but emigrants from Colne have built a church at Farringdon, two miles from Brantford, Ontario. The whole body probably numbers about 2000.³

Another minor leader in the Methodist revival was William Cudworth (1717-63). After a year in charge of Whitefield's school at the Tabernacle he worked independently, and by 1747 superintended five London congregations, known collectively as the Hearers and Followers of the Apostles. He was invited to Norwich in 1751, and made this city his headquarters, building the Pentagon chapel on Margaret Street, while his helper James Wheatley built a tabernacle, opened by Whitefield. Cudworth had begun printing extracts from Luther, Puritans, Baptists, then published his own views, and many collections of hymns, including some by his adherents. His sixty pamphlets record disputes with Crookshanks, Wesley, Anne Dutton, Moravians, Whitefield, Rely, Sandeman, Law; also his sympathy with Hervey and John Erskine of Edinburgh. His travels embraced not only East Anglia, but the shires of Leicester, Derby, and Stafford. His ablest lieutenant was Robert Robinson, who, however, was repelled by the renewed immorality of Wheatley, and in 1759 left for Cambridge Baptist church. When therefore

Cudworth died, on tour in 1763, his connexion slowly disintegrated. The church near Covent Garden is last known in 1778, the Norwich Tabernacle passed to the Countess of Huntingdon, the Pentagon heard very different doctrine before 1840 and soon afterwards was replaced by All Saints church. Yet his views on assurance and saving faith were reprinted for the Free Church of Scotland at the Disruption, and A. A. Bonar edited his chief work in 1851. A sketch with bibliography appears in the *Transactions* of the Congregational Historical Society for 1918, vii. 363.

The Welsh Calvinistic Methodists regard themselves as belonging to the Presbyterian family, but their peculiar isolation deserves some notice.¹ About 1735 Howell Harris, a layman of Trevecca, Daniel Rowlands, curate of Llangeitho, Howell Davies, an itinerant clergyman, and William Williams of Pantycelyn, a deacon who was refused priest's orders, led a great revival, which was at once labelled 'Methodist,' and thus turned their attention to George Whitefield. He was asked to preside at an 'association' in Glamorgan, and this meeting of 1742 crystallized the movement. Methods and names were arranged so as to hold aloof from the old dissent and not to clash with the Established Church system. Despite bitter opposition by mobs and magistrates the work extended, and spread into N. Wales. By 1751 there was a severe check owing to a split between Harris and Rowlands; the former had had no theological training, and expressed himself so unconventionally on the divinity of Christ that the trained clergy would not work with him. He then settled at Trevecca, built a huge community-house, and preached daily, till he accepted a commission in the Brecon militia and was sent on service to different parts of England. Evangelizing there, he came into contact with the Countess of Huntingdon, for whom he prepared an ancient building at Trevecca, which she used as a college for the training of ministers. In 1768 this was inaugurated, and for a few years the little town was a centre of great influence. But, as the Wesleys and Fletcher preached Arminian doctrine, the Methodist movement fell finally into two divisions in 1771. The Calvinists in England either remained within the Established Church or were drawn into the Countess of Huntingdon's Connexion; in America they mostly formed separate churches which on the whole became Baptist. In Wales all the converts who did not join the Baptists or the Congregationalists held together and formed by degrees the Welsh Calvinistic Methodists, who affectionately style themselves 'Yr Corff,' 'The Body.'

A great binding force has been an *Annotated Family Bible*. The Society for the Promotion of Christian Knowledge had issued in the 18th cent. only five editions of the Bible, totalling at most 70,000 copies. Peter Williams revived the old Geneva plan, and prepared a Bible with a commentary, printed and published at Carmarthen. It proved abundantly useful; it prompted Thomas Scott, John Fawcett, John Brown of Haddington, and others to do the same for readers of English; in its 38 editions it is still a great bond for the Calvinistic Methodists, though the editor himself was expelled for heresy in 1791. By that year Thomas Charles of Bala was the leader; known to Englishmen by his appeal which resulted in the British and Foreign Bible Society, he rendered constant service in Wales by promoting education, both by itinerant daily teachers and by residents on Sunday. He lived to see an important step in 1811, when Ingham's precedent was again followed, and preachers were ordained by the authority of

representatives of the churches, Charles himself presiding. This led to most of the ordained clergy's ceasing to work with the body and to the withdrawal of several rich and influential families. A confession of faith was approved and published in 1823, and rules of government which had been growing for a generation were codified. A theological institute was opened at Bala, and the community-house at Trevecca was converted into a second college—not to be confounded with the Countess's college once in an older building there. The two colleges are now conducted at Bangor and Aberystwyth, in connexion with the University of Wales.

In 1840 foreign mission work was begun, and the Khasia hills, on the confines of Bengal and Burma, were chosen. A very large proportion of the population has been won to Christianity; the Connexion contributes about £16,000 yearly for this work. A little evangelism is also carried on in Brittany, whose kindred language attracts other Welsh bodies also.

With 1864 the two associations of N. and S. Wales united to establish a General Assembly. This has since entered into sisterly relations with the Presbyterian Church of England, and its churches east of Offa's Dyke often bear the legend 'English Presbyterian' in addition to the Welsh title. In America a single church was formed in 1826, and a General Assembly took shape in 1869; there are nearly 13,000 adherents.

The French Revolution brought together and stirred into activity a number of wealthy evangelicals, chiefly within the Church of England, many of whom lived at Clapham, London, whence arose the name of the Clapham Sect. John Thornton had done much to circulate Bibles and to buy advowsons; his son Henry became first treasurer of the Bible Society and of what became the Church Missionary Society. Zachary Macaulay by managing a Jamaican estate became sensitive to the evils of slavery. The Clapham Sect promoted the colony of Sierra Leone, of which Macaulay was governor from 1792 to 1799; he was also secretary to the company till 1808. William Wilberforce took up the cause, and in 1801 founded the *Christian Observer*, which advocated the abolition of the slave trade, and of which Macaulay was first editor. Hannah More in 1792 wrote a pamphlet on *Village Politics* which had great circulation and influence, and led in 1799 to the foundation of the Religious Tract Society. Her original interest was in village education, and she founded schools in Somerset from 1789 onwards. Charles Grant, an East India merchant, wrote in 1792 a pamphlet on the toleration of missions and education in India; in 1813 he secured in the new charter of the East India Company a grant for such education; he also promoted the building of churches in India and of Sunday-schools in Scotland. Wilberforce also furthered education, and founded a society for the better observance of Sunday. His brother-in-law, James Stephen, published in 1824 the first volume of his memorable work, *Slavery in the British West India Colonies Delineated*. The last leaders of the emancipation movement died in 1833, when slavery in the empire was on the verge of extinction; their other interests were safe in the hands of societies which have not taken shape as independent churches. The way was thus cleared for the Oxford Movement (q.v.).

During 1917 three groups of churches in Great Britain united under the title Churches of Christ, which had previously been borne by the English group. The oldest had previously been known as Scotch Baptists—a title peculiarly misleading, as most of its churches were in Carnarvon and Lan-

¹ W. Williams, *Welsh Calvinistic Methodism*², London, 1884.

cashire, one being in Yorkshire. The movement was due to Archibald McLean between 1765 and 1812, but only the one church in Edinburgh with which he was associated still upholds in Scotland the necessity of more pastors than one, which was the chief distinguishing feature of the group; and this one church is not concerned with the southern alliance, but is in harmony with all other Baptists in Scotland. For a few decades this view was propagated by many Scottish immigrants to England, and their churches were dotted along the west coast, in Birmingham, and in London. While several Welshmen preferred to stereotype their organization on that of Ephesus at one of Paul's visits, and thus disrupted a promising movement associated with Christmas Evans in N. Wales, yet the Scotch Baptist group had shrunk greatly. The third group, the Disciples of Christ (*q.v.*), sprang from American influences, and the vigorous efforts of these for reunion have succeeded in amalgamating the others.¹

The chief ecclesiastical developments north of the Tweed² are described in the art. PRESBYTERIANISM. One movement, however, was away from that fold. From the United Secession Church in 1841 was suspended James Morison of Kilmarnock, whose views as to the universality of the Atonement, the nature of faith, and the work of the Spirit in salvation were not sufficiently Calvinistic. Three other ministers being also deposed, the four met in 1843 and formed the Evangelical Union of Scotland, for mutual aid and for training successors. They were soon joined by nine students from the Congregational Academy, and then by eight churches from the Congregational Union of Scotland. By 1889 there were nearly 100 churches, and seven years later these, with eight exceptions, joined the Congregational Union.

Among the Dutch there was no new religious movement till the 19th century. The churches then seemed to be settling into conventional respectability or moderatism, so that Mennonite, Lutheran, Calvinistic, and Arminian ministers began to interchange. The poet Willem Bilderdijk and the minister Hendrik van Cooek headed a conservative reaction which resulted by 1834 in a separation. Leave was obtained with difficulty to form a new Christelyke Gereformeerde Kerk, marked by intense study of the Bible, strict adhesion to the standards of Dort, and a certain mystical strain. A similar movement in 1880 coalesced twelve years later. Meanwhile many of the Boers in Cape Colony had joined this Dutch Reformed Church, which there became better known as 'Dopper.' In the mother-country there is a seminary at Kampen, and the adherents are about 4 per cent of the population, ranking next to the former State Church and the Roman Catholics.

It seems as if the centrifugal forces have now been largely spent, and it is obvious that strong forces are at work for integration. The barriers between the Calvinistic and the Arminian Baptists have been taken down both in England and in America; the divisions of Methodism hardly spread outside England, and are quickly being healed there; so too with Presbyterianism. International bodies have arisen to promote fraternal intercourse of the great churches of the same faith and order, and in every part of the British Empire conferences are being held to see how far the movement towards unity may go speedily. Under these circumstances it would appear that any small sect

which holds aloof is likely to become of mere local or antiquarian interest.

LITERATURE.—See the sources quoted throughout.

W. T. WHITLEY.

SECTS (Hindu).—1. Introduction.—The study of the Hindu sects presents difficulties of many kinds: the imperfect enumeration of these religious orders, the secrecy with which many of their rites of initiation and their ritual and devotion are conducted, the fact that the doctrines of some sects merge in or overlap those of others. But, if we are to arrive at any real knowledge of Hinduism as a religious system, it must be studied in its multitudinous sects. For a consideration of Hindu sectarianism see *ERE* vi. 700 ff., ix. 257, 619; and see separate artt. AGHORI, BAIRĀGI, GORAKHNĀTH, GORAKHPANTHĪ, GOSĀIN, KABĪR, KABĪRPANTHĪS, KARĀ-LINGIS, LINGĀYATS, NĪMĀVATS.

The difficulty of obtaining statistics of the religious orders is great.

It may be asked why, when the term [Hinduism] covers such a multitude of beliefs and diversity of races, an attempt has not been made to disentangle them by a return of sect. . . . In the first place, there is a bewildering maze of sects which overlap each other in a most extraordinary way. There are the two main divisions of Śaiva and Vaiṣṇava; and it has been said that all Hindus belong to one or other of these, but this does not seem to be correct. There is, for example, the Śākta sect, which owes its origin to the Tantrik developments that infected both Buddhism and Hinduism, chiefly in North-East India, about the seventh century of our era. This cult is based on the worship of the active . . . manifested in one or other . . . religion of bloody sacrifices:

down in the mediæval scriptures known as Tantras, in one of which it is expressly stated that the Vedas have become obsolete. It would be incorrect to treat the followers of this cult as Śaivas. The same remark applies to the Smārta [*q.v.*], Ganapatya and Saura [*q.v.*] sects, as well as to the numerous minor sects such as the Pāṇchīriya [*q.v.*] and Kārtābhaja, which it would be equally wrong to allocate to either of the above main heads. Secondly, there is the practical impossibility of obtaining a complete return of sect. Of the great mass of Hindus, only a relatively small minority belong definitely to special sects, and still fewer have any idea that their peculiar cult differentiates them in any way from ordinary Hindus.¹

Sectarianism, in fact, so far as the mass of the rural population is concerned, depends largely on the local Brāhmins who perform the rites of public and domestic worship. With this is coupled the easy toleration which the Hindu feels towards those whose beliefs and usages differ from his own.

There is no doubt a certain amount of hostility felt by the leaders and the inner circle of devotees against the adherents of their rival sects. It is due to this that devout Vaiṣṇavas of the Vallabhachari sect are careful that they do not pronounce the Gujarati word *śivavun*, "to sew," lest they may indirectly utter the name of Śhiva and show him reverence. The head of the Śaiva sect, the Shankaracharya of Dvārka, similarly shows hostility to the Swaminarayan and other Vaiṣṇav leaders, and the brawls between them sometimes result in legal notices, apologies, and even criminal proceedings. But beyond these lies the great mass of the people who, while showing special reverence to the god of their sect, their *iṣṭa deva*, worship also all the gods of the Hindu pantheon. A Śhiva Brahman, for instance, visits Śhiva's temples and also Vishnu *mandirs* and Mātā temples. A Vaiṣṇav makes obeisance to the Rama and Krishna idols of his sect, and also visits Mahadeo and Mātā temples, and similarly *Devī-upāsaks* (worshippers of the goddess Devī) have no objection to reverence Mahadeo or Krishna. The Gujarat Hindu is very religious and very tolerant. He worships not only his own and other people's gods, but also shows reverence to Musalman Pirs (saints) and Christian *padris*. He abstains from insulting the religious feelings of others, and avoids anything that may bring on him the wrath of any deity.²

Hence in this article no attempt can be made to give an exhaustive account of the doctrines and practices of Hindu sectarians; all that can be done is to classify the sects into a series of groups, based on the worship of the sectarian gods. These groups are: Śaivas, worshippers of Śiva-Mahādev; Śāktas, worshippers of various forms of the mother-goddess; Vaiṣṇavas, worshippers of Viṣṇu in his various incarnations (*avatāra*), especially those of Kṛṣṇa or Rāma; and some reference is made to those who worship a *guru*, or religious teacher.

¹ *Census of India, 1911*, vol. i. pt. I. p. 114 f.

² *Ib.* xvi. Baroda, pt. i. p. 74 f.

¹ The native movements are being investigated by T. Witton Davies of University College, Bangor, who expects to publish a short monograph through the Baptist Historical Society.

² See W. Grinton Berry, *Scotland's Struggles for Religious Liberty*, London, 1904.

2. The Śaiva sects.—The cult of Śiva, being in its nature colder and less ecstatic than those of his consorts or Viṣṇu, presents fewer sectarial developments.

Of these the more important groups—Aghorī, Gosāin, Lingāyat, Sannyāsī—are described in separate articles. The Daṇḍīs, who take their name from the wand (*daṇḍ*) which they carry, and the Vaiṣṇava Tridaṇḍīs 'are the only legitimate representatives of the fourth āśrama, or mendicant life, into which the Hindu, according to the instructions of his inspired legislators, is to enter, after passing through the previous stages of student, householder, and hermit.'¹ The term Paramahansa, 'the great swan' (which can separate water from milk, truth from falsehood), is a general title of notable ascetics of every sect, but it is specially applied to the higher grades of Sannyāsīs, and more particularly Daṇḍi Sannyāsīs. Members of these orders can attain this grade only after twelve years' probation; they devote themselves to the search for the supreme Brahma, without regard to pleasure or pain, heat or cold, satiety or want. In proof of having reached this ideal of perfection, they wander about in all weathers, and do not speak even to indicate any natural want; some even go about naked, affect to live without food, or eat only when fed by others; some refuse food unless they are fed by a virgin (*kumārīkā*) with her own hand; when they die, their corpses are buried or set afloat in a river.² For the Jogī, or Yogī, see artt. YOGA, YOGIN; H. A. Rose, *Glossary of the Tribes and Castes of the Punjab and N.W. Frontier Province*, ii. 388 ff.

In a lower grade are those who practise various kinds of disgusting mortifications.

'As a part of their *tapascharya* or austerities, some Sādhūs undergo many inconveniences, pains, and sometimes terrible tortures. Some called Panchatapas or Panchadhūni sit under the open sky girt about with five small fires.³ Sometimes only four fires are lighted, the sun overhead being regarded as the fifth one. Some sit and sleep on a bed of spikes, called *kanakasayā*; some, called Tharashri, stand leaning on some kind of rest for days or weeks together. Sādhūs known as Ūrdhhamukhī hang downwards from the bough of a tree for half an hour or more. Those known as Ūrdhvabāhu keep one or both their arms erect over head till they are reduced to a shrunken and rigid condition. Some practise *aṣṭadandata*, that is, applying the eight parts of the body—the forehead, breast, hands, knees, and insteps—to the ground, and thus measuring the ground, go on a long pilgrimage by slow and laborious marches. Some called Jaladāyī sit a whole night immersed in water. Some called Phalāhārī live upon fruits, others called Dūdhāhārī subsist on milk alone, while those known as Alonā never eat salt with their food. As aids to meditation, a number of āsan or postures, e.g. *padmāsan* or lotus posture, have been devised. Some Sādhūs perform pro-purificatory rites known as *neti karma*, drawing a thread through the mouth and one of the nostrils with the object of cleaning the nasal fossæ; *dhōti karma*, swallowing a long strip of cloth, and after it has reached the stomach drawing it out again with the object of cleaning out the stomach; *brahma dāntan*, cleaning the throat with a long and thin green stick used as a brush; *brajotē karma* and *ganesh kriyā*, for flushing the colon without instrumental aid.'⁴

3. The Śākta sects.—In the simplest acceptance of the term, Śāktism 'is the worship of force (Skr. *śakti*) personified as a goddess and subordinately in all women.'⁵

The best known Śākta sects are the Dakṣiṇāchārī, 'right-handed,' or more respectable group; the Vāmāchārī, 'left-handed'; and the Kaulā, 'belonging to a family, ancestral,' the extreme Śākta.⁶

¹ When the worship of any goddess is performed in a public manner, and agreeably to the *Vaidik* or *Paurāṇik* ritual, it

does not comprehend the impure practices which are attributed to a different division of the adorers of Śakti, and which are particularly prescribed to the followers of that system. In this form it is termed the *Dakṣiṇa* or right-hand form of worship. The only observance that can be supposed to form an exception to the general character of this mode is the *Bali*, an offering of blood, in which rite a number of helpless animals, usually kids, are annually decapitated.¹

The Vāmī or Vāmāchārī adopt a ritual of an unusual kind, and contrary to what they dare publicly avow. The practices of what are known as the Cholimārg or Kāñchulipanth, the 'boddice' sect, represent a form of debauchery which cannot be described.² The same is the case with the Kaul of Bengal.³

4. The Vaiṣṇava sects.—The cult of Viṣṇu, particularly in his manifestations as Rāma or Kṛṣṇa, has produced a number of sects, of which only a few examples can be given.

The Vaiṣṇavas are usually divided into four groups or sects (*sampradāya*), of which the most ancient and respectable is that of the Śrīsampradāyī or Rāmānujī, founded by Rāmānuja (*q.v.*), or Rāmānujāchārya, born in 1017 at Parambattur, near Madras. The distinctive mark of his teaching was his assertion of a triad of principles (*padārthatritiyam*): (1) the supreme spirit, Parabrahman or Īśvara; (2) the separate spirits (*chit*) of men; (3) non-spirit (*achit*). Viṣṇu is the supreme being; individual beings are separate spirits; the visible world (*drīṣyam*) is non-spirit; all these have an eternal existence and are inseparable. Yet *chit* and *achit* are different from Īśvara, and dependent on Īśvara.⁴

'This Sampradāya is divided into two sects, the Tenkalai and Vadakalai ['southerners' and 'northerners']. They differ on two points of doctrine which, however, are considered of much less importance than what seems to outsiders a very trivial matter, viz., a slight variation in the mode of making the sectarian mark on the forehead. The followers of the Tenkalai extend its middle line a little way down the nose itself, while the Vadakalai terminate it exactly at the bridge. The doctrinal points of difference are as follows: the Tenkalai maintain that the female energy of the Godhead, though divine, is still a finite creature that serves only as a mediator or minister (*parushakāra*) to introduce the soul into the presence of Deity; while the Vadakalai regard it as infinite and uncreated, as in itself a means (*upāya*) by which salvation can be secured. . . . The Vadakalai insist on the concomitancy of the human will in the work of salvation, and represent the soul that lays hold of God as a young monkey which grasps its mother in order to be conveyed to a place of safety. The Tenkalai, on the contrary, maintain the irresistibility of divine grace and the utter helplessness of the soul, till it is seized and carried off like a kitten by its mother before the danger that threatened it. From these two curious but apt illustrations the one doctrine is called *markata-kīṣora-nyāya*, the other *marjāla-kīṣora-nyāya*; that is to say, "the young monkey theory," the "kitten theory."⁵

Next come the Rāmānandī or Rāmāwat (*q.v.*), disciples of Rāmānanda, who is said to have been born in the 13th cent. A.D. They worship Viṣṇu in the form of Rāma, singly or conjointly with his wife, Sītā. His twelve disciples were drawn from all classes of Hindus, and among them Kabīr, Rāi Dās, and Tulasi Dās (*qq.v.*) are best known.

The sect known as Brahma Sampradāyī, Madhva (*q.v.*), or Madhvāchārī, owes its origin to Madhvāchārya, a S. Indian Brāhman, born in 1199. This sect is therefore popular in that part of India. Like other Vaiṣṇavas, Madhva identified Viṣṇu with the supreme spirit, as the pre-existent cause of the universe. But his special doctrine was duality (*dvaita*), as opposed to the non-duality of the opposing sect founded by the great Vedāntist, Sankarāchārya (*q.v.*).

The Vallabhāchārya (*q.v.*) or Gokulastha Gosāin sect was founded by Vallabhāchārya, who is said to have been born in the Champāranya forest, near Benares, in 1479. Its cultus is devoted to the

worship of Kṛṣṇa in the form of Bāla Gopāla, the child who played with the Gopis, or cow-herd maids of Mathura.

'Unlike other Hindu sects, in which the religious teachers are ordinarily unmarried, all the Gośāins among the Vallabhāchāryas are invariably family men and engage freely in secular pursuits. They are the Epicureans of the East, and are not ashamed to avow their belief that the ideal life consists rather in social enjoyment than in solitude and mortification. . . . The scandalous practices of the Gośāins and the unnatural subserviency of the people in ministering to their gratification received a crushing *exposé* in a *cause célèbre* for libel tried before the Supreme Court of Bombay in 1881.'¹

5. Sects of modern origin.—The vigorous growth of sects in modern times may be illustrated by a few examples out of many.

The Kumbhipatiā sect, founded by Mukund Dās in Orissa, first attracted attention about 1874. Their name is derived from the practice of wearing the bark (*pāt*) of the yellow cotton-tree (*kumbhī*). Their founder was inspired with the idea that, if the image of Jagannāth were destroyed, it would convince the Hindus of the futility of their religion. As a result of this teaching, a band of his followers made an ineffectual attack upon the temple. There seem to be traces of Buddhism in this cult, with a substratum of phallism, and a strong antagonism to Hinduism and to Brāhmins.²

Guru-worship appears among the Rāmdē Pir sect. The members worship a horse named after their founder, along with his foot-impressions (*pādūkā*), before which incense is burnt, and a lamp fed with butter is kept burning.³ Other sects display a curious combination of Christian with Hindu or Musalmān doctrines and practices.

In the Panjāb the Chetrāmī sect, founded by Chetrām († 1894), recognizes a Christian Trinity consisting of Jesus, the Holy Spirit, and God, while a second consists of Allāh, Paramēśvar, and Khudā, Creator, Preserver, and Destroyer, based on the Hindu conception of Brahṁā, Viṣṇu, and Śiva. They often carry a long rod surmounted by a cross, and practise a form of baptism. The sect is said to be persecuted by both Hindus and Muhammadans.⁴ Still more remarkable is the Nikalsaini or Narangkariā sect, which sprang up in the Panjāb after the defeat of the Sikh army at the battle of Gujrat in 1849. In order to secure the patronage of the celebrated General John Nicholson, who fell at the siege of Delhi in 1857, they attached themselves to him and took his name, though he is said to have flogged some of the members for their audacity. It is doubtful whether there was actually a cult of Nicholson, and the sect does not appear in recent returns.⁵

6. Sectarian marks.—Each sect uses as its outward symbol a mark (*tilak*) usually made on the forehead.

In the Central Provinces that of the Śaivas, which is believed to be of phallic origin, consists of two or more horizontal lines with or without a dot below or above the lines or on the middle line, and with or without an oval or half oval, a triangle, a cone, or any other pointed or arched figure having its apex upwards. The figure of a crescent moon or that of a trident (*triśūla*) also marks some Śaivas. These marks are made by hand or by metallic stamps with ashes collected from the sacrificial fire, or from burnt cow-dung, sandalwood paste, or turmeric steeped in a solution of lime-juice and saltpetre. The ashes used are said to represent the disintegrating force associated with Śiva. Vaiṣṇavas usually make two perpendicular lines on their foreheads with or without a dot or circle between them. They also mark on their bodies the emblems of Viṣṇu: the discus (*chakrā*),

the conch (*sankhā*), the mace (*gadā*), and the lotus (*padmā*). They have other signs which are coloured red, yellow, or black, and are made with sandalwood paste or charcoal taken from a fire in which incense has been burned before an image. Clay brought from sacred places is also used in the same way, especially by the lower castes, as sandal is considered to be too holy for them. Separate marks also indicate the subdivisions of the Vaiṣṇava sects. Thus, among the Rāmānujas, the Vādakalai, or 'northerners,' make a simple white line between the eyes, curved like the letter U, to represent the sole of the right foot of Viṣṇu, and a central red mark emblematical of Lakṣmī, while the Tenkalai, or 'southerners,' have a more complicated device symbolical of both feet of the god, which are supposed to rest on the lotus. The complete Tenkalai symbol has the appearance of a trident, the two outer prongs painted with white earth standing for Viṣṇu's two feet, the middle painted red for his consort Lakṣmī, and the white line over the nose representing the lotus. The sect marks of Madhvās and Vallabhās are the same as those of the Vādakalai, but the Madhvās, instead of a red line in the centre, have a black one made with charcoal taken from incense burned before an image of Viṣṇu. Vaiṣṇavas also brand their breasts, arms, and other parts of their bodies with stamps representing the two chief emblems of Viṣṇu, the lotus and the conch shell. These instruments are made of copper, brass, or silver, and are heated to a temperature sufficient to singe the skin and leave a deep black mark on it. These brandings are done chiefly at holy places like Dwārka, Brindaban (*gg.v.*), and Udki. The Śāktas have no distinctive marks, using those of the Śaivas.¹ There are local variations in other parts of the country.²

7. The character of the ascetic orders.—Many members of these orders are men of high character, learned students of Indian theological literature, and, as *gurus*, or religious preceptors, exercise a healthy influence over their disciples. But the character of some sects is indifferent.

'Looked at with the light of common sense and unbiased judgment, the net result of their so-called reformation is that they let loose on society an army of able-bodied beggars, with the most preposterous claims on the charity and the reverence of the laity. Moral teaching of any kind seldom forms a part of the programmes of our prophets. They teach their followers to sing some songs which either tend to corrupt their morality, or to make them indifferent to work for the production of wealth. The most important part of the discipline enforced by our "incarnations" on their lay followers consists in requiring them to paint or brand their bodies in some particular manner, and to show every possible honour to their spiritual guides and to the begging mendicants. The monks and nuns of every sect are only so many licensed beggars.'³

LITERATURE.—The best general accounts of Hindu sects are those of H. H. Wilson, *Select Works*, i. London, 1861, and Jogendra Nath (Bhattacharya), *Hindu Castes and Sects*, Calcutta, 1896. Much information will be found in older works, such as W. Ward, *A View of the History, Literature, and Mythology of the Hindoos*², 2 vols., Serampore, 1815-18, and J. A. Dubois, *Hindu Manners, Customs, and Ceremonies*³, Oxford, 1906. Among modern works the following deserve mention: H. A. Rose, *A Glossary of the Tribes and Castes of the Punjab and N.W. Frontier Province*, vols. ii. and iii., Lahore, 1911-14; R. V. Russell, *The Tribes and Castes of the Central Provinces of India*, 4 vols., London, 1916; E. Thurston, *Castes and Tribes of S. India*, 7 vols., Madras, 1909; W. Crooke, *The Tribes and Castes of the N.W. Provinces and Oudh*, 4 vols., Calcutta, 1896; H. H. Risley, *The Tribes and Castes of Bengal*, 2 vols., do. 1891; BG, esp. ix. pt. i. (1901); F. S. Growse, *Mathurā's Allahabad*, 1883; J. C. Oman, *The Mystics, Ascetics, and Saints of India*, London, 1903. The following reports of the Census of India are valuable: Punjab: *Census of India*, 1891, xix.; *Census of India*, 1901, xviii.; *Census of India*, 1911, xiv. 2 pts.; Bengal: *Census of India*, 1901, vi.; *Census of India*, 1911, v. 3 pts.; Baroda: *Census of India*, 1901, xviii.; *Census of India*, 1911, xvi. 2 pts.; Central Provinces: *Census of India*, 1911, x. 3 pts.

SECTS (Jewish).—Since the reorganization of Judaism after the destruction of the Temple by the Romans there has been little or no sectarianism, in so far as the monotheistic principle of Judaism is concerned. There have been groups which bear some of the marks of sects, but they deserve to be described rather as parties, which indeed have often been divided as regards very important concerns of the religious life. There is, however, no general term in Rabbinic Hebrew for 'sect' corresponding to the *αἵρεσις* of Josephus.¹ Josephus treats the groups in Judæa less as political parties than as philosophical schools. In the new Hebrew the word *kath* (קַת) denotes 'class,' 'band,' and only rarely 'sect' in the earlier literature. Similarly with *aguddah* (אֲגוּדָה), which denotes 'party' on the disruptive side, just as *haburah* (חֲבִירָה) denotes it on the side of 'union.' In modern Hebrew the Biblical word *miphlagah* (מִפְלָגָה) is often employed both in the wider sense of 'party' and in the more specific sense of 'sect.'

In ancient Palestine there co-existed a number of local cults, and North and South (Israel and Judah) were divided religiously as well as politically. Within each division there were groups of devotees, such as Nazirites (*q.v.*), prophetic guilds, Rechabites (*q.v.*) whose existence as late as the 12th cent. is recorded by Benjamin of Tudela, and even castes such as the Nethinim (*q.v.*). The resettlement after the Babylonian exile gave importance to the Samaritans (*q.v.*), afterwards divided into groups, among them the Dositheans. There may also have been proselytes of incomplete degree, though here the difference was of the nature of variety in status and obligation rather than sectarian.

With the later part of the Greek period the most famous parties, often described as sects, appear. The Hasidim played a conspicuous part on behalf of the Maccabean rising,² while the Hellenists to a certain extent went into opposition. Not that this opposition lacked complexity. For Freudenthal has shown that there were 'orthodox' among the Hellenists, while Philo as a Hellenist denounced some of the antinomianism of his class. According to some authorities, the 'fearers of God' mentioned in various late passages of the OT were Greeks who adopted monotheism. Others consider the title a synonym for 'proselytes.' The Pharisees and the Sadducees (*qq.v.*) (of whom the Boethusians were a subdivision) then came into vigorous life. Whether there was a Zadokite sect (similar to the Samaritan or Sadducean Dositheans) at the early period is still a matter of controversy. Side by side with these were the Essenes (*q.v.*), who have their counterpart in Philo's Therapeutæ (*q.v.*) and similar Egyptian groups, including the Abelites. The Pharisees, it is generally held, should hardly be considered a sect, as they gradually absorbed a preponderant majority of the Jews. During the Roman War there came into temporary being parties such as the Zealots (*q.v.*) and Sicarii, which, however, were mainly political groups.

With the birth of Christianity (which was regarded by the Romans as a sect of Judaism) we are met by the Judæo-Christian sect, known as *Mīmim*.³ This term also applies to Gnostics (*q.v.*), some of whom were pre-Christian. They are described under various titles—Naasseni, Elkesaites (*q.v.*), Cainites, Ophites (*q.v.*), and so forth. The Judæo-Christians also assumed various designations such as Nazarenes, Ebionites (*qq.v.*). It is very doubtful whether we should regard the Epicureans⁴ as a heretical sect.

With the 7th cent. arises the great Karaite (*q.v.*) schism, which has some affinity with Sadduceism. In Persia a sect of 'Isavites' (an offshoot of these were the Yudghanites) was a forerunner of Karaism. Within the Karaite body there were also many subdivisions. In contrast to the Karaites the great bulk of traditional Jews are known as Rabbanites. There were also wide differences within the Rabbanites, especially from the 12th cent. onwards, as regards the pursuit of metaphysics; the Maimonists and anti-Maimonists were respectively the friends and foes of this study, which was so prominently advanced by Maimonides (*q.v.*). Then the development of the Kabbala (*q.v.*) led to the growth of various groups of mystics, the Hasidim of the 18th cent. being the most important. Earlier the great Messianic movement of Shabbathai Sebi¹ had separate consequences, so that, even apart from the Frankists, one might almost speak of the Shabbathian sect (who are not to be confused with the Sabbatarians). The Shabbathian movement has left permanent traces, for there are descendants of the adherents to Shabbathai in the Donmeh of Salonica. Similarly, the Chuetas of Majorca have left their modern offspring. These were the result of the work of the Inquisition, which led to various groups of Crypto-Jews, more particularly the Maranos, who conformed externally to the Church but remained secretly Jews, often with debased theology, waiting for a favourable opportunity to throw off the mask. There had earlier been a similar phenomenon of Crypto-Muhammadans. There have been groups, similar to the pre-Islamite Jewish communities in Arabia, which are ethnic rather than sectarian (as, e.g., the Chazars, the Krimchaki of the Crimea, the Daghatuns of the Caucasus, the Falashas of Abyssinia,² and the Cochin Jews³). These are sometimes described in religious terms. Thus in China the Jews were the Tiao Kiu Kiaou ('the sect which extracts the sinews' [Gn 32³³]), and the Bene-Israel (*q.v.*) of Bombay were called the Shanvār Teli ('Saturday oil-pressers') in allusion at once to their occupation and to their ritual.

Within the Synagogue there grew up varieties of rite (*minhag*) as between Palestine and Babylonia, and these perpetuated themselves between the Westerns (Ashkenazim) and Easterns (Sephardim). These differences do not constitute sectarianism, and they co-exist (with many others) in the same communities. Similarly it is inappropriate to describe the post-Mendelssohnian *haskalah*, or the modern liberal movements, as sectarian.⁴

LITERATURE.—W. Bacher, 'Qirqlsan, the Qaraites, and his Work on Jewish Sects,' *JQR* vii. [1894] 687-710; S. Schechter, *Documents of Jewish Sectaries*, 2 vols., Cambridge, 1910; artt. in *JE* on the various sects named; H. Graetz, *Hist. of the Jews*, Eng. tr., 5 vols., London, 1891-92 (see Index, American ed., 6 vols., Philadelphia, 1891-98, s.v. 'Sects'); the historical works of M. Jost, though superseded by that of Graetz, are still of value. It is important to note the title of his work: *Gesch. des Judenthums und seiner Sekten*, 8 vols., Leipzig, 1857-59. Some interesting sketches of modern Jewish communities may be read in E. N. Adler, *Jews in Many Lands*, London, 1905. I. ABRAHAM.

SECTS (Russian).—I. RASKÓL.—I. The term and its signification.—The term Raskól ('separation,' 'schism,' 'dissent') is applied in Russia to those ecclesiastical groups and organized communities which took their rise in the 17th cent. in consequence of the liturgical reforms introduced into the Church of Moscow by the patriarch Nikon (1652-58), and which in part still maintain their separation from the Russian Orthodox State Church. These bodies are more correctly de-

scribed as 'the Raskól of the Old Ritual'; they call themselves Old Ritualists or Old Believers (*Starobryjádsi, Starověri*), claiming to be the true heirs of the Old Muscovite Church as it was before Nikon introduced his reforms. Since that Church, however, was the Orthodox Church (*Pravoslávnaia Zerkovj*), Old Ritualism really asserts—as against a State Church which has departed from the true faith—that it alone is the Orthodox Church, that in fact it is *the* Church, the true Catholic and Apostolic Communion, in relation to which all other ecclesiastical bodies are heretical.

The rise of this powerful dissenting movement was due, as indicated above, to a liturgical reform. In the Eastern Church, however, and especially in the Russian Orthodox Church, the distinctive quality of religion consists in ritual,¹ and no line of demarcation is drawn between ceremony and doctrine. Hence any attempt to alter the outward form of worship was to admit that the Church had erred, and could therefore no longer claim to be the infallible vehicle of divine salvation. Church and dissent were here at one. Previous changes had claimed to be simply a restoration of the original forms; and Nikon's reform purported to be no more; it was merely more thorough-going and more extensive. Nikon himself shared the prevailing conviction that the true character of the Church found its sole warrant in the 'orthodox' ritual. To ascribe to him a more liberal attitude towards the cultus is to show a complete misunderstanding of the matter at issue. To us the warring parties may seem to be fighting about trifling liturgical points; to themselves the very nature and standing of the Church were involved. It was this fact that made the conflict so bitter and ruthless; and thus it was no original divergence of opinion, but rather the long-continued strife, that at length generated unmistakable differences in the character of the two parties—differences in their religious spirit, their temperament, and their mental tendencies.

2. Inadequate explanations.—The usual theory has been that the schism was due to the blind dependence upon tradition, the ignorance, and the fanaticism which, as was almost natural in a predominantly ritualistic communion of that age, characterized the Muscovite Church. Nikon's reforms seemed akin to the work of the Illumination, and were therefore suspect from the outset, so that resistance was certain. Such is the explanation given by most Russian writers on the subject, and it might indeed be called the 'official' theory, i.e. the theory hitherto current among the authorities of both Church and State. It is nevertheless quite inept. For one thing, it fails to explain how the reforming party could have diverged so far from the principles of their Church as to propose the changes in question, and how, again, the resistance to the changes developed into a movement without parallel in Russia. The cardinal defect of the theory, however, is its failure to recognize the undoubtedly religious forces which lay at the root of the Raskól.² Finally, the hypothesis of mere ignorance and fanaticism is confuted by the facts of history. In Russia historical investigation of the Raskól has all along been cramped and fettered by the obstructive attitude of the authorities, and the State Church was quite content with a view which saw in the movement a merely mischievous revolt against the Church and the justifiable changes introduced by its former patriarch.

¹ See art. RUSSIAN CHURCH.

² It is in view of this religious factor that, in opposition, e.g., to F. Kattenbusch (*Lehrbuch der vergleichenden Confessionskunde*, Freiburg, 1892, i. 235), we regard the Raskól as well worth the attention of Western learning.

Russian scholars themselves felt that the theory was inadequate, and sought other explanations; but, while they produced many interesting and ingenious hypotheses, they consistently undervalued the historical material and its investigation, and their work was stimulative rather than fruitful in positive results. Thus, for instance, Old Ritualism was capriciously brought into connexion with previous heretical movements in the Russian Church;³ or its political aspect was accentuated;⁴ or the social factor in its rise was unduly emphasized;⁵ or, finally, attempts were made, under the powerful advance of Russian nationalism from 1870 onwards, to represent it as a product of the distinctively Russian spirit, i.e. of independent and genuinely native beliefs in the religious sphere.⁶

3. The Russian Church prior to the Raskól.—In order to gain a proper understanding of the rise of Old Ritualism, we must glance at the history of the Russian Church before the 17th century.

(a) *Alliance with national sentiment.*—Russia was evangelized from Byzantium, and for centuries the Russian Church was entirely under the Byzantine influence—organized by immigrant Greeks, governed by the Greek metropolitans of Kiev, and subject to the ecumenical patriarch, who nominated these metropolitans. As was inevitable, the influence and predominance of the Greeks declined and at last passed away. Their position in the Church was irreconcilable in particular with the rise of a strong native State, which made Moscow its capital. The Church itself succeeded in making a close alliance with the national movement, and its complete emancipation from the authority of Byzantium was only a matter of time. Nor could the princes of Moscow in common prudence leave the choice of the metropolitans in the hands of the patriarch of Constantinople, who frequently acted with an eye to his own advantage. Moreover, the political and ecclesiastical conditions of the Byzantine empire were not such as to evoke the respect of the Russians. Thus the Church of Moscow was in the way of becoming autocephalous—a natural process, but in this case complicated by the attempts then being made to unite the Greek Church with the Roman.

(b) *Growth of anti-Greek feeling.*—Among the members of the Reunion Council held at Florence in 1439 was Isidore, a Greek who had shortly before been elected metropolitan of Moscow. He was in favour of the union between Constantinople and Rome, and on his return to Moscow tried to carry it into effect there. Among the Russians, however, whom the Greeks had taught to regard the Roman Church as impiously heretical, the bare mention of union raised a perfect storm of indignation. Then Prince Vassilij of Moscow, himself apprehensive of the Florentine Union, appointed—only indeed after long hesitation—the first autocephalous metropolitan of Russia (Jonas, bishop of Riazan, 1448). Although the Florentine Union was, as regards Byzantium, barren of all practical result, it generated among the Muscovites the too-welcome conviction that the Greeks had become the betrayers of orthodoxy and had sold themselves to the Latins. This belief firmly held its ground in Moscow until the 17th century. The capture of Constantinople by the Turks and the fall of the Byzantine empire were regarded as confirming it: God's righteous judgments had fallen upon a faithless people. The belief served as a formula which at once explained the divergence, mainly liturgical, of the Greek Church from the Muscovite, and harmonized with the spirit of self-reliance now found in Moscow. All these circumstances conspired to develop an excessive ecclesiastical and national pride among the Muscovites, prompting them to look down upon the Greeks with scorn, and to regard themselves as the only orthodox and God-pleasing people on earth, and, steeped in self-complacency and crude superstition, they sank deeper than ever in mere stagnation and torpidity.

(c) *The idea of 'the third Rome.'*—Belief in the Greek apostasy and the fall of the Byzantine empire served to create still another idea, the importance of which in Russian life can hardly be exaggerated—the idea of Moscow as 'the third Rome.' Muscovy was now the only orthodox country in the world. The prince of Moscow was thus the legitimate successor of the Byzantine emperor. By God's unchangeable decree the Roman emperor was still the defender of the orthodox Imperial Church. But by reason of Rome's unfaithfulness the headship

³ A. Shtchapov, *State and Raskól* [Russ.], 1862 (never completed because of the author's banishment to Siberia); W. Andrejev, *The Raskól and its Significance in the History of the Russian People* [Russ.], Petrograd, 1870.

⁴ Cf., e.g., J. Jüsov, *The Russian Dissenters, the Orthodox and the Spiritual Christians*, Petrograd, 1882; A. Prugavin, *Raskól and Sectarianism in the Life of the Russian People*, Moscow, 1905, *Old Ritualism in the latter Half of the 19th Century*, do. 1904 [all Russ.].

of God's kingdom upon earth had passed over to 'the second Rome,' Byzantium, and, in turn, to the princes of Moscow. Thus these princes (and later the tsars) laid claim to the hegemony of the world. Nor was this merely the overweening belief of politicians and ecclesiastics; it came to be a conviction of the whole people. It was largely fostered by an apocalyptic conception then prevalent in Russia, viz. that Moscow was not merely the third but the *final* Rome. Should Moscow fall away, as Rome and Byzantium had done, then the dread end of all things would be at hand; Moscow was the *καρέων* of 1 Th 2^o, and its constancy and faithfulness protected the world against the irruption of the divine judgment. It was under the dominance of the idea of Moscow as the third Rome that Ivan iv. (the Terrible) adopted in 1547 the title of tsar; and on the same ground was established the patriarchate of Moscow, since the orthodox emperor must by divine decree have at his side the imperial patriarch. It remains merely to emphasize the fact that this idea, besides enormously intensifying the national self-esteem, added powerfully also to the Church's sense of its importance. It also greatly strengthened the impression that only by rigid adherence to perfect orthodoxy—i.e., in especial, absolute ritualistic purity—could the empire maintain its sovereign claims. Heresy of every kind, even the slightest liturgical departure from 'the faith of the fathers,' was not only a blow at the Church, but also a menace to the supremacy of Moscow as the third Rome.

(d) *The demand for social improvement.*—The accession of the second Romanov, the youthful Alexis (1645-76), saw the emergence of forces which gravitated towards a remodelling of the whole State, and the removal of the rigid barriers which hitherto had shut Moscow off from all non-Russian civilization. The appalling despotism of Ivan iv. († 1584), the extinction of the Ruric dynasty, and the anarchy during the interregnum (1610-13) created a sense of dissatisfaction with existent forms of life and a feeling of insecurity. Projects for ameliorating the life of the people by culture and education had now the support of the court.

(e) *The rise of a pro-Greek attitude and the opposition to it.*—But what concerns us in this connexion is the fact that the tsar and his entourage completely changed their attitude towards the Greeks, the orthodoxy of whom they now once more admitted. Our knowledge of how this was brought about is naturally rather meagre; we simply find ourselves before the accomplished fact. From about 1648 a more conciliatory attitude towards the Greeks becomes clearly noticeable at court, and was in part due to certain Greek hierarchs then present in Moscow, notably Paësius, patriarch of Jerusalem. He and others believed that in supporting the philo-Greek influences at the court of Moscow they were working in the interests of their own country, and, in particular, furthering the project of using the Russians to deliver Constantinople from the Turks and to restore the Greek empire. Paësius frankly announced this plan in his first interview with the tsar. He expressed the wish that God might assign to the tsar 'the highly exalted throne of the great emperor Constantine, your ancestor,' and that the tsar might, 'like a new Moses, liberate the faithful from the Turkish yoke. The tsar and his counsellors could not but be impressed; they resolved upon an alliance with Greece and Greek culture, and coupled with this the idea of the third Rome in the sense that the liberated and restored Byzantium should have the Muscovite tsar himself as its head. These designs were not without a certain grandeur. They might be made a powerful instrument in breaking down the popular prejudice against the Greeks. It was forgotten, however, that, to the popular mind, the acknowledgment of Greek orthodoxy could not but seem an abandonment of the idea of the third Rome, or even a lapse of Moscow into the heresy so fatal to the Greeks. 'The third Rome,' hitherto a religious conception, had now become a political one.

(f) *Efforts to win the clergy for the pro-Greek attitude.*—If the cause was to succeed, it had to win the support of the Church. This was far from easy; for in the clergy was concentrated all the racial and religious conceit of the Muscovites. Thus a group of priests who had gathered round the tsar's confessor, the philo-Greek Vonifátjev, and who were earnestly bent upon social and religious betterment, were altogether unaware of the philo-Greek aims of the court, and, as was subsequently seen, were simply steeped in the traditional prejudice against the Greeks. It was from this group that the later leaders of the Raskól were drawn—its proto-popes (chief priests, proto-presbyters) Ivan Nerónov, Avvakúm, and others—and to it belonged also the archimandrite (abbot) of the new Monastery of the Saviour in Moscow, Nikon, who (born in 1605, of peasant parentage, at Veljémánovo in what is now the government of Nishni Nóvgorod) had risen by his undoubted ability and his vast energy to a position in which he had the tsar's intimate friendship and confidence. Nikon, however, was won over by the pro-Greek party—a fateful event, for the tsar believed that he was precisely the man to carry out the plans of reform. Having been appointed in 1649 metropolitan of Nóvgorod, the leading diocese of Russia, he was in a manner designated as the successor of the incompetent patriarch Josiph, and the vigour and ability of his administration added to his prestige alike at court and throughout the Church.

The tsar, however, could not yet prosecute his ends publicly, and meanwhile sought to prepare the way. His principal agent in the process is said to have been a Muscovite monk named Arséní Suchánov, a man of outstanding culture and of great influence in the Church. In the summer of 1649 this monk was sent to the East, accompanied by Paësius (who was returning to Jerusalem), to form a final opinion regarding the Greek Church

and to lay this before the tsar. On his return he handed to the tsar a written account of his discussion with the Greek divines at Térgovite in Moldavia—*Prénje s Grekami* ('Controversy with the Greeks'). His verdict was altogether adverse, confirming the views generally prevalent in Moscow. Now, in thus employing Suchánov, did the tsar and his intimates really desire to obtain an impartial judgment regarding the Greeks before launching their pro-Greek policy? If so, it is strange that Suchánov's verdict had no effect. What was the actual object of that mission? The only adequate answer is that the philo-Greek party hoped for a reversal of Suchánov's views under the influence of the shrewd and capable Paësius. In that case they would be able to claim that a recognized authority of the Muscovite Church had now discerned the baselessness of the prejudice against the Greeks. Doubtless the tsar and his advisers were bitterly disappointed, and, if Suchánov did not fall into disfavour, it was owing to a circumstance of interest to us at this point. In his *Discussion* he had set forth the theory of the third Rome quite unambiguously, affirming that the authority of the empire had been definitely transferred to Moscow, and that the patriarch of Moscow was now the chief bishop of the Church. The pro-Greek party, while not conceding Suchánov's reason for supporting that theory, viz. the apostasy of the Greeks, were not disposed to disown so forceful a champion of the supremacy of Moscow.

4. *The real origin of the Raskól.*—Now the deeper cause of the Old Ritualistic movement was this change of attitude on the part of the leading political and ecclesiastical authorities towards the Greeks and the Greek Church, and their endeavour to apply their pro-Greek views in the work of reforming the Church of Moscow. The reform roused the fanatical opposition of the conservative classes, who, believing that they were defending the orthodoxy of the Church as well as the stability of the throne, and desiring to save their metropolis from the fate of Rome and Constantinople and avert the terrors of the Last Judgment, resisted with such vehemence that a conflict of unparalleled passion and virulence was the result.

5. *How the reform was carried out.*—(a) *Nikon's methods.*—On the death of Josiph (15th April, 1652) Nikon was appointed patriarch, and was consecrated on 25th July; his promotion was approved even by those among the Old Ritualists who became his bitterest enemies. The pro-Greek party at the court had thus gained their end; the elected head of the Church of Moscow was ready to carry out their plans. Nikon set himself to the work with a will. He acted with unexampled brutality, trampling upon all opposition, and ignoring the religious feelings of the people.

His ruthless methods cannot be explained wholly by his character, though he was certainly a man of harsh and rigid disposition, without patience, without the capacity of truly estimating his opponents. The deeper explanation of his actions is twofold: (1) in spite of his devotion to the cultus, he was not a man of truly religious temperament; (2) the reform was for him only a means of attaining certain ends of a politico-ecclesiastical character, his real object being to strengthen the authority of the patriarchate, even against the monarchy itself.

Thus, when Nikon entered upon office, he exacted with the sanction of the tsar an oath of inviolable obedience from the boyars and the synods. The tsar would doubtless regard this as merely a preparatory step to the work of reform, but Nikon had something more in view. The great aim of his administration was to liberate the hierarchy of Moscow, which had hitherto been a passive instrument of the monarch, and to get the reins of power into its hands. In the patriarch, as set forth by Nikon, is concentrated a power not less than divine; in him lies the source of all political and monarchical authority. Nikon exploits the theory of the third Rome by regarding the patriarch of Moscow as having been proclaimed the supreme hierarch of Christendom; and, if the tsar should become the recognized head of the world empire, what would be the position of the patriarch, the occupant of the sacred office from which were derived the jurisdiction, power, and authority of tsar and State alike?

(b) *His guiding principle.*—Nikon was no sooner installed in office than he began his revision and correction of the liturgical books. His guiding

principle was to substitute the Greek liturgical practice of the day wherever it differed from the Muscovite. In Moscow scholars had long been engaged with the variant and often inaccurate texts, but all attempts to construct a correct and uniform edition had been thwarted by the general lack of education and also by the prevailing belief that there was one original sacred text, which required only to be restored. This belief was associated with another, viz. that in the ritual there could be but one single 'true' form, which was likewise the original; this had been given by God, and any departure from it impaired its sacred and sanctifying power, and might even obstruct the divine activity conjoined with it. 'It is the duty of all of us, as orthodox Christians'—so writes a leader of the Raskól, the relatively enlightened deacon, Feódor—'to die for a single A' (in the liturgical texts). As regards the question of different versions and various readings—natural in a liturgy so extensive and of so long a growth—the Muscovites scorned the very thought of a historical account of the liturgy: there could be but one form. By what means, then, was a uniform text to be secured? By going back to the sacred original, said the Muscovites, quite unaware that no such original existed. Such views, of course, excluded the very possibility of emendation; all that could be done was to eject the more glaring blunders.

Even so the cry of heresy was always ready to break out. Thus, at the beginning of the 16th cent., the Greek monk Maximos, a learned and noble-minded man, who had sought to rectify the formularies, was condemned by two synods (1525, 1531), and spent 28 years in a Moscow prison. In 1551 'the Hundred Chapter Synod' (held at Stogláv) ordered the priests to have the texts copied only from 'good' models, thus showing its own incapacity to deal with the prevailing confusion. The establishment of the first printing press in Moscow (1563) merely increased the disorder. Under the first of the Romanovs, Michail, the printing of the liturgical texts went assiduously forward, but only multiplied the variant editions. When Dionissi, abbot of the Trinity Monastery near Moscow and a cultured Greek scholar, constructed an emended text on the basis of the Greek form, he and his two assistants were convicted of heresy by a
The texts brought out ur
Joasaph I. (1634-40), and
uniform, and did nothing to relieve the situation.

Nikon's emendation, on the other hand, had a prospect of success, since it followed a definite principle. But to the Muscovites the principle itself could not but be obnoxious. In face of this difficulty Nikon committed the blunder of giving an influential position in the work of revision to a Greek monk named Arsénios.

This Arsénios was proficient in the Slavic tongues, but otherwise an arrogant adventurer. He had been a pupil of the Propaganda in Rome, but had been reconciled; had subsequently gone over to Islám and been reconciled again; and then, on coming to Moscow to seek his fortune, had been thrown into prison. The work of revision was thus discredited from the outset.

(c) *His first proceedings.*—Shortly after the beginning of the Easter fast of 1653 Nikon began the work of changing the ritual by issuing a decree substituting the Greek mode for the Muscovite in two rites, viz. the practice of bowing during a certain prayer (that, so called, of Ephraem Syrus) and the sign of the cross. In Moscow the sign of the cross was performed by two fingers of the right hand (representing the twofold nature of Christ), while in the Greek Church three fingers were used (representing the Trinity). In Moscow, moreover, the sign of the cross was in many cases the only act by which the uncared-for masses could manifest their religion and take part in worship; it was regarded as sacrosanct and inviolable; in its genuine form, as was said by a later writer among the Old Ritualists, was contained 'the whole secret of the faith.' Nor need we wonder at this, when we learn that the synod of 1551 had decreed as follows: 'If any one does not bestow his blessing

with two fingers, as Christ did (!), or does not make the sign of the cross [in the same way], let him be accursed.' Thus Nikon's innovation seemed to expose believers to the Church's anathema; the Church was being betrayed by her own patriarch!

(d) *Clerical opposition.*—Hostility broke out at once, and was so vehement as to compel Nikon temporarily to desist; and it was not till 1656, when he was at the height of his power, that he sought to enforce the change in the sign of the cross. The rising opposition, however, revealed the malcontents. It had its source in the Vonifátjev group referred to above. Vonifátjev himself, it is true, shared the pro-Greek sentiments of the patriarch, and remained silent; but his friends raised a protest. Nikon did not hesitate to rid himself of these adversaries by degradation and the ban. Nerónov was excommunicated, Avvakúm was sent to Siberia; the group was broken up; Nikon had triumphed. But his ruthless policy was ill-advised, for these revered men, thus dispersed throughout the country, carried the opposition to the most remote places, and everywhere evoked fresh loyalty to the old rites. They now belonged to a class which in Russia has never failed to exercise a great influence—the class of 'sufferers,' those who bear injustice in silence.

In face of the growing resistance Nikon found it advisable to convene synods to give countenance to his measures. The first of these was held at Moscow in March or April 1654, the tsar being present, and this was followed by a series ending with the Great Synod of 1666-67. At the synod of 1654 the patriarch was supreme and despotic. In his inaugural address he summoned the assembly to make the 'divine law' operative in the Church of Moscow, to restore that Church to its pristine glory, to cancel all the 'innovations' that now disfigured it, the 'innovations' specified being all of a liturgical character and of little or no significance. The main point, however, was the reforming principle, for which Nikon obtained the sanction of the synod. This was that the 'Greek and Old Slavonic' books were to form the standard. In point of fact, however, it was only the Greek texts then in use in the Greek Church that Nikon had in his mind. The synod was a mere blind. The presence of the tsar, and his supporting vote, made opposition difficult. Pável, the revered bishop of Kolomna, who ventured very cautiously to express an opinion at variance with Nikon's, was dismissed from office, and finally banished. Here again Nikon showed his imprudence, for he furnished the adherents of the old institutions with a martyr.

(e) *Popular opposition.*—Opposition was not confined to the clergy. The course of events shortly after the synod of 1654 shows that a vague antagonism was stirring the masses, and that the soil was being prepared for the astonishingly rapid up-growth of the Raskól.

In the late summer and autumn of 1654 Moscow was stricken with plague. The tsar had taken the field against the Poles, and the court, including the patriarch (who was also vicegerent), had left the city. Now Nikon, immediately after his accession to office, had started a campaign against the so-called 'Frankish' pictures of the saints, i.e. such as were not Byzantine, but painted from Western models. These his agents searched out, and destroyed or disfigured. On 25th August an excited mob appeared in the Kremlin carrying icons that had been disfigured by Nikon's orders; their fury was directed against him as the arch-iconoclast, and against the printing establishment where heresies were under his direction foisted into the liturgical texts. It was on his account that God had sent the plague! This disturbance

tion; and communion might be replaced by the desire for it ('spiritual communion'). This again was brought into logical connexion with the doctrine that the kingdom of Antichrist was at hand. The priesthood, originally a gift of God's grace, had been destroyed by Antichrist, as was to be expected in the tribulation of the last days. Here, be it noted, Antichrist was not a person, but the age that began with Nikon's reform; Church and State were the organs thereof. This attitude of the Bezpopóvtsi to the ruling powers was aggravated by the reforms of Peter I. Believers fled from an unclean world; and those who left the Church for the Raskól were baptized as heathen. As might be expected, dissensions arose, and fresh disruptions. These were due mainly to two questions: marriage and the relation to the State. As there were no priests, believers had to accept celibacy as a binding law; as a matter of fact, it was adopted as a principle, and communities were organized on the monastic model. In practice, however, some sought to retain marriage, while theoretical celibates sometimes gave themselves to the worst immoralities. Then the demand of the State for a recognition of its authority (especially by prayer for the tsar), the impracticability of complete isolation, and the compromises resulting from business relations, tax-paying, military service, etc., created new difficulties.

The more important sub-sects of the Bezpopóvtsi are as follows:

(1) *The Pomórtsi* (from *Pomórze*; see above), organized towards the end of the 17th century. Among their characteristics were the monastic pattern of their communities, rejection of marriage and of prayer for the tsar, as also the readiness of their members to die by burning themselves. The body became wealthy; it provided teachers for other Old Ritualistic groups, and in fact came to be a kind of centre for the entire priestless section. In process of time it became less rigid: prayer for the tsar—under compulsion, it is true—was countenanced by some, marriages originally contracted in the State Church, as well as irregular unions, were tolerated, and a community which arose in Moscow at the end of the 18th cent. actually permitted marriage. These are the *Brátechniki* ('having marriage'),

so named from their founder Feodóssi of the Pomórtsi († 1771), who instituted independent communities in W. Russia. Originally allied with the Pomórtsi, they broke away in a controversy regarding the form of the inscription upon the cross. The questions of prayer for the tsar and marriage widened the gulf, the Feodóssíjevtsi maintaining the original strictness of the Pomórtsi themselves. In 1752 a synod declared the absolute necessity of celibacy. This denomination found its most powerful support in the establishment in 1771 of the *Preobrazhénsk* Institution in Moscow, its leader here being the uneducated but shrewd *Iljá Kovýlin*, under whose almost unlimited authority it rapidly increased in wealth and influence, while it adhered to a most rigid rule of celibacy (married people were admitted to baptism only after divorce). The serious spread of immorality led Kovýlin, by his insistence on the merits of penitence, virtually to exonerate it. After his death a kind of tolerance was granted to loose unions, but the persons concerned remained formally outside the community, and were absolved only on their deathbed. This question of marriage is still a fruitful source of dissension and disruption in the group.

(2) *The Philipóvtsi*, founded in the first half of the 18th cent. by a certain Philip, who had been expelled on personal grounds from the Pomórtsi. Its distinctive tenets are somewhat obscure; but it rejects marriage and prayer for the tsar. When in 1743 a military expedition was sent to the settlement, Philip and his adherents burned themselves, with the result, however, that the sect increased. It is characterized by fanatical and divisive tendencies.

(4) *The Stránniki* ('wanderers') or *Béguni* ('runners'), founded not later than the latter half of the 18th cent. by a certain Jevúmi, are the extremists of the Raskól, rejecting all compromise with Antichrist. The members must pay no taxes, must not deny their nonconformity or let their names appear in the Government list of the Raskólniki, must receive no official papers, must (in one group) possess no money, and have no intercourse with members of the State. Jevúmi, for his salvation's sake, adopted rebaptism, and baptized his followers, thereby devoting them to a life of wandering and homelessness. While the other Bezpopóvtsi find Antichrist in a period of history, the Stránniki see it embodied in the succession of tsars from Peter I. State and Church are in its power; the Church is Satan's prophet. Disputes arose after the founder's death in 1792, ending with the triumph of a more tolerant party, and leading to the recognition of two classes of members, viz. (i.) those who keep the whole law and are under obligation to wander without rest, and (ii.) those 'who have discerned Christian doctrine' without practising it. The latter have homes

and property, must be hospitable to 'wanderers,' and are not baptized till shortly before death, when, by being removed to some place associated with wanderers, they formally adopt the more extreme law. The Stránniki likewise have split up into sub-sects.

(5) *The Nétovtsi* ('deniers'), or *Spásovno sogládsíje* ('community of the Redeemer'), probably arose about 1700. They deny that the laity can take the priest's place in all cases. They have no worship, no sacraments; the Church, they believe, has forfeited God's grace. Still, they permit baptism and marriage in the State Church, though they do not regard this performance of the two sacraments as orthodox, and seek to make good all defects by the prayer, 'May God let his grace be effective!'

The fanaticism and ignorance of the Bezpopóvtsi have given rise to numerous less important denominations, many of them doomed to a brief existence.

(b) *Popóvtsi*.—This section of the Raskól differs from the Bezpopóvtsi in regarding a priesthood as essential to the existence of a Church, and from this all other differences result. When the priests ordained prior to the reform died out, others who joined the sect were admitted on renouncing their errors. This necessarily led to modifications of the doctrine of Antichrist, who was here believed to be an actual personage of the final age. Moreover, as such priests could be recognized only in virtue of their baptism (in the State Church), rebaptism was not universally required in the case of ordinary members who passed from the State Church to the sect. The Popóvtsi are accordingly less rigid in their renunciation of the State, though they hate it no less intensely.

The priests who deserted the State Church for the Raskól did so secretly and as runaways, and hence the Popóvtsi are also called *Béglopópóvtsi*, i.e. the Popóvtsi who are served by fugitive priests. Many of these priests made the change not from conviction but from motives of material gain, and there was among them a large disreputable element. Such men could have no good influence upon their flocks, and, though retained as instruments, were often despised and merely tolerated—a circumstance which led to an even more formal conception of religious worship and to the transference of directive control to the laity.

Flourishing centres of the sect, with churches and monasteries, were established in the following localities: (1) the island of Werka, government of Mogiljév (broken up in 1733; rebuilt, then finally destroyed under Catherine II.); (2) Starodúbje, gov. Chernigov; (3) the Don district; (4) the river Irgíz, gov. Sarátov; (5) the Rogóz Institution in Moscow (the present headquarters of the Popóvtsi). The position of the sect, nevertheless, remained insecure, depending as it did on the attitude of the Government, which was sometimes tolerant (as under Catherine II. and Alexander I.), sometimes repressive (as under Nicholas I. and Alexander III.). Moreover, doubts arose as to whether a Church could exist without bishops, and the unworthy element in the priesthood created scandals. These things, together with the difficulty of obtaining accessions to the priesthood during persecution, suggested the idea of an independent hierarchy, and in the 18th cent. many unsuccessful attempts were made to secure a bishop from the Eastern Church.

The situation became critical from c. 1825. By an enactment the sect was permitted to retain priests who had joined it prior to 1826, but later accessions were heavily penalized, and, though clandestine additions could not be altogether prevented, utter collapse seemed imminent. The arrogance, greed, and ill-behaviour of the dwindling group of priests added gravely to the difficulties. Then in 1838 a synod assembled at Moscow resolved to take energetic steps towards instituting an Old Ritualist hierarchy; and, after long delays, this design was eventually realized in 1844, largely through the instrumentality of

the devoted Pjotr Velikodvórski (Pável). Ambrosios, metropolitan of Bosnia, a Greek by birth, then living poverty-stricken in Constantinople, resolved to join the sect. In apprehension of Russian espionage, he left Constantinople secretly, and under Austrian protection became the first Old Ritualist bishop in the monastery of Bêlokríniza in the Bukovina. The Russian Government took fright, and their machinations led in 1848 to his being banished to Zill, where he died in 1863. Meanwhile, however, he had ordained several bishops for the Russian hierarchy, while his successor Kirill did the same for Old Ritualists in Turkey and Rumania, and in 1849 sent to Russia its first Old Ritualist bishop, Sofroni of Simbirsk, who secretly ordained others. The new hierarchy, however, was not too well received in Russia; some of the imported priests as well as of the laity saw in it a menace to their respective positions; its legitimacy was loudly questioned, while certain of the bishops themselves gave offence by their avarice and ambition.

What lay at the root of all the trouble, however, was the fact that many of the Popóvtsi had come to be influenced by ideas prevalent among the Bezpopóvtsi, and with a view to settling all perplexities a council of bishops sent out in 1862 a 'circular letter,' which had been composed by Ilarion Kabánov ('Xenos'). This pastoral, rejecting the doctrine that the State Church is ruled by Antichrist, expressly acknowledges the competency of its priests, and asserts that it serves the same God as the Raskól (denied by certain of the Bezpopóvtsi on the ground that 'Ipros' had been substituted for 'Issús'); the real sin of the Church was its having excommunicated the Old Ritualists in 1667, and its 'new doctrines.' In thus recognizing the Church, the Popóvtsi were of course seeking to vindicate the legitimacy of their new hierarchy. The result, however, was further dissension, and eventually a division into Okrázhniki ('adherents of the circular') and Neokrázhniki (its opponents). The latter have now sunk into insignificance. The Okrázhniki, on the other hand, have an organized hierarchy throughout Russia; its head is the archbishop of Moscow, and it has bishops in most of the great cities. The metropolitan of Bêlokríniza has only an honorary primacy, and it has been proposed to make the archbishop of Moscow a metropolitan. The Church of the Popóvtsi has thus become a counterpart of the State Church, and claims to be the genuine National Church. It has a vigorous communal life, which it directs by means of schools and a press, and its leading circles are in part open to progressive thought.

A small group of the Popóvtsi has never recognized the new hierarchy; it retains the name of Bêglopópvtsi (see above). Another insignificant section, the Jedinóvêrtsi ('of one faith'), made an alliance with the State Church in 1800, and had the 'old rites' conceded to them. Being scattered over the country, and having no hierarchy of their own—as, indeed, by their acceptance of the canonical regulations they cannot have, since one diocese cannot have two bishops—they have no real standing. Some sense of alienation between the members of the 'sect' and the Church is but natural in view of their divergent history.

Thus the Russian State Church has found its position challenged by a multitude of sects, some of them strong and well-organized. It certainly conducted a 'mission' to them, but on spiritual lines it has always shown an amazing incapacity. Down to 1905, when freedom of conscience was conceded to all, its great instrument was State coercion; and even since it has striven by legislation or local pressure to limit that freedom as far as possible. How the abolition of the State

Church, and the ruin and misery of the whole country, brought about by the revolution of 1917 will react upon the whole religious situation it is impossible to predict.

LITERATURE.—The following are some of the more important Russian works dealing with the Raskól: Platón (P. G. Levshin), *Short Hist. of the Russian Church*, 1805, ii.; D. Opótski, *The Causes of the Rise of Raskól in the Russian Church*, St. Petersburg, 1861; S. Solovjév, *Hist. of Russia*, Moscow, 1870; Philaréte (Gumilevskii), *Hist. of the Russian Church*, St. Petersburg, 1895; A. Shchápov, *The Russian Schism of Old Ritualism*, 1859; Makári (Bulgákov), *Hist. of the Russian Raskól*, St. Petersburg, 1889, *Hist. of the Russian Church*, do. 1910, xii.; N. Ssubbótin, in his periodical *Brđtskoje Slóvo* ('The Fraternal Word') and *Materials for the History of Raskól*, 9 vols. (a work of the utmost value in the scientific study of Raskól); N. Ivanovski, *Manual of the Hist. of, and the Polemic against, the Old Ritual Raskól*, 2 vols., Kazán, 1905; E. Golubinski, *Our Controversy with the Old Ritualists*, Moscow, 1905 ff.

Non-Russian writers, as A. Leroy-Beaulieu, P. Strahl, L. Boissard, and F. Kattenbusch, merely reproduce the views prevalent among Russian historiographers, and independent and scientifically developed conclusions are not to be looked for in their works.

Works (in Russian) which, while sometimes differing in details, deal with Old Ritualism on strictly scientific lines, and in particular recognize the philo-Greek movement as a powerful factor in the rise of the Raskól, are: N. Kaptenev, *The Nature of the Relations between Russia and the Orthodox Orient in the 16th and 17th Centuries*, Moscow, 1914, *The Patriarch Nikon and his Opponents in the Ennendation of Church Rites*, 2, do. 1913, *The Patriarch Nikon and Czar Alexis Michailovich*, 2 vols., Sergiev Posad, 1909-12; E. Golubinski, *op. cit.*; P. Miljukov, *Sketches from the Hist. of Russian Civilization*, ii. 5, St. Petersburg, 1916; W. Kluchévski, *A Course of Russian History*, iii. 3, Moscow, 1916.

A. BARON VON STROMBERG.

II. OTHER SECTS.—The sects which diverge from the Orthodox Church of Russia not merely in ritual but also in doctrine are gradually becoming more and more distinct from Raskól in its various denominations. They may be classified thus: (a) native sects: (i.) secret, including (1) the Khlysti, or Men of God, and (2) the Skoptsi; (ii.) public, including (3) the Doukhobors, and (4) the Molokani; (b) sects based upon foreign influences, the most important being (5) the Judaizers and (6) the Stundists.

1. Khlysti.—See art. MEN OF GOD, vol. viii. pp. 544-546.

2. Skoptsi.—The earliest known Skoptsi (*skopets*, 'eunuch'), 34 in number, were discovered in 1772 in villages around Orjól, in the districts of Belev and Aléxin belonging to the government of Tula, and in the district of Kosjólsk in the government of Kalúga; other 27 persons, though known to be castrated, evaded legal detection. All of them were Khlysti, led by the female teacher Akulina Ivánovna. The claim of having originated the practice of castration was made by André Ivanov Blochín, a runaway peasant thirty years of age and a professional beggar, who belonged to Brásovo in the district of Sevs (Orjól). Having joined the Khlysti in 1769, he had mutilated himself because he found it difficult to fulfil the leading rule of that sect, viz. absolute sexual abstinence; and along with an assistant whom he had castrated—the untraced Kondráti Triphonov, or Nikiphorov, of Stolbische, a village near Brásovo—he had in the course of four years won over the 60 others referred to above. The Khlystic female teacher already named and the Moscow 'Christ' whom she followed had not opposed this new propaganda, and in point of fact their own helpers had submitted to the rite. Blochín was knouted in Bogdanovka, where he was then resident, and sent to Nerchinsk in Siberia; his dupes, with the exception of two, were released.

In 1775, however, another Skoptsi community was discovered in a district far removed from the localities of the earlier movement, viz. in the village of Sosnovka (government of Tambov). A peasant named Kondráti, who styled himself 'the hermit of Kiev,' and his henchman Alexándr

tion; and communion might be replaced by the desire for it ('spiritual communion'). This again was brought into logical connexion with the doctrine that the kingdom of Antichrist was at hand. The priesthood, originally a gift of God's grace, had been destroyed by Antichrist, as was to be expected in the tribulation of the last days. Here, be it noted, Antichrist was not a person, but the age that began with Nikon's reform; Church and State were the organs thereof. This attitude of the Bezpopóvtsi to the ruling powers was aggravated by the reforms of Peter I. Believers fled from an unclean world; and those who left the Church for the Raskól were baptized as heathen. As might be expected, dissensions arose, and fresh disruptions. These were due mainly to two questions: marriage and the relation to the State. As there were no priests, believers had to accept celibacy as a binding law; as a matter of fact, it was adopted as a principle, and communities were organized on the monastic model. In practice, however, some sought to retain marriage, while theoretical celibates sometimes gave themselves to the worst immoralities. Then the demand of the State for a recognition of its authority (especially by prayer for the tsar), the impracticability of complete isolation, and the compromises resulting from business relations, tax-paying, military service, etc., created new difficulties.

The more important sub-sects of the Bezpopóvtsi are as follows: (1) *The Pomórtsi* (from Pomórje; see above), organized towards the end of the 17th century. Among their characteristics were the monastic pattern of their communities, rejection of marriage and of prayer for the tsar, as also the readiness of their members to die by burning themselves. The body became wealthy; it provided teachers for other Old Ritualistic groups, and in fact came to be a kind of centre for the entire priestless section. In process of time it became less rigid: prayer for the tsar—under compulsion, it is true—was countenanced by some, marriages originally contracted in the State Church, as well as irregular unions, were tolerated, and a community which arose in Moscow at the end of the 18th cent. actually permitted regular marriage. These are the Brátniki ('having marriage'), or novo- ('new') Pomórtsi.

(2) *The Feodosséjvtsi*, so named from their founder Feodóss Wasséljev, originally one of the Pomórtsi († 1771), who instituted independent communities in W. Russia. Originally allied with the Pomórtsi, they broke away in a controversy regarding the form of the inscription upon the cross. The questions of prayer for the tsar and marriage widened the gulf, the Feodosséjvtsi maintaining the original strictness of the Pomórtsi themselves. In 1762 a synod declared the absolute necessity of celibacy. This denomination found its most powerful support in the establishment in 1771 of the Preobrazhénsk Institution in Moscow, its leader here being the uneducated but shrewd Iljá Kovylín, under whose almost unlimited authority it rapidly increased in wealth and influence, while it adhered to a most rigid rule of celibacy (married people were admitted to baptism only after divorce). The serious spread of immorality led Kovylín, by his insistence on the merits of penitence, virtually to exonerate it. After his death a kind of tolerance was granted to loose unions, but the persons concerned remained formally outside the community, and were absolved only on their deathbed. This question of marriage is still a fruitful source of dissension and disruption in the group.

(3) *The Philpóvtsi*, founded in the first half of the 18th cent. by a certain Philip, who had been expelled on personal grounds from the Pomórtsi. Its distinctive tenets are somewhat obscure; but it rejects marriage and prayer for the tsar. When in 1743 a military expedition was sent to the settlement, Philip and his adherents burned themselves, with the result, however, that the sect increased. It is characterized by fanatical and divisive tendencies.

(4) *The Stránniki* ('wanderers') or *Béguni* ('runners'), founded not later than the latter half of the 18th cent. by a certain Jevfimi, are the extremists of the Raskól, rejecting all compromise with Antichrist. The members must pay no taxes, must not deny their nonconformity or let their names appear in the Government list of the Raskólniki, must receive no official papers, must (in one group) possess no money, and have no intercourse with members of the State. Jevfimi, for his salvation's sake, adopted rebaptism, and baptized his followers, thereby devoting them to a life of wandering and homelessness. While the other Bezpopóvtsi find Antichrist in a period of history, the Stránniki see it embodied in the succession of tsars from Peter I. State and Church are in its power; the Church is Satan's prophet. Disputes arose after the founder's death in 1792, ending with the triumph of a more tolerant party, and leading to the recognition of two classes of members, viz. (i.) those who keep the whole law and are under obligation to wander without rest, and (ii.) those 'who have discerned Christian doctrine' without practising it. The latter have homes

and property, must be hospitable to 'wanderers,' and are not baptized till shortly before death, when, by being removed to some place associated with wanderers, they formally adopt the more extreme law. The Stránniki likewise have split up into sub-sects.

(5) *The Nétóvtsi* ('deniers'), or *Spássovo soglássije* ('community of the Redeemer'), probably arose about 1700. They deny that the laity can take the priest's place in all cases. They have no worship, no sacraments; the Church, they believe, has forfeited God's grace. Still, they permit baptism and marriage in the State Church, though they do not regard this performance of the two sacraments as orthodox, and seek to make good all defects by the prayer, 'May God let his grace be effective!'

The fanaticism and ignorance of the Bezpopóvtsi have given rise to numerous less important denominations, many of them doomed to a brief existence.

(b) *Popóvtsi*.—This section of the Raskól differs from the Bezpopóvtsi in regarding a priesthood as essential to the existence of a Church, and from this all other differences result. When the priests ordained prior to the reform died out, others who joined the sect were admitted on renouncing their errors. This necessarily led to modifications of the doctrine of Antichrist, who was here believed to be an actual personage of the final age. Moreover, as such priests could be recognized only in virtue of their baptism (in the State Church), rebaptism was not universally required in the case of ordinary members who passed from the State Church to the sect. The Popóvtsi are accordingly less rigid in their renunciation of the State, though they hate it no less intensely.

The priests who deserted the State Church for the Raskól did so secretly and as runaways, and hence the Popóvtsi are also called Bégopopóvtsi, i.e. the Popóvtsi who are served by fugitive priests. Many of these priests made the change not from conviction but from motives of material gain, and there was among them a large disreputable element. Such men could have no good influence upon their flocks, and, though retained as instruments, were often despised and merely tolerated—a circumstance which led to an even more formal conception of religious worship and to the transference of directive control to the laity.

Flourishing centres of the sect, with churches and monasteries, were established in the following localities: (1) the island of Werka, government of Mogiljów (broken up in 1733; rebuilt, then finally destroyed under Catherine II.); (2) Starodúbje, gov. Chernigov; (3) the Don district; (4) the river Irgiz, gov. Sarátov; (5) the Rogóz Institution in Moscow (the present headquarters of the Popóvtsi). The position of the sect, nevertheless, remained insecure, depending as it did on the attitude of the Government, which was sometimes tolerant (as under Catherine II. and Alexander I.), sometimes repressive (as under Nicholas I. and Alexander III.). Moreover, doubts arose as to whether a Church could exist without bishops, and the unworthy element in the priesthood created scandals. These things, together with the difficulty of obtaining accessions to the priesthood during persecution, suggested the idea of an independent hierarchy, and in the 18th cent. many unsuccessful attempts were made to secure a bishop from the Eastern Church.

The situation became critical from c. 1825. By an enactment the sect was permitted to retain priests who had joined it prior to 1826, but later accessions were heavily penalized, and, though clandestine additions could not be altogether prevented, utter collapse seemed imminent. The arrogance, greed, and ill-behaviour of the dwindling group of priests added gravely to the difficulties. Then in 1838 a synod assembled at Moscow resolved to take energetic steps towards instituting an Old Ritualist hierarchy; and, after long delays, this design was eventually realized in 1844, largely through the instrumentality of

the devoted Pjotr Velikodvórski (Pável). Ambrosios, metropolitan of Bosnia, a Greek by birth, then living poverty-stricken in Constantinople, resolved to join the sect. In apprehension of Russian espionage, he left Constantinople secretly, and under Austrian protection became the first Old Ritualist bishop in the monastery of Bêlokríniza in the Bukovina. The Russian Government took fright, and their machinations led in 1848 to his being banished to Zill, where he died in 1863. Meanwhile, however, he had ordained several bishops for the Russian hierarchy, while his successor Kirill did the same for Old Ritualists in Turkey and Rumania, and in 1849 sent to Russia its first Old Ritualist bishop, Sofróni of Simbirsk, who secretly ordained others. The new hierarchy, however, was not too well received in Russia; some of the imported priests as well as of the laity saw in it a menace to their respective positions; its legitimacy was loudly questioned, while certain of the bishops themselves gave offence by their avarice and ambition.

What lay at the root of all the trouble, however, was the fact that many of the Popóvtsi had come to be influenced by ideas prevalent among the Bezpopóvtsi, and with a view to settling all perplexities a council of bishops sent out in 1862 a 'circular letter,' which had been composed by Ilarion Kabánov ('Xenos'). This pastoral, rejecting the doctrine that the State Church is ruled by Antichrist, expressly acknowledged the competency of its priests, and asserts that it serves the same God as the Raskól (denied by certain of the Bezpopóvtsi on the ground that Ἰησοῦς had been substituted for 'Issús'); the real sin of the Church was its having excommunicated the Old Ritualists in 1667, and its 'new doctrines.' In thus recognizing the Church, the Popóvtsi were of course seeking to vindicate the legitimacy of their new hierarchy. The result, however, was further dissension, and eventually a division into Okružhniki ('adherents of the circular') and Neokružhniki (its opponents). The latter have now sunk into insignificance. The Okružhniki, on the other hand, have an organized hierarchy throughout Russia; its head is the archbishop of Moscow, and it has bishops in most of the great cities. The metropolitan of Bêlokríniza has only an honorary primacy, and it has been proposed to make the archbishop of Moscow a metropolitan. The Church of the Popóvtsi has thus become a counterpart of the State Church, and claims to be the genuine National Church. It has a vigorous communal life, which it directs by means of schools and a press, and its leading circles are in part open to progressive thought.

A small group of the Popóvtsi has never recognized the new hierarchy; it retains the name of Bêglopopóvtsi (see above). Another insignificant section, the Jedinovértsi ('of one faith'), made an alliance with the State Church in 1800, and had the 'old rites' conceded to them. Being scattered over the country, and having no hierarchy of their own—as, indeed, by their acceptance of the canonical regulations they cannot have, since one diocese cannot have two bishops—they have no real standing. Some sense of alienation between the members of the 'sect' and the Church is but natural in view of their divergent history.

Thus the Russian State Church has found its position challenged by a multitude of sects, some of them strong and well-organized. All of them were Khlysti, led by the female teacher Akulína Ivánovna. The claim of having originated the practice of castration was made by André Ivanov Blochin, a runaway peasant thirty years of age and a professional beggar, who belonged to Brásovo in the district of Sevsk (Orjól). Having joined the Khlysti in 1769, he had mutilated himself because he found it difficult to fulfil the leading rule of that sect, viz. absolute sexual abstinence; and along with an assistant whom he had castrated—the untraced Kondráti Triphonov, or Nikiphorov, of Stolbische, a village near Brásovo—he had in the course of four years won over the 60 others referred to above. The Khlystic female teacher already named and the Moscow 'Christ' whom she followed had not opposed this new propaganda, and in point of fact their own helpers had submitted to the rite. Blochin was knouted in Bogdanovka, where he was then resident, and sent to Nerchinsk in Siberia; his dupes, with the exception of two, were released.

In 1775, however, another Skoptsi community was discovered in a district far removed from the localities of the earlier movement, viz. in the village of Sosnovka (government of Tambov). A peasant named Kondráti, who styled himself 'the hermit of Kiev,' and his henchman Alexándr

Shilov were singled out as its founders, and were banished; the two had already been at work in the districts of Tula and Aléxin in the government of Tula, and, as regards Aléxin, in the very place where castrati had been discovered in the prosecution in 1772, viz. Luginin's linen factory in Aleshnja. Most Russian scholars identify this Kondráti with that earliest assistant of Blochin who had evaded capture in the former prosecution, but it seems more likely that he was none other than Blochin himself, since he was known among his later adherents in Petrograd by his real name, André Ivanov, and his self-confidence is difficult to explain on the theory of his being any one's disciple. Moreover, we see from the *Sorrows*¹ of Kondráti Selivanov (as he called himself in Petrograd), who is to this day regarded by the Skoptsi as their sole founder and their first leader, that the author had fled from the grasp of the law and at length reached the government of Tula. Here, however, he was still harassed; for the Khlysti, doubtless remembering what they had suffered in 1772 in consequence of his propaganda, wished to deliver him to the authorities. Nevertheless, he succeeded in winning fresh adherents from among them in the village of Aleshnja, where their local leader, Akulina Ivánovna—no doubt identical with the Akulina mentioned above—and her assistant, the 'prophetess' Anna Románovna, acknowledged him as 'Christ,' probably because he had suffered the knout (in Khlystic usage = crucifixion) and banishment, though he himself, as being the first to revive the forgotten teaching of Jesus regarding self-mutilation (Mt 19¹¹. 18⁸), accepted the dignity in a sense that excluded the other 'Christs' of the Khlysti, and then in turn recognized Akulina Ivánovna as the Mother of God, and Shilov as John the Baptist. Having been sent a second time to Siberia, on the way he brought himself, by further amputation, to the state of complete mutilation (the 'tsaric seal,' in contrast to the 'little seal,' i.e. simple castration), and then, in imitation of Pugachov, he assumed the designation of Tsar Peter III. Hardly anything is known of the twenty-two years he spent in Irkutsk. He returned, in a most adventurous fashion, to Russia in 1797. It appears that certain rich Skoptsi merchants in Petrograd availed themselves of Paul I.'s whimsical desire to interview those who claimed to be his father—there were fifteen such pseudo-Peters—and were permitted to bring Selivanov before him, but the impression which the fanatic made upon the tsar was such that the latter sent him to a madhouse. He was not discharged till the accession of Alexander I. From 1802 he lived with one or other of his followers in the rich commercial circles of Petrograd, and at length one of these, Solodóvnikov by name, built a kind of palace for him, where his adherents—alike those of the capital itself (now to be numbered by hundreds in consequence of a vigorously renewed propaganda) and those who came there as pilgrims from all parts of Russia—revered and worshipped him as 'Christ Peter III.'; for, while, during Selivanov's exile, the sect had expanded but slowly and only in the central provinces—with ramifications in Petrograd, Riga, and Odessa—the systematic propaganda now directed by him soon extended it over all Russia. In Petrograd it gained a certain footing also among the aristocracy. Madam de Tatárinova, while rejecting castration, introduced the Skoptsi form of worship into her 'Brotherhood in Christ.'² But, when castration was found to be making headway among officials and military men,

Selivanov was thrown into the notorious cloister-prison of Susdal, and this town became the centre of the sect until his death in 1832. Since then the Skoptsi have contrived to keep secret the locality of their headquarters.

From the time of Selivanov's labours in Petrograd the sect has had numerous adherents not only among the peasantry, but also among the merchants and money-changers of the cities. Many of these are wealthy, and, as they have no children, their wealth passes by will from one to another, and tends to accumulate in the hands of individuals who use it in support of the work of promulgation and the policy of secrecy. Their attitude towards castration has varied between rigour and laxity. At the present day not only catechumens, but also many members in full standing, especially women, still remain un mutilated, availing themselves of the dispensation by which the operation may be again and again deferred. To-day, in fact, it is only a decided minority of the 100,000 Skoptsi that have submitted to the rite. Persecution has driven many of them to Rumania, where they have centres at Galatz and Jassy, and where, as foreigners, they are tolerated. Here, in 1872, arose a new 'Christ,' Lisin by name, who founded a party known as the New Skoptsi. In the course of a missionary journey into Russia Lisin, together with numerous helpers and followers, was arrested and banished to Siberia, and the movement collapsed. The Skoptsi have found recruits not only among the Orthodox Russians, but also among the Lutheran Finns of Ingria, and many Skoptsi of both classes are now resident in villages of their own in the government of Yakutsk, where they were forcibly settled. Selivanov himself, to judge from his appearance and character, was not of pure Russian descent, but of Russo-Finnish blood. Such half-breeds, as well as the pure Finns, find a peculiar attraction in the sect; the Finns are in fact temperamentally disposed to religious fanaticism.

Selivanov's claim of symbolic identity with Tsar Peter III. was accepted by the Skoptsi as literal fact, for they believed that Peter had been conspired against by Catherine II. because of his impotence, and had thus undergone Messianic sufferings. In order to lend this an air of plausibility they fabricated an absurd story in which certain other personages of the imperial family and the court were made to play a part. Akulina Ivánovna was identified with the tsaritsa Elizabeth, who was the virgin mother of Peter III. Napoleon was the son of Catherine II. and the Devil, was living in Turkey, and would return as Antichrist. When the number of the 144,000 virgins (Rev 14¹⁻⁴ but interpreted as 'castrated ones') is complete, Christ Selivanov will come from Siberia, will ring the Tsar bell in Moscow, gather around him all the Skoptsi, quell the Antichrist advancing from Turkey, and establish a Skoptsi kingdom upon the earth; only after these things will come the end. Apart from their ideas regarding Christs and the last things, the teaching of the Skoptsi differs from that of the Khlysti only in substituting mutilation (for which support was found also in Is 56²⁻³, Wis 3¹⁴, Col 3⁵) for sexual abstinence. The idea that Adam and Eve were created sexless, and that the halves of the forbidden fruit were grafted upon them—as testicles, or as breasts—after the Fall (whence the necessity of restoring the disfigured image of God by the knife), is not received by the whole sect. Their original practice of operating with a red-hot knife was grounded on Mt 3¹, but the use of the cold knife was introduced while Selivanov was still living—a consequence, as the Skoptsi say, of his capitulation to human weakness. The mutilation of women likewise was subsequently

¹ Ed., together with his 'Epistle,' by the present writer as *Die geheime heilige Schrift der Skopzen*, Leipzig, 1904.
² See art. MYSTICISM (Christian, Russian), § 4.

performed in a less severe manner, and this was recommended, though not prescribed, by Selivanov. The assertion that the Skoptsi mutilate their proselytes against their will or after they have made them insensible is a calumny. The organization of the sect is much more rigid than that of the Khlysti. Its members constitute a centralized and strictly exclusive association, with well-developed methods of concealment, self-preservation, and expansion, and capable of acting throughout the whole Russian empire with astonishing unity and consistency. While their form of worship is externally almost identical with that of the Khlysti, the practice of ecstasy, borrowed from the latter, is now on the wane.

3. Doukhobors.—See art. DOUKHOBORS, vol. iv. p. 865 ff.

4. Molokani ('milk[moloko]-drinkers').—The origin of the Molokani has not as yet been made out. The hypothesis that they were an offshoot from the Doukhobors, and separated from them by surrendering the residue of Khlystic ecstasy which these still retained and attaching supreme importance to anti-ritualism in contrast to the ritual (including the seven sacraments) of the State Church, is very probable, and seems to find some corroboration in the fact that, as the Molokani themselves represent, Semjon Uklé-in, whom they regard as their founder, married (c. 1750) the daughter of Pobiróchin, the leader of the Doukhobors. But the use of the name 'Molokani' is of earlier date, having been applied by the Russian people as early as the 17th cent. to all sectaries who drank milk and ate non-fasting foods during Lent. Moreover, the Molokani *Confession of Faith* printed at Geneva in 1865 says that the sect designated as such is of earlier date than Uklé-in. As far back as the 17th cent. it had been brought by a physician to Moscow from England. A certain Matvé Semjónov was the first Russian who spread abroad the 'worship of God in spirit and in truth,' and for this he was broken on the wheel. His teaching, however, was carried to the government of Tambov by some of his pupils, and, although they were at once and finally got rid of, their teaching held its ground there. Now, if this account is correct, what Uklé-in did was simply to give a fresh impetus to an existing denomination. Himself originally a Doukhobor, he made a stand, in the village of Goréloje, against the claim of Pobiróchin, the leader of the Doukhobors, to be the Son of God, and against their contempt for Holy Scripture. Fleeing before Pobiróchin's 'angels of death,' he reached Ribnoje, a village in the same government, and won many adherents there. Having chosen from among them 70 'apostles,' he led them in solemn procession into Tambov, there to make war against the 'idols' (icons, the saints' pictures of the Orthodox Church). He was arrested, but regained his liberty by an ostensible reconciliation with the Church. Thereafter he directed his propaganda from the village of Raskásovo as a centre, and extended it to the provinces of Voronezh and Saratov. During his lifetime he gained some 5000 followers, and after his death a succession of zealous disciples diffused his teachings throughout Central and S.E. Russia. In 1805 a portion of the Molokani were settled in the Molotchua, in Taurida; and there they founded the prosperous villages of Novovasiljevka, Astrakhanka, and Novospassk, in which by 1833 their number had reached 3000.

Molokanism was originally a simple Bible Christianity marked by anti-ritualistic opposition to the State Church. It gave full recognition to the Church's leading doctrines of the Trinity, the Incarnation, and the God-manhood of Christ. Uklé-in accepted also the virgin-birth of Jesus,

though he believed that the body of Jesus was not of the common human type, but was a spiritual one, like that of the archangel Raphael when he accompanied Tobias; on this point, however, the *Confession* of 1805 is entirely orthodox. That *Confession* also recognizes the moral perfection of Adam and the doctrine of original sin, as does also the *Foundations of the Molokany Doctrine*, published fifty years later. As regards the appropriation of redemption, the sect is far removed from Protestantism. It adhered rather to a naive legality, which it based equally on the OT and the NT. While it gave a symbolic interpretation to many of the OT commandments, it accepted others—e.g., the prohibition of the use of pork—quite literally. Recently, however, the Molokani have been affected by the unitarianism of W. Europe, largely through the efforts of the able A. S. Próchnanov († 1912), a physician who, educated at Dorpat, exercised a powerful influence upon them by his journal *Duchóvny Christianín*, founded in 1906. The unitarian leaven makes itself felt in the *Confession of the Spiritual Christians commonly called Molokani*, which was drawn up at the general congress of the Molokani held at Astrakhanka in 1905, was recognized as binding upon all 'spiritual Christians' (the only name that they apply to themselves), and so printed and published. The doctrine and worship of the sect are set forth by it as follows:

'God is the Good. Evil has no independent existence, but is merely the negation of God. God is not a trinity, but a unity, and the apparently trinitarian formula of Mt 28¹⁹ simply sets forth the one God in His threefold relation to the world and man. The innocence of the first man consisted in his ignorance of evil and good alike, in which he resembled the animals, whereas the innocence of Christ was a conscious and voluntary righteousness. Thus the Fall, although it resulted in man's loss of communion with God, was in reality a step forward, and man, having become like God in the knowledge of good and evil, has now to win that communion by his own efforts (Mt 11¹²). But, while God has left man free to do either good or evil, it is the latter that is mainly preferred by him (Eph 2¹⁰); he feels that God is alien to him and that His law is coercive and hard to obey. He violates it constantly, and thus regards God as his incensed Lord, who is to be propitiated by sacrifice. In the fullness of time, however, Christ came, and revealed to us our nearness to God; called God Father and spoke of us as His children (Jn 20¹⁷, Ro 8¹⁴); changed the covenant of fear into the covenant of love (Ro 8¹⁵, He 12¹⁴), so that goodness comes to have a meaning for us, and the law of compulsion becomes the law of liberty (Gal 5¹). He thus showed us the way to blessedness, and sealed His word with His death on the Cross. The Church which He founded is the community of those who believe in God; and in virtue of that belief all members of the Church are equal, so that the hierarchy of the Græco-Russian Church has no standing in it. The presbyters or bishops ("overseers") appointed by the "spiritual Christians" are not priests, but merely the servants of the ordinary members, and receive no remuneration for their voluntary labours. Christ instituted no visible sacraments, not even Baptism or the Lord's Supper, and the NT passages upon which these two sacraments are said to be founded are to be interpreted spiritually, i.e. as referring to the initial and continued apprehension of God's word; the Church's practice of fasting must also be wholly discarded.

We do not use the sign of the cross, for we regard it as quite uncalled for. All that it does is to tire the hands, whereas Christ has bidden us endure the spiritual cross, i.e. the sufferings appointed to us.

The Sabbath was given for relaxation and divine worship; but good works may be done on the Sabbath, as appears from the example of Christ in contrast to the Pharisaic hallowing of the Day (Mt 12¹⁻¹²). It is especially necessary, however, to refrain on that day from evil deeds, unchastity, and drunkenness (Eph 5¹⁸). As, in conformity with the witness of Holy Writ, the first day after the Saturday is kept sacred in place of the Sabbath by Christians of all creeds in commemoration of Christ's resurrection, we likewise do this.

Tradition given in the Holy Scriptures and the writings of the Fathers of the Græco-Russian Church, or the multitude of ceremonies in which its worship consists, for man should worship God in spirit and in truth (Jn 4²⁴). In our assemblies the worship of God begins with the Lord's Prayer, spoken by the presbyter. Then the presbyter reading the verse, and this is continued for common prayer, which the presbyter recites while the congregation kneels (Lk 22⁴¹, Ac 20³⁶), and the service closes with the singing of psalms. Our worship of God takes place in our own houses; for we do

not think that a building can give sanctity to an assembly; it is rather the assembly that sanctifies any place where it is held. The Ten Commandments must still be obeyed, for Christ did not abrogate them (Mt 5:17). Hence God alone is to be worshipped. Nowhere does Scripture authorize the worship of any besides Him—not even of the Apostles of Christ, though they wrought miracles, or of the angels (Ac 10:25, Rev 22:8); and if not the former while they were still alive, all the less now when they are dead; while if not the latter, then all the less the so-called saints. In conformity with the 2nd Commandment, we have no images or icons. When the Græco-Russian Church puts forward the plea that it does not worship the images themselves, but the holy men portrayed by them, the defence is quite invalid, for in that case the images would all be regarded as of equal worth, or, at most, those which show the best painting and the most accurate representation would be the more highly prized, while, in point of fact, it is the badly painted, old, and grimy ones that are preferred. The worship of saints' images, said not to have been made by hand of man but to have come into existence miraculously, is commanded on pain of anathema. We simply do not believe that there are such things at all, for God is Spirit and not man, and would not therefore concern Himself with the making of idols, and the less so because Heaven forbids men to do it. The worship of images is prohibited by Holy Writ in its entirety (Ac 17:23, 1 Co 10:7, Ps 115:4-8, 134 [135] 12-18, Wis 18:19, 14:8-17, Ep. of Jer 3-12, Rev 9:20). The worship of human corpses conflicts with Gn 3:10. Even if the body in which Christ the Saviour passed His earthly life had by chance been preserved, we would not worship it, for we revere Christ for His divine spirit and understanding, and not for His perishable body, even were it turned to stone.

The 2nd [3rd] Commandment forbids oaths of all kinds, and the 5th [6th] includes the prohibition of war and capital punishment. Marriage was instituted by God Himself (Gn 2:18-22, 1:28, Mt 19:3-9), and God is likewise the source of the ordinances relating to those with whom sexual intercourse is not to take place (Lv 18:18, 22:29, Sir 9:3-9, 23:22-27, 1 Co 6:15-20). Our mode of contracting marriages we take from To 7:10. After the parents have given their blessing, Ps 118 [114] is sung, and a prayer recited. The bridal pair then express their mutual consent, promise to be faithful to each other, and not to separate (1 Co 7:10). Thereafter To 8:2 and Eph 5:22-33 are read. The ceremony closes with an exhortation to the married pair, and then Ps 132 [133] is sung by all present. Although Christ Himself remained unmarried, He did not regard many as being capable of this, and therefore never urged it upon His disciples. Monasticism has against it both Scripture (Mt 19:12, 1 Co 7:16) and the example of Christ. If monks and nuns seclude themselves in convents in order to engage in the worship of images, God punishes them by abandoning them to unchaste conduct (Ro 12:1, 26).

We believe in the resurrection of the dead and in a life to come (according to Mk 12:26, 2 Co 5:1, Ps 55:17-19, Mt 24:30, Jn 5:28, Rev 20:12-15, Ac 24:15), and accordingly we pray that their sins may be forgiven them (2 Mac 12:46). When a member of our community dies, we pray and sing Ps 23 [24] and 145 [146], and, at the funeral, Ps 83 [84], in conformity with Ac 8:2, Sir 38:16, 23.

At the present day the Molokani are very numerous not only in Taurida, but in the Caucasus region and in E. Siberia (to which their ancestors were banished), and they are to be found in many other parts of Russia. It is computed that they number in all over half a million. As a result of dissensions regarding what are mainly minor distinctions, they have split up into a considerable number of denominations.

5. Judaizers.—The founder of this group is generally supposed to have been a member of the Molokani named Sundukov, a peasant from the village of Dubovka in Saratov, and a pupil of Uklé-in. As early as the 15th cent., however, we can trace a 'heresy of the Judaizers' in Nôvgorod and Pskov (Pleskau), which spread from these cities eastwards to Moscow. This was founded by two learned Jews, Sharija, an astrologist and Kabbalist, and Moïshe Chapusha, a Talmudic scholar. Its doctrinal basis was a fusion of Jewish and Christian elements, the former being by far the more predominant. It drew adherents even from the highest circles of Russian society; thus Sosima, the metropolitan of Moscow, and also the *fiancée* of Grand Duke John III. gave it their support. In 1490 and 1554 it was condemned by ecclesiastical councils in Nôvgorod and Moscow respectively. Gennadi, archbishop of Nôvgorod, and Josiph, abbot of the Volokolâmsk monastery, made such onslaughts upon it that at length it disappeared from view, although it possibly survived in a state of concealment. At a later day ecclesiastical writers

still occasionally refer to Judaizing groups, and it is possible that as a result of Jewish propaganda the sect may have repeatedly experienced a revival. In 1738 two Jews, by name Boruch and Faivist, diffused Jewish doctrines among the Orthodox, and, among other activities, built a Jewish school in Smolensk for the use of the humbler classes among the Russians. The Judaizing sect of the present day, however, has no traceable connexion with these earlier movements, but took its rise independently from the soil of Molokanism, which regards the OT as a valid standard equally with the NT. Sundukov, in fact, took the step of ranking the former above the latter, and this was certainly due in part to Jewish influence. He won numerous adherents among the Molokani. The authorities made their first discovery of Judaizing Molokani (called by the rest Subbôtniki, 'Sabbatarians') in 1797 in Alexandrovka, a town in the north of the Caucasus region, where even by that time they were more numerous than the Orthodox. In 1814 proceedings were taken against them in Jélez, in the province of Orgól, and incidentally certain Jews belonging to Saratov were implicated as proselytizers. All the accused were found to be circumcised. They had connexions with fellow-believers in the province of Voronesh. One of their missionaries who had been arrested stated that they then numbered about 400 in the province of Saratov; in 1818 some 500 were identified in Voronesh, but by 1823 they had increased in that government to over 3700. In one particular village in Transcaucasia there lived at that time more than 7000 Subbôtniki, while in the government of Archangel, i.e. the remote opposite quarter of the country, the entire Orthodox population of certain large villages had gone over to them. At the present day they possibly number 100,000. Many live in Siberia, as in the outskirts of Irkutsk and Minusinsk. As regards European Russia, they are particularly numerous in the middle and lower Volga districts, in the Crimea, in the region of the Don, and in the entire Caucasus area. Since the proclamation of religious liberty in 1905 their missionary activity has greatly expanded, and their agents are now penetrating the south-western region—as far as the government of Kiev—where previously they were not to be found. While a number of them eventually conformed in all respects to Judaism, learnt Hebrew, used the Hebrew Bible, and had their religious services conducted in that language by highly remunerated rabbis, yet the real Subbôtniki—also called Karaims or Karaimites—remained Russians in all things, using their native language in all religious functions, and adhering only to some of the Jewish practices, as, e.g., the laws regarding food, though indeed they are all circumcised. Their partial observance of Jewish customs is connected with the fact that, while accepting the Bible, they reject the Talmud. They do not look for a Messiah, and those who have gone wholly over to Judaism regard them as lost, declining all connexion with them either in eating or in marriage.

6. Stundists.—Stundism is an evangelical movement among the Russian peasantry of the south-west, and, according to Russian ecclesiastical writers, it is due to the propaganda of German evangelical, chiefly Lutheran, pastors who labour in the German settlements of that district. These Lutheran ministers in particular, however, in view of the legal restrictions under which the Lutheran Church was tolerated in Russia until the proclamation of religious freedom, refrained on principle from proselytizing work among the Russians, and long usage has made it easy for

them latterly to maintain their practice in this respect. The only exception was found in the case of the Reformed pastor Bohnekämper, who in the Odessa district of Kherson (from 1824 onwards) conducted his pietistic devotional 'hours' (*Stunden*) in the Württemberg manner, not only for German settlers but also for Russian peasants. It was not till the time of his son and successor, Karl Bohnekämper, however, that any religious movement of the kind arose among the Russians themselves (1862); and that the rise of Stundism was due to him is admitted by the well-known religious and theological writer Hermann Dalton,¹ who at that time was superintendent of the Reformed Church in Russia. The movement, however, under the direction of zealous Russian leaders like Ivan Rjaboshapka, Gerásim Balaban, and the brothers Zibulski, presently freed itself from all connexion with the Reformed Church, became purely Russian in character, and, spreading at first from the government of Kherson to that of Kiev, soon extended over the south-western and central regions of the country. According to the annual reports presented to the tsar from 1873 to 1885 by M. Pobédonostsev, chief procurator of the Holy Synod, Stundist communities, notwithstanding the most rigorous measures taken against the movement by the powers of Church and State, were then to be found everywhere in the areas indicated. It was during these years too that Stundism became more consolidated by union with the Russian Baptist body, which likewise owed its rise to W. European influence, and since then it has also been designated Stundo-Baptism. The relatively few who held aloof from this union were those who sought to maintain the original link of connexion, not indeed with evangelical pastors, but with the pietistic *Stundenhalter* ('those who hold hours of devotion') among the Swabian colonists, and these are now the 'Stundists' strictly so called in contradistinction to the Stundo-Baptists. The latter body, again, maintains its Russian character by keeping itself distinct from the Baptist group which originated in the work of Johann Gerhard Onken and his auxiliaries (Käbner, Lehmann, Willer, Ondra, Priezkan, Fischer, Schulz, Köniz, and Liebig) among the German colonists in Russia. The most outstanding agents of the Baptist movement among the Russian Stundists were André Miller and Vasili Ivanov, presbyter in Baku. The movement, as embodied in Stundo-Baptism, has also infected the south-east of Russia. More especially in the Caucasus region and in Siberia it carries on a strenuous and successful propaganda among the numerous Molokani residing there (to whom it has the right to preach), and also among the Orthodox, its chief missionaries being W. Pavlov and D. Masajev, a wealthy man of some celebrity. While generally at one with W. European Baptists in doctrine and worship, it devotes itself largely, in its conflict with the State Church, to fighting against the worship of images. The hotheadedness of some of its adherents has prompted them now and again to lay violent hands upon the saints' images of the Church, with the result that the sect has frequently suffered severe persecution, to which, it is true, it was exposed also in the days of Pobédonostsev. The Stundists are now a vast multitude; they are to be met with even in the north of Russia. Reliable statistics as to their numbers are not to be had, and it is a debatable point whether they are to be reckoned by the million or only by the hundred thousand, though the latter would probably be the more correct.

LITERATURE.—(i.) Of works dealing with the Skoptsi, in addition to those cited in vol. viii. p. 546, the most important are: E. Pelikan, *Forensic-Medical Investigations of Skoptism and Historical Notices regarding it* [Russ.], St. Petersburg, 1872, Germ. tr. by N. Ivanov, Giessen, 1876; K. Grass, *Die russischen Sekten*, vol. ii. 2 pts., *Die weissen Tauben oder Skopzen nebst geistlichen Skopzen, Neuskopzen, etc.*, Leipzig, 1909-14; N. G. Wysocki, *The First Skoptsi Trial: Materials relating to the Earliest History of the Skoptsi Sect* [Russ.], Moscow, 1915.

(ii.) Works dealing with the Stundists: A. Roshdestvenski, *South Russian Stundism* [Russ.], St. Petersburg, 1889; H. Dalton, *Der Stundismus in Russland*, Gütersloh, 1890; S. Stepnjak-Kravtshinski, *Der Stundist Pavel Rudenko*, Geneva, 1900, 2nd St. Petersburg, 1907 (=first part of *Collected Works*).

(iii.) The other sects have not been dealt with in monographs of a comprehensive kind, but short accounts of them will be found in the following general works: Vladimir Anderson, *Orthodoxism and Sectarianism* [Russ.], (*An Historical Sketch of Russian Religious Dissent*), St. Petersburg, 1908; T. Butkévitsh, *Survey of the Russian Sects and their Denominations* [Russ.], Kharkov, 1910, 1915; *The Russian Sectarians, their Doctrine, Worship, and Modes of Propaganda: Fraternal Work by Members of the Fourth Pan-Russian Missionary Congress* [Russ.], ed. M. Kalner, Odessa, 1911.

K. GRASS.

SECTS (Samaritan).—Some of the tendencies that gave rise to sectarian movements within Judaism were also at work among the Samaritans (*q.v.*). This was natural, since the general development in many respects ran along parallel lines. The things that Jews and Samaritans had in common, such as the worship of Jahweh as the only God, the recognition of the Law with what it embodied of the prophetic spirit, and the consequent observation of the Sabbath, the other festivals, circumcision, and the dietary rules, were more important than those in which they differed. In spite of strong antipathy and more or less careful avoidance of commerce, analogous methods of interpretation, exchange to some extent of ideas and customs, and exposure to the same external influences were inevitable. Hegesippus, who flourished in the time of Eleutherus (A.D. 175-189) and appears to have been a Christian Jew, looked upon 'the sons of Israel' as a whole and counted the Samaritans as one of their seven sects. When he enumerated among these, in addition to the Pharisees, the Sadducees, the Samaritans, and the Galileans (probably the Jewish Nazareans of Epiphanius), also Essenes and Baptist communions like the Masbothreans and the Hemerobaptiste,¹ he may have thought of the latter chiefly as Jews, but probably had no intention of denying that they had likewise representatives in Samaritan circles. Just as Jewish sects arose from such causes as the adoption, in one form or another, of the Persian doctrine of the resurrection of the dead, speculation concerning the desirable changes in the calendar or the mode of observing the festivals, doubts in regard to the permissibility of offering sacrifices in a sanctuary that had been desecrated and had an illegitimate or otherwise unworthy high-priesthood, opposition to animal sacrifices and to the use of animal food, abstinence from a second marriage or marriage with a divorced wife, preference for the celibate life, and the introduction of baptism as an initiatory rite for proselytes and frequently repeated ceremonies of purification, so similar tendencies seem to have occasioned schisms among the Samaritans. Nor is it at all improbable that they were at an early time affected by the currents of thought which later crystallized in the great Gnostic systems, though at first this incipient Gnosticism is likely to have appeared in a relatively crude form.

According to Epiphanius, there were four Samaritan sects, viz. Essenes, Sebucæans, Gorothenes, and Dositheans. Of the Essenes he gives, in this connexion, no description, evidently regarding their tenets as substantially identical with those of Jewish Essenes (*q.v.*). It is not impossible

¹ *Evangelische Strömungen in der russischen Kirche der Gegenwart*, Heilbronn, 1881.

¹ Eusebius, *HE* iv. 22.

that they were the earliest of these sects. Their name seems to designate them as 'quietists' (קִיֻּטִּים). The etymologies of Herodianus (*olkiarhis*) and Suidas (πολιτης) have no value; the generally assumed connexion with the Hasidæans (*q.v.*) is improbable; a Rechabite descent (Epiphanius, Nilus, Hilgenfeld) cannot be proved; and there is no basis for Lincke's theory that they were originally a tribe settled in Samaria.¹ But there is no reason to doubt that there were Essenes in Samaria as well as in Judæa. The desecration of the temple on Mt. Gerizim by Antiochus IV. in 168 B.C., and its destruction by John Hyrcanus c. 120 B.C.,² must have deeply affected the Samaritans; and it is not unlikely that some of them were opposed to a rebuilding of the temple, and, seeing in its destruction a judgment upon the worldly character and policy of the pontificate, were led to reject the sacrificial cult, and adopted the doctrines of the Jewish Essenes. As neighbours of the Sebuzæans they seem to have followed them in the matter of the calendar.

The Sebuzæans may well have been actuated by such a motive as Epiphanius assigns for their departure from the orthodox custom as regards the festivals, though he is no doubt wrong as to its date. Their origin is to be sought, not in the Persian, but in the Seleucid period. Even if a party of Galilæan Jews was rescued by Simon in the time of Judas Maccabæus³—and this has been questioned by Wellhausen⁴—it is by no means certain that the whole Jewish population was removed, and many Jews no doubt settled both in Galilee and in Samaria during the reigns of John Hyrcanus and Alexander Jannæus. Conflicts would naturally arise when these went to Jerusalem at the same time as the Samaritans went to Mt. Gerizim. To eliminate this cause of friction the Sebuzæans placed the Passover in the autumn. In doing so they may not only have desired to show their loyalty to the Seleucid rulers to whom Samaria belonged, and who began the year on the 1st of Tishri (Apellæus), but also have acted in harmony with their interpretation of Nu 28¹⁶, which obviated a distinction between a civil and an ecclesiastical year. If this is the origin of the sect, Lagarde's⁵ explanation of the name as derived from *sebu'ay*, one who counts the year as beginning with the 1st of Tishri, when God's oath (*sebu'a*) to Abraham (Gn 22¹⁶) was celebrated on Mt. Gerizim, is to be preferred both to the older derivation from *sabu'oth*, 'weeks,' and to that from *sabu'in*, 'Baptists,' adopted by Brandt, Bousset, and Holl; and the schism is perhaps more likely to have taken place early in the 1st cent. B.C. than after Pompey's conquest of Palestine. The result of this change in the calendar was that the Passover came to be celebrated in the autumn and the Feast of Tabernacles in the spring (Nisan, Xanthicus). Only some of the Essenes followed them in this innovation. It is not known whether they practised baptism; Abu'l Fath⁶ testifies that they opposed the innovations of Baba Rabba and preserved the ancient traditions of the Samaritans.

The Gorothenes are said to have adhered to the orthodox calendar. Their differences from the main body of Samaritans are not indicated. Possibly the name gives a hint. It may be derived from גִּירוּתָא (Syriac *giurutha*), 'a body of foreigners,' 'proselytes.' The objection that proselytes do not form a sect is scarcely valid. If they were received into the religious community by baptism, they may have been regarded, and even have considered themselves, in spite of their conversion, as a separate body, not quite on a par with 'the sons

of Israel' according to the flesh. The Gorothenes may have been looked upon as a Samaritan branch of the Masbuthæans, so named from *masbu'itha*, *masbu'itha*, 'baptism.' As to the age of proselyte baptism, the prevailing view at present is that it antedates the Christian era; the researches of Brandt have especially tended to confirm this opinion.

Concerning the Dositheans, the fourth sect mentioned by Epiphanius, we possess a certain amount of information from native Samaritan as well as Christian, Jewish, and Muslim sources. Unfortunately, Abu'l Fath, a Samaritan who wrote his *Chronicle* in Arabic in 1355, while familiar with the later customs and ideas of the sect, could only report, without critical sifting, the current traditions concerning their earlier history. The accounts of Dositheus and his followers by Hippolytus (whose lost work was known to Photius and apparently used by pseudo-Tertullian), Origen, Jerome, Philaster, Epiphanius, and Eulogius are often confused and contradictory; the references in *Pirgê de R. Eliezer* and *Tanhuma* yield little that is dependable for the earlier period, as Büchler especially¹ has shown; and those in Mas'udi and Shahrastāni, repeated by Abu'l Fida and Makrizi, are important chiefly for the later period. Various attempts have been made, on the basis of this material, to reconstruct the earlier history. It has been supposed that there were two or three different sects, each founded by a Dositheus. Krauss² mentions ten men bearing this name. This scholar identifies the founder of the sect, which continued to exist into Muslim times, with Theodosius, one of the two Samaritans who, according to Josephus,³ disputed with Andronicus before Ptolemy VII. Philometor (181–145 B.C.) and were put to death by this king for failing to prove that the true temple was on Mt. Gerizim. There is no evidence to prove either the identity of the two or the historical character of the legend. Another Dositheus is supposed by Krauss to be a disciple of Simon Magus and founder of a Christian sect referred to by Origen. Montgomery⁴ rejects the identification with Theodosius, but thinks that the first founder of a Dosithean sect may have opposed the Jews in Egypt at some time before the Christian era, while another Dositheus founded a different sect in the beginning of this era, the latter being distinguished by its belief in a resurrection, its practice of the ritual bath, and its inclination to asceticism and mysticism. But most of the ancient testimony connects Dositheus with Simon Magus (*q.v.*) either as his teacher or as his disciple. When the *Clementine Recognitions*, Philaster, pseudo-Tertullian, and Jerome derive the Sadducees (*q.v.*) from the Dositheans, it is to be remembered that they imagined absence of a belief in the Resurrection to be an innovation, and, as they knew some Dositheans in their own time to reject this doctrine, they charged them with having started this heresy. They evidently thought that Dositheus had appeared some time before the public ministry of Jesus and had been a predecessor of Simon Magus. This is indeed likely to have been the fact. As the importance of Simon Magus waxed, that of Dositheus waned, and the latter was relegated to a secondary place as disciple of the former. Dositheus may have been a *goet*, regarded by a Samaritan party as the *tahob*, or Joshua returned to life, to lead a new conquest and fulfil the promises given to Abraham; and Krauss⁵ may possibly be right in connecting him with the insurrection quelled by Pontius Pilate in A.D. 35.⁶ There does not seem to be any real need

of assuming a second Dositheus. In view of the strong evidence to the contrary from different periods, it cannot be successfully maintained that all Dositheans believed in the Resurrection. The Dositheans known to Epiphanius 'confessed a resurrection,'¹ and there are other indications of this belief in the history of the sect. At the time when the Samaritans generally accepted this doctrine (4th cent. A.D.), it is natural that it should also have been adopted by some of the Dositheans, and that they should have ascribed it to the original founder. But this seems to have been a temporary development within the sect. From Eulogius to Shahrastāni there is no trace of it. Even the omission of the formula, 'Blessed be God forever,' may, as Montgomery intimates,² be due to a desire the more emphatically to deny a life beyond. Neither a transient belief in some circles in the resurrection of the dead, nor the later legends clustering about the founder, nor the older peculiarities mentioned by Epiphanius, such as abstinence from animal food, sexual continence, and mysticism, can justify the assumption of a second Dositheus and a separate sect. Rigoristic interpretation of the Law, ritual washings, asceticism, and a penchant for mystical literature found their way into many of these sects; and the descriptions of the Dustan, or Dositheans, by Abū'l Fath and the Arabic writers show the perseverance of such characteristics in the main body of the followers of Dositheus. Abū'l Fath mentions a number of minor sects apparently sprung from the Dositheans. They were distinguished by such names as Abunai, Katitai, Sadukai, Fuskutai, sons of Yosudak, followers of Aulian, and disciples of Sakta ben Tabim; the Katitai declared the Law to have been abolished, the Saktai did not visit Mt. Gerizim, and the followers of Aulian were communists.

Was there a Simonian sect among the Samaritans? The existence of a religious body known as Simonians is not in doubt. It is clear that Justin,³ Irenæus,⁴ and Hippolytus⁵ believed Simon Magus to be the founder, and inferred from Ac 8⁹⁻²⁵ that he and the multitudes who acclaimed him 'the great power of God' were Samaritans. The historical character of Simon Magus has been questioned in modern times, and the origin of the sect ascribed by some scholars to a Christian Gnostic of the 2nd century.⁶ There is not sufficient evidence, however, to maintain either of these positions. In Samaritan tradition, manifestly influenced by Christian sources, Simon is remembered only as a wonder-worker and an opponent of Christianity. If Simon was actually baptized into the name of Jesus, this would inevitably tend to break up the Simonians as a Samaritan sect; and, if as a Christian his thought continued to move in the direction of later Gnostic speculation, this would naturally affect his fellow-converts among the Samaritans, and would, after all, best account for the characteristics of the Simonian sect described by Justin, Irenæus, Origen, and Hippolytus.

SECTS (Zoroastrian).—The emergence of distinct and properly called sects in the Zarathushtrian fold cannot, apparently, be definitely traced before Sasanian times (226-652 A.D.).

It must not, however, be inferred from this fact that complete uniformity of creed and religious practice obtained in Mazdæism before that period, or at any time from the days of Zarathushtra to the end of the Parthian domination. Throughout the Avesta passages occur revealing conditions of strong religious conflict in thought and usage. It is true that the chief opponents of the orthodox Mazdayasnians, especially in the *Gāthās*, were the adherents of the old naturalistic religion, led by the *kavis* and *karapans*—the priests of the nature pantheon. Still it would scarcely be safe to assume that the gulf that separates the rival parties is, in all instances, as wide as that which divided nature-worship from the Mazdæism of Zarathushtra or his immediate followers. Two considerations should be given their due weight in the interpretation of allusions to religious antagonists in the Avesta. In the first place, the degree of vehemence with which religious opponents are assailed and denounced is not always a true measure of the essential difference of the rival creeds; for the bitterest denunciations of the Zarathushtrians of the Avesta can be paralleled in the mutual anathemas of the various sects of almost every religion. And it is significant that the connotation which tradition¹ assigns to the names *kavis* and *karapans*, viz. 'blind' and 'deaf' respectively, exactly corresponds to the epithets with which Mihr Narsih,² the minister of Yazdagird II., stigmatizes those who did not hold the belief of the Mazdayasnians; and yet that dignitary immediately proceeds to set forth as part of the Mazdayasnian creed a doctrine which, as we shall see below, those in the direct doctrinal succession of the Gāthic Zoroastrians must have entirely repudiated.

Secondly, a religious community which recognized equally, as the basis of its creed and practice, the polytheistic *Yashts* and the monotheistic *Gāthās* could scarcely expect to achieve anything approaching unity of faith or religious usage. Hence there must have existed, even from late Achaemenian times, between the two extremes of Gāthic Mazdayasnians on the one hand and those converts who remained but little removed from nature-worship on the other, a large number of communities holding as many varieties, professedly, of the same creed. Nevertheless our only definite evidence of this is the presence of these divergent oracles in the same canon.

The establishment of Zarathushtrian Mazdæism as the state religion by the Sasanians (*g.v.*) no doubt gave a new impulse to the process of systematization and closer definition of religious dogma, and hence the cleavage between the

⁶ See art. SIMON MAGUS.

different teachings would be more distinctly revealed. The Pahlavi literature, strange as it may seem, contains no explicit allusions to the sects, known from other sources to exist in the Zoroastrian Church of Sasanian and early Muslim days, though the influence of the doctrines of the sectaries is discernible in some of them. With one exception—the small tract called '*Ulamā-i-Islām*,¹ whose author was almost certainly a member of the sect of which he writes—we are dependent for our knowledge of the sects of Zoroastrianism upon non-Zoroastrian works, of which the most extensive is that of the Muslim historian Shahrastānī² († A.D. 1153).

In addition to the two great heretical sects, the Manichæans and the followers of Mazdak, which really represented distinct religious systems, and are therefore treated in this work under their respective titles, Shahrastānī describes the tenets of two main sects which deviated from the position of the Zarathushtrians as represented in the Avesta.

1. Zarvanists.—By far the more important of the two were the Zarvanists. They derived their appellation from Zrvan or Zarvan (mod. Pers.

زرمān), Time, whose place in their conception of theogony is generally regarded as the distinctive doctrine of the sect. In the Avesta,³ it will be remembered, 'the Good Spirit' is said to have created 'in endless time' (*zrvan akarana*), indicating, probably, that he was gifted with 'boundless time,' or eternity, as an attribute. In other passages⁴ Zrvan⁵ is praised as a *yazata*, or lesser divinity. According to the Zarvanist theory, he is neither an attribute nor a deity, but a primal source of deity, a *fons deitatis*. Moreover, not only did Ormazd owe his existence ultimately to Zrvan, but Ahriman also was derived from the same source. Thus it was sought to resolve the dualism which the orthodox faith seemed to have failed to achieve.⁶ As to the details of the Zarvanist theogony there seemed to have been no unanimity. According to the '*Ulamā-i-Islām*, the origin of Ormazd from Zrvan was not direct, but mediated by the union of fire and water, which were first created, although creation was, according to this sect, a function not of Zrvan, but of Ormazd, as in the orthodox faith.

Shahrastānī and the Armenian writers⁷ make no mention of any intermediary, but describe in a somewhat naive manner the conception and birth of Ormazd and Ahriman from Zrvan. According to the Armenian account, Zrvan had offered sacrifices for 1000 years in the hope of begetting a son who would bring creation into being. Shahrastānī extends the period during which Zrvan had whispered that desire to himself to 9999 years. At the end of the period all agree that misgiving assailed Zrvan and from that doubt Ahriman was conceived, although Ormazd was simultaneously generated in the womb through Zrvan's knowledge.

³ *Vend.* xix. 33.

⁴ *Ib.* xix. 44, 55; *Ny.* i. 8, etc.

⁵ As to the antiquity of Zarvanism, N. Söderblom (*La Vie future, d'après le Mazdéisme*, Paris, 1901, p. 248, note 2) reminds us that Berossus relates that Zrvan was a king, from which it is concluded (see M. Bréal, *Mélanges de mythologie et de linguistique*, Paris, 1877, p. 214) that Zarvanism goes back to the 4th cent. A.D.

⁶ Paulus Persa tells us that in his day (6th cent. A.D.) many opinions were held as to the nature of God: 'There are some who believe in only one God; others maintain that he is not the only God. Some teach that he possesses contrary attributes,' etc. (*Logica*, ap. J. P. N. Land, *Anecdota Syriaca*, Leyden, 1802-75, vol. iv., lat. tr. p. 2).

⁷ Eznik (6th cent.), tr. in John Wilson, *The Parsi Religion*, Bombay, 1843, p. 542f.; also Elissæus, *op. cit.*

When Zrvan realized this, he vowed to give the sovereignty to the first-born; whereupon Ahriman, although at the time the farther from the birth, perforated the womb and became the first-born. When he stood before his father to claim the sovereignty, Zrvan despised him on account of his ugliness and depravity and endeavoured to repudiate him, but owing to his vow he was constrained to grant him the lordship of the world, though in a somewhat limited form, for 9000 years.

The Zarvanists were by no means agreed among themselves as to the origin of Ahriman or as to his function in the scheme of things. Some held, according to Shahrastānī, that there was some evil principle in God eternally. Others maintained, according to the '*Ulamā-i-Islām*, that Ahriman was a fallen angel, thus agreeing with the Biblical conception. We may legitimately suspect Christian influence here. It is equally clear that the Zarvanists differed as widely among themselves as to the motive of Zrvan in the creation of Ahriman. Some held that his function was to prove to Ormazd the absolute power of Zrvan; others maintained that the two spirits were necessary for the production of variety in creation: while others again despaired of discovering the *raison d'être* of Ahriman, and regarded his existence almost as a mishap. In addition to their distinctive doctrine of theogony the Zarvanists had developed a system of cosmology which also differed in important respects from that of the Avesta.¹ The '*Ulamā-i-Islām* relates that, in the great conflict between the powers of light and the forces of darkness, seven demons were taken captive and chained to the heavens, but Ormazd changed their names and assigned to each of them a special sphere in the sky. The names prove to be the same as those given to the *apakh-tars*, or planets, in the *Bundahishn*. These the Zarvanists evidently regarded as inimical to man, whereas they held the constellations to be friendly and helpful to him.² F. Spiegel³ contends strongly that it was in their cosmology rather than in their theogony that the Zarvanist tenets differed from the accepted teaching of the Zoroastrian Church of Sasanian times. We may admit that Zarvanist cosmology may have been their major contribution to Zoroastrian thought, and that evident traces of Babylonian astrology can be detected in their teaching; but we can scarcely go so far as Spiegel⁴ does in saying that their peculiar views on the nature of God were a matter of indifference in the Zoroastrian Church of the Sasanian period.⁵ Nor do the special mention which the Zarvanist creed receives in the edict of Mihr Narsih and the fact that in his refutation of heresies Eznik confines himself to the Zarvanist doctrine warrant the conclusion that they were co-extensive with the whole or even the major part of the Church of those days. The latter fact may only prove that their theological doctrine was regarded by Eznik as by far the most pernicious.

Finally, there is much to connect the Zarvanist teaching with the strong fatalistic element that runs through some of the Pahlavi books.⁶ Eznik explains the term 'Zrvan' as signifying 'fortune' (*bakht*). Theodore of Mopsuestia⁷ similarly interprets the name (Ζαρουδμ δν ἀρχηγόν πάντων ἐσάγει δν καὶ τύχην καλεῖ). The modern Persian term,

روزگار, especially in the *Shāhnāmāh*, signifies both 'time' and 'fortune'; and the frequent employment of *sipihr*, 'heavens,' and *charkh* in the same

¹ See art. COSMOGONY AND COSMOLOGY (Iranian).

⁷ Ap. Photius, *Bibl.* 81

book, as metaphors for 'fate' and 'chance,' evidences perhaps the fatalistic tendency of Zarvanist astral lore. It may therefore be unnecessary to assume the existence of a separate sect of fatalists.¹

2. Gayomarthians.—The other sect, clearly of far less importance, was the Gayomarthians. For their tenets we are almost entirely beholden to Shahrastānī's account. They believed in the existence of two principles or beings, Yazdān (God, i.e. Ormazd) and Ahriman. Yazdān is eternal, Ahriman derived and created. The origin of the latter is accounted for in much the same way as in some of the views attributed to the Zarvanists. A thought that crossed the mind of Yazdān, as to the kind of being his rival (if such existed) would be, was not in harmony with the nature of light, and thus darkness (which was called Ahriman) resulted from that thought. The essential opposition in the nature of the two beings inevitably led to a bitter conflict between them, just as is related in the Avesta. The new element here, however, is that an angel appears as mediator, and peace is made between the warring spirits on condition that the lower world, or earth, should belong to Ahriman for 7000 years, but that at the end of the period he should surrender it to light; yet those who were in the world before peace was made were to be assigned to the evil one.

Then there appeared the man Gayomarth and the ox; but both were killed, and in the man's place there sprang up a plant, *ribās*, and from the root of the plant sprang a man, *misha*, and a woman, *mishāna*. They were the parents of the human race. In the place of the ox there came the domestic and other animals. Man as yet was only spirit, but now he was allowed the option of being carried away to the realms of Ahriman, on the one hand, or, on the other, of being clothed in bodily form and entering upon the conflict with Ahriman, with an assurance of the support of light and of final victory over the forces of darkness and entrance into the state of resurrection.

3. Saisāniya.—From the Zarathushtrians, i.e. apparently the orthodox section of adherents of Mazdeism, there originated at the time of Abu Muslim Sāhib-u'd-Dawlah († A.D. 755) a small sect which Shahrastānī calls Saisāniya or Bihāfridiya. Their founder was a certain Khawwāf from the neighbourhood of Nishapur. His secession seems to have been due mainly to his objection to next-of-kin marriage (*khvētōk-das*) and the drinking of wine, in which it is natural to suspect traces of Muslim influence. Shahrastānī also says that he was strongly opposed to fire-worship, which brought upon him the wrath of the *mobed*, at whose bidding probably Abu Muslim ordered him to be put to death. His followers are credited also with aversion to killing and eating the flesh of any animal until it was old. They acquired for their own possession the houses of strangers, and were lavish in their expenditure. After the death of their founder we have no record of the doings of this sect, but Shahrastānī relates that they believed him to have ascended on a yellow horse to heaven, whence he would return to take vengeance upon his enemies.

A Persian work entitled *Dabistān-i-Mazāhib*, written by Muhsin-i-Fānī in the 17th cent., claims to supply us with an account of some thirteen or fourteen Parsi sects. For two reasons, at least, no discussion of those sects is included in this article: in the first place, the historical value of the *Dabistān*, and especially of the *Dasātīr* (whence the materials of the *Dabistān* in that part of it are drawn), has been seriously impugned by some of

the highest authorities;¹ in the second place, inasmuch as we have no other account or mention of those sects by which to compare and check notices so overlaid with purely legendary lore as we find Muhsin-i-Fānī's account of the Parsi sects to be,² we do not possess the necessary data to pronounce a considered opinion upon them.

The reader may consult that work in the original Persian, of which many lithographed texts exist, or in the English translation of D. Shea and A. Troyer, *The Dabistān or School of Manners*, 3 vols., Paris, 1843.

LITERATURE.—In addition to the works already referred to, see L. C. Casartelli, *La Philosophie religieuse du Mazdéisme sous les Sassanides*, Louvain, 1884, Eng. tr., Bombay, 1889; Avesta: *Livre sacré du Zoroastrisme*, tr. C. de Harlez, Paris, 1881, Introd. pp. lxxxiv-lxxxviii. E. EDWARDS.

SECULARISM.—I. Antecedents.—Secularism may be described as a movement, intentionally ethical, negatively religious, with political and philosophical antecedents. Founded with the express intention of providing a certain theory of life and conduct, it follows that in its positive aspect it is ethical. Since it undertook to do this without reference to a deity or a future life, and thus proposed to fulfil a function of religion, apart from religious associations, it may be regarded as negatively religious. Its origin, however, was primarily due to certain political conditions and philosophical influences.

Politically, secularism sprang from the turmoil which preceded, and still more from that which followed, the passing of the Reform Bill in 1832. Its matrix was provided in the somewhat incoherent socialism of Robert Owen and his followers and in the ill-fated Chartist movement. It came to birth shortly after the collapse of the revolutionary hopes which had been inspired in the extreme Chartists by the Continental revolutions of 1848. It was, therefore, in some measure, a recognition of the necessity of attempting to further social and political progress by the quieter methods of organization and education.

It is impossible to ignore the fact that serious social wrongs produced the reaction of which secularism was one of the fruits. The selfishness of the wealthy and influential classes, the unreasoning opposition to political and religious freedom, the stolid dogmatism of theology, were all powerful irritants; and it is not to be thought strange that, among the working-classes, consciousness of such a state of things begot not only extreme political theories, but the tendency to anti-religious reaction. Secularism was essentially a protest-movement. It possessed the vehement character of all such movements and the driving-force of the passions which they arouse. At the same time, it inherited the inevitable defects—the tendency to destructive rather than constructive action, the warping influence of heated feeling, the limited outlook, and the negationism—which inhere in all movements that are primarily reaction against established facts. Although it is true that secularism was an attempt to provide a positive policy, its positive nature was based upon a specific limitation of range and outlook, rendered possible only by reason of prejudice against the religious implications of life and conduct, which secularism refused to take into consideration. It proved impossible, therefore, as the history of secularism shows, for the movement to disentangle itself from the political and social passions out of which it arose.

The philosophical roots of secularism run back

¹ E. G. Browne, *A Literary Hist. of Persia*, London, 1902-06, i. 53-56; also A. W. von Schlegel, *Réflexions sur l'étude des langues des Asiatiques*, Bonn and Paris, 1832, p. 51 f.

² This remark is not necessarily applicable to other than the accounts of Parsi sects.

¹ See, however, M. N. Dhalla, *Zoroastrian Theology*, New York, 1914, pp. 205-208.

different teachings would be more distinctly revealed. The Pahlavi literature, strange as it may seem, contains no explicit allusions to the sects, known from other sources to exist in the Zoroastrian Church of Sasanian and early Muslim days, though the influence of the doctrines of the sectaries is discernible in some of them. With one exception—the small tract called '*Ulamā-i-Islām*,¹ whose author was almost certainly a member of the sect of which he writes—we are dependent for our knowledge of the sects of Zoroastrianism upon non-Zoroastrian works, of which the most extensive is that of the Muslim historian Shahrastānī² († A.D. 1153).

In addition to the two great heretical sects, the Manichæans and the followers of Mazdak, which really represented distinct religious systems, and are therefore treated in this work under their respective titles, Shahrastānī describes the tenets of two main sects which deviated from the position of the Zarathushtrians as represented in the Avesta.

1. Zarvanists.—By far the more important of the two were the Zarvanists. They derived their appellation from Zrvan or Zarvan (mod. Pers.

زمان), Time, whose place in their conception of theogony is generally regarded as the distinctive doctrine of the sect. In the Avesta,³ it will be remembered, 'the Good Spirit' is said to have created 'in endless time' (*zrvan akarana*), indicating, probably, that he was gifted with 'boundless time,' or eternity, as an attribute. In other passages⁴ Zrvan⁵ is praised as a *yazata*, or lesser divinity. According to the Zarvanist theory, he is neither an attribute nor a deity, but a primal source of deity, a *fons deitatis*. Moreover, not only did Ormazd owe his existence ultimately to Zrvan, but Ahriman also was derived from the same source. Thus it was sought to resolve the dualism which the orthodox faith seemed to have failed to achieve.⁶ As to the details of the Zarvanist theogony there seemed to have been no unanimity. According to the '*Ulamā-i-Islām*, the origin of Ormazd from Zrvan was not direct, but mediated by the union of fire and water, which were first created, although creation was, according to this sect, a function not of Zrvan, but of Ormazd, as in the orthodox faith.

Shahrastānī and the Armenian writers⁷ make no mention of any intermediary, but describe in a somewhat naive manner the conception and birth of Ormazd and Ahriman from Zrvan. According to the Armenian account, Zrvan had offered sacrifices for 1000 years in the hope of begetting a son who would bring creation into being. Shahrastānī extends the period during which Zrvan had whispered that desire to himself to 9999 years. At the end of the period all agree that misgiving assailed Zrvan and from that doubt Ahriman was conceived, although Ormazd was simultaneously generated in the womb through Zrvan's knowledge.

³ *Yend.* xix. 33.

⁴ *Ib.* xix. 44, 55; *Ny.* i. 8, etc.

⁵ As to the antiquity of Zarvanism, N. Söderblom (*La Vie future, d'après le Mazdéisme*, Paris, 1901, p. 248, note 2) reminds us that Berossus relates that Zrvan was a king, from which it is concluded (see M. Bréal, *Mélanges de mythologie et de linguistique*, Paris, 1877, p. 214) that Zarvanism goes back to the 4th cent. A.D.

⁶ Paulus Persa tells us that in his day (6th cent. A.D.) many opinions were held as to the nature of God: 'There are some who believe in only one God; others maintain that he is not the only God. Some teach that he possesses contrary attributes,' etc. (*Logica*, ap. J. P. N. Land, *Anecdota Syriaca*, Leyden, 1862-76, vol. iv., Lat. tr. p. 2).

⁷ Eznik (6th cent.), tr. in John Wilson, *The Parsi Religion*, Bombay, 1843, p. 542 f.; also Elisæus, *op. cit.*

When Zrvan realized this, he vowed to give the sovereignty to the first-born; whereupon Ahriman, although at the time the farther from the birth, perforated the womb and became the first-born. When he stood before his father to claim the sovereignty, Zrvan despised him on account of his ugliness and depravity and endeavoured to repudiate him, but owing to his vow he was constrained to grant him the lordship of the world, though in a somewhat limited form, for 9000 years.

The Zarvanists were by no means agreed among themselves as to the origin of Ahriman or as to his function in the scheme of things. Some held, according to Shahrastānī, that there was some evil principle in God eternally. Others maintained, according to the '*Ulamā-i-Islām*, that Ahriman was a fallen angel, thus agreeing with the Biblical conception. We may legitimately suspect Christian influence here. It is equally clear that the Zarvanists differed as widely among themselves as to the motive of Zrvan in the creation of Ahriman. Some held that his function was to prove to Ormazd the absolute power of Zrvan; others maintained that the two spirits were necessary for the production of variety in creation: while others again despaired of discovering the *raison d'être* of Ahriman, and regarded his existence almost as a mishap. In addition to their distinctive doctrine of theogony the Zarvanists had developed a system of cosmology which also differed in important respects from that of the Avesta.¹ The '*Ulamā-i-Islām* relates that, in the great conflict between the powers of light and the forces of darkness, seven demons were taken captive and chained to the heavens, but Ormazd changed their names and assigned to each of them a special sphere in the sky. The names prove to be the same as those given to the *apakh-tars*, or planets, in the *Bundahishn*. These the Zarvanists evidently regarded as inimical to man, whereas they held the constellations to be friendly and helpful to him.² F. Spiegel³ contends strongly that it was in their cosmology rather than in their theogony that the Zarvanist tenets differed from the accepted teaching of the Zoroastrian Church of Sasanian times. We may admit that Zarvanist cosmology may have been their major contribution to Zoroastrian thought, and that evident traces of Babylonian astrology can be detected in their teaching; but we can scarcely go so far as Spiegel⁴ does in saying that their peculiar views on the nature of God were a matter of indifference in the Zoroastrian Church of the Sasanian period.⁵ Nor do the special mention which the Zarvanist creed receives in the edict of Mihr Narsih and the fact that in his refutation of heresies Eznik confines himself to the Zarvanist doctrine warrant the conclusion that they were co-extensive with the whole or even the major part of the Church of those days. The latter fact may only prove that their theological doctrine was regarded by Eznik as by far the most pernicious.

Finally, there is much to connect the Zarvanist teaching with the strong fatalistic element that runs through some of the Pahlavi books.⁶ Eznik explains the term 'Zrvan' as signifying 'fortune' (*bakht*). Theodore of Mopsuestia⁷ similarly interprets the name (*Ζαρβάνη δὲ ἀρχηγὸν πάντων ἐλαττει δὲ καὶ τύχην καλεῖ*). The modern Persian term, روزگار, especially in the *Shāhnāmāh*, signifies both 'time' and 'fortune'; and the frequent employment of *spīhr*, 'heavens,' and *charkh* in the same

¹ See art. COSMOGONY AND COSMOLOGY (Iranian).

⁷ Ap. Photius, *Bibl.* 81

book, as metaphors for 'fate' and 'chance,' evidences perhaps the fatalistic tendency of Zorvanist astral lore. It may therefore be unnecessary to assume the existence of a separate sect of fatalists.¹

2. *Gayomarthians*.—The other sect, clearly of far less importance, was the Gayomarthians. For their tenets we are almost entirely beholden to Shahrastānī's account. They believed in the existence of two principles or beings, Yazdān (God, i.e. Ormazd) and Ahriman. Yazdān is eternal, Ahriman derived and created. The origin of the latter is accounted for in much the same way as in some of the views attributed to the Zorvanists. A thought that crossed the mind of Yazdān, as to the kind of being his rival (if such existed) would be, was not in harmony with the nature of light, and thus darkness (which was called Ahriman) resulted from that thought. The essential opposition in the nature of the two beings inevitably led to a bitter conflict between them, just as is related in the Avesta. The new element here, however, is that an angel appears as mediator, and peace is made between the warring spirits on condition that the lower world, or earth, should belong to Ahriman for 7000 years, but that at the end of the period he should surrender it to light; yet those who were in the world before peace was made were to be assigned to the evil one.

Then there appeared the man Gayomarth and the ox; but both were killed, and in the man's place there sprang up a plant, *ribās*, and from the root of the plant sprang a man, *misha*, and a woman, *mishāna*. They were the parents of the human race. In the place of the ox there came the domestic and other animals. Man as yet was only spirit, but now he was allowed the option of being carried away to the realms of Ahriman, on the one hand, or, on the other, of being clothed in bodily form and entering upon the conflict with Ahriman, with an assurance of the support of light and of final victory over the forces of darkness and entrance into the state of resurrection.

3. *Saisāniya*.—From the Zarathushtrians, i.e. apparently the orthodox section of adherents of Mazdæism, there originated at the time of Abu Muslim Sāhib-u'd-Dawlah († A.D. 755) a small sect which Shahrastānī calls *Saisāniya* or *Bihāfridiya*. Their founder was a certain Khawwāf from the neighbourhood of Nishapur. His secession seems to have been due mainly to his objection to next-of-kin marriage (*khvātōk-das*) and the drinking of wine, in which it is natural to suspect traces of Muslim influence. Shahrastānī also says that he was strongly opposed to fire-worship, which brought upon him the wrath of the *mōbed*, at whose bidding probably Abu Muslim ordered him to be put to death. His followers are credited also with aversion to killing and eating the flesh of any animal until it was old. They acquired for their own possession the houses of strangers, and were lavish in their expenditure. After the death of their founder we have no record of the doings of this sect, but Shahrastānī relates that they believed him to have ascended on a yellow horse to heaven, whence he would return to take vengeance upon his enemies.

A Persian work entitled *Dabistān-i-Mazāhib*, written by Muhsin-i-Fāni in the 17th cent., claims to supply us with an account of some thirteen or fourteen Parsi sects. For two reasons, at least, no discussion of those sects is included in this article: in the first place, the historical value of the *Dabistān*, and especially of the *Dasatīr* (whence the materials of the *Dabistān* in that part of it are drawn), has been seriously impugned by some of

the highest authorities;¹ in the second place, inasmuch as we have no other account or mention of those sects by which to compare and check notices so overlaid with purely legendary lore as we find Muhsin-i-Fāni's account of the Parsi sects to be,² we do not possess the necessary data to pronounce a considered opinion upon them.

The reader may consult that work in the original Persian, of which many lithographed texts exist, or in the English translation of D. Shea and A. Troyer, *The Dabistān or School of Manners*, 3 vols., Paris, 1843.

LITERATURE.—In addition to the works already referred to, see L. C. Casartelli, *La Philosophie religieuse du Mazdæisme sous les Sassanides*, Louvain, 1884, Eng. tr., Bombay, 1889; *Avesta: Livre sacré du Zoroastrisme*, tr. C. de Harlez, Paris, 1881, Introd. pp. lxxxiv-lxxxviii. E. EDWARDS.

SECULARISM.—I. *Antecedents*.—Secularism may be described as a movement, intentionally ethical, negatively religious, with political and philosophical antecedents. Founded with the express intention of providing a certain theory of life and conduct, it follows that in its positive aspect it is ethical. Since it undertook to do this without reference to a deity or a future life, and thus proposed to fulfil a function of religion, apart from religious associations, it may be regarded as negatively religious. Its origin, however, was primarily due to certain political conditions and philosophical influences.

Politically, secularism sprang from the turmoil which preceded, and still more from that which followed, the passing of the Reform Bill in 1832. Its matrix was provided in the somewhat incoherent socialism of Robert Owen and his followers and in the ill-fated Chartist movement. It came to birth shortly after the collapse of the revolutionary hopes which had been inspired in the extreme Chartists by the Continental revolutions of 1848. It was, therefore, in some measure, a recognition of the necessity of attempting to further social and political progress by the quieter methods of organization and education.

It is impossible to ignore the fact that serious social wrongs produced the reaction of which secularism was one of the fruits. The selfishness of the wealthy and influential classes, the unreasoning opposition to political and religious freedom, the stolid dogmatism of theology, were all powerful irritants; and it is not to be thought strange that, among the working-classes, consciousness of such a state of things begot not only extreme political theories, but the tendency to anti-religious reaction. Secularism was essentially a protest-movement. It possessed the vehement character of all such movements and the driving-force of the passions which they arouse. At the same time, it inherited the inevitable defects—the tendency to destructive rather than constructive action, the warping influence of heated feeling, the limited outlook, and the negationism—which inhere in all movements that are primarily reaction against established facts. Although it is true that secularism was an attempt to provide a positive policy, its positive nature was based upon a specific limitation of range and outlook, rendered possible only by reason of prejudice against the religious implications of life and conduct, which secularism refused to take into consideration. It proved impossible, therefore, as the history of secularism shows, for the movement to disentangle itself from the political and social passions out of which it arose.

The philosophical roots of secularism run back

¹ E. G. Browne, *A Literary Hist. of Persia*, London, 1902-06, i. 55-56; also A. W. von Schlegel, *Reflexions sur l'étude des langues des Aïatiques*, Bonn and Paris, 1832, p. 51 f.

² This remark is not necessarily applicable to other than the accounts of Parsi sects.

to the 'associationist' school of James Mill (*q.v.*) and Jeremy Bentham, with an anti-theistic strain inherited from Thomas Paine and Richard Carlile. Secularism also reveals the influence of positivism (*q.v.*), of which it was in part the English re-echo. Although avoiding the positivist religion and refusing to constitute humanity as a deity, it espoused a theory of knowledge essentially positivistic. This influence was, however, imported into secularism chiefly at second hand, through G. H. Lewes and J. S. Mill (*q.v.*) in particular. The principles of secularism were submitted to the latter and received his approval. It was, accordingly, the British utilitarians who were philosophically the sponsors of secularism.

Whilst the main impulses of the movement were derived from the social and political conditions which roused its founders to rebel against the accepted doctrines of life and thought prevalent in their day, its collateral influences were philosophical. This was necessarily so, since its avowed separation from religion made it incumbent upon secularism to establish its claim to furnish a theory of life and conduct by an appeal to philosophy, and especially ethics. Positivism supplied a conception of knowledge affording a basis upon which it was held that religious considerations could be ruled out, and utilitarianism (*q.v.*) lent itself to a non-religious explanation of the motives and ends of conduct. In these theories, therefore, the requisite ground for secularism was given.

2. The founders.—Secularism owes its name, and in large measure its existence, to the life and labours of George Jacob Holyoake.

Holyoake was born in Birmingham in 1817. His parents were hard-working artisans, and his upbringing was religious. The atmosphere of the town of his birth and the circumstances of his own childhood aroused in him strong social and political convictions, which were fanned into flame by the passing of the Reform Bill in 1832, at which time Holyoake was an impressionable lad of fifteen. He became estranged from the Churches because of their lack of social sympathy, and made his first ventures into political life as an Owenite 'social missionary.' Subsequently he was associated with Chartism (*q.v.*), and after the failure of that movement his later years revealed him as an advanced Radical. About the year 1841 he definitely abandoned belief in God, and his antipathy to Christianity was deepened by a somewhat unjust term of imprisonment imposed upon him at Cheltenham for 'blasphemy.' At the same time Holyoake never appears to have felt himself in sympathy with the dogmatic atheism of his day. His atheism was rather agnosticism (*q.v.*), and in one of the many periodicals with which he was from time to time associated, *The Reasoner*, he wrote: 'We are not infidels if that term implies rejection of Christian truth, since all we reject is Christian error.' During his life he was frequently in association with Christians who shared his social and political sympathies, and his attitude towards the 'Christian socialism' of Maurice (*q.v.*) and Kingsley reveals his union of aim so far as socialism was concerned, equally with his dislike of the doctrinal significance which he felt was conveyed by the term 'Christian.' For many years Holyoake was honourably connected with the welfare of the co-operative movement.¹ In middle life he settled in London as a bookseller, and among his many interests the struggle of Italy for freedom found a characteristic place. He counted in the circle of his friends both Garibaldi and Mazzini, and busied himself with promoting the unlucky 'English Legion' that sailed to their assistance. In later life he settled at Brighton, where he died in 1906, agitator and enthusiast to the end, welcoming almost with his last breath the Liberal victory at the General Election early in that year.

During his long life Holyoake was associated more or less sympathetically with the men whose anti-Christian propaganda was the storm-centre of the 19th cent.; and yet at the same time he maintained, especially in his later life, cordial relations with eminent supporters of Christianity, including W. E. Gladstone, who regarded him as an honest and single-minded opponent. None of the associates of Charles Bradlaugh was so generally esteemed among their opponents as Holyoake, and a number of attacks made upon him by members of his own party are significant testimony to the fairness and independence of Holyoake's judgment.

¹ See art. CO-OPERATION.

Among Holyoake's companions in establishing secularism may be named Charles Southwell, Thomas Cooper (afterwards converted to Christianity), Thomas Paterson, and William Chilton. The movement originated in 1849, and was expressly regarded by Holyoake as an alternative to atheism.¹ In 1850 Holyoake met Bradlaugh, and in the subsequent year coined the term 'secularism,' after some hesitation as to the merits of 'netheism' and 'limitationism' as alternatives, 'as best indicating that province of duty which belongs to this life.' Secularism was intended to differentiate Holyoake's anti-theistic position from Bradlaugh's atheistic pronouncements, and, although Bradlaugh, Charles Watts, G. W. Foote, and other atheists were identified with the secular movement, Holyoake always endeavoured to make it possible that the social, political, and ethical aims of secularism should not necessitate subscription to atheistic belief, in the hope that liberal-minded theists might, without prejudice to their theism, join in promoting these ends—an attitude to which he persisted in clinging, despite the small success which it achieved.

3. Principles.—The essential principle of secularism is to seek for human improvement by material means alone. It holds that such means are the more important, because the more proximate; and that, independently and in themselves, they are adequate to secure the desired end.

Secularism arose and developed at a period when the relations of science and religion were beginning to be regarded as those of sharp opposition. In harmony with that notion, it proclaimed the independence of secular truth. Secular knowledge is founded upon the experience of this life and can be maintained and tested by reason at work in experience. It conceived that, just as mathematics, physics, and chemistry were 'secular' sciences, so it would be possible on the same lines to establish a secular theory of the conduct and welfare of life, and to add the instruction of the conscience to instruction in the sciences, in a similar manner and on similar conditions.

The relations of secularism to religion were accordingly defined as mutually exclusive rather than hostile. Theology professes to interpret the unknown world. Secularism is wholly unconcerned with that world and its interpretation. It deals with the known world interpreted by experience and neither offers nor forbids any opinion regarding another life. Neither theism nor atheism enters into the secularist scheme, because neither is provable by experience. In so far as Christianity is moral, secularism has common ground with it, but it offers a basis for morality wholly independent of all Christian belief and one that will appeal to those who, for various reasons, are dissatisfied with theology. It submits that complete morality is attainable by, and can be based upon, secular considerations alone, just as all the uses for which the house was designed can be fulfilled without reference to the architect who may have designed it. It does not assert that there is no light elsewhere, but that such light adds nothing to the pursuit of human ends. Unless dogma actively interferes with human happiness, secularism is content to leave it to flourish or perish as it may.

Historically, secularism has been intermingled with atheism throughout its course, but Holyoake always insisted that the two were distinct. On secularist principles, he was willing to associate with Bradlaugh and equally ready to associate with any theist who would unite with him in seeking the mutual improvement of the race by secular means. He regarded both theism and

¹ See art. ATHEISM, § 6.

atheism as what would now be called 'overbelief.' In contrast with Holyoake, Bradlaugh considered that secularism was bound to contest theistic belief and that material progress was impossible so long as 'superstition' so powerfully manifested itself.

Secularism held that its principles could be established and sustained by the intellect as principles of reason and intelligence equally applicable to all humanity. It contended that morality was based upon reason and that error lay in knowledge rather than intention. Holyoake thought it possible to establish material conditions which would eradicate poverty and depravity. With the utilitarians he held it as self-evident that morality was the conduct which establishes the common welfare, and he thought that science could teach the laws of happiness equally with the laws of health. To that end we must be guided by reason, believing not what we desire, which gives the condition neither of certainty nor of uniformity, but that which reason can vindicate. To fulfil this function, reason must be left unfettered. Ethical and religious research must be as free as scientific research. There must be no penalties, legal or spiritual, for any investigation, criticism, or publicity. In this aspect of a reasonable theory of life secularism fulfils a function which it regards religion as imperfectly serving. It 'takes truth for authority, not authority for truth' and 'substitutes the piety of usefulness for the usefulness of piety.' What is best for man will be determined by reason tested by experience and will surely be approved by 'the Author of humanity.' The new piety exhibits itself in self-help and 'vexes not the ears of the All-wise with capricious supplications.'¹ Recognizing that we are wholly ruled by general laws, man's duty is to study them and live by them.

4. Progress and prospects.—The influence of secularism was most apparent during the middle of the 19th cent., when the movement flourished to a not inconsiderable extent among its allies in the anti-Christian reaction of the period. Latterly it has decayed rapidly and has almost disappeared from independent existence, being merged in such organized rationalism (*q.v.*) as now represents the more recent phases of the secular spirit. It is significant that the best days of secularism coincided with the definitely anti-religious propaganda of those of its sympathizers who, like Bradlaugh, joined with secularism what Holyoake refused to regard as essential to it, namely atheism. The atheistic controversy ended, the old animosities centred in it have softened, a less extreme view of the opposition of science and religion has prevailed, and with these things much of the *motif* of secularism has passed away. It is not likely to revive as an organized movement. The question is rather whether its spirit and principles are destined to continue in being. Secularism proposed a limitation of human knowledge and interest to the material sphere—an attitude which, whilst possible, and indeed often actual, in practice, is impossible to justify or establish from the theoretical standpoint, as secularism essayed to do.

In practice there are millions whose interests and concerns are confined to the material aspects of life. This attitude is practicable because they have no conscious theory of life and conduct. No such theory is needed. It is its absence that makes practical secularism possible. The weakness of secularism lies in the fact that it offers needless and insufficient reasons to mankind for doing what they can and will do without requiring reasons. It is much the same as if one should

propose to afford a philosophical basis for the natural realism of 'the plain man,' which regards the evidence of the senses as indisputable testimony to the existence of an external reality which is what it appears to be. In practice no such basis is needed. In theory it cannot be given; for the first steps in philosophy reveal the insufficiency of 'the plain man's' assumptions. So it is with secularism. Many are secular in practice, but any theory of life or conduct is bound to discuss the questions which secularism attempts to ignore. Though Holyoake claimed that secularism was a theory of life and conduct, in reality it is the renunciation of one, like agnosticism, with which it is closely allied. As such it is needless, and it fails because it has no place to fill. In practice one can limit one's interests without a theory of limitation, and negate without a theory of negation. When, however, we propose to ask why we should limit our knowledge, we are obliged to take up an attitude of reception or rejection, not merely one of ignoring, in face of the claims of religion to afford a knowledge of other than material concerns. In this matter Bradlaugh acted more consistently than Holyoake, and his action is confirmed by the fact that secularism was most vigorous when linked with anti-religious views. The attempt to ignore rather than deny religion is impractical, because religion embraces both secular and spiritual concerns. Religion denies the secular conception of life, and that conception cannot establish itself without defeating the claim of religion to control life. It is an impossible proposition to maintain that there may be a God, but that He does not concern material existence. Whoever believes in God believes in Him *ex hypothesi* as the greatest of all realities. Whilst it is true that in practice a believer in God may be sufficiently inconsistent to neglect the implication of his belief upon conduct, it is impossible to construct a satisfactory theory to justify this course. It is for this reason that a secularism which does not include a definitely anti-religious theory is bound to fail.

From the philosophical side, the weakness of secularism, as Holyoake presented it, consists in an inability to appreciate the distinction between fact and value—a failure which is perhaps attributable to the dogmatic certainty which characterized the claims set forth in the name of science in the middle of the 19th century. Whilst 'facts,' i.e. abstractions from experience considered by themselves, as science regards them, may be treated as matters of intellectual knowledge alone, the worth and permanence of values are posited only by an act of faith. In attempting to construct an ethical system of facts, analogous to mathematics or chemistry, to deal with knowledge and not with faith, secularism reveals its ignorance of a fundamental distinction. It proposed to decide between competing values by a standard of fact, and spoke of truth and reason without any clear understanding of the relation of these terms to value, as if they gave self-evident proof of the existence of values and obvious means of distinguishing between competing values. Whilst utilitarianism—the philosophical theory which gave most impetus to secularism—prevailed, it was possible to uphold, to some extent at least, the secularist ethic, but the collapse of utilitarianism involved the failure of the movement based, on the philosophical side at least, upon its premises.

For these reasons it does not seem apparent that secularism is destined to survive as a theory of life and conduct, and it must be regarded as a movement arising out of, and passing with, the conditions of its time. Whilst its ethical aims were honourable, it lacked an adequate basis upon

¹ Holyoake, art. 'Secularism,' in Chambers's *Encyclopædia*.

which to establish itself as a permanent feature of human thought.

LITERATURE.—G. J. Holyoake, *Principles of Secularism*, London, 1859, *The Trial of Theism*, do. 1858, *The Limits of Atheism*, do. 1861, *The Origin and Nature of Secularism*, do. 1896. See also *The Secular Review*, vol. i., do. 1876-77, *The Present Day*, 3 vols., do. 1883-86, both ed. by Holyoake, whose autobiography is contained in *Sixty Years of an Agitator's Life*, 2 vols., do. 1892, and in *Bygone's worth Remembering*, 2 vols., do. 1905; J. McCabe, *Life and Letters of George Jacob Holyoake*, 2 vols., do. 1903; C. W. F. Goss, *Descriptive Bibliography of the Writings of G. J. Holyoake*, do. 1903; R. Flint, *Anti-Theistic Theories* (Baird Lecture for 1887), Edinburgh, 1879, pp. 211-249. ERIC S. WATERHOUSE.

SEEKERS.—The Seekers, in the narrowest use of the term, formed a small sect of the Independents during the period of the English Commonwealth. In a broader and more accurate sense of the word, the name 'Seeker' covers a movement or tendency, both Continental and English, extending from the time of the Reformation in Germany to the middle of the 17th cent., the definite sect of the Seekers in England being the historical culmination of this movement.

The definite Seeker tendency, with its characteristic group of ideas, first comes to light in the writings of Sebastian Franck (1499-1542), a humanistic reformer of Schwabia. Franck¹ describes groups of Christians among the Anabaptists who desire to allow baptism and other ceremonies to remain in abeyance until God gives further commands, and those persons, he says, suspending for the time external ceremonies, *wait* and *seek* for fuller light. Dirk Coornhert, a Dutch theologian and reformer, born in Amsterdam in 1522, strongly developed the Seeker tendency, and through his influence the Seeker attitude took an important place in the thought of an interesting section of Dutch dissenters. Coornhert considered the existing Church, with its divisions, external organization, and outward ceremonies, as only an interim Church, and he held that the faithful shall quietly wait for the true apostolic, authoritative Church to be divinely commissioned, endowed, and inaugurated. The Seeker attitude, emphasized in the writings of Coornhert, was taken up by the societies of Dutch Collegiants, or Rynsburgers (*q.v.*), in the 17th cent. and made a central feature of this interesting movement. Daniel Van Breen, Adam Boreel, and Galenus Abrahams of the Amsterdam Collegium, or Society, were the leaders of this Seeker movement in Holland, though the most developed expression of it is found in a tract entitled *Lucerna super candelabro* (Amsterdam, 1662), probably written by Peter Balling, a Collegiant of Rynsburg, and translated into English by the Quaker, Benjamin Furley, under the title, *The Light on the Candlestick* (London, 1665). This tract and 'the Nineteen Articles' (1658) with their 'Further Exposition' (1659), issued by the Amsterdam Collegiants, give the fullest available account of Continental Seeker views. The visible Church, with its doctrines, or 'notions,' as they named them, its external organization, its outward ceremonies, is here thought of as devoid of real authority and spiritual power, as lost in the wilderness and in an apostate condition, while the true believer is one who waits and seeks for the Church of apostolic power which in the fullness of time God will establish with freshly-commissioned prophets whose authority will be verified by miraculous gifts. The same ideas reappear, in a more developed stage and in more cohesive form, in the groups of English Seekers during the Commonwealth.

The word 'Seekers,' as the name of a sect, with its definite religious connotation, first appears in England in *Truth's Champion* (London, 1617),

¹ *Chronica*, Strassburg, 1531.

probably written by John Morton, where 'Seekers' are described as a people opposed to everything external, who do not need to 'hear preaching nor read the Scriptures.' Even before this date, however, Bartholomew Legate, an English cloth-dealer, whose trade took him to Holland, had taught definite Seeker ideas. Henoeh Clapham¹ makes Legate say that God is soon to give a new revelation through 'myraculous apostles' and a 'myraculous ministry' and that until this commission appears there is 'no true Church,' 'no true baptism,' 'no visible Christian.' Until God acts, man can only wait and seek. Legate plainly held the group of ideas which formed part of the Continental movement traced above. He was burned at Smithfield in 1612 as a heretic, suspected of holding Arian views.

Ephraim Pagitt gives an adequate account of the Seeker position:

'Many have wrangled so long about the Church that at last they have quite lost it, and go under the name of *Expecters* or *Seekers*, and do deny that there is any Church, or true minister, or any ordinances.'²

Edwards's *Gangræna* (London, 1646), Richard Baxter's accounts in *Reliquiæ Baxterianæ* (do. 1696), John Jackson's *A Sober Word to a Serious People* (do. 1651), and John Saltmarsh's *Sparkles of Glory* (do. 1648) give further and somewhat fuller description of the Seeker movement of the time. The following passage is sympathetic and on the whole a fair description of the main features of the movement:

'Firstly, they seek the mind of God in the Scriptures. Secondly, they judge that prayer and alms are to be attended to, and for this purpose they come together into some place on the First-days as their hearts are drawn forth and opportunity offers. Then they seek, firstly, that they may be instruments in the hand of the Lord to stir up the grace of God in one another, by mutual conference and communication of experience: and secondly, to wait for a further revelation. Thirdly, to hold out their testimony against the false, and for the pure ordinance of ministry and worship. They behave themselves as persons who have neither the power nor the gift to go before one another by way of eminency or authority, but as sheep unfolded, and as soldiers untrained, waiting for a time of gathering. They acknowledge no other visible teacher but the Word and works of God, on whom they wait, for the grace which is to be brought at the revelation of Jesus Christ.'³

It is, however, through the writings and documents of the early Quakers that it has been possible to discover the extent of the movement in England and at the same time to find the real characteristics of the sect of Seekers.

The First Publishers of Truth, printed in 1907, which contains a historical account of the rise and spread of Quakerism, contains the fullest available accounts of the Seekers. They appear in these documents to be a sincere, earnest, spiritually-minded people, who have turned away from outward things and are endeavouring to discover the will of God and His divine leading by waiting in silence for the light to break forth. They are described as 'a seeking and religiously inclined people.' They appear to have had large meetings in the West Riding of Yorkshire, in Westmorland, and also in Bristol. Their meetings seem to have been held with long periods of silence and with opportunity for free, spontaneous, and unprepared messages, though there were evidently leaders in the local groups who often, probably usually, preached to them and interpreted to them the spiritual nature of Christianity as they conceived it. The Seeker groups described in the early Quaker documents went over almost entirely to the new movement inaugurated by George Fox, and the leaders of the Seeker societies became after 1652 the foremost preachers in the early Society of Friends (*q.v.*). From having been 'seekers' they now believed that they had become what

³ Jackson, p. 3.

Cromwell once called 'happy finders.' After 1652 there is no indication of the continuation of a separate sect of Seekers, and the characteristic ideas which formed the body of their propaganda henceforth disappear from religious tractarian literature in England, though they continued somewhat longer to find expression in Holland.

SELF.—See PERSONALITY, EGO.

SELF (Buddhist).—In Buddhism the use and content of the term 'self,' both as separate word and as prefix, coincide largely with its use and content in Western religions and ethics. But the former system has some interesting features of divergent development to show—linguistic, psychological, ethical, and metaphysical.

Linguistically, e.g., there is in Pāli the useful compound *atta-bhāva*, 'self-state' or 'self-hood,' meaning personality, individual life, the bodily and mental organism.

'I cannot remember, since I have had experience through this *attabhāva*, all its characteristics and habits; how then should I remember my various former existences?'¹

'... each of the five organs of sense derived from the four great elements, included in the *attabhāva*.'²

It was consonant also with the old *Sutta* diction to use *atta* alone in this sense,³ but the compound term superseded it.

It was used, wrote Buddhaghosa, 'both for the body and for all the corporeal and mental factors, foolish folk including these in the notion they hold that "This is myself" (or "my soul").'⁴

Again, there is the Pāli idiom of the dual self, a form of speech which corresponds to no psychologically conceived parallel, but in which one *atta* functions (instead of a personal pronoun) as the subject, the other as the object:

'These are the penalties of wrong-doing: self upbraids self.'⁵

'Any virtuous layman established in the fourfold peace can, if he will, confess self to self as being assured of happy rebirth.'⁶

'To whom is the self not dear? To evildoers, for... though they may say "Dear to us is the self," yet that which a foe would do to his foe, that do they by self to self.'⁷

'By self incite the self, examine self
By self; self-guarded thus, watchful of mind
And happy shalt thou live. For self of self
Is warder, unto self hath self recourse.
Therefore train well thyself.'⁸

Here we have a mode of psychical activity, known to psychological analysis, which bifurcates the unitary concept of the self, setting a self which is the accretion and outcome of experience—the 'character'—over against the self of the present moment, and so on.

Thus used, the former 'self' at times takes the place of our term 'conscience.'

'Doth self reproach thee not as to morals?'⁹
'There is not anywhere a place throughout the world
Where evil deeds may secretly be done.
The self doth know thee, Man, whether in truth
Thou didst it, or if it be false. O friend,

Thy better self¹ thou hold'st in mean repute,
Who within self hid'st evil from thyself.'²
"Self-known" applies to one who reflects:—"Thus far am I in faith, morals, learning, self-surrender, insight, ready speech."³

There are two adjectival forms of *atta*, neither of which has the meaning of our 'selfish.' The one, *attaniya*, is simply the adjective of relation, the other, *ajjhattika* (*adhi-att-ika*), is the same. But they are used in different connexions. The former is used with reference to soul, or ontological self. The latter is a purely psychological term, and is opposed to whatever is 'external' to one's self, corporeal and mental. Thus *ajjhattika* phenomena are the activities of the five senses and of the ideating factor or mind. External phenomena are objects of sense and images—mental constructions objectified. The former phenomena are 'self-referable, one's own, referable to the person, bodily and mental.'⁴ And, because the corporeal factor is included, our modern term 'subjective' does not always form a fit rendering.

It is clear from the foregoing linguistic considerations that, whatever restrictions the religious philosophy of Buddhism imposed upon the metaphysical implications of the term and concept of 'self,' the use of it as a convenient label for the totality of any living individual was by that philosophy both approved and exploited. As such a label, it belonged to the stock of terms and ideas called *sammūti*, or 'of conventional usage.' The Buddhist scholar used it as such. Philosophically speaking, it did not mean for him an ultimate unitary principle, continuing self-identical amid a stream of transient manifestations. Contrariwise, it was merely a name-and-concept binding together and labelling a transient aggregate of factors. For him the ultimate principles, material and psychical, were not in the bond or label, but among those factors. But even they were evanescent, ever-changing.⁵ And as to the name-labels he judged that

'These are merely names, expressions, turns of speech, designations in common use in the world. Of these he who has won truth makes use indeed, but is not led astray by them.'⁶

The ethical implications of *atta* have been already dealt with in art. EGOISM (Buddhist).

SEEKERS.—The Seekers, in the narrowest use of the term, formed a small sect of the Independents during the period of the English Commonwealth. In a broader and more accurate sense of the word, the name 'Seeker' covers a movement or tendency, both Continental and English, extending from the time of the Reformation in Germany to the middle of the 17th cent., the definite sect of the Seekers in England being the historical culmination of this movement.

The definite Seeker tendency, with its characteristic group of ideas, first comes to light in the writings of Sebastian Franck (1499-1542), a humanistic reformer of Schwabia. Franck¹ describes groups of Christians among the Anabaptists who desire to allow baptism and other ceremonies to remain in abeyance until God gives further commands, and those persons, he says, suspending for the time external ceremonies, *wait and seek* for fuller light. Dirk Coornhert, a Dutch theologian and reformer, born in Amsterdam in 1522, strongly developed the Seeker tendency, and through his influence the Seeker attitude took an important place in the thought of an interesting section of Dutch dissenters. Coornhert considered the existing Church, with its divisions, external organization, and outward ceremonies, as only an interim Church, and he held that the faithful shall quietly wait for the true apostolic, authoritative Church to be divinely commissioned, endowed, and inaugurated. The Seeker attitude, emphasized in the writings of Coornhert, was taken up by the societies of Dutch Collegiants, or Rynsburgers (*q.v.*), in the 17th cent. and made a central feature of this interesting movement. Daniel Van Breen, Adam Boreel, and Galenus Abrahams of the Amsterdam Collegium, or Society, were the leaders of this Seeker movement in Holland, though the most developed expression of it is found in a tract entitled *Lucerna super candelabro* (Amsterdam, 1662), probably written by Peter Balling, a Collegiant of Rynsburg, and translated into English by the Quaker, Benjamin Furley, under the title, *The Light on the Candlestick* (London, 1665). This tract and 'the Nineteen Articles' (1658) with their 'Further Exposition' (1659), issued by the Amsterdam Collegiants, give the fullest available account of Continental Seeker views. The visible Church, with its doctrines, or 'notions,' as they named them, its external organization, its outward ceremonies, is here thought of as devoid of real authority and spiritual power, as lost in the wilderness and in an apostate condition, while the true believer is one who waits and seeks for the Church of apostolic power which in the fullness of time God will establish with freshly-commissioned prophets whose authority will be verified by miraculous gifts. The same ideas reappear, in a more developed stage and in more cohesive form, in the groups of English Seekers during the Commonwealth.

The word 'Seekers,' as the name of a sect, with its definite religious connotation, first appears in England in *Truth's Champion* (London, 1617),

probably written by John Morton, where 'Seekers' are described as a people opposed to everything external, who do not need to 'hear preaching nor read the Scriptures.' Even before this date, however, Bartholomew Legate, an English cloth-dealer, whose trade took him to Holland, had taught definite Seeker ideas. Henoeh Clapham¹ makes Legate say that God is soon to give a new revelation through 'myraculous apostles' and a 'myraculous ministry,' and that until this commission appears there is 'no true Church,' 'no true baptism,' 'no visible Christian.' Until God acts, man can only wait and seek. Legate plainly held the group of ideas which formed part of the Continental movement traced above. He was burned at Smithfield in 1612 as a heretic, suspected of holding Arian views.

Ephraim Pagitt gives an adequate account of the Seeker position:

'Many have wrangled so long about the Church that at last they have quite lost it, and go under the name of *Expecters* or *Seekers*, and do deny that there is any Church, or true minister, or any ordinances.'²

Edwards's *Gangrana* (London, 1646), Richard Baxter's accounts in *Reliquiæ Baxterianæ* (do. 1696), John Jackson's *A Sober Word to a Serious People* (do. 1651), and John Saltmarsh's *Sparkles of Glory* (do. 1648) give further and somewhat fuller description of the Seeker movement of the time. The following passage is sympathetic and on the whole a fair description of the main features of the movement:

'Firstly, they seek the mind of God in the Scriptures. Secondly, they judge that prayer and alms are to be attended to, and for this purpose they come together into some place on the First-days as their hearts are drawn forth and opportunity offers. Then they seek, firstly, that they may be instruments in the hand of the Lord to stir up the grace of God in one another, by mutual conference and communication of experience: and secondly, to wait for a further revelation. Thirdly, to hold out their testimony against the false, and for the pure ordinance of ministry and worship. They behave themselves as persons who have neither the power nor the gift to go before one another by way of eminency or authority, but as sheep unfolded, and as soldiers unrallied, waiting for a time of gathering. They acknowledge no other visible teacher but the Word and works of God, on whom they wait, for the grace which is to be brought at the revelation of Jesus Christ.'³

It is, however, through the writings and documents of the early Quakers that it has been possible to discover the extent of the movement in England and at the same time to find the real characteristics of the sect of Seekers.

SELF-ASSERTION AND SELF-SUBJECTION. — 1. Primary instincts. — Self-assertion (or self-display) together with its opposite, self-subjection (or self-abasement), has been classed by many modern psychologists with the primary instincts of human nature—the instincts which, either directly or indirectly, are the prime movers of all human activity. The term 'instinct' has, unfortunately, not yet acquired a fixed meaning.⁷ For the purposes of this article the definition of McDougall may be considered useful.

He defines it as 'an inherited or innate psycho-physical disposition which determines its possessor (1) to perceive, and to pay attention to, objects of a certain class, (2) to experience an emotional excitement of a particular quality upon perceiving such an object, and (3) to act in regard to it in a particular manner, or, at least, to experience an impulse to such action.'⁸

Of the three parts of the psycho-physical disposition it is the second that is most stable and unchanging.

¹ *Kalyāṇam*; comparative not in the Pāli.

³ *ib.* iv. 114.

⁴ *Dhammasaṅgani*, §§ 1207, 1044; cf. *Majjhima Nikāya*, i. 421 f., where physical elements of the anatomy are called *ajjhātika*.

⁵ See art. REALITY (Buddhist).

⁶ *Digha Nikāya*, i. 202 (tr. *Dialogues of the Buddha* (SBB, London, 1899), i. 263); in this connexion the art. SOUL (Buddhist) should be consulted.

⁷ Cf. art. INSTINCT.

⁸ *An Introd. to Social Psychology*⁷, London, 1913, p. 29.

'The emotional excitement, with the accompanying nervous activities of the central part of the disposition, is the only part of the total instinctive process that retains its specific character and remains common to all individuals and all situations in which the instinct is excited.'¹

Not only has the emotional excitement of each instinct a specific character, but it always expresses itself by the same symptoms. McDougall describes the emotion characteristic of self-assertion by the term 'elation,' its opposite by the term 'self-subjection.' Ribot² uses the terms 'positive self-feeling' and 'negative self-feeling' to describe them. Positive self-feeling gives an impulse to the display of size, strength, and other traits of the self, whereas negative self-feeling leads to shrinking, self-effacement, submission, self-abasement. Drever³ questions McDougall's statement that the affective part of these instincts is always an emotion. There is no evidence, he contends, that the complex experience denoted by that term is always present when the instinct is active. The positive self-feeling invariably present is more accurately described by the term 'interest' (a feeling of worth-while-ness) than by the term 'emotion.' The emotion of elation, according to him, is experienced only when self-assertion or self-display (which is the term Drever prefers) has met with its suitable response in the submissive attitude of those before whom self-display is made.

Drever⁴ employs the following five tests in determining from a psychological point of view whether any particular instinct is to be considered primary, and the two instincts under consideration meet all five:

(1) Irreducibility by introspective analysis to simpler components.

(2) Arousal of impulse and emotion, with its specific and unmistakable expressive signs, by specific objects or specific kinds of objects, prior to individual experience of these objects.

(3) Manifestation in the early months of child life.

(4) Wide diffusion in the animal world.

(5) Occurrence in exaggerated form under pathological conditions.⁵

McDougall relies on the fourth and fifth. His discussion, however, implies the use of the first, while we find illustrations of the five in the examples that he gives of the operation of the instincts. His treatment of self-assertion and self-subjection is the most full and satisfactory that we possess. Ribot's treatment—which preceded McDougall's—is briefer and less thorough. Drever has improved on McDougall's analysis in some particulars. A good account of the significance of self-assertion and self-subjection in the social and ethical development of the child is given by Baldwin.⁶

These instincts are essentially social in nature. Their excitement depends on the presence of others. In the case of man the *idea* of others, without their actual presence, may cause elation or subjection with their corresponding manifestations. One may 'show off' before an imaginary gallery of spectators, or even before one's self in a mirror, as if he were another person. But the display is always to, and the shrinking from, some one's notice—usually some one of the same kind. A barnyard cockerel struts before other fowls, a hen among her chicks; a small dog crawls submissively towards, or away from, a big dog; but he will also slink away with his tail between his legs from a man who has shown disapproval of him. Generally, however, the instinct of subjection is excited by the presence of one of the same kind who is perceived to be in some respect superior, whereas the instinct of self-display is excited by

another of the same kind who is perceived to be inferior. In the case of animals the superiority or inferiority is chiefly in size or strength, but other striking characteristics, such as the tail of the peacock, may be organs for the self-display of their owners, and may produce subjection in others. The self-display of animals occurs mainly, though not exclusively, during the mating season. Darwin,¹ in his interesting description of this instinct, regards it as a manifestation of the courtship instinct. The two should not, however, be identified.

Self-assertion and self-subjection come into operation at an early age in children. A child will crow and otherwise display its powers and become elated at the admiring applause of the family group, whereas the absence of applause or inattention will reduce it to silence and cause it to shrink out of sight.

Pathological cases show the operation of both the instincts in an exaggerated form. In certain mental diseases—e.g., general paralysis of the insane—'exaggeration of this emotion and of its impulse of display is the leading symptom.' In other mental diseases the patient exhibits exaggerated symptoms of self-abasement. He 'shrinks from the observation of his fellows, thinks himself a most wretched, useless, sinful creature,' etc.²

2. Emotional complexes.—Instincts may be excited singly or in combination. In human beings they are seldom excited singly. When two or more are excited together, their emotions may fuse so as to form a complex emotion in which the various constituents modify one another. In the new emotion the various constituents may be detected; yet the whole is not a quasi-mechanical sum of the constituents, but a new emotion having a special emotional tone. Among the examples given by McDougall is admiration (*q.v.*). This he analyzes into the two primary emotions of wonder and negative self-feeling. Wonder he considers to be the emotion which is the affective part of the instinct of curiosity³—the instinct whose impulse is to cause us to approach a relatively novel object and to contemplate it. But we approach an admired object slowly and with hesitation, i.e. submissively. For admiration is elicited when the novel is in some respect superior. It is therefore most frequently excited by a person perceived to be superior to ourselves, whom we do not fully understand. McDougall maintains that in our admiration for books and works of art there is always present the thought of the maker. Admiration of natural objects implies the personalization of natural powers or the postulate of their Creator. The presence in admiration of the submissive attitude with the attendant negative self-feeling is an indication of this. Admiration qualified by fear is awe (*q.v.*). When the power which excites awe is beneficent towards us and excites gratitude (*q.v.*), we experience reverence (*q.v.*)—the religious emotion *par excellence*.⁴ McDougall's account of reverence is scarcely satisfactory. Wonder, negative self-feeling, and fear are clearly elements in it; but gratitude is not essential. What is essential is respect. Respect depends on the recognition of some personal excellence other than size or power. Benevolence is such an excellence, so is righteousness; and a manifestation by a being of either towards even another may suffice to qualify our

¹ *The Descent of Man*, 2 vols., London, 1871, ch. xiii.

² McDougall, pp. 64-66.

³ Drever (p. 200) seems right when he says that the word 'curiosity' describes not only the impulse but the emotion attending it better than the word 'wonder.' Wonder is itself complex. In its simplest and most elementary form he thinks it is 'baffled curiosity.' The relatively novel rouses the instinct of curiosity. If the 'enquiring impulse' is not satisfied, 'wonder is developed,' curiosity, however, remaining an element in it.

awe into reverence. We can respect another only if he is seen to respect himself. Indeed McDougall suggests that our 'respect for another is a sympathetic reflexion of his self-respect.'¹ Hence positive self-feeling qualified by a sense of personal worth enters into reverence. So it is an emotion possible only to a person conscious in some degree of his moral dignity or worth. Reverence for God the Father is attainable only by the man who is conscious of the value of 'sonship.'

McDougall suggests that 'the fundamental distinction between magical and religious practices is not, as is sometimes said, that the former exercise the powers it envisages as personal powers, while magic conceives them as impersonal; but rather that the religious attitude is always that of submission, the magical attitude that of self-assertion; and that the forces which both magical and religious practices are concerned to influence may be conceived in either case as personal or impersonal powers. Hence the savage, who at one time bows down before his fetish in supplication, and at another seeks to compel its assistance by threats or spells, adopts toward the one object alternately the religious and the magical attitude. The same fundamental difference of attitude and emotion distinguishes religion from science, into which magic becomes transformed as civilization progresses.'²

This theory cannot be justified. We have seen that in one of the highest forms of religious emotion—reverence—positive self-feeling in the form of respect is present. Durkheim³ maintains that there is an element of respect in the fear of the primitive for his gods. And he shows that the religious rites of the Australian totemists have as one of their functions the strengthening of the divine principle in the totem and the ensuring of the reproduction of the totemic species. Their worshippers are as necessary to the gods as the gods are to the worshippers.⁴ And in the higher religions (e.g., Christianity) the worship and service of men are believed to be needed by their God. Hence the attitude cannot be one of pure submission. McDougall is probably right in saying that the magical attitude is self-assertive. Does not that distinguish it from both the religious and the scientific attitudes? For surely intellectual humility is a characteristic of the scientific mind. There is a confident assertion of power in the propounding and following out of hypotheses, but there is also a readiness to submit to facts, and a subjection of self to truth, even when truth demands the surrender of cherished beliefs and hopes. In the application also of scientific knowledge to practical affairs the scientific man can impose his will on nature only by obeying nature's laws. Positive and negative self-feeling are constituents of scientific and religious emotion.

3. The self-sentiment.—The emotions not only fuse to form new emotional complexes; they also compete with and inhibit one another. In comparatively undeveloped minds, such as those of animals and very young children, positive and negative self-feeling would simply preclude one another's appearance, or, if both appeared, one would expel the other from the mind. In bashful behaviour, which appears in a child's third year, neither succeeds in expelling its opposite. Both continue to be excited by different aspects of a situation—that constituted by a self in relation to other selves—but because of their opposite characteristics, and the opposite types of behaviour to which they lead, they do not fuse. The impulses to self-display and self-effacement struggle to check each other's manifestations. Such a struggle seems to imply the organization of the two dispositions into a system. The bond of union is the idea of the self, and a rudimentary form of the consciousness of self is therefore a condition of

the union and consequent struggle. To such a system of dispositions organized about the idea of an object modern psychologists, following Shand, have given the name 'sentiment.'¹

'When any one of the emotions is strongly or repeatedly excited by a particular object, there is formed the rudiment of a sentiment.'²

For example, the admiring applause of a child's nurse gradually develops the "'Am I not a wonder?" consciousness, and the child will acquire the habit of displaying its powers and expect applause each time it does so. One that is always petted, admired, and allowed to have its own way may acquire the self-assertive habit to an excessive degree, will become what is called a 'spoilt' child. It will come to think of itself as a being superior to others, to whom all must always defer and submit. About its idea of self—an idea essentially social in character, for it is the idea of the self in relation to others—its emotions will become organized with positive self-feeling central and dominating. In the self-sentiment so formed it will tend to include all the emotions that are of service to its ends, and to exclude all those which are useless or antagonistic; e.g., it will feel fear when the satisfaction of positive self-feeling is threatened, anger when it is obstructed, elation when it is satisfied, and sorrow when it is frustrated.³ Signs of fear, admiration, gratitude, and deference in others it will welcome, but it will tend to restrain the impulses to exhibit them itself, and to feel the corresponding emotions. A fully-formed sentiment of this type is the cause of pride (q.v.) in its extreme and most objectionable form. But it never happens that the self-sentiment excludes negative self-feeling entirely. That would be possible only if a child were born devoid of the instinct, or never perceived persons in any way superior to itself. Where, however, this instinct is weak or its exercise much inhibited, a whole series of emotions into which negative self-feeling enters is only faintly felt—e.g., admiration, reverence, respect, gratitude, humility. There would be comparative indifference to praise and blame—concern for either implies a recognition of the superiority of those who bestow it—and consequently little knowledge of other men, inasmuch as the motive for closely observing their attitudes and the expression of their opinions would be largely lacking. Further, there would be great ignorance of self, for we learn to know ourselves by comparing ourselves with others, by observing their attitudes towards us, and accepting their opinions about us. Moreover, weakness in negative self-feeling indicates incapacity to appreciate ideals (truth, beauty, goodness) and to devote the life to any great cause; for these ends imply the vivid realization of a form of personal life superior to one's own, which realization involves the consciousness of present inferiority and submissiveness.

In the case of the ordinary man negative self-feeling becomes incorporated with positive self-feeling, in varying degree, in the self-sentiment, because in the social environment the growing boy inevitably meets some who are superior to himself. Authority especially, represented by parents, teachers, etc., imposes its will on the boy; and above all the authority of society as a whole which 'with a collective voice and irresistible power distributes rewards and punishments, praise and blame, and formulates its approval and disapproval

¹ Some distinguish between simple and complex sentiments. 'A "simple" sentiment consists of a single emotional tendency associated with an idea or idea complex' (Drever, p. 215 f.). The term 'emotion' is reserved for an experience on the perceptual level, 'sentiment' for an experience on the ideational level (cf. *ib.* ch. ix.; see also art. SENTIMENT).

in universally accepted maxims.¹ Owing to the incorporation of these two emotions in the self-sentiment,

'all persons fall for the child into one or other of two classes; in the one class are those who impress him as beings of superior power, who evoke his negative self-feeling, and towards whom he is submissive and receptive; in the other class are those whose presence evokes his positive self-feeling and towards whom he is self-assertive and masterful, just because they fail to impress him as beings superior to himself. As his powers develop and his knowledge increases, persons who at first belonged to the former class are transferred to the latter; he learns, or thinks he learns, the limits of their powers; he no longer shrinks from a contest with them, and, every time he gains the advantage in any such contest, their power of evoking his negative self-feeling diminishes, until it fails completely. When that stage is reached his attitude towards them is reversed, it becomes self-assertive; for their presence evokes his positive self-feeling. In this way a child of good capacities, in whom the instinct of self-assertion is strong, works his way up the social ladder.'²

This account of the progress of a boy to manhood must be qualified by the fact that the self-sentiment is not the only one that moves him. Of special importance are the various love sentiments—love of parents, children, friends, home, country, church, God. At the basis of all the love sentiments is the primary emotion of tender feeling with its impulse to protect—an emotion and impulse which may lead to concern and care for others irrespective of their relation to the self-sentiment. This impulse may legitimately be called altruistic, and often leads to self-sacrifice.³

4. Extension and moralization of self-sentiment.—The moral character of the self-sentiment will depend largely on the idea of self about which it is organized together with the thoroughness of the organization depending on this idea. The idea of the self in all but its most rudimentary forms is essentially a social product, developed by interaction with other persons and involving constant reference to them; it is, in fact, a conception not merely of one's self but of one's self in relation to other selves. The relationship may be conceived to range from complete exclusion, through opposition, sympathy, co-operation in various degrees, to inclusion partial or complete.⁴ The self conceived as an exclusive monad is not a defensible conception; but it has been maintained on theoretical grounds, though rarely assumed as a working conception in the actual affairs of life. Usually, as we saw above, a certain measure of antagonism and conflict of interests is felt to exist between self and others. The self, however, may identify itself with others—*e.g.*, a mother with her children; a boy with his family, school, or college; a man with his church, his country, and even with humanity. The group with which the self is identified becomes included, more or less firmly, in his self-regarding sentiment. The success or failure of the group may rouse his positive or negative self-feeling. He is concerned for its success or failure as he is for his own. He judges it to be his own, and feels and acts accordingly, when that group comes into relations of antagonism to, or co-operation with, other groups. Hence his emotions and actions, although in form self-regarding, are in effect other-regarding with respect to the group included in his self-regard. Thus, on the one hand, his conduct becomes moralized and socially valuable, through the extension of his self-regarding sentiment to include the interests of ever-increasing numbers of his fellow-men; the moralization may proceed, on the other hand, in what may be considered a more internal direction—*i.e.*, he may identify himself with the abstract sentiments which are suggested to him, or which he has thought out for himself (*e.g.*, the sentiments of truth, goodness, beauty), and incorporate them in the self-sentiment. They become

his own ideals and represent the self that he wills to be—to realize them is to realize himself, to express them is to express himself. So he submits himself to them, strives to express, propagate, and defend them, is elated when their power triumphs over the impulses of himself and others, and is cast down when they are defeated.

Care for others and devotion to ideals may, and do, spring from other motives—the sentiment of love in its various forms, active sympathy which impels a man to seek to bring the feelings and actions of his fellows into harmony with his own, and his own into harmony with theirs—and these are essential moral and social motives. But these receive great reinforcement when their objects are included in the idea of self, and concern for them is incorporated in the self-sentiment. Conversely, the latter is raised to a higher level and becomes more comprehensive and adequate as a guide of conduct by the inclusion of the love sentiments within it. It is possible for a man to take pride in the thought of himself as a lover, and seek consequently to develop the love sentiments in his character. Some ethical writers have adopted this method of reconciling the claim of egoism and altruism. They maintain that the individual should seek his own good, but should conceive his good to include the good of others. Another method is to unite the self-regarding and other-regarding sentiments in a more general sentiment, the sentiment of the perfection of life—not one's own merely, but all life. One's chief concern may still be with one's own life, not because one thinks it more valuable, but because self-perfection is more within the individual's power, and by concentrating chiefly on that he will do most to promote the universal life. His efforts would have the advantage of reinforcement by the strongest human sentiment—the sentiment of self.

5. Sentiment for self-control.—Any one of the many sentiments which are formed in an adult consciousness may become sufficiently powerful to dominate large portions of a man's life—*e.g.*, avarice, ambition, love of a person, of home, church, art, science—and to inhibit all impulses which are inconsistent with, or irrelevant to, its end. But the sentiment which seems capable of meeting most of the situations in life, and of rendering an individual practically independent of passing solicitations, is the self-sentiment, when that incorporates a high ideal of life including a sentiment for self-control. Self-control is itself a particular development of the self-sentiment, and in virtue of it a man takes pride in realizing his ideal of self in all circumstances. It is the sentiment of self, according to McDougall,¹ which is roused into activity when we are said to determine by an effort of will to act along the line of greatest resistance.

'The conations, the desires and aversions, arising within this self-regarding sentiment are the motive forces which, adding themselves to the weaker ideal motive in the course of moral effort, enable it to win the mastery over some stronger, coarser desire of our primitive animal nature and to banish from consciousness the idea of the end of this desire.'²

It is not correct to say that only this sentiment enables us to act along the line of greatest resistance;³ but we may say that, when, by the incorporation of the ideal of perfection of life including self-control, this master sentiment has been formed and become dominant, perhaps after many conflicts,

'it becomes capable of determining every conflict so certainly and easily that conflicts can hardly arise; it supplies a determining motive for every possible situation, namely, the desire that I, the self, shall do the right.'⁴

The subsequent struggles are no longer moral

conflicts, but intellectual efforts to determine what is right and most worth doing.

LITERATURE.—In addition to the literature given in the footnotes cf. A. F. Shand, 'Character and the Emotions,' in *Mind*, new ser., v. [1896] 203 ff., 'M. Ribot's Theory of the Passions,' *ib.* xvi. [1907] 477 ff.

DAVID PHILLIPS.

SELF-CONSCIOUSNESS.—This word is used in two senses, one of which has been sufficiently treated in art. CONSCIOUSNESS, and alluded to in art. COMMON SENSE. The question whether all consciousness may or may not be reduced to self-consciousness or how far by common sense, philosophically understood, the 'various impressions received' are 'reduced to the unity of a common consciousness' does not concern us here. Social and psychological observation shows that some persons are much more drawn than others to observe the workings of their own minds. The tendency and habit of introspection (*q.v.*) produces a type of mind and character capable (if literary abilities are superadded) of writing first-rate autobiography.¹ It is also valuable in helping the growth of medical and psychological knowledge, since patients who can observe their own symptoms, and artists or thinkers who can distinguish and remember their own impressions, are able to collect much valuable material for the scientific investigator. In common parlance, however, the word stands for something more pronounced than a tendency to introspection. The self-conscious person of the strongly marked type is one whose interest in the world and in society is inseparable from his personal status and individual inclinations and dispositions. Commonly this exaggerated self-consciousness accompanies a very exaggerated opinion of one's own character and abilities. But the reverse may sometimes happen, as personal responsibility for misfortunes may loom as large in the consciousness as personal credit when the event is good. In these cases it may rise to the height of mania.² In general, self-consciousness implies an intense sensitiveness to the opinion of friends and of society, and a constant fear of appearing in a ridiculous or undignified position, which causes diffidence in social intercourse and sometimes abnormal shyness. It becomes immoral only when the self (with its peculiar personal desires and aversions) is the one object the satisfaction of which is sought throughout life.³ The tendency to excessive self-consciousness should be counteracted in young people by stimulating active interest in scientific and social pursuits, by extending and quickening the sympathies, and by imposing such disciplinary force as may lead the individual to regard himself as a not-all-important member of human society.

LITERATURE.—See the works cited in footnotes; also literature under CONSCIOUSNESS, COMMON SENSE.

ALICE GARDNER.

SELF-CONTROL.—See ETHICAL DISCIPLINE.

SELF-CULTURE, SELF-DISCIPLINE.—

The principle that there is a right self-love, though not ignored by Greek ethics, was first brought into prominence by Christianity.⁴ Self-love is a duty implied, first, in the revelation of the archetype of manhood in the incarnate Christ; secondly, in the 'royal law,' 'Thou shalt love thy neighbour as thyself' (Jn 2⁹). True or reasonable self-love is in fact a part of the love of God, and coincides with it. We are to love ourselves as God loves us; having regard both to what He would have us be and to what we are on the way to become.

¹ See G. Misch, *Gesch. der Autobiographie*, i., Leipzig, 1907.

² See S. Baring-Gould, *The Tragedy of the Caesars*, 2 vols., London, 1892, *passim*.

³ G. Meredith, *The Egoist*.

⁴ See e.g., Plato, *Legg.* 781 E; Arist. *Eth. Nic.* iv. viii. 7.

'Tales nos amat Deus, quales futuri sumus Ipsius dono, non quales sumus nostro merito.'¹

And this self-love involves a proper reverence and care for the personality—body, mind, and spirit. Self-culture, self-development, is a moral duty which has gained in significance in proportion as the idea of personality (*q.v.*) has been emphasized by modern philosophy.

1. Self-discipline.—Negatively, self-love takes the form of due self-discipline, including all that the Greek comprehended in the word *σωφροσύνη*—sobriety, temperance, and chastity; the temper of sobriety in judgment and in the estimation of self (Ro 12³, 2 Co 10⁵); the habit of restraint in the indulgence of desire and in the enjoyment of pleasure.² In any case the aim of self-discipline is the cultivation of moral and spiritual power through the process of strengthening, renewing, and educating the will. In Christian language, the end of discipline is freedom, the unhindered dominion of the spirit in the personality.

The good man, says J. Smith, 'principally looks upon himself as being what he is rather by his soul than by his body; he values himself by his soul, that being which hath the greatest affinity with God, and so does not seek himself in the fading vanities of this life, nor in those poor and low delights of his senses, as wicked men do; but as the philosopher doth well express it, ὅση δύναμις φέρειν ἀπὸ τοῦ σώματος βούλεται, καὶ ἀπὸ τῶν σωματικῶν παθῶν εἰς ἐαυτὸν συννεύει.'³

Thus the discipline of self begins with conversion and repentance—i.e. with an effort of will in the direction of self-purification; with the process which St. Paul describes as 'putting off the old man' (Eph 4²²)—the counterpart in the moral life of the individual of that which has already been mystically accomplished in Christ (Ro 6⁶, Col 3¹⁰). We may observe that here emerges the distinctively Christian idea of a new self, which is to be 'put on' as a garment. The process of casting away the old nature is in fact crowned by the 'putting on of Christ' (Ro 13¹⁴, Eph 4²⁴, etc.). In connexion with this subject the threefold ordinance of asceticism needs consideration. Prayer, fasting, and almsgiving are duties expressly commended by Christ Himself as efficacious aids to holiness. For the process of *κάθαρσις* is followed by *γυμνασία* or *ἀσκήσις* (Ac 24¹⁸)—the systematic effort implied in such passages as 1 Co 9²⁷, 1 Ti 4⁷, He 5¹⁴ 12¹; and fasting, almsgiving, and prayer stand in a natural relationship to the three great spheres of Christian duty—towards self, towards our fellow-man, and towards God. These duties must be understood in no narrow or merely technical sense. Aquinas well says:

'Omnia quae aliquis facit ad refrenandum seipsum in suis concupiscentiis, reducuntur ad jejunium; quaecunque vero sunt propter delectationem proximi, reducuntur ad eleemosynam; quaecunque vero propter cultum Dei sunt, reducuntur ad orationem.'⁴

Further, the very words *γυμνασία* and *ἀσκήσις* remind us that the discipline of self is a continuous and prolonged process; the state of grace is one of unceasing warfare, demanding the qualities of the soldier and of the athlete—power to 'endure hardness,' readiness to meet emergencies, vigilance, sobriety, courage. Hence the frequency of military imagery in the NT and in early Church writers.⁵ The need of self-discipline is involved in the very fact that the Christian is beset by sleepless spiritual foes (Eph 6¹², 1 P 5⁸, 1 Jn 5¹⁹), and that the new personality can only through exercise and discipline attain to its full development and acquire true spiritual liberty.

Self-discipline, then, implies the training of the

⁴ *Summa*, i. ii. qu. cviii. 3 ad 4; see artt. PRAYER, FASTING, CHARITY.

⁵ See Ro 13¹², 2 Co 10⁵, 1 Th 5⁸, Eph 6¹², 2 Ti 2³⁸; and A. Harnack, *Expansion of Christianity in the First Three Centuries*, Eng. tr., London, 1904, ii. 19 ff.

will, the right education of which is a matter affecting much more than the welfare of the individual. For in all social advance 'human will is the great factor, and . . . economic law and moral law are essentially one';¹ and a man is contributing to the solution of public problems by personal self-discipline. In this task religion supplies man's will with motives and helps, bringing within his reach the incalculable 'powers of the world to come' (He 6³): impelling him to make great ventures of faith and heroic endeavours to live as God would have him live. For the most part it is by the fulfilment of plain, obvious, and even trivial duties that the will is braced and strengthened; and, as regards the control of appetite, weakness of will is often the result of the persistent neglect of minor obligations.

Christian self-discipline—e.g., of temper, manners, behaviour under stress of difficulty or trial—'is a work of the Holy Spirit, and is in virtue of prayer, and tends to establish the soul in God. Any small act of self-repression done in the grace of prayer will have some result of communion with God, and will leave a capacity for a closer union with God than before. The occasions for our daily self-discipline are mostly unimportant and unobserved. But the littleness of the opportunity is no measure of the grace developed.'²

As we have seen, asceticism means that process of education or discipline by which the will is enabled to acquire or regain its rightful supremacy. Asceticism properly understood has no quarrel with pleasure as such.

'Its war has never been against pleasure, but against disturbing passion, and artificial wants, and weak dependence upon external and accidental things; its aim has been, not to suffer, but to be free from the entanglements of self, to serve the calls of human pity or Divine love, and conform to the counsels of a Christ-like perfection.'³

2. Self-culture.—Positively regarded, the spirit of self-love implies the duty of self-culture, the 'ordered use' of every gift and endowment which man has received. Self-culture includes the proper care of the body, the training of the intellect and imagination, the education of taste and of the faculty of judgment, and the training of character. Its general aim is to make both mind and body suitable instruments for the service of God and of mankind. A man is morally bound to make his personality all that it is capable of becoming. This is a debt owed to God, who has His ideal for us, and to society, which has a right to claim our service.

(1) *The care of the body* includes all that will tend to its preservation and development as a facile instrument of the spirit—self-control or temperance, and the maintenance of the due relation between work and recreation. As regards bodily strength and vigour, Dörner wisely observes that what we should aim at is not 'to make ourselves capable of great momentary achievements but rather to cultivate *endurance* within the limits of our individual strength.'⁴ He points out that bodily endurance 'is the great support of *ὑπομονή*,' a virtue which holds a very high place in the NT conception of the Christian character, and is most conspicuous in the human example of our Lord Himself.

(2) *The culture of the intellect and imagination*, the education of judgment and taste, come next under consideration. The general aim of self-culture has been well described as 'openness of mind to the idea of humanity and its highest interests.'⁵ The process of culture consists in such a development of our spiritual nature as may correct all one-sidedness or inordinate bias

due to special training or to some peculiarity of temperament. This seems to be implied in such a passage as 1 Co 9²², 'I am made all things to all men.' The truly cultured man¹ possesses the faculty of judgment, the capacity which is the great aim of all liberal education. The power of forming a sound judgment implies not merely a wide knowledge of many subjects, but a true estimate of one's own mental limitations, and a due sense of the diversity of method employed in different departments of knowledge.

The culture of the imagination is a prominent feature in the Platonic ideal of education.² Plato teaches with great emphasis that art has an ethical aspect and that the æsthetic faculty needs a deliberate and serious discipline from childhood onwards. He even insists that, in the ideal State, poets and artists ought to be restrained from hindering the cause of true culture by feeding the imagination of the citizens with unworthy or immoral representations.

They are to be required, he says, 'to express the image of the good (*τὴν τοῦ ἀγαθοῦ εἰκόνα*) in their works, and prevented from exhibiting the forms of vice, intemperance, meanness, or indecency' under penalty of expulsion from the community.

The Christian spirit, on the one hand, claims as its own the apostolic utterance, 'all things are yours' (1 Co 3²³); on the other, it regards the gifts of nature and civilization—art, literature, the drama, etc.—as a heritage to be used under a serious sense of responsibility. 'All things' are the heritage of God's children, but they are to be used or enjoyed under the guidance of the Spirit and as ministering to spiritual ends. They are to be contemplated and judged in union with the mind of Christ (1 Co 2¹⁶).

In modern times a sense of the importance of the proper culture of imagination has been developed by the wide diffusion of culture and by deeper insight into the theory of education. We appreciate better, perhaps, than formerly the power of imagination to kindle passion and to influence conduct by feeding upon worthy or unworthy ideals. St. Paul seems in Ph 4⁸ to recognize the duty of cultivating imagination aright.

(3) The most important part of true self-culture is concerned with the *training of character*. When St. James (3²) speaks of the 'perfect man' he implies that every character has an ideal completeness, the attainment of which depends upon the measure of a man's self-control. Self-discipline thus lies at the root of every advance in true culture. The central element in personality is will, and character grows by acts of moral decision, by the constantly renewed 'dedication of the will to goodness,' by persevering adhesion to truth and right. Thus character tends towards stability and fixity in proportion as it comes under the restraining and inspiring domination of a single aim and motive. Obedience is in the eyes of Christ at once the organ of religious knowledge and the condition of moral progress. He appeals, generally speaking, not so much to emotion or to intellect as to will. He calls upon a man to act and to follow Him. The perfect man is in fact he whose body, soul, and spirit act in obedience to a single principle—the love of God (Ro 5⁵)—and the goal of all self-culture is singleness of heart and purpose, the bringing of every impulse, inclination, and thought into subjection to the obedience of Christ (2 Co 10⁵).

Self-development, self-realization, self-culture—these are generally regarded as typical ideals of the Hellenic spirit. Hellenism is sometimes contrasted with 'Hebraism' to the disadvantage of the latter. 'Hebraism stands to us for moral

discipline; Hellenism for the culture of the human, the sensitive love of the beautiful and the joy of living.¹ The antithesis, however, is at best superficial. The real reconciliation with Hebraism of all that is admirable in Hellenism is to be found in the NT. There we learn that the realization of self is a gradual process—a progressive self-surrender:

'progressive self-identity with that spirit of the Incarnate which, being the very Spirit of God in, and as, human character, is found to be the consummation of the perfectness of the self of every man.'²

The Christian is 'heir of both ideals.' He loses the world and forsakes it, only to receive it back transfigured and ennobled (Mk 10²⁹, Lk 18²⁹).

SELF-DENIAL.—See SELF-SACRIFICE.

SELF-DISCIPLINE.—See SELF-CULTURE.

SELF-EXAMINATION.—See INTROSPECTION.

SELF-EXPRESSION.—I. Description and definition.—Morality and religion at their best and fullest are actuated by no particular 'motive'; they seek for the most part no conscious end or reward. They are the natural behaviour of a healthy personality. Kindliness, good-will, and service desire no 'wages'; they ask only 'the wages of going on, and not to die.'³ Worship, reverence, and religious contemplation in a nature that has found itself issue forth spontaneously like the flow of springs of water and songs of birds.

There is an autodynamic quality in life as a whole that seems to be the direct source of its urge, its passion for novel conquests, its sense of freedom, and its joy in self-realization. The power of self-expression is not a force or agency impelling life from behind, nor an external stimulus accounting for its present behaviour, nor an end existing outside it leading it on. It is a descriptive aspect of life itself. The entire organism is, in the words of Lloyd Morgan, 'a going concern.'⁴

By 'self-expression' one does not mean 'spontaneity,' or 'self-activity,' or 'self-determination,' in so far as these terms indicate that conduct is independent of causal connexions. Every mental act or state has its inner or outer excitations, its immediate and remote causes, and observes the laws of association. When, however, all these conditioning factors of a certain phenomenon are summed up, they do not fully and completely account for the output. There is, in addition, a moving, self-creating something that is of the very stuff of which life is made. The environmental factors, immediate and remote, of an act are not its sole causes; they are the necessary and ever present conditioning factors of its amount and quality.

2. Philosophical setting.—The fact of self-expression is in harmony with Aristotle's energy concept of the nature of reality.⁵ Pure spontaneity, however, rarely if ever happens.

'There is not any motion independent of things themselves, for change invariably takes place in accordance with the laws of substance.'⁶

The notion that reality as a whole is in the last analysis an urgent something with spontaneity has been steadily gaining ground since Kant. It doubtless received an impetus as the result of the *Critique of Practical Reason* and the *Metaphysics of Morality*, in which a good will is proclaimed as 'first in the world in primacy and in worth. Hegel's 'creative reason' is absolute self-activity moved by 'an inner necessity to set forth in itself what it inherently is.'¹ Schopenhauer, differing, as he thought, *in toto* from Hegel as to the nature of the stuff of which the world is made, is at one with him in finding it centre in a moving, self-creative principle—'the will . . . a blind incessant impulse . . . the thing-in-itself, the inner content, the essence of the world.'²

3. The energy concept of nature and life.—The inevitable outcome of the evolutionary science of the last half-century and more has been to lay the foundations wide and deep for appreciation of the significance of spontaneous self-expression as a characteristic of mentality. Nature as a whole has a dynamical aspect that is fundamental. The synthesis of the physical and biological sciences shows the evolutionary process to be energy or manifestation of its modes of expression.

'The evolution of life may be rewritten,' says Henry Fairfield Osborn, 'in terms of invisible energy,' as it has long been written in terms of visible form. All visible tissues, organs and structures are seen to be the more or less elaborate agents of the different modes of energy.'³

There are no longer two basal categories of being—matter and energy—as in Spencer's synthetic philosophy; matter, along with all other static existences, has gone by the board.

'The reality of matter, as formerly conceived, is now abandoned, and the invisible becomes the everyday reality of the scientific laboratory.'⁴

Essentially all physicists and chemists accept the electron theory of matter. Its supposed attribute of self-existent stuff has been dissolved in the universal flow of energies. At bottom energy alone remains. D'Arcy W. Thompson has set forth this profound scientific change of front in these words:

'Morphology then is not only a study of material things and of the forms of material things but has its dynamical aspect, under which we deal with the interpretation, in terms of force, of the operation of Energy . . . Matter as such produces nothing, changes nothing, does nothing . . . The spermatozoon, the nucleus, the chromosomes or the germ-plasm can never act as matter alone, but only as seats of energy and as centres of force. And this is but an adaptation of the old saying of the philosopher: in the beginning was a divine and creative essence rather than matter.'⁵

It is the conviction of modern students like Osborn and Thompson that the energy concept applies equally to the physical universe and to mentality. A description of the entire continuity in the evolution of the various types of energy is the task of J. M. Macfarlane in a recent significant work, *The Causes and Course of Organic Evolution*.⁶ The energies range through the connected series—the thermic, electric, biotic, cognitive, cogitive, and spiritic. In such a scheme self-expression is the spontaneous manifestation of these energies in human personality. This conception runs centrally through the voluntarism of Paulsen, the creative evolutionism of Bergson, and the vitalism of Driesch. After passing in review various modern scientific tendencies in their bearing upon the ontological problem, Paulsen exclaims:

'Spontaneous activity everywhere! Your inert rigid matter, movable only by impact, is a phantom that owes its existence,

not to observation, but to conceptual speculation. . . . The human mind is but the highest development on our earth of the mental processes which universally animate and move nature.¹

4. Biological evidences of self-expression.—The behaviour of all organisms, plant and animal, indicates that each of them is a centre of energies that want only to meet an appropriate situation to be released. They are touched off by fitting excitations somewhat after the way in which a finely adjusted gun is discharged by the pressure on the trigger. The growth of seeds, the development of plants, the explosion of instinct tendencies, the flow of vegetative functions during sleep and waking, the universal restlessness of organisms, their demand for new and better adaptations, the creative intelligence in science and industry, the willed activities of a highly conscious and self-conscious personality, are all—like the autodynamism of radio-active substances on the one hand and the spontaneity of moral, æsthetic, and religious valuation on the other—manifestations of self-expression.

Careful experimental and observational studies of lower organisms prove to many students of genetic psychology that spontaneity is a basal characteristic of life. No one has pursued the study of protozoa and metazoa with greater thoroughness than H. S. Jennings. He claims that behaviour arises as much from internal as from external factors.

'Activity occurs in organisms without present specific external stimulation. The normal condition of *Paramecium* is an active one, with its cilia in rapid motion; it is only under special conditions that it can be brought partly to rest. *Vorticella*, as Hodge and Aikins showed, is at all times active, never resting. . . . Even if external movements are suspended at times, internal activities continue. The organism is activity, and its activities may be spontaneous, so far as present external stimuli are concerned.'²

It has become progressively possible to describe the behaviour of the entire organism, including its highest mental operations, in terms of the complication, through development, of physical and chemical reactions.³

The theory maintained by 'behaviourists' and 'tropists' is not at variance with the point of view herein set forth, if one keeps in mind two facts: (1) 'matter,' the subject of discourse of physics and chemistry, is dynamical, perhaps even autodynamical; (2) the inner factors of worth and value in mentality should help to interpret the lower orders of reality, even of the inorganic world, as truly as the mechanical aspects of behaviour help to describe the higher functions.

By keeping in mind that internal and external factors never exist apart from one another, it is possible to escape the excesses of both vitalism and mechanism.

'The spontaneous activity, of course, depends finally on external conditions, in the same sense that the existence of the organism depends on external conditions. The movements are undoubtedly the expression of energy derived from metabolism.'⁴

5. Physiological evidences of self-expression.—Muscles and cells of the body seem to be centres of energy. The electrical stimulation of a nerve of a live animal will 'cause' an output of contraction fifteen to twenty-five thousand times the work-value of the stimulus. The embryo heart of a developing chick begins to beat, touched off presumably by the normal salt solution with which it is bathed, before the nerves reach it from the central nervous system.

6. Self-expression and play.—The impulse to

⁴ Jennings, p. 284.

play is the best criterion of health. It is, at its best, almost pure spontaneity. Most theories of play miss this point, which is the heart of the problem. Play may indeed be an act of imitation; it does often anticipate adult activities and prepare for them;¹ it harks back not infrequently to old anthropological types of behaviour;² it furnishes relaxation, rest, and recuperation of the easily fatigued higher mental powers that are overwrought by the demands of civilization.³ More central than all these is the energy concept of play. Every normal organism has a high potential of energy. It is activity. Play is self-realization. Through a spontaneity of activity life is coming into its own and fulfilling its destiny.

It is somewhat beside the mark to call play the toppling over of excess of energy from unused faculties that are well nourished, as Herbert Spencer has done—the 'tendency to superfluous and useless exercise of faculties that have been quiescent.'⁴ For it is the very nature of play, just as of work, to find its supreme satisfaction in the use of its powers to the point of complete exhaustion.

7. Self-expression and art.—With the substitution of the energy concept of play for the superfluous activity theory, the claim of Spencer and many other students, that art is the evolved play of cultivated minds, seems well founded.

'I do but sing because I must,
And pipe but as the linnets sing.'⁵

The prevailing social-utility interpretations of primitive art falsify the soul of it.

"He makes good songs," say the Hopis. "Everybody likes Tawakwaptiwa." The poet's answer to the question, "How do you make your songs?" was like the answer made by many a Hopi singer: "When I am herding my sheep or away in the fields, and I see something that I like, I sing about it."⁶

The great modern artist, like the primitive, usually feels himself and his art to be the organ of some inner necessity which is his truest being and at the same time more than himself. Richard Wagner's compositions are always of that sort.

'The sound and sturdy man, who stands before us clad in the panoply of actual body, describes not what he wills and whom he loves, but wills and loves, and imparts to us by his artistic organs the joy of his own willing and loving.'⁷

One further picture of the mind of the true artist will suffice:

'I have once, perhaps not inaptly, called the composer "God's stenographer." With feverish haste he attempts (for what can man do more than attempt the expression of the sublime?) to jot down the harmony of the spheres. He is compelled to articulate in the manner that seems to him their only true expression the Truths that transport him to ecstasy. There is but One more divine than this Reproducer. Him we call Creator!'

If it be true that the composer is God's stenographer, we may consider the instrumental artist as His interpreter. It is for him as a medium to express the music of the spheres, the endless story of Nature, of Love and Life. Every time he climbs to the platform he is there to fulfil his mission to tell you the story again, and it is through his universal love and the all-compelling sympathy of his Art that the people are attracted to him and he is made to live in the hearts of men and women!⁸ The most extensive and consistent presentation of the expressionist theory of art is that by Colin McAlpin:

'Art, at root, is the expression of man's feelings. The world of art is but the world of expression. And expression is at once the deepest and divinest necessity of our being. . . . All high and noble expression, whether in art or actuality, is but the escapement of an inner spiritual solicitude.'⁹

8. **Self-expression and work.**—In work as truly as in play there is satisfaction through 'escape-ment of an inner solicitude.' Work and play draw from the same fountain. They have more of likeness than of difference. Real play is exacting and exhausting, like work. That kind of work which counts for most is happy, contented, and buoyant because it is either life-giving in itself or moves towards a purposeful end that lightens the toil. It is done in the play attitude. Here lies the crux of a true interpretation of self-expression. Spontaneity is both serious and cheerful. As sometimes described, it is too thin and weak to function profoundly in the serious business of life with its tough struggles, defeats, and dearly-bought victories. The superficial romanticism, *e.g.*, of Rousseau and Novalis feels like an aroma, an effluence, or a gay holiday deliverance from the slavery of a work-a-day world. It openly rebels against the plodding programme of common life and the slavery of duty, conscience, and obligation, and lands in a 'romantic primitivism' with its 'delightful sense of having got rid of all boundaries and limitations whatsoever.'¹

On the contrary, the energy concept of self-expression regards play, work, art, and religion as having a far more rugged constitution. Spontaneity in these human interests involves the stress and strain, the sweat and drudgery, the pain and tragedy of the world as truly as its moments of joyous self-realization. They are only part of the creative energy of the world.

'So far as the creative power of energy is concerned we are on sure ground: in physics energy controls matter and form; in physiology function controls the organ; in animal mechanics motion controls and, in a sense, creates the form of muscles and bones. In every instance, some kind of energy or work precedes some kind of form, rendering it probable that energy also precedes and controls the evolution of life.'²

In like vein Bergson:

'Reality is a perpetual growth, a creation pursued without end. Our will already performs this miracle. Every human work in which there is invention, every voluntary act in which there is freedom, every movement of an organism that manifests spontaneity, brings something new into the world.'³

9. **Struggle and conflict in morality and religion.**—The game of living out the personal, social, and ideal values is not an easy one because, in one aspect, it is bound up in nature's drama that has throughout the element of movement through opposition and resistance accompanied not infrequently by cataclysm. There is, furthermore, the disturbing fact that mentality is always prognosticating lines of possible improvement, anticipating more desirable situations that are at variance with old systems of habits and conventions. Hence the conflict. Duty usually presents herself initially as a stern lawgiver, a 'rod to check the erring and reprove.' Religion not infrequently has its birth through cries and groanings of the spirit. These hard experiences are but morality and religion in the making. When they discover themselves, they issue into naturalness, grace, and beauty.

'The life of the saints has always been a mystery to the non-religious. The joy, equanimity, and triumph which they have shown in the face of apparent suffering, discouragement, obstacles, and grief is one of the wonders of the human spirit. It makes work play; it makes torture pleasure; and it makes faith the beginning of life. One side of religion is humiliation, confession, and petition; another is praise, thanksgiving, and adoration. . . . Where grace aboundeth, there aboundeth joy. This is one of the beauties of the biography of the stricken and long-suffering who have found an abiding comfort in religion.'⁴

10. **Morality and religion as spontaneous self-expression.**—Self-expression is a dominant and central human instinct. It is more than an instinct,

the impelling, creating something—call it energy, personality, world-will, God-life, or what you will—that is the real within the phenomenal. Morality and religion are forms of self-expression—morality when it plays through social values chiefly, and religion when it centres in ideal values predominantly. They are among the higher, more refined, rationalized, idealized, spiritualized forms of self-expression.

'Only in some such view is it easy to understand the meaning of much that passes under the name of religion. From this standpoint one can take a sympathetic attitude toward dancing, shouting, boisterous music, ecstasy, and the like which accompany lower forms of religion; and in higher forms, the prominent place of music and other arts of reverie and contemplation, of ritual, of mis-
uprush of the spirit in
is perhaps the centre
religion as consisting essentially in the spontaneous act of the
soul in response to its most intimate sense of absolute worth.'¹

LITERATURE.—See the works cited in the footnotes.

EDWIN D. STARBUCK.

SELFISHNESS.—See SELF-LOVE.

SELF-LOVE.—The term 'self-love' is peculiarly associated with 18th cent. ethical speculation; indeed its employment by the English moralists of that period forms a distinguishing feature of their writings. In all such cases the term was understood to have reference (though by Butler other references were also included) to the question as to the disinterestedness or otherwise of the benevolent affections.

The prominence of this question was originally due to the influence—carried over from the previous century—of Thomas Hobbes (*q.v.*), who had made self-love the ultimate object of all human action, had rejected the notion of disinterested virtue, and had represented the affections as only so many forms of self-love. The ascendancy of the selfish philosophy, however, gave rise, early in the 18th cent., to a reaction against it. The latter movement was of the nature not so much of a direct attack on the then dominant tendency as of an attempt to show that the principles of Hobbes and Mandeville required to be considered in relation to certain other principles, and to be reinterpreted accordingly. Shaftesbury, Hutcheson, and Butler (*q.v.*), the protagonists of the new school, were so far in agreement. But the last-named thinker differed from the two others in respect to the point of view from which he regarded the diversity of elements in human nature, and it is to this peculiarity that the more technical character of Butler's doctrine of self-love is mainly to be attributed. Though in his exposition benevolence, self-love, and conscience are regarded as primary constituents of human nature, yet the moral quality of each of these is made to depend (and this especially applies to self-love) on what it is in relation to the rest and to the whole of which it forms part, rather than on what it is in itself. Thus, with regard to benevolence, Butler's attention does not centre exclusively, as did that of the intuitive school of moralists, in the self-evidencing superiority of the claims of benevolence over those of self-love; whilst, on the other hand, with regard to self-love he is even more express in insisting that it demands recognition, on the ground that it serves a necessary and salutary purpose in the economy of human nature. Butler indeed is concerned not so much with self-love as with its relationships. The sporadic character of his references to the subject may perhaps thus be explained.² The definition given of self-love in

¹ E. D. Starbuck, 'The Play Instinct and Religion,' *HR* (American ed.) lviii. [Oct. 1903] 278.

² It is perhaps to be wished that he could have found occasion to gather into one *conspectus* all the important and leading propositions on the subject [self-love] scattered about his Works' (W. E. Gladstone, *Studies subsidiary to the Works of Bishop Butler*, Oxford, 1896, p. 62).

⁴ C. E. Seashore, 'The Play Impulse and Attitude in Religion,' *AJTh* xiv. [1910] 605-620.

Sermon xi,¹ however, contains a sufficiently positive statement as to its nature:

'Every man hath a general desire of his own happiness. . . . [This] proceeds from, or is, self-love; and seems inseparable from all sensible creatures, who can reflect upon themselves and their own interest or happiness.'

Note that it is not here said that self-love itself produces happiness. Happiness, in Butler's view, is procurable only by the attainment of 'those objects which are by nature suited to our several particular appetites, passions, and affections.' All that self-love can do is to serve as an indirect agent; its office is, in Butler's expressive phrase, to 'put us upon' obtaining our own happiness. Thus, in the case of hunger, the particular desire is for food; self-love is but the general concern for our own welfare which prompts us to gratify the particular desire.

The argument is that 'all particular appetites and passions are towards external things themselves, distinct from the pleasure arising from them.'²

This is a matter of great importance not only for the right understanding of Butler's view, but also as bearing upon subsequent ethical theories, these being divisible into two classes according as they do, or (as with Butler) do not, represent that the motive of all our actions is the appeasing of pain and the gaining of pleasure.³

Note further the presupposition involved in the last words of the definition, viz. those relating to the reflective character of self-love. This is the feature referred to when Butler speaks of the 'cool principle of self-love.' In so speaking he means something more than that, in the interests of self-love, we should reflect before we act. His intention rather is to explain the function served by reflexion in bringing to light the total interests of our being, and to emphasize the fact that it is only with these that self-love is concerned. For, in one sense, our own self-love is at the bottom of everything we do, i.e. in the sense that 'every particular affection' is a man's own, and 'the pleasure arising from its gratification' is his own pleasure, so that 'no creature whatever can possibly act but merely from self-love.'⁴

As distinguished from this, 'cool,' or (as it is elsewhere and perhaps better called) 'reasonable,' self-love expresses the judgment of our whole being, after taking into account 'the relations and respects which the parts have to each other.'

The two leading points with regard to the positive nature of self-love having thus been determined, viz. that it is the desire for happiness and that this desire leads to reflexion, with the result that we are enabled to act in conformity with our own self-interest in the most comprehensive sense, we are next invited to consider the relation in which self-love stands to benevolence.

'There is a natural principle of benevolence in man,' says Butler, 'which is in some degree to society what self-love is to the individual.'⁵

He, of course, admits that self-love may assert itself at the expense of benevolence, but this is so, he urges, only in the same sense in which self-love may assert itself at the expense of any other particular appetite, passion, or desire.

'The idea of self-love . . . can no otherwise exclude goodwill or love of others, than merely by not including it, no otherwise, than it excludes love of arts or reputation, or of any thing else.'⁶

This, no doubt, is carrying the distinction between self-love and the particular affections to its furthest

lengths. But, when Butler's argument is disencumbered of his peculiar psychology, there need be no difficulty in accepting his general conclusion, as, e.g., in the following passage:

'That any affection tends to the happiness of another, does not hinder its tending to one's own happiness too. That others enjoy the benefit of the air and the light of the sun does not hinder but that these are . . . one's own private advantage.'¹

Moreover, there is truth in this assertion of his:

Though 'there is indeed frequently an inconsistency or interfering between self-love or private interest, and the several particular appetites, passions, affections, or the pursuits they lead to,' yet 'this competition or interfering is merely accidental; and happens much oftener between pride, revenge, sensual gratifications, and private interest, than between private interest and benevolence.'²

And, again, he is fully justified in impugning the theory of Hobbes that benevolent affection and its pleasures are merely a form of the love of power, and in maintaining that 'the love of power manifests its consequences quite as much in cruelty as in benevolence.'³ In respect to Hobbes, however, it is of more importance to note that Butler mitigates the supposed mutual opposition of self-love and benevolence by holding, with Aristotle, that man is naturally a social animal:

'That mankind is a community, that we all stand in a relation to each other . . . is the sum of morals.'⁴

And these two principles of self-love and benevolence are, we are told, so far connected that 'we can scarce promote the one without the other' and 'self-love is one chief security of our right behaviour towards society.'⁵

There remains to be considered the more positive association of self-love with morality which, from Butler's point of view, means its relation to conscience. Conscience, like self-love, is called a principle of reflexion, but, in the case of conscience, the principle is that 'by which men distinguish between, approve and disapprove their own actions.'⁶ They both lead us the same way, though the fact that they do so awaits its perfect manifestation in the final distribution of things. This, though it may be disputed, cannot be regarded as a forced or arbitrary conclusion, since throughout his whole demonstration Butler exhibits the parts of human nature as having been designed by God for the furtherance of a common purpose and in the interests of the moral order. The coincidence of duty and interest is 'implied in the notion of a good and perfect administration of things.'⁷ No doubt, passion or interest may rebel against the authority of conscience, but this is a mere usurpation, 'a violation of the constitution of man.' Again, we may submit only to such restraints as tend to our own interests and convenience. It is right that we should do so, says Butler, for our own happiness is the measure or end of virtue. Only, it is not vice but virtue that promotes happiness, and self-love does, in its true sense, accompany virtue.⁸ However, apart from these statements regarding the harmony of virtue and self-interest, the higher character of self-love sufficiently appears from the mere consideration of the purpose for which, according to Butler, it exists.

'Surely there is nothing ignoble in conceiving,' says Gladstone (paraphrasing his master), 'of the Christian world as a garden divided into plots, each of which represents an individual soul, and is committed by the supreme Gardener, to the special care of that same soul. Self-love, then, in the only commendable sense, is our view, taken with the eye well purged from disturbance and obstruction, of what God has committed to every one of us as our principal work in life.'⁹

⁹ *Studies*, p. 102. At the same time, on p. 63 of this work too much is claimed for self-love under its religious aspects.

Self-love gradually ceased after Butler's time to retain the technical significance which he first had imparted to it. Hume¹ has an interesting discussion on the subject, whilst Price² confirms the teaching of Butler. And there are frequent references to self-love (which, however, is not always called by this name) in other writings of the period previous to the rise of the utilitarian school of ethics dating from Jeremy Bentham. But the subtlety of Butler's conception is peculiar to himself. An altogether grosser, though no doubt a more easily comprehensible, view as regards the claims of self acquired wide vogue not long after Butler's death, owing to the influence of Paley. Butler's psychological method, typically illustrated by his treatment of self-love, passed out of favour. More recently the study of the mind in the light of anthropological and physiological researches has changed the point of view from which ethical questions had been previously regarded. Not only so, but, even if we confine ourselves to the field of ethics pure and simple, we shall find that utilitarians and transcendentalists are agreed in ascribing to such speculations as those of Butler on human nature a purely historical value.

This, however, being admitted, or partly admitted (for there are at all events many side-issues on which these speculations throw light), the subject of this article, both on its own account and on account of its treatment by the English school of moralists (especially during the period which is of chief significance in connexion with it), will be found to present numberless attractions alike to the student of ethics and to the student of history, all the more so inasmuch as the interest taken in it during the 18th cent. is embodied in the literature of the period not less than in its philosophy, and was not more a favourite topic of discussion in England than it was abroad.

C. A. WHITTUCK.

SELF-PRESERVATION.—The term 'self-preservation' is used in ethics to denote (1) a particular duty and (2) the highest principle of conduct. In the first sense the term explains itself, referring to the duty, recognized to some extent by most systems, of preserving one's own life so far as is consistent with the demands of the highest good. The self to be preserved is here usually interpreted as the physical self or life, and the duty is taken to include the use of all means necessary for its maintenance—the care of health and the avoidance of unnecessary risk, as well as the more serious and unusual measures necessary for self-defence against violence. Even the more extreme forms of religious ethics, in which resistance is forbidden, usually recognize the care of the body as a duty. In some of the Oriental types of mystical pantheism or nihilism, however, which place the goal of life in the loss of selfhood and the freedom from the illusion of individuality, even this moderate care for the self ceases to have merit.

¹ *An Enquiry concerning the Principles of Morals*, London, 1751, appendix ii.

² *A Review of the Principal Questions and Difficulties in Morals*, London, 1768, ch. iii.

The self, as ordinarily conceived, is to be neglected or suppressed in order that the one Being may be all in all. The evil selfhood to be overcome is essentially the individual will with its desires, rather than the mere physical body, but the latter, as the bearer of these desires, is also to be at least kept down to the lowest level consistent with bare life. So also in Western pessimism, with its conception of the world as a mistake, there can be no recognition of a positive duty of self-preservation. The negation of the will to live involves only a temporary and conditional tolerance of physical life.

When used as the supreme principle in ethics, the term 'self-preservation' has generally had certain specific implications not commonly present in its usage as a particular duty. In the first place, systems which make morality consist in self-preservation are essentially individualistic, whatever may be their final conception of the self. They conceive of morality as a product of selves, which develop it as a means to their own preservation. Social action may be shown to be necessarily involved in final and adequate action for the self, but it is involved as means and not as end. In Spinoza's system this is not unambiguously the case, but in the typical systems of the class it is fundamental. In the second place, such systems imply a struggle between individuals in which the conditions of self-preservation become the recognized laws of morality. The supreme good for each individual is thus his survival in the struggle for existence, and his supreme duty is the acquirement of power for this end. The ideal is in some sense the strong man, and right is made equivalent to might. In the third place, these theories emphasize the genetic or historical aspects of the problem. They are theories of how morality with its restraints came to be, and they are, accordingly, symptomatic of changes taking place in moral living, expressions of attempts to transvalue old values and find new meanings for life. In this sense they are revolutionary systems—ethics of revolt.

It is these implications that distinguish the concept of self-preservation from the similar terms 'self-development' and 'self-realization,' in both of which idealistic meanings are involved. In self-development the self is regarded as having a positive content which is unfolded on occasion of the stimuli furnished by experience, whereas in the self-preservation theories its content is determined by the environment. Self-determination is the implication of self-development. Similarly, the theory of self-realization (*q.v.*), as held by T. H. Green and his school, implies a conception of the self as rational and universal, and sees in morality the progressive unfolding of a single rational life. It is thus the direct antithesis of the individualism and naturalism of the self-preservation theory.

The representatives of this type of ethical theory are found in modern philosophy, not in ancient thought. It is true that some of the sophistic theories seem to express this revolutionary and individualistic tendency, but in general their emphasis seems to have been on self-interest rather than on self-preservation, on advantages to be gained rather than on a life to be conserved. They tend, therefore, to be hedonistic rather than biological or metaphysical. The individualism of the Hellenistic period took the form, not of revolt, but of abstention and withdrawal from active life. The Epicurean, while an individualist, had no taste for the active life, the good, as conceived by him, being the result, not of struggle, but rather of compromise.

It is not till the late mediæval, or early modern, period that we find typical theories of self-preservation.

tion. They arose as the expression of the growing gap between the Church and secular civilization, with the consequent necessity of finding a natural sanction for moral and political law. Even within the limits of late Scholasticism we find nominalistic political theorists taking the fallen state of mankind as conceived by the Church as the basis for a doctrine of sovereignty in which the State figures as the power necessary to control and further the interests of naturally unsocial individuals. The confusion of the religious wars emphasized still more the radically unsocial character of human nature, so that it is not surprising to find a complete doctrine of self-preservation put forward by Thomas Hobbes in his *Leviathan*, in the midst of the English civil wars.

According to Hobbes, individuals are reaction-machines, conveying the motion furnished by the stimulus inwards to the brain and heart, whence it is returned to the muscles, and issues in action either towards or away from the stimulus. The tendency towards the object is desire or appetite; the tendency away from it is aversion. The former, which is accompanied by a sense of pleasure, is 'a corroboration of vital motion and help thereto,' and its object we call good; the latter is accompanied by a sense of displeasure, and its object we call evil. Good and evil thus get their whole natural significance from their relation to the life of the individual, and have no meaning in themselves. The fundamental and necessary impulse of every individual is directed towards those objects and activities that minister to the preservation and enlargement of life, so that we may 'put for a general inclination of all mankind a perpetual and restless desire of power after power that ceaseth only in death.' As a consequence, the natural condition of mankind is one of struggle, in which the only consideration is survival. The evils of such a war of all against all are so great and apparent that reason dictates conditions of peace, and men agree to renounce their natural rights of free offensive, in order that there may be a common power able to preserve order and make possible the values of peace. If the fundamental natural right is that of self-defence, its complement is the fundamental law of nature, 'to seek peace and follow it.' All obligations go back to the primary fact that his own life is each man's nearest concern, and whatever is to be demanded of him must be demanded in the name of his own preservation. That social co-operation is the best means to accomplish this end is eternally true, but, until there is an organized State to compel peace, social morality can be only an ideal for the individual, and his actual practice must rely upon force and fraud as the means necessary for survival in war-time. Yet, while law-observance is, under almost all conditions, best for the individual, and hence has the strongest sanction, Hobbes recognizes that obedience is not an absolute obligation. There can be no gain to the individual in losing his life, and hence no reason why he should not resist the State when it threatens his life. Under these conditions we revert to the state of nature again, and use force and fraud to escape the extreme penalty of the law. The State has a right to crush us, but we have an equal right to resist, since social morality has only a conditional and conventional obligation. This reservation of the individual's right of self-defence (which is, of course, subversive of Hobbes' whole theory of State absolutism) illustrates well the essential characteristics of the self-preservation theory—its individualism, its naturalism, and its revolutionary character. Hobbes conceives of the end as the conservation of the individual life, for the sacrifice

of which nothing can compensate. All that a man hath will he give, and should give, for his life. And, similarly, this life is identified with the physical life and its actual desires. An ideal or universal self can have no meaning in Hobbes' sensationalistic psychology. Selves are sharply distinct, and their relations are those of barter. So, too, the revolutionary or anarchic character of the doctrine is involved in its atomic individualism and its recognition of no ideal basis for the unity of society.

These implications of the doctrine are brought out more clearly by comparison with a system whose principle seems identical with that of Hobbes, is, indeed, historically related to it, but whose development is different—so different that some would refuse to place it in the same class with his. This is the system of Spinoza. Like Hobbes, Spinoza assumes that the essence of each thing is its tendency to be, to persist in its being, its *conatus sese conservandi*. Whatever is done must in some way be the outcome of this inevitable tendency of each thing to be itself. It is inconceivable that anything could do anything else than be itself. Hence the virtue of the individual can consist only in the most complete self-expression.

'As Reason requires nothing contrary to Nature, it requires that each love himself, seek his own advantage, what is really for his own advantage, and desire all that which really raises man to greater perfection, and, to speak generally, it requires that each endeavour to maintain his own being as far as possible. . . . The foundation of happiness consists in this, that the man is able to preserve his own being.'¹

Virtue does not consist, therefore, in self-abnegation or in mere negative control of passions, but in self-expansion and the attainment of positive good. The good man is the strong man. Repentance, humility, as signs of weakness, have only a slight value, and pity, so far as it is a mere feeling, is to be discouraged. This self-assertion, however, is not anti-social, since man is most useful to man. Moreover, man can be useful to man only in so far as he is himself a positive force and has something of his own to give. To be anything for another, one must be oneself. The good, therefore, Spinoza, with Hobbes, conceives, not as absolute, but as relative to the nature whose good it is. We do not desire things because they are good, but they are good because we desire them. No object of desire is in itself bad, but it may become bad when considered in relation to the whole system of desires with the satisfaction of which it may interfere. For man, as conscious, is able to form a concept of himself as a whole and hence of his total or ultimate good, which then becomes the object of his reflective pursuit. It is in his conception of the nature of the self and of its power that Spinoza differs from Hobbes and makes his classification difficult. For the self is essentially a rational self and, in so far as truly conceived, is one with the infinite nature of God. The more clearly it thinks, therefore, the more it is itself and the more adequately it expresses the nature of God. The more adequately, in turn, it conceives itself, the less is it in subjection to the power of the passions. The man who takes a thinking view of things knows himself and all things as modes of God and therefore absolutely determined both in nature and in existence by the divine nature. Knowing this absolute necessity of things, he ceases to be moved by things as individual, and fixes his contemplation on the order of nature as a whole. In this life of thought he is more truly active and himself, and therefore finds in it his highest joy. This joyful contemplation of the necessary order of things is the intellectual love of God and man's highest good. He is then free from the bondage of passion and

¹ *Leviathan*, ch. xiv.

¹ *Ethica*, pt. iv., prop. 18, schol.

self-controlled. And, in so far as he is freed from his passions, he ceases to contend with others with whom he is united, in so far as they too have come to the recognition of their place in the necessary order of the world.

With Hobbes the tendency towards self-preservation and the power necessary to ensure it lead to the establishment of an external control through fear of which men restrain, but do not extirpate, their inordinate desires. With Spinoza the same tendency leads to the development of a rational view of the self and the world, which itself suffices to control the passions and make possible a common life. In the doctrine of Hobbes morality is a mere tool of which the individual makes use for his private ends, and which, under certain conditions, he may reject. In Spinoza virtue is itself blessedness. The knowledge which is power is not, as with Bacon, a power to do, but a power to be—the insight which is alone able to make man master of his passions.

The influence of Hobbes and Spinoza upon their age is to be found chiefly in the antagonisms which they aroused, and it is not till we come to the middle of the 19th cent. that we have again instances of the doctrine of self-preservation. And here it is not as expressions of political conditions that we find them, but as applications of the principles of biology to ethics. This is strictly true of the motives of Herbert Spencer, but in the case of Nietzsche the biological analogy is of secondary, rather than primary, importance.

The biological theory of evolution¹ has affected ethics in two ways: (1) by its contribution to the study of the development of morality, through which it has supplemented the older associationist account of the genesis of conscience; and (2) by its suggestion of a new standard of morals, through which it has attempted to render the older utilitarian doctrine more exact. Spencer's *Data of Ethics* is concerned with both these problems, but the treatment of the latter is the more distinctive. His quarrel with the utilitarians, as he explains in a letter to J. S. Mill, is based upon the unscientific character of pleasure as a standard of conduct.

'The business of Moral Science [is] to deduce, from the laws of life and the conditions of existence, what kinds of action necessarily tend to produce happiness, and what kinds to produce unhappiness.'²

Morality is only the latest phase of life in general; its laws, therefore, are only developments of the general laws of life. These laws of life are the conditions of self-preservation as they have been developed in the struggle of individuals and groups for existence. All life is striving to persist and to grow, and the moral life is only the final and self-conscious stage of the resulting development. A moral life is one that conduces to greater life, measured, not in mere length, but in breadth, or complexity, of activities as well. As biology, psychology, and sociology grow more exact, we shall have a more scientifically worked out system of morals in place of our empirical or rule-of-thumb system. Life and more life is thus the end suggested by the evolutionary theory. No distinction of quality can be recognized without destroying the value of the exact quantitative method. The breadth of life, which is recognized as one of the dimensions, means, not width of rationally interesting activities, development of a broadly human point of view, but only variety and complexity of biological activities so far as these promote survival. If conflict were to arise between these two dimensions of length and breadth so that the individual should have to choose between them, it would seem that the fundamental principle

of self-preservation would demand the sacrifice of breadth to length. Spencer's assumption that no such conflict can arise is perhaps due to his pre-occupation with the absolute ethics of ideal conditions. Certainly breadth of life cannot have equal value with length as a factor in determining quantity of life as the criterion of the moral, nor can any meaning be given to the idea of their multiplication into a single product. In the absence of any fixed unit, the very conception of quantity of life remains even more indefinite than the pre-scientific idea of the greatest happiness, which it was devised to supplant.

But, while Spencer emphasizes the fact that human conduct is what it is because the struggle for existence has so shaped it, and while therefore the end of self-preservation would seem to be the test of good and bad conduct, he yet insists that life is not in itself a value, but that it is pleasure alone that justifies it. Remove the pleasurable feeling from even the longest life and it would have no more value than a handful of dust. The universal object of desire is pleasure. There seem therefore to be two ends of human action: from the biological point of view, life is a ceaseless struggle to preserve and increase itself; from the psychological point of view, it is a search for pleasure. That the individual is not torn in two by this dual tendency is due to the fact that the two aims actually coincide—that, in the long run and under ideal conditions, pleasure-producing actions are also life-preserving. It must be so, Spencer urges, because the creature who took delight in conduct not conducive to life would be eliminated. This, of course, is no proof that pleasure is the universal object of desire, but only that, granting it to be such, the coincidence of its conditions with those of self-preservation can be explained. The implication is that the real determinants of conduct are mechanical, and that our conscious aims and interests are wholly fixed by the conditions of survival. It is physical life that unfolds itself in personal and social conduct, and it is to its laws that our conscious aims are to be adjusted. Its laws, moreover, are not so much expressions of its own nature as forms impressed upon it by the environment. Although the term 'self-preservation' seems to imply self-assertion and individual initiative, actually, as conceived by Spencer and the evolutionists, it has no such meaning. The self, whether we think of it as moulded by the direct action of the environment or as picked out by natural selection (and Spencer uses both theories), has no character of its own, makes no contribution to the result, but is wholly the product of the impersonal world-forces outside it. The forms of moral conduct are selected *for* man, not *by* him. It is the universe that is asserting itself, not individuals, and a universe in which there seem to be no real selves, but only 'others.'

The doctrine of Friedrich Nietzsche can be called one of self-preservation only in so far as he makes use of the biological conceptions of struggle and survival to support his thesis. As in the case of Hobbes, self-preservation is almost too negative a term to apply to that will-to-power which Nietzsche makes the essence of each individual being. The intellect and its creations have no independent value, but are only instruments in the service of this instinctive life. There is no purpose discoverable in the world at large; we are here, and our only intent is to fight our way to ever greater power. Unlike Hobbes, he can see no value in peace and ordered morality. All restraint, as a lowering of life, is bad. Nor is Nietzsche a hedonist in his individualism: it is not pleasure that gives value to life, rather almost is it pain. It is the glory and excitement of combat, the

¹ See art. EVOLUTION (Biological).

² *Principles of Ethics*, pt. I. ch. vi. § 21.

struggle itself, the sense of strength, that make it worth while. To eliminate this struggle, to make life comfortable and safe, is to take from it all that gives it its terrible charm. Hence our social morality and our religions of sympathy and renunciation are to be condemned as encouragements to the weak and inferior. This slave-morality of the herd is to be replaced by the master-morality of the higher man, and its supreme command is, 'Be hard.' Nietzsche's doctrine is thus one of pure individualism; the self to be preserved is the natural self of impulse, and its goal is the attainment of power in the abstract—not power for the realization of any final end, but power as power, empty of any end which might give meaning to its possession. It is the dream of the adolescent, impatient of restraint but unconscious of his ends. His ideal, therefore, in spite of its not making use of the name itself, is perhaps, in its individualism, its naturalism, and its anarchism, the most typical of the theories of self-preservation.

In Nietzsche, too, can be clearly seen both the strength and the weakness of these systems. They are strong in so far as they lay emphasis upon the actual self-preservative instincts and tendencies necessary for existence. Any order of life, whatever its ideal, must be rooted in the actual motive forces of human nature, must appeal to some real interest of the individual, or else remain a meaningless and remote idea, powerless to affect life. It is this that those thinkers feel and provide for—a real interest in the given ideal—under the obvious assumption that there can be no nearer and dearer interest to a man than his own self.

But they are weak in so far as they fail to recognize the reality of any other self than that which finds expression in the natural instincts of man—in so far as they refuse to admit a self whose interests are not individual, but reflectively social. Apart from the recognition of the reality of a direct interest in an over-individual good, Nietzsche rightly sees that there can be no such thing as moral obligation; hence his characterization of his doctrine as immoralism. Individualism made absolute renounces its claim as morality, and is indeed unable consistently to plead its cause. Self-centred and antagonistic selves can have no common good and therefore no basis for co-operative action or rational obligation. There may be an over-lordship based upon might, but no reasonable organization expressing the natural interests of all in a common life, and consequently no ground for a moral appeal for the recognition of any law not actualized by force.

The assumption upon which all these theories rest, however, that the individual is essentially and wholly a self-seeking creature, is not tenable in the light of our present psychology. The contention of Butler, as well as of the moral sense writers, that the other-regarding impulses are as fundamental as the self-regarding, has been borne out by all recent analysis. The fact that our desires are *our* desires by no means implies that we ourselves are their objects. The contrary rather is true, that our tendencies are naturally directed upon objects other than the self, and that conscious self-seeking is a secondary and reflective product. There is no reason against, but, on the contrary, all the evidence for, the fact that the social good is as immediate and natural an object as the private good, and, with this granted, the theories of self-preservation lose their plausibility.

NORMAN WILDE.

SELF-REALIZATION.—I. 'Self-realization' is a term so vague and indefinite in connotation that some writers on ethics (e.g., Sidgwick) consider that it would be well to expunge it from the vocabulary of ethical science. This indefiniteness is largely due to the ambiguity of the word 'self,' and also partly caused by the vagueness of 'realization.' The self can indeed be defined with varying degrees of narrowness or of comprehensiveness—a fact which is often expressed, in loose and inaccurate phraseology, by the assertion that each individual has many selves, such as the bodily, the animal, the rational, the social, self. 'Realization,' again, is a word which, in this connexion, may be taken to include or to exclude what is usually called 'self-suppression' or 'self-sacrifice.' Thus, before any precise meaning can be attached to the compound term 'self-realization,' it is necessary first to define precisely what is meant by 'self' and 'realization' respectively.

If (i.) the self be understood predominantly as sentient, and the individual's highest good be accordingly taken to be pleasure, self-realization will consist in so living as to secure for oneself the maximum of pleasurable feeling. This was the doctrine of the Cyrenaics (q.v.), and the more degenerate members of that school tended to identify self-realization with what would more correctly be called self-indulgence. The better Cyrenaics, however, did not restrict pleasure to the pleasures of sense, but rather had higher forms of pleasure—e.g., that of friendship—in mind. Similarly the Epicureans (q.v.) repudiated sensualism or slavery to the lower desires and passions, while adopting a hedonism akin to that of the Cyrenaics.

If (ii.) man's rational nature be regarded as the truest expression of the self, and the highest individual good be accordingly sought in the control of the lower or animal 'self' by right reason, then self-realization will consist in the attainment of rationality or reasonableness and will involve suppression of many impulses and desires: the whole self, or the self in all its spheres of conative activity, will thus not be 'realized.' Anti-hedonistic ethic, proceeding on these lines, culminates in emphasis of self-sacrifice or self-discipline, even self-mutilation—in emphasis on the fact that we can only enter into the higher life halt or blind. Self-realization, according to this doctrine, is realization of the rational self at the expense of the sentient self. In ancient Greece the Cynics (q.v.) maintained such a view as this. They held that virtue is the chief good, and that virtue makes the human being independent of the vicissitudes of worldly fortune. The Cynics went on to teach that self-realization consists in living in the natural state, or according to nature. The Stoics (q.v.) also advocated realization of the rational self as the highest end, and, like the Cynics, inculcated freedom from the good or ill fortune which life may bring; but they saw the means to this end in repression of the elements of

feeling, desire, and emotion. This was their chief difference from the Cynics; they differed from the Epicureans, to whom they were most directly opposed, in emphasizing the supremacy of reason over feeling. Virtue, for the Stoic, consisted in the assertion of the rational side of man, and largely in extirpation of the passions, till 'apathy' was attained. A similar ethic was taught, within the modern period, by Kant (*q.v.*), and indeed by many rationalists and intuitionists.

As against both of these one-sided theories, each of which does full justice to but one side of our complex nature, the eudæmonism (*q.v.*) of Aristotle may be instanced. This philosopher held that happiness is the chief good, and regarded happiness as the outcome of life according to virtue. In eudæmonism it is rather (iii.) the whole self that is to be realized, and writers of the eudæmonistic school emphasize, more than do most ancient hedonists, the place of pleasures of the mind, while at the same time they assign more value than did the Stoics to the external goods of life and the æsthetic (as distinguished from the strictly ethical) adornments of conduct and character. Thus eudæmonism sees in self-realization, at any rate far more completely than do hedonism and rationalism, the complete development of all sides of the self, and discountenances the extirpation of any.

From what has been said it will appear that self-realization, in one form or another, is adopted as the chief good by all forms of egoism, as distinguished from altruism and systems which emphasize (iv.) the social self. In the broadest sense, self-realization will denote development of personality to the utmost, 'personality' being here used to refer to fully actualized human nature, as contrasted with the individual life of the child, the savage, or the non-rational animal. All of these inevitably seek self-realization of a kind—at least they aim at self-preservation, and at self-betterment in some sense. But the broader self-realization, or complete attainment of personality, will consist partly in synthesis or co-ordination of the conative elements of experience, and partly in the development of all the capacities of the soul. The former of these processes involves progressive control of impulse, desire, and passion, with a view to securing a full and untrammelled life for the whole self, inclusive of the higher faculties of reason, will, and moral sense. It is the means of securing that the momentary self, or, more correctly, the passing impulse or desire of the moment, indulgence or pursuit of which would mar the happiness and well-being and thwart the abiding purpose of the whole self or personality, be not allowed to have free play. For passing impulses and present passions often conflict with the attainment of enduring happiness; and desires frequently conflict with one another. If the agent in his completeness, *i.e.* as rational, volitional, and moral, as well as sentient and appetitive, be the controller of every kind of factor of his moral experience, he can effect realization of his higher or better self such as otherwise may be unattainable. The latter of the processes included in the attainment of self-perfection will involve the full use of all the individual's 'talents' or endowments, whether they be few or many, great or small, in that these may be instrumental to the completest moralization and perfecting of the self.

2. The various possible senses of 'self-realization' having now been enumerated and defined, we may turn to the further question whether any of them be adequate as a description of the highest good, and notice briefly some of the chief criticisms which the conception has received.

In the first place, it must be admitted that self-realization is very seldom actually before the mind

of a moral agent when he is about to perform a moral act. Moral acts are almost always done without any consciousness on the part of the agent, at the moment, of self-realization; that is not set up by him as the final cause of his action. He chooses the course of conduct which he pursues as good, rather than as good for him. So, unless we commit 'the psychologist's fallacy,' or confound the 'psychic' and the 'psychological' standpoints (*i.e.* the standpoint of the agent at the time of his action with the standpoint of the external observer or of universal, scientific, knowledge), we must deny that self-realization is an end or a final cause that we ever set before us or by which we are ever motivated, save in exceptional cases. And, if it be retorted that self-realization does not profess to be the end or the good which is consciously in view for the moral agent himself, but is nevertheless, objectively speaking, a realization of the agent's self, whether the individual know it or not, we then encounter the difficulty that all our moral acts, whether good or bad, must be regarded as stages in the assertion or realization of the self. There are objects of quite different ethical value in which a self may find its satisfaction or realization; or, as it is commonly expressed, there are different selves, or aspects of the self, to be satisfied; there is always, in moral action, a choice between the realization of one or another element in the whole self, unless self-realization be a mere empty form without content. This point has already been touched upon in the foregoing description of the various partial meanings of the self, and it has been remarked before that self-realization in actuality always involves self-negation.

In so far as self-realization is identified with self-satisfaction (*q.v.*), it may be urged that there is satisfaction of a kind for some individuals in that which is not good; and the more settled principles of individual lives, with which the momentary act may be contrasted and be found in conflict—the permanent 'self'—are not always or necessarily the best. Permanency of satisfaction, if we regard the self which is to be realized as the permanent self, is but one mark among others of the good act, moreover, when the permanent self is the better man. And, if we contemplate the whole self, rather than the self as the permanent (in contrast with the momentary), we are reminded that the whole self is never realized; as such, it cannot be, for our earliest moral teaching is directed chiefly towards the securing of our self-suppression, and 'the manifold temptations which death alone can cure' arise from conflict within the whole self which never can be wholly eliminated, in the case of most of us, while life lasts. We cannot enter into life 'whole'; the only question is, What kind of 'a whole' are we to be?

3. We pass now to a difficulty which has not been foreshadowed in our initial account of what self-realization may be understood to mean—a difficulty which arises when we turn from egoistic theories to altruistic, or even to all ethical systems which see the highest good in the *common* good. Self-realization is obviously incapable of being identified with the highest good by the altruist, for whom conduct is good in so far as it subserves the realization of other selves than one's own. And, without going to the extreme of literal altruism, we may, and nowadays generally do, demand that social activity have at least some place in the ethical ideal. If altruism fails to take note of the ethical element involved in personal culture, purely egoistic theories, which regard self-realization alone as exhaustive of the ethical ideal, fail to take note of the 'social self' in man,

and of the place which devotion to the common welfare occupies in a complete and adequate account of the moral life. There is much that is to be desired because it is good, though not because it is good for the particular agent bent exclusively on the realization of himself. The chief good must be desired by some self and for some self; but not necessarily by some self for itself. Thus self-realization alone, unless the term be used so broadly and vaguely as to include the extinction of self—as in the case of the patriot who dies for his country—cannot be the whole of the ethical end. Not realization, whether assertion or development, of the self is the essential rule of conduct, but rather the use of the self and all its powers and talents for the furtherance of the common, as well as of the individual agent's, welfare. Contribution and service thus take the pre-eminence over self-development and self-culture in the ethical ideal; and realization of the self can enter into the end only in so far as self-realization is compatible with, and conducive to, the common good. To seek one's own life merely is to lose it. Attainment of the end doubtless involves self-development and self-realization; but such development presupposes an end which is not the self.

Indeed the rational self is by no means rational, nor the whole self whole, if it be conceived as an independent unit; or, rather, an isolated rational individual is inconceivable. The realization of the individual self, as we know it, demands life in society; for without social intercourse there is no rationality, so thoroughly are we 'members one of another.' Our true self, regarded either as the rational self or as the whole self, can fully develop itself only by being also the social self, or by striving for social ends, which involves much sacrifice of the individual self. 'Looking at the matter, therefore, from this point of view, it might be better to describe the ultimate end as the realization of a rational universe, rather than as self-realization.'¹

Christianity of course accentuates the idea that we are 'members one of another'; also the truth that self-sacrifice enters largely into the effort to attain to the highest end. It thus sees in that end something more than the realization of the individual self. And this something-more arises from man's relation to God as well as from his relation to his fellow-men. At the same time Christianity, through its doctrine of eternal life and its hope of immortality, is able to present an ideal of self-realization which escapes the inadequacy characteristic of such ideas of it as have as yet been discussed, in that it is one which embraces them and transcends their mutual conflictingness. For the Christian faith, in the doctrines just mentioned, recognizes yet another 'self' than those with which we have hitherto been concerned, viz. the eternal self or the self of the life to come, which may be realized only through devotion to the common good, and even through devotion unto death. Only, perhaps, when hope of an after life is thus presupposed can we reach a sense of 'self-realization' which is wholly compatible with the end as represented in non-egoistic systems of ethics; otherwise, from the point of view of such systems, self-realization will be but a means to an end.

But even in the light of a future life and of relation to a personal God we cannot now conceive fully how the distinct ideals of self-realization and of the social good can be reconciled and combined in one. Further consideration of how these ideals arise and are conditioned will enable us to appreciate the importance of this problem which

seems to be ignored by the general assumption that there is but one absolute moral ideal or end presupposed in objective moral valuation.

Three levels of valuation are to be distinguished, each having its peculiar cognitional conditions and presupposing a different kind of abstraction from the effective-conational attitude called 'valuing.' At the sub-personal level we apprehend worths determined by individual feeling which we refer to the bodily self, and not to the self as person. Here the end is happiness, and our ethic is hedonism. At the personal level we apprehend worths determined by feelings, the presupposition of which is the ideally constructed self, and attainment of the ideal which now emerges involves sacrifice of the ideals of sub-personal valuation: pleasure must be subordinated to virtuous disposition. Personal dispositions have intrinsic value, and such objects may acquire absolute worth. These are internal to the self, and recognition of them is conditioned by abstraction from all instrumentality of the virtuous disposition to attainment of the common good. Their pursuit beyond certain limits is superfluous from the common or over-individual standpoint, though obligatory from that of the individual who is an end to himself. Finally, the self may participate in the valuations of his fellows, and play the rôle of the over-individual self or the impartial observer. He then contemplates exclusively the social good, and his intrinsic personal values have now to be sacrificed to the over-individual values of society. Of course the personal and the social ideals will at many points coincide; but they will not necessarily do so in all situations. And here the problem arises, Is there any absolute criterion or standard of preference for the one ideal over the other when, in concrete situations, they may conflict or be incompatibilities for the individual will? Such an *a priori* ground of preference seems to be beyond the range of our knowledge, and it becomes a question whether ethics is entitled to speak of one only absolute moral ideal, rather than of a plurality of them which cannot be unified. A philosophy of values may require a single supreme value; but from such a theoretical absolute there is no possibility of transition to an empirical unity of conscious ends and felt values. Perhaps the only direction in which we may look for a solution of this difficulty is in identification of the individual will with the metempirical will of God. Ultimate ends and their coalescence, it would seem, must be made intelligible otherwise than by logical subordination of the one to the other, and neither self-realization nor sacrifice to the social end can be the final word of ethics.

LITERATURE.—The text-books on ethics—e.g., J. S. Mackenzie, *A Manual of Ethics*¹, London, 1900; A. E. Taylor, in *IJE* vi. [1895-96] 356 ff.; W. M. Urban, *Valuation: its Nature and Laws*, London, 1909. F. R. TENNANT.

SELF-RESPECT.—I. Ethical import.—Self-respect is regard for one's existence, one's worth and dignity as a human person. As such it is a phenomenon both of civilization and of primitive society, although in its highest and most distinctly operative form it is a feature chiefly of the ethical life of the supposedly free and independent individual of modern times. It is here a high concern for one's personal honour and personal honesty, and for the due satisfaction of the powers and capacities of intelligent and active personality as a conscious possession. It is connected with the instincts and propensities of the 'self-feeling' (*Selbstgefühl, amour-propre*), with the various 'emotions of self' that are recognized and treated of by nearly all psychologists.

¹ Mackenzie, *Manual of Ethics*¹, p. 295.

'Whatever name we may give them,' says Ribot,¹ 'these emotional forms are reducible to one primary fact of which they are the embodiment in consciousness—viz., the feeling (well-founded or not) of personal strength or weakness, with the tendency to action or arrest of action which is its motor manifestation.'

They may also be connected with the instinct of conservation, the will to live. They are finally connected, however, with the feeling and the idea of individuality and personality. It is in the latter idea (or reality) that the self-preservative instinct 'attains to the full consciousness of itself, and becomes incarnated in the idea of the ego.'²

The primary self-feeling of the human individual³ is no doubt an undifferentiated feeling. It may be connected with the feeling of the body (its increasing size, strength, power, etc.) or with the value of its activities to the tribal or family group in question. But in its higher and later developments this self-feeling is no doubt connected with the sense (or reality) of personality (*q.v.*), with one's conscious existence as a person among conscious persons. Where this sense is lacking, as it may be in some men of science or in moral weaklings, as well as in a Caliban, a Buddhist, or a mystic, there will be no such thing possible as self-respect, or even the sense of self-agency. The reality, however, at nearly all stages of civilization, of that manifestation of personality which we call self-respect is attested by evidence from all races.⁴ We all, whatever our views about the universe, desire to be recognized and respected by our fellow-men, and we all dislike being ignored, or injured, or slighted by them. In ordinary life a man or woman without a self-respecting efficiency and sense of agency, without the reliability of the autonomous morality due to self-respect, is not looked upon as a responsible, or desirable, associate or servant.

And 'according to current ideas men owe to themselves a variety of duties similar in kind to those which they owe to their fellow-creatures. They are not only forbidden to take their own lives, but are also in some measure considered to be under an obligation to support their existence, to take care of their bodies, to preserve a certain amount of personal freedom, not to waste their property, to exhibit self-respect, and, in general, to promote their own happiness.'⁵

2. Development of the self-feeling.—The inevitable and the actual associations of the phenomena of self-respect with the various psychical tendencies underlying such terms as 'self-determination,' 'self-realization,' 'self-esteem,' etc., all tend to emphasize its connexion with that general growth in self-control, in rational self-love, in character, in the sense of personality, which forms such a large part of the study of genetic psychology or genetic sociology. Self-respect is undoubtedly a kind of development of the self-feeling that, at its lower levels, passes down into simple physical selfishness (natural egoism) and that has progressed from the second stage of self-interest and self-love to the third stage of a broad ethical force, or influence, that 'impels the individual to the pursuit of larger and more appropriate ends of activity.' At this last level it becomes a high, inward guarantee of objectively moral conduct. The very fact, however, that it has even here certain grave dangers and possible excesses and defects shows that it must indeed be studied in connexion with that entire development of the sense of individuality and separate personality which is our human birthright and which means the possibility of erring as well as of achieving and attaining. Self-esteem—Gall claimed a certain 'bump' for it in the brain—is probably the nearest expressive equivalent for self-respect; for the latter is clearly

above some aspects of self-activity—above self-satisfaction or self-admiration, *e.g.*, and above even self-control and self-realization. And it is also a more ethical phenomenon than self-sufficiency, or that mere inward initiative and autonomy of which a confused thinker like Nietzsche would have us make so much. For there are very clearly many definite ethical norms and criteria of that true self-respect or that true self-esteem in which we all so thoroughly believe for ourselves and others. And, again, although a development of the sense of duty under which we are all brought up, self-respect is a still more reliable guarantee of really good conduct than the mere sense of binding duty. The latter will keep a man doubtless within the limits of what is definitely owed to others who have claims upon him—superiors, dependents, the law, God, and so on. But it is only an inward self-respect that will guarantee the higher conduct that may have to rise above what is definitely prescribed or demanded.

3. A phase of moral evolution.—We may see an important confirmation of the theory of the actual and the necessary connexion of self-respect with the different physical and intellectual forms of selfishness and self-interest in Henry Bradley's finding¹ that self-respect originally meant (1) 'a private, personal, or selfish end,' then (2) 'self-love, self-conceit,'² and finally (3) that ethical regard for one's person and position which is implied, *e.g.*, in John Hill Burton's phrase about the 'Scot Abroad'—'the well-becoming pride and self-respecting gravity.' And, with a further use of the same distinction—emphasized by moralists—between (1) the 'external,' (2) the 'internal,' and (3) the 'teleological' aspects of the moral standard, we may point out again that, even where morality is apparently sunk in external law or custom, we can still see there the self-respect that all human beings have either as physical existences or as members of some social group—the self-respect, *e.g.*, of some 'savage' female beauty, or the pride of an Aryan conqueror, a Brāhman, a Pharisee, a well-born Greek, a Spaniard, an Englishman. But, properly speaking, we are pointing out that self-respect belongs to, and remains on, that second great stage of moral evolution which we call 'internal' morality, the stage where morality has passed from 'instinct' and 'custom' to 'insight' and 'reflexion,' to inward or voluntary self-determination. Morality is never, properly speaking, morality at all as long as it is based upon mere natural instinct (self-defence, *e.g.*, protective anger, personal effort) or on mere custom (the law of the tribe or that of one's social set). Nor do we have morality on the basis of mere desire or emotion, mere feeling. Nor is morality mere duty or prescribed morality.

It is established and invested with a dignity and a controlling power only when 'it ceases to be wholly dependent on the fitful play of emotion, or on any externally imposed standard of duty; and possesses as well that higher appeal which lies in an inward sense of self-respect.' This inward sense 'disclaims the mean, the base, the cruel, not alone because injurious to others, and attended by the condemnation of others, but because of the scorn of self that would follow.' 'The morality that is based upon the resolution to be true to our own better selves has a greatness, a spaciousness, a completeness, that no other morality can approach. For no other moral sanction can so keenly probe into the shadiest corner of our minds, and ferret out the lurking meannesses of motive. Supreme then over most secret lives, it has power to stifle wrong that no other check could influence.'³

4. Defects and excesses.—But just at the very point of its true and proper function it is essential to refer to the defects and excesses and limitations of self-respect, and to connect them all with the fact of the undoubted superiority of the third stage

¹ *Psychology of the Emotions*, p. 239.

² *Id.* p. 240.

³ Animals are credited by psychologists with pride, jealousy, a sense of esteem or lack of esteem, and so on, but not with a sense of selfhood or personality.

⁴ See Westermarck, *Jl* ii. 187–189, 141.

⁵ *Id.* ii. 265.

¹ In *OED*, *s.v.* 'Self-respect.'

² For rational self-love see Aristotle and Butler.

³ A. Sutherland, *Origin and Growth of the Moral Instinct*, l. 63. (9).

of morality, the 'teleological,' the morality of enlightened love, the morality of the spiritual impulse after perfection. Owing to the fact of the purely natural and purely conventional basis of much self-respect, there may well be, and there often actually is, in ordinary daily life what may rightly be called (1) an entirely non-moral self-respect—the self-respect for the body, *e.g.*, or the pride in one's inherited social position. Both these things are obviously a self-respect into which the sense of duty or choice or volition has hardly as yet entered. There may also be (2) a quasi-moral self-respect—the false pride, *e.g.*, of a man who will not acknowledge a mistake, of the man who cannot bring himself to share a reduced meal with a time-honoured friend, or of the man who works hard to pay contracted debts out of a dread mainly of the personal disgrace of the bankruptcy court. And there may be the endless forms of (3) pseudo-self-respect to be associated in one form or another with egoism and with imperfect moral training—the desire, *e.g.*, to make a correct 'appearance' and to insist upon forms of etiquette and politeness rather than on reality, or the mere inward adoption of some purely conventional, outwardly prevalent, fashionable, mode of thinking and acting. These three forms are all different from the true self-respect that holds up before the self only that which it holds up—in courage, wisdom, justice, and kindness—before others. From the study of the lives of men who have professed an unswerving allegiance to diverse sets of supposedly fixed first principles; from the study of the lives of men who, like Jean Jacques Rousseau, have professed to see through all conventional and established 'principles'; from the study of the effects upon the minds and souls of the adherents of systems like Stoicism, Pharisaeism, Puritanism, Brāhmanism, casuistry, transcendentalism, idealism, rigorism; from the study of the effect upon men of different forms of pride, we become aware, in fact, that the ideal of self-respect constantly requires enlargement, revision, and modification from (1) fresh knowledge of new conditions, (2) increased sympathy with beings different from oneself, (3) the imperative character of some actual duties to actual people. These last often cannot be set aside in the interest of any superman morality whatsoever.

Self-respect, in short, must progress with time and with the gradual unfolding of the possibilities and necessities of human nature. The intellectual and ethical approval of mankind can be expected only for true self-respect, viz. that which takes invariably what is to-day called the 'social' conception of the 'self' (as simply one being in a society of selves) and grasps the fact of the experimental or tentative character of even the best of our morality—the law was made for man, and not man for the law. Our self-respecting ideals are often poor things when compared with the dictates of divine goodness, of a real inward goodness of heart. An absolute belief in self-respect as the final standard takes, too, an unduly optimistic view of human nature, in ignoring its necessary and actual imperfections and the limitations of its knowledge. Like the egoist in general, the man who is all for self-respect will probably do right as long as this coincides with his own notions of the fitness of things—in general or in detail. But there is no guarantee of his doing so when this is no longer the case, or when it can no longer be the case. Both the morality of simple duty and the morality of sympathetic love are here probably superior. The morality of a so-called high or lofty self-respect has often collapsed into the meanest, basest, and cruellest of actions. And, again, in view of the diversity of actions to which an imag-

ined self-respect may lead men, we must remember that society would fall to pieces if each person were to become a law to himself or herself.

Self-respect, in other words, although a perfectly well marked and necessary phenomenon in the evolution of morality from the stage of instinct and custom to that of conscience and insight (character and freedom), can become, if regarded as a supreme determining principle, a fetish, an idol, a stumbling-block, a rock of offence. It must pass into an operative and a sympathetic sense, an emotion, for the life of duty and achievement that we undertake for one another, as members of a 'kingdom of persons,' a 'realm of ends'; when things come to a pass, self-respect is other-respect, respect for others who are also persons, who have also self-respect, and who are worthy of it.

5. Sociological aspects.—As for some of the promised sociological aspects of a true self-respect, it follows from what has been said and implied about the true self being the social self that every self-respecting man must pursue certain impersonal, or supra-personal, common ends. Self-respect is obviously a social force of great importance, for it makes a man respect his work, his calling, his associates, his family, his 'shop,' his school, his town, his neighbourhood, his country, humanity. It involves a kind of loyalty or love to all these great personalizing and civilizing agencies. It is a cohesive force, and the person who possesses it is a valuable person, sociologically speaking—a good citizen, a good neighbour. He can be counted upon for his share of the common task, of the 'white man's burden.' And, again, in the matter of social reform, it has been discovered very definitely to-day that all the philanthropy that stops short of inculcating in the so-called down-trodden, in the poor, in the vicious, in the inefficient, in the discontented generally, a self-respect that may become a lever to efficiency and service is really wasted, and that the social problem is really the problem of adjusting our social machinery and our educational arrangements so that the unfolding of the powers and capacities of personality (a vital part of the idea of self-respect) may become a possibility for all those who are born into any society.

LITERATURE.—See the elaborate works of E. Westermarck (*MI*, 2 vols., London, 1903) and L. T. Hobhouse (*Morals in Evolution*, 2 vols., do. 1906) on the evolution of morality.

The various histories of Greek philosophy (Zeller, Gomperz, Burnet, Cornford, and Grant's ed. of the *Ethics* of Aristotle) may be consulted for the story of moral philosophy from Socrates (the importance of self-knowledge) to Aristotle, Stoicism, and Christianity. Plato's theory of virtue as the sense of an inward harmony of the soul, and his idea that it is better to suffer wrong than to do wrong, is all an elaborate theory of self-respect for one's soul and its functions. To Aristotle the ethical life as the conscious realization of function is practically a lofty kind of self-respect, rising to its height in his famous conception of the 'high-souled man.' The self-respect of the 'wise man' of the Stoics, the idea that the wise man is as necessary to God as God is to him, the idea of solitary self-contemplation (seen at its height in Marcus Aurelius), is in many respects the highest form of self-respect that the world has ever seen.

By way of contrast to Greek ethics, which is all a kind of idealization of the natural reason-endowed man, and to the ethics of naturalism generally, consult the many works on Christian ethics, for to Christianity, as to Buddhism, not self-respect but self-surrender and self-abnegation are the beginning of the morality of the spirit. See F. Paulsen, *System of Ethics*, Eng. tr., London, 1899, for a comparison of the Greek, Christian, and 'scientific' elements in the modern moral consciousness; Butler, *Fifteen Sermons upon Human Nature*, do. 1726, for the legitimate place in the moral life for rational self-love; and Adam Smith, *Theory of the Moral Sentiments*, do. 1759, for the 'sympathy' theory of conscience.

Kant's ethical system is practically founded on a rational self-respect. See J. G. Fichte, *Popular Works*, tr. W. Smith, 2 vols., London, 1859, for an attempt to found German national culture, and the 'vocation of man' generally, upon the consciousness of the inward dignity of our power of self-determination. A. Schopenhauer (*The World as Will and Idea*, tr. R. B. Haldane and J. Kemp, 3 vols., London, 1883-86; various volumes of *Essays*, tr. T. Bailey Saunders, do. 1890-1902; W.

Caldwell, *Schopenhauer's System in its Philosophical Significance*, Edinburgh and New York, 1896) despised the absence of self-respect and legitimate pride even in the ordinary man, although his moral principle is sympathy. See F. Nietzsche (*Beyond Good and Evil*, Eng. tr., Edinburgh, 1907, and *The Gay Science*, Eng. tr., do. 1910) for the self-respect of

H. Lichtenberger, *La Philosophie* and W. M. Salter, *Nietzsche, The Thinker—A Study*, New York, 1917, on the spiritual, or even Christian, interpretation that may be put upon Nietzsche's and other similar attempts to transcend ordinary morality). Goethe's life may profitably be studied for the limits and the limitations of the inevitable egoism of an attempt to found the conduct of life on the idea of a kind of cultural self-respect, a natural and untrammelled self-development. See also A. E. Giles, *Moral Pathology*, London, 1895; A. Sutherland, *The Origin and Growth of the Moral Instinct*, 2 vols., do. 1898 (the latter work has an excellent chapter on the different phases of self-respect); A. E. Taylor, *The Problem of Conduct*, London, 1901 (a penetrating examination of the theoretical and practical flaws in the Anglo-German 'idealistic' or 'self-realization' theory of morals); the artt. 'Self-activity,' 'Self-consciousness,' 'Self-exhibition,' 'Self-love,' 'Personality,' etc., in *DPhP*, and in works on psychology; W. McDougall, *An Introduct. to Social Psychology*, London, 1913; T. Ribot, *Psychology of the Emotions*, do. 1907; A. Bain, *Mental and Moral Sciences*, do. 1884. See the terms αἰδώς, ἀντράκεια, μεγαλοψυχία in Liddell and Scott; also the 'Three Reverences' in Goethe.

The whole subject is a comparatively new one, for in ancient times and in the Middle Ages there was no such separation of the self from society as has existed (with questionable consequences) since the Reformation and the French Revolution.

W. CALDWELL.

SELF - RIGHTEOUSNESS. — 'Self-righteousness' is a term which figures little in philosophy, though the philosophical discussion of righteousness always raises the question, and requires by implication an examination of the self and the other-than-self as possible sources and bases of righteousness. The resources of one's own human nature are the nearest and most obvious refuge for the seeker after moral rightness and power. On the other hand, a mystical humanist or a passionate believer in human brotherhood may feel that the rightness of an individual, if it could exist and maintain itself in a self-centred form, would sin against ideal human unity or human sympathy; and thus, sinning against these things, it would already have marred itself, and would no longer be perfect rightness. Still more with the man to whom 'to live is Christ' (Ph 1²¹), or who in some other way is saturated with the realization of a personal God, the thought of a self-centred righteousness is difficult to entertain, even with an effort and for a passing moment. It belongs to a world which the long habit of dependence and communion has made strange to him. His highest conception of right is the doing of what is right by God, the doing, for the sake of God, of what is right in the sight of God.

A man would lose much by complete independence of his fellows, if such a thing were possible. (He would, of course, begin life as an adult. If he started as a child, his independence would be ruined at the start.) How would a man's character stand if he had never trusted another for help and never felt one thrill of gratitude for help received? If he had to the full the power to serve others without needing them, he would be only half human. And here again we have a contradiction in terms; for then he would not have the sympathetic insight which is necessary for the highest service and the truest justice. If it may be so put, there is nothing a man needs more than his needs. H. Weil made a far-reaching remark when he said that St. Paul 'had the art of beautiful acceptance.' It expresses much of his charm and the whole of his religion. For it is in religion above all that a man's needs are the last thing he can afford to lose. With God there can be no possibility of a man serving and not needing. A completely self-centred righteousness is therefore, in dealing with Him, inconceivable from the outset.

It is often said that, since character can have reality only in interaction with other characters,

and this is relative, self-contained righteousness is impossible. So it is; but, if the distinction may be made, a self-centred righteousness would still remain conceivable—interacting in the form of help bestowed on others, but not received from them, and owing to other characters, not its source, but merely an opportunity for outflow. 'I give tithes of all that I possess' (Lk 18¹²) is not self-contained, since the speaker gives; but it is self-centred, since he speaks as if he receives nothing. What he 'possesses' is treated as an absolute starting-point (though in reality it was first accumulated from outside). On this assumption there is a centrifugal but not a centripetal movement. It was therefore necessary to show (1) that this flow in one direction only, though conceivable at the first blush, would not be the flow of a complete righteousness towards other men, since essential qualities like gratitude and some forms of loyalty and faith—to say nothing of humility and readiness for contrition—would be lacking; and further, to show (2) that in relation to God self-centred righteousness is out of the question entirely, except as a poor and pitiful fragment, and vitiated at that—in any case, something quite inadequate for acceptance before God and 'justification.' And, in practice, such a righteousness, lacking help human and divine, is likely to be a far greater failure than mere logic requires. If finally (3) we go behind such righteousness as the man really has, it turns out that, just as it is inadequate, so it was never original. We can trace the influences for good which formed its source. In regard to goodness, as in regard to goods, he has nothing which he has not received (1 Co 4⁷).

If we look at the term 'self-righteous' in ordinary use, it is found to be employed with several different shades of meaning: (1) in condemnation of those who, in their own judgment, by reason of their superior character and deeds, are 'not as other men are' (Lk 18¹¹); it is implied by the critic that this self-approval is due to exaggerated self-esteem; (2) in (unjust) condemnation of those who maintain their own moral convictions when they differ from those around them; they may be personally humble, and even humble in an unusual degree; (3) in a distinctly religious reference, of those, such as the Pharisees, whose claims are concerned not so much with character in itself, or with moral principles purely as moral, as with their supposed standing in relation to God. Not only are they in enjoyment of superior knowledge of Him or favour with Him, but they have in some sense earned it. They are His servants, but they cannot help knowing that they are profitable servants (Lk 17¹⁰). Usually they speak, and stand, and look as if they had never done a wrong; but, curiously enough, a similar state of complacency is sometimes attained by a man who, after an outstanding and degraded career as a sinner, has experienced an outstanding and distinguished conversion. He must have been singularly worth saving from the one career and for the other.

As regards all three, the ultimate question is that of God. (1) The man who really is better than his neighbour by the grace of God robs God if he obscures the fact. His self-righteousness is to assert the fact as of his own doing. His righteousness is to 'let his light shine before men,' and, when the question of credit arises, to insist that they give it all to the 'Father who is in heaven' (Mt 5¹⁶). (2) It is righteousness, and not self-righteousness, to stand with quiet, lofty inflexibility by a truth which we did not make, but which has 'come' to us, most of all when it 'cometh down from the Father of lights' (Ja 1¹⁷), and when our attitude is that we cannot be 'dis-

obedient unto the heavenly vision' (Ac 26¹⁹). (3) The Pauline (and Christian) attitude is that native goodness, saintly heredity, preservation from falling, are all of grace, free and undeserved; that rescue after falling is also all of grace; and that there can never be a spark of self-righteousness in any man while he is giving grace its due. But its due is his absolute all. 'When ye shall have done all, say, We are unprofitable servants' (Lk 17¹⁰).

The peculiarity of the Pauline position is its strong emphasis, founded deep in Paul's experience, on the utter impossibility in practice of real and full self-centred righteousness. Not only so, but the righteousness which is partly self-centred and (as in Paul's case) most earnestly religious is also doomed to tragic failure and disappointment. 'In me [that is, in my human nature] dwelleth no good thing' (Ro 7¹⁸). Hence no amalgam of the God-given and the self-achieved will stand the tests of life or the final light of God. It must be grace, all grace, and nothing but grace.

It is a hard doctrine for men to grasp. Self-righteousness reveals its terrific strength in the form of the universal instinct of self-defence. Except when the admission of 'sin' is a mere convention, it is very rarely admitted while it can possibly be denied or while the question can possibly be shelved. In practice the everyday question is always: 'How can I justify myself?' If grace is ever to be triumphant, this attitude must be systematically undermined, not only in theology, but in philosophy and in life. And teachers of ethics might give serious attention to the question whether self-defence, take it for all in all—prejudiced and unscrupulous self-defence, as it nearly always is—should not rank as one of the deadly sins. Certainly it is the deadly enemy of repentance and of the Pauline Christianity of grace alone.

C. H. WATKINS.

SELF-SACRIFICE.—The subject of self-sacrifice is one which has many aspects and many developments. It is originally an instinct of human nature, the evolution of which can be traced from earliest data. Its power and manifold forms are demonstrated on every page of human history. It arrests our attention at the outset of our ethical inquiry. Its relation to the contrary instinct of self-preservation (*q.v.*) covers a large area in the field of ethical controversy. Its rational stimulation, direction, and control are of serious moral importance, while its relation to religion also shows us that it is of the profoundest significance and loftiest interpretation. In fact, there is hardly any limit to our search for indications of the working of the principle or to the application of its claims 'in heaven above or earth beneath.'

1. **Primary facts.**—To say that self-sacrifice is an instinct of the human race does not do full justice to the elementary facts. In the animal world also, side by side with instincts that are fierce and cruel, are those of parental, conjugal, or generic fidelities which make self-sacrifice necessary. Nay more; it is a law of nature itself: 'Except a grain of wheat fall into the earth and die, it abideth by itself alone: but if it die, it beareth much fruit' (Jn 12²⁴). Indeed, the daisy and the guelder-rose have been used as illustrations of the statement that floral beauty depends upon the principle, since the ray florets become neutral.¹ It is with the human aspect of self-sacrifice, however, that we are here concerned. Self-sacrifice lies at the foundation of our social institutions;

¹ See Greville Macdonald, *The Religious Sense in its Scientific Aspect*, London, 1903, pp. 106-125.

for there is no relation into which a man can enter with his fellows which does not proclaim 'None of us liveth to himself, and none dieth to himself' (Ro 14⁷). Not only so; in the limited range of a man's deeds, which seem at first sight to concern himself alone, life presents alternatives which require self-sacrifice in the choice of the higher, since that must be called self-sacrifice which surrenders the pleasure of the moment for nobler ends. In the most thorough or absolute sense of the word it may fairly be argued that there is no such thing as self-sacrifice or that, if there is, it is neither to be desired nor to be approved. There is always some interest or advantage larger or higher than that which short-sighted selfishness would choose, and with this the Ego, or self, identifies its own. Consequently the controversy originating with Hobbes and the Cambridge Platonists is transformed at last to the question, What is the legitimate meaning of self-realization? And we have to deal with the egoism of Nietzsche, as opposed to the social idealism of modern interpretations of Christianity. But it is clear that the essential contrast between selfishness and self-sacrifice remains. The question is, Why should a man forgo that which he naturally would prefer, and why should he voluntarily endure that which he naturally would avoid? And the actual facts of life show how differently men respond. Thus the alternative of following the higher or lower self is present from first to last. From prudential self-control we quickly pass to all the forms of altruistic conduct. Combined with these, or apart from these, there is the conscious aspiration after intellectual or spiritual excellence, for which a man will surrender the ease or pleasure, or even the safety, of the present moment. Even the miser or the ambitious man may be regarded as making a sacrifice of immediate self-pleasing; but in thinking of self-sacrifice we eliminate those cases which have no evidence of altruistic intention. There are innumerable occasions when no prudence is sufficient motive or explanation of conduct that is commendable. When there is obviously no coincidence with the natural desires of the man who does a heroic deed, we cannot deny the distinct character of his conduct.

2. **Excessive forms.**—We must not pass by the fact that psychologically the instinct has sometimes asserted itself irrationally, and that asceticism (*q.v.*) for its own sake has been judged to have merit. Eastern religions like Buddhism and Hinduism, as the result of theories of good and evil, have set out to achieve such self-renunciation that asceticism becomes a virtue apart from any social consequences. According to these theories, matter is the cause of evil and must be subdued in bodily life, so that spiritual exaltation is measured by neglect of the body and indifference to pain, or by such renunciation as leads to passive endurance. Through the influence of Alexandrian philosophy such ideas found their way into Jewish ethics in the customs of the Essenes (*q.v.*), and through these they found a place in early Christian thought. In monasticism (*q.v.*), with its fasting and celibacy, they have exercised a lasting influence.

But the sentient self is not necessarily evil, and severities such as those of St. John of the Cross and Suso are not reasonable. 'Negative mysticism' of this type is ethically pernicious.¹ Martyrdom may be sought with morbid desire, and even in ordinary life there may be an assumption that so-called unselfishness is in all cases saintly. It is this that gives to Nietzsche the opportunity to sneer at Christianity as slave-morality—so

¹ See W. James, *The Varieties of Religious Experience*, London, 1902, p. 303; Illingworth, *Christian Character*, p. 184 ff.

necessary is it to remember that the social relation gives value to morality. Against either egoism or altruism alone the same criticism may be urged; for both alike tend to the futile isolation of the individual, by disregard of social relations. It follows, not that morality has no reference to ideals, or that the individual has not direct relation to such ideals, but that social value is the direct and necessary criterion of conduct, and that it must be the object of rational judgment.

3. Rational forms.—We have only to begin with the individual as a centre and pass to wider and wider circles of social life to discover how expansive may be the claims for self-sacrifice and the emotions that attend its manifestations.

(a) Within the limits of a man's own life, besides the self-control and self-denial whereby each one is normally fit for the ordinary duties of life, there are more special demands that may be made. It may be very difficult to decide in particular cases; but, so far as a man's self-development may be of service to his fellows, either by increased capacity or as an exceptional example, any renunciation he may make of part of life's possibility is worthy, whether as athlete, artist, or saint.

(b) In the family the mutual rights and obligations of parents to each other, of children to their parents, and of parents to children, of brothers and sisters, etc., may require, or give the occasion for, trivial and passing or constant and complete devotion. Without such recognition of mutual dependence, service, and sacrifice, these ordinary social ties soon become intolerable and destructive. Certain expectations are generally recognized; but the extent of such claims of one life upon another for its comfort or success, for relief of suffering, or even for its continued existence, is a problem ultimately decided in each case by the individual concerned with making the sacrifice. Such problems often require the sanest and most delicate moral judgment. They afford opportunities of stupidity or of nobility, but certainly of patience and of heroism, which have always been recognized as of supreme moral worth.

(c) Near akin to the relations of the family are those of friendship—the voluntary loyalties to which we commit ourselves in comradeship and in the accidental partnership of risks on land and sea. These again have certain obvious and acknowledged obligations; but the finest examples may be on the fringe of uncertainty.

(d) Next we may put the positive self-sacrifice required by our work or calling. To be fit for our tasks, in health as far as possible, in capacity as far as may be legitimately sought or expected, will mean for each one such self-direction in the employment of his time and energy that he will have to make sacrifice not only of his lower self, but also of his own tastes and pleasures, and even of those family and social engagements which otherwise might be not only harmless but praiseworthy. Duty involves self-sacrifice. It is part of the discipline of our social life; yet here again there are in different men different standards and different estimates of what is requisite in the discharge of duty. In some cases there is such a grudging submission to what is required that there is no ethical value of self-sacrifice at all. In others there is an exaggerated interpretation of what duty means, so that the most heroic fidelity has been modestly explained as only doing what was duty. Certain callings make greater demands than others—e.g., those of doctor, nurse, sailor, or soldier. Further, the vicarious suffering involved in the risks of life hardly finds a place in an analysis of self-sacrifice; yet in the choice of a calling in which such risks are run, or which distinctly sets out to lessen them, there is at least

potential self-sacrifice. It does not follow that all engaged in such callings—e.g., the life-boat and fire-brigade services—are actuated by such motives; but it must be recognized as a possibility.

(e) Besides the occupations of life there are also actual citizenship and concern for the welfare of the State, in which a man may be so disinterested as not only to forgo ease and prosperity, but, sacrificing all the rewards of ambition, to endure cruelty, shame, and obloquy, either from the external foes of his country or from those within the State itself who do not understand or do not share his purposes. This may lead to pain and hardship, and even to death itself. Paulsen¹ endeavours to show that Regulus might have acted as he did for his own sake; but it does not amount to more than showing that the sacrifice was made by reason of self-identification with all that promoted the highest honour of Rome. The same analysis or explanation might be made in all such cases.

A. B. Bruce² elaborates the thought of progress by sacrifice, as an outstanding law of social life.

'Sacrifice is the cost of progress; it is the instrument of redemption; not otherwise is real advance attainable.' Renan is quoted: 'There are always voluntary victims ready to serve the ends of the Universe.'³

'The social mass stagnates, clings tenaciously to old ways however barbarous or bad, obstinately resists movement; whence comes suffering in some form to the man who urges it to move. He suffers because he belongs to a social organism, or closely knit brotherhood, in which the pulse of a common life beats. He cannot escape from the vital influence of the corporate body. It will either assert its power over his soul, controlling his thoughts and affections, or, if his spirit be free, it will act vindictively in the sphere of his outward lot. He must either be a comrade in full sympathy with his people sharing their prejudices, errors and vices, or he must be a victim, suffering for their ignorance and sin. . . . All this is portrayed in Isaiah liii. It is He who is brought as a lamb to the slaughter who divides the spoil with the strong. But when one has grown to many, the power of resistance, if not the noblest conceivable, is the one which most readily suggests itself to brave, fearless and conscientious men. He, who came not to send peace but a sword, knew the sacrifice involved in such struggles. It is better to die fighting for liberty than to live the life of a slave.'⁴

(f) Philanthropy provides a distinct group of cases; it may be apart from patriotism or civic sentiment. Sympathy with any sort of sufferers has caused men and women to endure hardship and make sacrifice of all that is desirable or dear to the human heart. Children, slaves, prisoners, lepers, the poor, the sick, the dying, have evoked such devotion. When philanthropy has been associated with moral and religious enthusiasm, it has produced reformers, missionaries, and martyrs whose stories are the pride of the Christian Church.

Thus from earliest intimations of a great law of our being which may be instinctively and blindly obeyed we see there has been evolved a more and more conscious and deliberately rational acceptance of the necessity for self-sacrifice. The intellectual insight and foresight may vary immeasurably and be out of all proportion to the volitional and emotional elements in the acts of obedience.

'To preach to a man not to devote himself is like preaching to a bird not to make a nest, and not to nourish its young.'⁵

This may be true of many natural forms of self-sacrifice, and of the man who has accepted the position with passionate response to the demand; but it does not follow that we are to withhold our appreciation of such conduct, or that we are capable of passing judgment on the merit of any particular case. It certainly is a fact that a greater self may be developed with loftier aims than personal pleasure, and that there may be a rational acceptance and interpretation of the necessity for

the self-sacrifice involved which greatly enhances its moral value.

It is this growth of the 'conjunct self,' or social self, this over-self, or cosmic self, which tends to a reconciliation between egoism and altruism.¹

'There is some affirmation in every act of sacrifice and no man can make a fine sacrifice until he has a true value of himself.'²

Asceticism is the mystic search for self-realization gone astray in introspection and become self-destructive, parasitic. Its search is justified, but its aim must be positive, not negative, comprehensive, not exclusive, cosmic, not ascetic.

4. Significance.—The great facts of self-sacrifice cannot be gainsaid or explained away. No cynical interpretation of human nature can reduce them to forms of natural egoism. Altruism is established. Egoistic hedonism long ago surrendered to larger views of utilitarian and evolutionary ethics of the social organism. From H. Spencer, L. Stephen, and S. Alexander to H. Rashdall, G. E. Moore, and modern socialists the well-being of the community is emphasized. Individualism from Goethe to Schopenhauer and Nietzsche has always implicit reference to an external order which after all holds the individual in tyrannous necessity, while idealism from Kant to Eucken has its kingdom of ends or its constructive endeavour. We may not agree with the pragmatist that truth and goodness are identical, or that the value of goodness is an experiment; but its humanistic note is unmistakable, and the self-activity, whether of Bergson or of Eucken, whether creative or spiritual, whether pluralistic or monistic, is far too great to be self-centred or to exclude what we mean by self-sacrifice. This is not the place to do more than indicate the bearing of the subject on general philosophical and ethical inquiry; but its significance cannot be overlooked. We do not commit the interest of morality to merely emotional instincts, any more than we leave the definition of its goal to the pure rationalist. It is when the intellectual concept of duty has supervened upon the mere emotional impulse of primitive man that morality begins. It is the rational estimate of social content that is the task of moral consciousness. Whereas certain generalizations are established, and some have crystallized into laws, it is in the individual consciousness that the questions of casuistry arise. Morality is not simply subjective. Its objective reference or goodness is the basis of its value.

'To arrive at a perfectly truthful moral judgement as to the rightness or wrongness of particular acts, we should form a conception of human life as a whole, and then ask what mode of action in any given circumstance will promote that true good.'³ The difficulty is, How far is every man bound to make sacrifice for the good of others? That is a matter of moral vocation. And vocation is determined partly by a man's external circumstances and the needs of human society, partly by his moral and intellectual capacity.

5. Christian emphasis.—The objectivity of moral values must ultimately lead us to meta-physical problems which are beyond the scope of the present article; but those interests which conflict with our own immediate pleasure arm themselves, so to speak, with the sanctions of religion; and it is an indisputable fact that the Christian religion is pre-eminent in its treatment of this aspect of conduct. It is not in providing rewards and penalties whereby selfishness may be restrained and self-sacrifice encouraged that the ethical value of Christianity is discovered. It is in its treatment of the moral conflict as a whole that we understand its message.⁴

By the supreme demand for faith and love, and

the truths which justify that demand, Christianity seeks to overcome the natural antagonism between selfishness and self-sacrifice. Its apparently complete and exacting thoroughness of demand is intelligible only in view of the willing espousal of the interests, or 'universe,' of the Kingdom of God. The renunciation of worldly goods is required if earthly possession prove an impediment to a man's rising to the plane of character to which Christ sought to lift men (Lk 14¹⁵⁷). Any loss, even of eye or hand, is preferable to any faltering in choice between the call of the Kingdom of God and earthly or merely material pleasure or gain. Natural relations are second to those which have spiritual value (Mt 12¹⁸). Worthiness for discipleship is tested by this superiority of attachment (Mt 8²² 10³⁷). All is focused in fidelity to Christ, which, while it may mean conflict (10³⁵), yet has abundant recompense (19²⁹). Such self-denial was to be to the uttermost, 'even to the scaffold' (10³⁹), while on four distinct occasions is recorded the utterance, 'He that loveth his life shall lose it; but whoso shall lose his life for my sake the same shall find it' (10³⁹, Lk 9²⁴ 17³³, Jn 12²⁵). Christ's own death was a free act of love and surrender in the fulfilment of a divine purpose. It was not an irresistible destiny (Jn 10^{10, 18}, Mt 26³⁹); yet there was oneness with the Father's will in His eternal purpose. Personal love which Christ inspires is the great lever or dynamic of self-sacrifice among His followers (2 Co 5¹⁴, 1 Jn 3¹⁶, Ph 2⁴, etc.). In Christ's sacrifice of the Cross are the pledge and promise of the victory of divine love and wisdom in the affairs of men and the assurance that in all self-sacrifice and suffering purposes of divine wisdom are supreme.

LITERATURE.—It is difficult to attempt a survey of the literature on this subject. On the elementary forms of temperance or self-control precepts abound among all sorts of moralists.

Plato's teaching on *σωφροσύνη* and the sacrifice of the individual to the State may be sought in his works, and in books that deal directly with his teaching. Of his works see esp. *Protagoras*, *Gorgias*, *Philebus*, and the *Republic*. See also Aristotle's teaching on self-restraint (*ἐγκράτεια*) in *Nicomachean Ethics*, iii., vii., x., xii., and also on friendship. The relation of pleasure to moral rightness runs through the whole history of ethics. The Roman Stoics rise to a high level in their teaching of self-control and endurance.

The *Imitatio Christi* of Thomas à K. familiar example of the more distinctly denial from the Christian point of view

fasting, chastity, dress, etc., are to be found in the practical advice of Christian writers in apostolic and mediæval times. Benevolence as a specific Christian virtue is continually emphasized. As indicating the controversy originating in Hobbes, reference may be made to his and his opponents' works (see art. *Ethics*) and to the subsequent writers on egoism and altruism down to the present time, esp. H. Spencer, *Data of Ethics*, new ed., London, 1906; L. Stephen, *The Science of Ethics*, do. 1882; S. Alexander, *Moral Order and Progress*, do. 1889; H. Sidgwick, *The Methods of Ethics*, do. 1901; H. Rashdall, *The Theory of Good and Evil*, 2 vols., Oxford, 1907; G. E. Moore, *Principia Ethica*, Cambridge, 1903; B. Kidd, *The Science of Power*, London, 1918; E. Westermarck, *MI*, ch. xxxiv., 'The Altruistic Sentiment.'

For writers on Christian ethics see art. *ETHICS AND MORALITY* (Christian). The following may be added: J. Seeley, *Ecce Homo*, new ed., London, 1905; J. Stalker, *The Ethic of Jesus*, do. 1909; R. L. Ottley, *Christian Ideas and Ideals*, do. 1909; J. R. Illingworth, *Christian Character*, do. 1904; C. F. D'Arcy, *Christian Ethics and Modern Thought*, do. 1912; W. S. Bruce, *Formation of Christian Character*, Edinburgh, 1902; F. G. Peabody, *The Approach to the Social Question*, New York, 1909; H. C. King, *Ethics of Jesus*, do. 1910; A. E. Balch, *An Intro. to the Study of Christian Ethics*, London, 1905; W. N. Clarke, *The Ideal of Jesus*, Edinburgh, 1911; A. B. D. Alexander, *Christianity and Ethics*, London, 1914; R. M. Jones, *Social Law in the Spiritual World*, New York and London, 1904; H. S. Nash, *Genesis of Social Conscience*, New York, 1902; also J. B. Baillie, 'Self-sacrifice,' *IJ* xii. [1914] 260 ff.; H. Walker, 'Triumph and Tragedy,' *ib.* xiv. [1915] 135 ff.; C. L. Maynard, 'Love and the Law,' *ib.* xv. [1917] 479.

A. E. BALCH.

SELF-SATISFACTION.—In every volition man seeks self-satisfaction; so many have contended. Thus T. H. Green says:

'If it is a genuine definition that we want of what is common to all acts of willing, we must say that such an act is one in

¹ See art. ALTRUISM.

² R. M. Jones, *Social Law in the Spiritual World*, p. 103; cf. M. Maeterlinck, *Wisdom and Destiny*, London, 1908, § 63 ff.

³ H. Rashdall, *Ethics*, London, 1913, p. 71.

⁴ See *HDB*, s.v. 'Self-surrender.'

which a self-conscious individual directs himself to the realization of some idea, as to an object in which for the time he seeks self-satisfaction.¹

A voluntary act 'is the putting forth of the man or self in desire,' and desire is distinguished from a 'mere solicitation,' such as the hunger impulse, which a man may have in common with animals, by this, that in desire the man identifies himself with the impulse.² The object which a man desires and aims at is, therefore, 'an idea of personal good,'³ 'a better state of himself,' 'a certain idea of himself—of himself doing or himself enjoying,'⁴ 'a good of himself as himself.'⁵ In all conduct to which moral predicates are applicable, whether it be virtuous or vicious, a man is 'an object to himself.'⁶ So every form of self-satisfaction appears good to the man who seeks it. True good is true or abiding self-satisfaction, i.e. 'the satisfaction of the fully realized or perfected self.'⁷ J. H. Muirhead likewise maintains that the object of desire and volition is 'a form of self-satisfaction':⁸

'It is only as involved in one's own that one can desire one's neighbour's good; it is only as his good enters as an element into my conception of my good that I can make it an object of desire and volition.'⁹

In form this is an egoistic view of human nature,¹⁰ and may be classed with psychological hedonism.¹¹ For, according to the latter also, a man always seeks his own satisfaction in the form of pleasure or avoidance of pain. Green and those who agree with him, however, maintain that the true good of the individual is a common good and non-competitive. Hence true satisfaction can be attained only by such a life as increases the true satisfaction of other members of the community.

The 'egoistic' psychology in its various forms has been called into question. Most writers on psychology and ethics seem to accept the general contention that volition involves the satisfaction of desire;¹² that desire implies the idea of an object to the realization of which we have an impulse; and that desire arises when there is an interval between the consciousness of the impulse and its realization, or a delay to its satisfaction. But the following are highly disputable propositions: (1) the idea of self is present to consciousness whenever we have a desire; (2) the self identifies itself with every desire; (3) every desire is for the satisfaction of the self.

Green lays great stress on the unity of the self; he often writes as if the self were a single principle always more or less completely present in the consciousness of a man; that all his desires and volitions are consciously related to it; and that consequently the idea of self is a constituent element in each of them. But the unity of the self should be conceived rather as an ideal—an ideal which becomes actual only through the progressive organization of its constituent instinctive tendencies, emotions, and ideas. The latter conception is to be found in Green, and it is the conception most characteristic of his system, especially when he discusses the moral ideal.¹³ But the disputable propositions mentioned seem to depend on the former abstract conception of its unity.

Now the self-regarding sentiment—an organization of emotional dispositions with their impulses

about the idea of self¹⁴—is rarely, if ever, so comprehensive and thorough as to embrace all the desires of the mind. Until this comprehensive sentiment is formed, however, it cannot be said that the idea of self is present whenever a man desires anything; nor can it be said therefore that he identifies himself with the object of desire; still less is it true that every desire is for the satisfaction of the self, and that the good sought is the good of the self. The adult mind is capable of forming a multitude of sentiments¹⁵ into which the idea of self does not enter, and any particular desire may find a place in, or be taken up by, one or more of these. Sometimes a desire owes its origin not to any single impulse, but to the organized dispositions forming a sentiment. And, unless the precise relations of a desire to these dispositions is discovered, its constituent elements cannot be known. Consider, e.g., the following series: a simple desire for food, a desire for food for myself, a desire for food for my child, a desire for food for a stranger. These are evidently different desires on account both of the ideas that determine them and of the impulses to the realization of the ideas. The idea of self enters as a determining factor into the second and third; it need not enter into the first and fourth. The impulse that necessarily enters into the first is the hunger impulse, and this is usually the only one if the impulse is satisfied without delay. Into the second there may enter, in addition to the hunger impulse, some of the other conations organized in the sentiment which is excited by the idea of the self—e.g., the impulses to enjoy the pleasure of eating, to preserve life, to render myself efficient. The hunger impulse does not enter into the third, nor does any one of the conations just mentioned. Other impulses related to my idea of myself are brought into play, such as the impulse springing from my sense of responsibility as a father, my self-respect, my concern for the approbation of others, etc. Into the fourth, the desire to procure food for a stranger, not one of the impulses mentioned above need enter. The motive force may spring from affection for children with its impulse to protect and succour. It may even spring from hatred of a man whom I consider responsible for the child's destitution, or from the thought that my enemy will be annoyed by such behaviour on my part. The emotions, with their attendant impulses, which are organized in the self-regarding sentiment are not excited in these cases. Of course it may be said that all these emotions spring from my own being; they are elements in what is called my total self; but to say that is very different from saying that the idea of my self-satisfaction is the object of desire sought in volition. It is indeed possible for hatred of enemies and affection for children to be included in the self-regarding sentiment. A man can take pride in the thought of himself as one who hates enemies and has affection for children. When this happens, the self-regarding sentiment may be stimulated by the sight of any hungry child. Whether this wider sentiment is actually stimulated in any particular case will depend on certain conditions.

(1) The first of these is the existence of a sufficient motive. If, e.g., the need of the child can be satisfied with comparative ease, there will exist no motive for putting the wider sentiment into operation. But, if food is difficult to obtain, and if it is

¹ See art. SELF-ASSERTION AND SELF-SUBJECTION.

² For an account of this specialized use of the term 'sentiment,' meaning an organized system of emotional dispositions about the idea of some object, see art. SENTIMENT; A. F. Shand, in *Mind*, new ser., v. (1896) 203 ff., xvi. (1907) 477 ff., and *The Foundations of Character*, *passim*; W. McDougall, *An Introduction to Social Psychology*, London, 1913, ch. v. f.

³ *Prolegomena to Ethics*, Oxford, 1883, § 154.

⁵ *Ib.* § 112.
⁶ *Ib.* § 115.
⁷ *Ib.* §§ 171, 234. There are expressions in Green's works suggesting a conception different from this, and inconsistent with it. For a detailed examination of Green see H. Sidgwick, *Lectures on the Ethics of T. H. Green*, Mr. Herbert Spencer and J. Martineau, London, 1905.

⁸ *The Elements of Ethics*, London, 1910, § 18.
⁹ *Ib.* § 67.
¹⁰ Cf. art. EGOTISM.
¹¹ See artt. HEDONISM AND ETHICS, § 6.
¹² Cf. B. Bosanquet, *Psychology of the Moral Self*, pp. 78–80, for a different view of some deliberate volitions.
¹³ See *Prolegomena to Ethics*, bk. iii.

necessary to face discomfort or danger to obtain it, affection or hatred may be an insufficient motive. There will then be need for reinforcement of the will by the thought of a man's reputation, his honour, his self-respect. (2) Another condition is opportunity for deliberation. This implies sufficient time and concentration of attention to realize the situation fully and to call up the forces organized in the self-regarding sentiment. 'Falling into temptation' is not infrequently due to insufficient deliberation. (3) The third condition is the thoroughness of organization of the self-regarding system. If the system is loosely constructed its strength will be small, and what strength it has will not be effectively mobilized to reinforce its constituent desires at need.

Perhaps it is possible for the idea of self to be so comprehensive, and so completely articulated, as to include every good that the individual considers he ought to seek, and the self-regarding sentiment consequently to be so systematically and thoroughly organized as to determine all his fully deliberated volitions. Still opportunity would be lacking, and motive would be wanting, to call it into operation to determine every volition. Hence it is incorrect to define volition 'as the supporting or the re-enforcing of a desire or conation by the co-operation of an impulse excited within the system of the self-regarding sentiment.'¹ This definition would apply only to fully deliberate action—e.g., 'action along the line of greatest resistance.'

It may be contended nevertheless that, although a man does not always aim at self-satisfaction, he ought to do so; he would be acting on a sound ethical principle in doing so. For, it may be urged, the true good for any individual is the abiding satisfaction of the perfect self, a good which is not only his own, but the good of others also. To realize this good, he ought constantly to aim at organizing all his impulses in relation to such an ideal of self as will bring his life to complete unity. Moreover, the sentiment organized about this ideal is an emotional system powerful enough to give a man mastery over all the vagrant solicitations of desire, and the only one that is powerful enough.

Now it must be admitted that an ethical principle of this type has obvious merits. A man inevitably seeks his own satisfaction in some measure. Could he be led to seek this in a way that increases the satisfaction of others, there would be great gain. Especially desirable is the idea of enlisting the strongest force in human nature—the self-regarding sentiment—in the service of every virtue. But, in the first place, is what appears good to men in every stage of their life a good common to all, and non-competitive? In a world of men developing ideally this might be the case. But is it true of the world as we know it? And, if it is not, is a man likely to live the best life by aiming always at satisfying himself? In particular, is this ideal likely to be a good principle of guidance for a man in process of forming his character? Is it possible for him to include in his idea of what will satisfy himself all the ends at which he should aim, and in the right proportion or degree? He will often be called upon to act with others and for others. Have we good ground for thinking that what will satisfy them will agree with his conception of what will satisfy him? If it does not, may not the judgment of many of his associates be superior to his own during his immature years?

Again, how is a man to obtain right conceptions of the virtues, of the ends, and of the ideals which he and others should seek, except by submitting to the instructions, the suggestions, the approba-

tion and disapprobation of others—except, in other words, by striving to satisfy them and by bringing his own satisfaction into line with that of others? A more adequate general rule of conduct is Kant's maxim:

'So act as to treat humanity, whether in thine own person or in that of any other, in every case as an end withal, never as means only.'¹

And it should follow that their satisfactions should be treated as ends in themselves. Indeed, it is because their satisfactions are recognized by him as ends in themselves, and therefore independently good, that concern for them can be included by a man in his self-regarding sentiment.

DAVID PHILLIPS.

SEMI-ARIANISM.—Semi-Arians is the name given to a party in the Arian controversy who, in spite of their name, were less Arian than Athanasian, and eventually by their mediating policy reconciled those who, at heart orthodox, were divided by mutual suspicion due in part to misunderstanding of their respective terminology. In the Arian dispute the Creed of Nicea failed to reconcile the 'conservatives' of the East to the theologians of Alexandria and Rome, because the use of the word *ὁμοούσιος*, besides being unscriptural, appeared to countenance the Sabellian heresy that the Trinity was an 'economic' manifestation of three aspects of the Godhead. This was the real cause of the downfall of the Nicene party, which culminated in the expulsion of Athanasius from Alexandria in 356. But the triumph over Athanasius did not give the bishops who had opposed his teaching the position to which they had aspired. On the contrary, they found themselves supplanted by the genuine Arians, who had used them to condemn Athanasius in the interest of extreme subordinationism. It became evident that the creed to which the Church would be called upon to submit would pronounce the Son not merely inferior to the Father, but essentially unlike Him (*ἀνόμοιος*). The supporters of this view, Eunomius and Aëtius, were called Anomœans, and those more cautious in expressing their views Homœans because they declared the Son like (*ὁμοιος*) the Father. The word *ὁσία*, which with its compound *ὁμοούσιος* had appeared in the Nicene Creed, was proscribed, and its use in defining the Godhead forbidden. These decisions, emanating in 357 from Sirmium, where the emperor Constantius was at this time, provoked the bishops of Asia Minor, under the guidance of Basil of Ancyra, to assemble under his presidency in 358 at Ancyra, where the synod in its letter condemned *ὁμοούσιος* or *ταυτόουσιος* ('of identical essence') as Sabellian, but declared the Son to be of like essence with the Father (*ὁμοίας ὁσίας*). Hence is derived the word *ὁμοιούσιος* as opposed to *ὁμοούσιος* of Nicea;² and those who adopted it are popularly known as the Semi-Arians.

The leaders of this party were George of Laodicea, Eustathius of Sebaste, Eusebius of Emesa, and Basil of Ancyra; and to them the wiser of the Nicene supporters extended a friendly hand because they perceived that the *homoiousian* doctrine often expressed what they themselves really meant. The labours of Hilary of Poitiers in Asia Minor during his exile, and the publication of the *de Synodis* by Athanasius, did much towards bringing about a mutual understanding. In addition to this, the Arianizing policy of Con-

² See art. ARIANISM, § 3 ff.

¹ McDougall, p. 249.

stantius during the last two years of his reign alarmed the Semi-Arians and drove them to make common cause with the orthodox. It was clearly recognized that the surrender of the Nicene formula by the Westerns at Ariminum and by the Easterns at Seleucia had made Homœan if not Anomœan Arianism possible as the creed of the Empire and had thereby put those who upheld the complete divinity of the Son, though questioning the Athanasian mode of expression, at a disadvantage; and after the Synod of Constantinople, in 360, the Homoiousians found themselves a persecuted party. Constantius died in Nov. 361, and the Homœan settlement was upset by the return of the banished bishops at the accession of Julian.

For the next twenty years the Arian question was being settled in favour of the Nicene Council, mainly by the efforts of a new generation whose leaders were the three Cappadocian fathers, Basil of Cæsarea and the two Gregorys (of Nyssa and Nazianzus). The point of issue among modern scholars is the manner in which the difficulty of explaining the relation of the Son to the Father was ultimately solved. Harnack maintains:

'It was not the *Homœousios* which finally triumphed, but on the contrary the *Homoiousian* doctrine, which fixed on the terms of agreement with the *Homœousios*. The doctrine which Hosius, Athanasius, Eustathius, and Marcellus had championed at Nicea was overthrown.'¹

In other words, the so-called Semi-Arians really triumphed over the fathers of Nicea at Constantinople in 381 by allowing the word *homoiousios* to stand explained as the equivalent of *homoioûsios*. This view has been strongly opposed by J. F. Bethune-Baker in his *Meaning of 'Homœousios'*, a reply to the theory advocated by Harnack in his *History of Dogma*. The argument which Harnack adduces in support of his theory is as follows:

The first step towards union was the publication of Athanasius' *de Synodis*, written in 359. Here he shows his true greatness; for, whilst he concedes nothing, he shows himself concerned not for formula but for principles. He recognizes that whoever grants that the Son is in nature of like quality with the Father and springs from the substance of the Father is not far from the *homoiousios*, but he is too keen-sighted not to point out that *homoiousios* either involves an absurdity or is dogmatically incorrect. In 362 Athanasius held the small but very important Council of Alexandria, at which it was decided that all who accepted the *homoiousios* should be admitted to the Church, whatever their past errors might have been. In addition it was declared in the *Tomus ad Antiochenos* that, provided the *homoiousios* was acknowledged, the question as to whether there were three *homoiousios* in the Trinity or only one might be left open. This, according to Harnack, was probably the largest concession that Athanasius ever made. It marked a complete change; for, whereas the old orthodoxy had started from the substantial unity of the Godhead in which was a mysterious plurality, it was now permissible to make the threefold nature of the Godhead the starting-point and from its unity to arrive at the conclusion that the God is one. This distinction is expressed by the terms *homoiousios* and *homoioûsios* respectively; and thus, by permitting both views to be held by those who professed to be Homœousians, the Homoiousians, whose opinions were really expressed, obtained a footing in the Church.

The decision at Alexandria satisfied the followers of the scientific theology of the day who admired Origen, notably Basil of Cæsarea and his friends. In his letter to Apollinarius Basil declares that he prefers the words 'unchangeably alike in essence' (*κατ' οὐσίαν*) to *homoiousios*; but Apollinarius convinced him that *homoiousios* is more correct. Basil, however, does not use the word in the Athanasian sense, nor is he particularly desirous to employ it. But the great contribution of the Cappadocians was that the Trinity consists of persons (*homoîstades*) who partake of an *oûsia* which they hold in common.² The unity of the Godhead, as the Cappadocians conceived it, was not the same as the unity which Athanasius had in his mind; for, while Athanasius, like Augustine, thought of a personal God living a threefold life, the Cappadocians certainly thought of three quite distinct persons sharing a common

oûsia as men do. They preserved the unity by insisting on the monarchy of God the Father. Thus through them the influence of Origen was exerted on the side of a 'scientific' orthodoxy, which triumphed over the arid and formal Aristotelianism of Eunomius; but it was a triumph of Neo-Platonism rather than of the Athanasian system.

The Meletian schism¹ at Antioch was due to the compromising attitude of the Synod of Alexandria; for Meletius represented the Homoiousians and was for this reason distrusted by the Alexandrians and Westerns, always suspicious of the *τρεῖς ὑποστάσεις* of the Cappadocians. The Arianizing policy of the emperor Valens (364-378) brought the supporters of the old and new orthodoxy of the East together, and, after delegates had been sent to Liberius at Rome, a union was effected at Tyana in 367. In 370 Basil became bishop of Cæsarea in Cappadocia and the leader of the Christians of Asia, and succeeded in blending the orthodoxy of Athanasius with the science of Origen, commending both by his support of the ascetic life. The basis of all his work, to quote Harnack, was 'to unite the orthodoxy of the East and the West on the basis of the *Homoiousian* interpretation of the *Homœousion*.' The death of Valens and the accession of Theodosius as emperor of the East (19th Jan. 379) was marked by the triumph of orthodoxy; nevertheless at the Council of Constantinople (381) Meletius of Antioch, though distrusted by Rome and Alexandria, acted as president and was highly honoured by the emperor. At this council the Nicene Creed gained an unqualified victory so far as terms were concerned; but, again to quote Harnack:

'The community of substance in the sense of equality or likeness of substance, not in that of unity of substance, was from this time the orthodox doctrine of the East.'²

The Council, as is well known, accepted the baptismal creed of Jerusalem. It assuredly did not put it forward as a new creed; and till the Council of Chalcedon there is no mention of it as a synodal creed, though it appears in the *Ancoratus* of Epiphanius, published 374. It was the work of Cyril, bishop of Jerusalem, whose experiences it appears to reflect. Eventually it superseded the creed of the Council of Nicea, and became the liturgical creed of the Church. The point on which particular stress is laid is that the explanation of *μονογενῆ-τος* *ὅτι ἐκ τῆς οὐσίας τοῦ πατρὸς*—is omitted, though *homoiousios* is retained. It is argued that the words *ἐκ τῆς οὐσίας* were far more offensive to the half-friends of the *homoiousios* than the word itself, as encouraging a Sabellian theory of the Sonship of Christ; that the omission of the obnoxious phrase, together with the anathemas appended to the Nicene Creed, expressed the real belief of Christian neo-orthodoxy; and that 'the Christological formula in the Creed of Jerusalem . . . is thus almost homoiousian even although it retains the *homoiousios*.'³

Such, then, is Harnack's opinion, to controvert which Bethune-Baker published in 1901 a contribution to the *Cambridge Texts and Studies on The Meaning of 'Homœousios' in the 'Constantinopolitan' Creed*. In dealing with the opinions of Basil of Ancyra, Bethune-Baker labours to show that this bishop was at heart in agreement with Athanasius, and that his formula *ὁμοιοι κατὰ πάντα* was in reality equivalent to *homoioûsios* in the Athanasian sense, nor have the Cappadocians any reason to be ashamed if this Basil is the father of their theology. Turning to Meletius, who was chosen to preside over the Council of Constantinople but died before its conclusion, Bethune-Baker shows that as early as the Council of Antioch in 363 he accepted the word *oûsia* in the Athanasian sense, and, before the council in 381, he and his party were in full agreement, so far as doctrine was concerned, with Damasus of Rome and Ambrose. After this comes a careful discussion of the correspondence between Basil of Cæsarea and Apollinarius, which Basil explains was between two laymen, before he was a bishop or Apollinarius a declared heretic (c. 358-362).

³ See ib. p. 92.

Basil appeals for guidance. His exact words, as rendered by Bethune-Baker, are these:

'Now to express this conception [of the *ὁμοία* of the Son] it seems to me that the term *ἀπαλλάκτως ὁμοίως* ("like without any variation") is better suited than the term *ὁμοούσιος*.¹ Here, however, the stress is not on the 'likeness,' but on the unchangeability. 'In this,' says Bethune-Baker, 'he is but following in the steps of Athanasius, who maintained that *ὁμοούσιος* + *ἐκ τῆς οὐσίας* = *ὁμοούσιος*. Basil was careful never to confuse *φύσις* with *οὐσία*, and he expressly repudiates the notion that 'likeness' can describe the relation between the three *ὑποστάσεις* and one *οὐσία* of the Godhead. As regards the omission of *ἐκ οὐσίας τοῦ πατρὸς* from the Creed, Bethune-Baker points out that it is really identical with *ἐκ θεοῦ*, and that, when the danger of Arianism had passed, the phrase could be dropped without injuring the faith. He sees consequently no evidence that the creed of the Church changed between the Council of Nicæa and that of Constantinople, or that Athanasius represented the old, and the three Cappadocians the new, orthodoxy. To decide between opinions so divergent as the above is no easy task, as they represent two view-points so different. Bethune-Baker, however, does not seem to do sufficient justice to the fact that the Cappadocians represent a progress on the crude Athanasianism which the bishops of the East found difficult to accept till explained philosophically. The history of Semi-Arianism shows that the Arian controversy was one of the few which were decided by reason rather than authority. If the Creed of Nicæa prevailed, it was not because it was backed by the authority of the first general council, but because—granted the premisses accepted on both sides—it gave the best logical explanation of the point at issue. But, even when the correctness of the Nicene formula is admitted, it is evident that at its first appearance it gave rise to great and not unwarranted difficulties. Certainly it was in some cases impossible for some ardent Nicenes, notably Marcellus and Photinus, to free themselves from the charge of Sabellianism. It was not till the Creed of Nicæa was proved, after repeated experiments and failures, to be the only possible explanation of the relation of the Son to the Father that it was finally accepted; and the clearing up of obscure and contradictory doctrines connected with the Creed was due in no small degree to the Semi-Arian party.

F. J. FOAKES JACKSON.

SEMINOLES.—The Seminoles (Creek for 'wanderers,' 'runaways'), now numbering about 600, and living in the Everglades, a swamp, or, rather, shallow sea studded with islets, in the southern portion of the State of Florida, belong to the American Indian stock of Muskogean (q.v.). Originally inhabiting what is now the State of Georgia, they broke away from the Creeks in 1750, and migrated to their present home, having been pressed farther and farther south by the whites.

I. Religious beliefs.—The Seminole believes in

¹ P. 41.

a Supreme Being; he also believes in God's Son (obviously the result of Christian teaching centuries ago), that the Son of God came on earth 'long time ago to live with the Indians and to make them good Indians and to prepare them for the "big sleep" when E-shock-e-tom-e-see (God) calls them hence'; he believes that the Supreme Being lives above the clouds, and that, when the Great Spirit calls him hence, his spirit will make its last journey to the happy hunting-grounds of his fathers, winging its way over the seven-coloured rainbow of the heavens, which is the 'highway of the Great Spirit.' The Seminole believes in a future existence, In-li-ke-ta (heaven or home), to which the Indians go after death. Here they may 'hunt, hunt, hunt, plenty deer, plenty turkey, plenty bear find and cool water ojus (plenty) all the time. Bad Indians, after big sleep, hunt, hunt, hunt deer, turkey, bear—no find 'em, hot water drink all the time.' The Seminole regards the Supreme Being as the 'giver and taker of life.' His religion is sacred to him and is based on the Indian's unwritten code, 'not to lie, not to steal, not to kill, and to think with God.'

Missionaries have attempted to work among the Everglade Seminoles; they receive most respectful attention, for their reverence to God will not permit the Seminoles to laugh at these messengers; their language contains no oath nor any word to express disrespect to the Great Spirit. Their idea of the Bible, however, is vague, because it is regarded as the work of the white man. 'Injun no make book—me think good Injun find happy hunting-ground all right.' No converts have been made by the white missionaries, and the Seminole clings tenaciously to his own religion.

2. Festivals.—The festivals of the Seminoles are all of religious interest, the principal one being the Green Corn (maize) Dance, which occurs annually in June at the time of the full moon. All men who have violated their laws may be reinstated at this time by undergoing certain ordeals. The transgressors appear before the council a short time before the dance, and, if they are forgiven, they are allowed to join in the feasting and dancing. The 'black drink,' which is an emetic made from herbs, is taken by all the tribe on the first day of the dance. This cleanses them and enables them to celebrate the feast to the fullest extent; its purpose may be to remove from the body all substances that may interfere with the full working of the rite which is to be celebrated.

A picturesque feature of this festival is the dancing and playing round the festal pole, which serves as a goal. The players take sides, both men and women participating in the game. The object of the game is to strike the pole with the ball, which is knocked with a racket of bent hickory having a netted pocket made of deer thongs. The ball is tossed and caught in the netted pocket, and then hurled at the pole. The opposing side endeavour to prevent the ball from touching the pole. When the ball strikes the ground beyond the line of play, the scamper for it causes great excitement, the victor having the next play. A score-keeper stands by the pole, keeping a record of the play. As the twilight falls, the players end the game. Then the feast begins, the men, women, and children each having a position designated for them—a peculiar arrangement which is employed at no other time. The joyous ball game is followed by the dance on the night of full moon, when the men and women dance from dark until sunrise. When this dance is over, the circle about the pole is perfectly symmetrical and a well-defined pathway is made by the running and dancing. It probably has some symbolical meaning—e.g., to help the sun to revolve, to assist the growth of the crops.

Another festival of importance is the Hunting Dance, which occurs in cycles—once every four years. The festival is for sorrowing, rejoicing, and purifying. Old fires are allowed to go out; not a spark must remain. New fire is produced artificially; this is the sacred fire and must be made with the ancestral flint-rock. The new fire is presented from one band to another as a token

of friendship. Then they assemble round the fires, singing and dancing.

On the nights of this festival men, women, and children gather at the council lodge. Camp fires burn round the dancing square, in the centre of which is the sacred fire, and at each corner a pole, where the dancers assemble. The leader starts a weird melody, as the Owl Song, and from the shadows of the oaks emerge the dusky forms of the Seminoles in the most fantastic dress. Yards and yards of brightly-coloured ribbons float from the head, neck, and shoulders of the women and children. The men likewise are in brilliant coats and enormous turbans, and wear leggings gracefully adorned with thongs of deerskin, with moccasins fresh and new. Nor are the children neglected; with swirling ribbons and bright red dresses that reach to their slim ankles, they come bubbling with joy and laughter, ready to be assigned their places in the dance circle. The dancers lock hands, and mark time as they take up the chant.

All members of the festival must work. They must leave the camp at daybreak and hunt or work till noon. The men hunt large game; the boys go for hares and squirrels; while the women pick potatoes or hunt hogs, and the very small children 'hunt' water and bring in wood.

3. Mythology.—The Seminole tradition of God's Son coming to live with the Indians is that the Son of God (E-shock-e-tom-e-see-e-po-choe) stopped at the most southern point of Florida, where He was met by three medicine-men, who carried Him on their shoulders, while He sowed the seeds of the *koonti* root, which the Seminole regards as God's gift to His red children. The *koonti* is found only in this southern section of Florida, and grows luxuriantly; it resembles the sago-palm, and from its roots a starch-like substance is prepared which makes delicious little cakes. According to the legend, the Indians were in a starving condition; the ground was parched, no corn grew, and the game had all left. While the Indians waited for the *koonti* to grow, God rained down bread, 'heap plenty,' which the Seminoles gathered and ate. In describing this bread, which came down each morning, the chieftain said: 'Littly bread; white man's biscuit all the same, good, every Indian eat plenty.'

The Seminole's conception of the creation is as follows:

'Long time ago, E-shock-e-tom-e-see (God) took seeds and scattered them all around in a rich valley bordering a river. By-and-by, God saw fingers coming up out of the ground and many people, "heap too many," came up from out of the sand. Some went to the river and washed, washed, washed "too much"; it made them weak and pale; this was the *es-ta-had-kee* (white race). Others went to the river and washed *not* too much; they returned full of courage, "strong heap"; this was the *es-ta-chat-tee* (red race). The remainder, "no wash, lazy too much"; *es-ta-lus-tee* (black man).'¹

4. Marriage and burial customs.—The Seminoles, like other American Indian tribes, are classified by *gentes*. The lineage is traced through the mother. The child belongs to the *gens* which the mother represents, and, should a squaw and her husband separate for any cause, the children belong unconditionally to the wife. A young brave dare not marry a girl from his own *gens*; he must select one from another clan. The young Seminole is shy and bashful in his courtship, and, having resolved to marry, he conceals his first overtures with all the cunning of his race. His intention is secretly conveyed to the girl's parents, and, should there be no objection, the young woman is at liberty to accept or reject—no Seminole girl is forced into marriage. The lover with permission to woo shows some token of affection. The sending and receiving of a present constitutes betrothal, and the bride-to-be shows her appreciation by making a shirt or tunic and presenting it in return. Marriage with the Seminoles is an affair of the heart and not of the purse. The day is fixed by the parents of the girl; the groom goes to the bride's home at the setting of the sun, and,

taking her by the hand, he agrees to maintain her and to live at her camp. When the young couple build their own wigwam, they must build it at the camp of the wife's mother, and not among the husband's relatives. Marriage laws are held sacred, but divorce is permitted where some incompatibility of temper is found. Either party may marry again, but the marriage must meet with the approval of the council.

Separation by death has its laws: a squaw losing her husband must abstain from matrimony for one year, during which she must remove her heavy strands of beads and must live with dishevelled hair; her long black tresses, worn over her face and shoulders, cause her to present a pitiable, forsaken appearance. On the death of his squaw a husband may not hunt for four days, and for four moons must appear in mourning, *i.e.* without his many neck-cloths and his turban.

When a member of the band dies, the body is carried by two men to the place of interment at sunrise the following day. The corpse is placed on a base of logs with the face to the rising sun, and a pen of logs is built over it. The rifle and accoutrements are placed by the side of the dead man, and a bottle of *sofka* (the Seminoles' tribal dish) is buried with him, that he may eat on his last journey. Into the keeping of the Great Spirit, who lives above the clouds, the mourners commend the bivouac of the dead, making a sacred fire at each end of the grave. They then return to the camp, the women loudly wailing and tearing their hair.

5. Tribal organization.—The government among the Seminoles is largely in the hands of the medicine-men, who are important personages among all bands. According to their legends, Christ was sent to live with the Indians 'to make them good Indians,' but, when the Son of God was killed by the wicked Spaniards, as their traditions tell them, it became the duty of the medicine-men to teach the Indians and to impart the Great Spirit's wishes to His red children. The medicine-men act as advisers, priests, and doctors. The Spartan spirit is supreme; each camp has its council, and no event having any connexion with the good conduct and life of the members is allowed to go without the advice and verdict of the council. In the case of the Everglade Seminoles so strict has been the obedience of the tribe that the amount of crime has been infinitesimal, involving only minor punishments. Their laws, though unwritten, are well understood, undeviatingly enforced, and unrummuringly obeyed.

The Seminole squaw is entitled to first claim as an American suffragist. She is a good counsellor in the camp life, and has a voice in the tribal laws; she has absolute control over the children, and is supreme in the management of the home. The money which she makes is hers to do with as she likes. If a squaw wishes to divorce her husband and can prove that she has just cause to do so, she can not only divorce him but name his punishment.

6. Character, dress, and food.—The Seminoles are gentle, kindly, and hospitable. They live a life of utmost purity, for the death penalty would follow any breach of virtue. The women are as chaste and modest as perhaps are the women of no other race to-day. Not a drop of the white man's blood courses through the veins of an Everglade Seminole.

In personal appearance the Seminole is far above the average. Many of the men are more than six feet in height, but so symmetrically proportioned that one loses sight of their height. Their features are good, their hands and feet remarkably small, their voices soft and low.

The Seminole dress consists of a tunic, highly decorated with narrow bands of red, close-fitting leggings, and moccasins. The turban, picturesque and oriental in its effect, is the insignia of the race and is worn almost constantly. It is made from enormous handkerchiefs or small woollen shawls, wrapped round and round the head and held in position by a band, often of beaten silver, encircling the whole. Another char-

¹ See M. Moore-Willson, *The Seminoles of Florida*, ed. New York, 1919, p. 103.

characteristic of the dress is the numerous handkerchiefs worn knotted loosely about the neck—the more handkerchiefs worn, the greater pride does the Seminole feel in his costume. The women, on the other hand, wear no head-dress or moccasins. Beads of many colours—and many pounds in weight—are the Seminole woman's badge of distinction, and she never appears without them. When the little papoose is one year old, she is given her first string with its 'first-year bead.' This bead is always larger than the rest and of different colour. A string of beads is allowed for each year until she marries, and at her marriage her mother gives her many new strands. A string of beads is always a reward for any prowess, and a mother is allowed two strings for each child born. In full dress many of the squaws wear from twenty to thirty pounds of glass beads, the colours of which blend in perfect harmony. When the squaw reaches middle life, she begins to take off her beads, one string at a time, until only one string is left. She is now an old squaw, too old to work, and the single strand is made up of the life beads and is buried with her.

Sofka is the tribal dish of the Seminoles: it is a stew containing the nutriment of many foods. The *sofka* spoon or ladle, made of wood, is a valued household article, and the authority of the women is seen again here, for a spoon cannot be sold or taken from camp without their consent. The different households have differently shaped and carved spoons, each band having its own particular style, or Seminole 'coat of arms.'

SEMI-PELAGIANISM.—See PELAGIANISM AND SEMI-PELAGIANISM.

SEMITES.—'Semites' is a term applied to a group of nations, partly living and partly dead, who live or have lived in Western Asia and Eastern Africa. The name is based on the fact that several of these nations or parts of them are said in Gn 10 to be descended from the patriarch Shem. While the name was suggested by Genesis, the classification of modern scholars does not coincide with that of Genesis, but is based on linguistic and racial characteristics. Thus in Genesis Elam is classed as a son of Shem, but the Elamite language shows that the Elamites belonged to a different race. Canaan is in Genesis classed with the sons of Ham, but linguistically and racially the Canaanites are now known to be Semites. Through a confusion of the Egyptian *kēs* (Nubia) and the Babylonian *kas* (the Kassite country) the author of Genesis was led to class the Babylonians as Hamitic, but we now know that the Babylonians were at least half Semitic. The peoples counted as Semitic are the Akkadians,¹ Assyrians,² Amorites, Canaanites (*q.v.*), Aramæans,³ Phœnicians (*q.v.*), Carthaginians, Hebrews,⁴ Ammonites, Moabites, Edomites, Nabatæans, Arabs, Sabæans (*q.v.*), or South Arabs, and Abyssinians.⁵ Whether the Egyptians should be counted as Semitic is a moot question.

The languages of these peoples, excepting the Egyptians, are very closely related—as closely as French, Italian, Spanish, and Portuguese are to one another. Notwithstanding considerable racial mixture in some of the nations speaking those languages, as in Babylonia and Abyssinia, there is a good degree of similarity in their physical and mental characteristics. This similarity is, however, difficult to define. The attempt of Renan⁶ to define them has been criticized by Nöldeke,⁷ because it attributed to the whole Semitic race characteristics of Hebrews and Arabs. In Assyria and N. Africa⁸ some of these supposed characteristics, such as inaptitude for political and military affairs, have not manifested themselves. The Semitic nations possessed skulls of similar shape, and all exhibited intensity of faith.

⁴ See art. ABYSSINIA.

⁵ E. Renan, *Hist. générale des langues sémitiques*, pp. 7-17.

⁶ *EBR* 11, s.v. 'Semitic Languages.'

⁸ Islam has carried the Arabic language over N. Africa, where it is now spoken by many peoples who are non-Semitic.

1. Relation to the Hamites.—The problem of the origin of the Semites, as well as the question whether the Egyptians were Semites, is closely bound up with the relation of the Semites to the Hamites.¹ According to the Africanist Meinhof,² 47 Hamitic languages, comprising 71 dialects, are spoken in Africa to-day. Through the labours of Reinisch, Stumme, Motylinski, and others the structure of several of these languages is known to the scholarly world. The tribes speaking them are scattered over N. Africa and penetrate the central Sahara to its southern side, and over E. Africa along the Red Sea through Abyssinia and Somaliland. One school of philologists count ancient Egyptian and its daughter, Coptic, as belonging to this group³—a view shared by certain anthropologists.⁴ Friedrich Müller divides them into (1) the Egyptian group (Egyptian and Coptic), (2) the Libyan group (Tamesheq), and (3) the Ethiopic group (Bedza, Galla, Somali, Saho, Chamir, etc.). Sergi classifies them as follows:

I. Eastern branch.

1. Ancient and modern Egyptians (Copts, Fellahin), excluding the Arabs.

2. Nubians, Bejas.

3. Abyssinians.

4. Gallas, Danakal (Danakali), Somalis.

5. Masai.

6. Wahuma or Watusi.

II. Northern branch.

1. Berbers of Mediterranean, Atlantic, and Sahara.

2. Tebus or Tubus.

3. Fulahs or Fulbés.

4. Guanches of the Canaries.

It should be noted that the Abyssinian language (Ethiopic) is not properly included in this group, since it and its daughters (Amharic, Tigre, Tigrena, and Harari) are clearly Semitic tongues. Fulbé was classed by Müller as a Nubian language, but Meinhof claims that it is partly Hamitic, forming a bridge between the Nubian and Hamitic groups.⁵ W. Max Müller holds⁶ that Sergi's Northern group should be classed as Libyan languages rather than Hamitic, while Erman and his school⁷ claim that Egyptian (with its descendant Coptic) must be counted a Semitic language that has suffered great deterioration from contact with African dialects. That there is kinship with Semitic is, no doubt, true, but it is a question whether it is confined to Egyptian, and whether it cannot be more satisfactorily explained on the basis of a common Hamito-Semitic ancestry than by the theory of a pre-historic Semitic invasion of Egypt. The kinship of the Semitic and Hamitic peoples is revealed by the following phenomena of language:

(1) The pronouns, which in the languages of the world are the most *sui generis* of all the parts of speech, are in these two groups so nearly akin as to be practically identical. This identity is common to the Semitic tongues, to the Libyan and Berber dialects, to the dialects of Somaliland, and to early and late Egyptian and Coptic. The Egyptian pronoun is no more pronouncedly Semitic than that of the other Hamitic tongues. Indeed, the pronoun in early Egyptian texts is not so similar to the Semitic as is that found in the later texts, whereas, on the theory of Erman, the exact reverse should be the case.⁸

(2) The Semitic languages possess but two tenses, one formed by affixing pronominal particles to a verb stem, to express completed action, and one formed by prefixing pronominal particles, to express incomplete action. In Arabic five forms of this second or imperfect tense are known, in Ethiopic and Assyrian two, while in Hebrew and Aramaic sporadic instances of a second form survive. In Assyrian (and Akkadian) the so-

¹ The term 'Hamite,' like 'Semite,' was suggested by Gn 10, but in modern parlance is applied to a group of peoples whose languages are related. The group is only partially identical with the Hamitic nations of Genesis.

called perfect form—that which originally expressed completed action—has been relegated to the expression of states of being, and completed action is expressed by one of the imperfect forms. In other words, in Assyrian and Akkadian the so-called perfect may be seen in process of elimination.¹

In the Hamitic languages, for nearly all of which we possess no ancient literature, there is considerable variety. Somali, Afar (Dankali), Saho, and Kabye have preserved both the perfect made by affirmatives and the imperfect made by preformatives.² The Galla has preserved only the perfect form, modifying it to express different shades of meaning.³ Bedauye, Shilshish, and R'edamès have eliminated the perfect, as the Akkadian and Assyrian were doing, and express the various shades of thought by modifications of the imperfect.⁴

Egyptian, like Galla, has entirely lost the imperfect. All its verb formations are made on the analogy of the Semitic perfect, by affixes to the verb stem. There is a considerable number of these, and one of them, the so-called pseudo-participle, is a survival of the real Semitic perfect.⁵ In the Pyramid Texts it is used as a transitive verb like the ordinary Semitic perfect; in the texts of the Middle Kingdom it has become an intransitive or passive, like the perfect form in Akkadian and Assyrian; in the later language it is often replaced by other constructions.⁶ These constructions consist primarily of a verbal noun to which the suffix form of the pronoun is appended: thus *sedemti*, 'I will hear'; *sedemk*, 'thou wilt hear.' The participial form of the verbal stem imparts to the combination a future meaning. Other meanings are obtained by variations of this form. *Sedemenf* has an aoristic significance; *sedemuf* a passive meaning; *sedemynf* is also a passive; *sedemharf* expresses resultant action; *sedemkf* expresses wishes.⁷ These forms, made on the analogy of the Semitic perfect, have entirely displaced the imperfect, and, in the later language, the perfect. The so-called pseudo-participle (perfect) is practically unknown in Coptic. Erman and Emmer explain this phenomenon in Egyptian on the supposition that there was a pre-historic invasion of Egypt by Semites from Asia, who for a time imposed their language on the Egyptians, and in course of time this Semitic tongue was largely submerged by African tendencies of speech furnished by the pre-Semitic elements in the population. The argument from the comparison of general grammatical forms is reinforced by comparisons of the Egyptian and Semitic vocabularies, by which it is proved that the roots of many Egyptian words are identical with the roots of many Semitic words. As the roots by which these same meanings are expressed in the other Hamitic tongues are quite different, the argument from vocabulary appears at first sight to have considerable force.

In reality the argument from vocabulary is fallacious. For the other Hamitic dialects we have no literature for the early time. It is all modern—millenniums later than the Egyptian. In all living languages words become obsolete, giving way to others. There is no evidence that Semitic roots did not appear in the other Hamitic dialects 4000 or 5000 years ago; or that they would appear in Egyptian, if Egyptian had remained a non-literary language, and we knew it only as a spoken dialect to-day. The argument from vocabulary must, therefore, be discarded.

If, now, the verbs of the two groups of languages are viewed broadly, it appears that it is not necessary to posit a Semitic invasion of Egypt in order to explain the existence there of the pseudo-participle. Another explanation seems more natural. Had there been such an invasion, it is difficult to explain why it should not have imparted to Egyptian the Semitic imperfect as well as the Semitic perfect. There is no early Semitic dialect from which the imperfect is lacking, and Semites entering Egypt must have carried this with them. On the other hand, the presence of the perfect form in other Hamitic dialects, and the analogy of the Galla language, which has lost the imperfect formation, show that the phenomena of Egyptian are paralleled in Hamitic, though not in Semitic. The phenomena find a more satisfactory explanation on the supposition that the Semites and Hamites are descended from a common stock, and that the Egyptians are a branch of the Hamitic stock.

This view of the matter receives confirmation from a consideration of the larger aspects of the verbal stems in Semitic and Hamitic. There are indications in Coptic that certain Egyptian stems formed an intensive by doubling the middle radical, as do the Semitic languages.⁸ This formation has survived in the Berber dialect of R'edamès,⁹ where it is employed to express habitual action, and in Bilin¹⁰ and Chamir,¹¹

at the other extreme of the Hamitic territory, where it expresses intensity as in Semitic. These dialects of Somaliland also, like Hebrew, form *pipets*. Again, Egyptian forms a *niphal*,¹ like Hebrew, Arabic, and Assyrian, by prefixing the letter *n*. A similar form is found at the two extremes of the Hamitic peoples in Saho² and Shilshish.³ In Tamesheq,⁴ the dialect of R'edamès,⁵ Bedauye,⁶ and Saho,⁷ the *n* is changed to *m* (in most languages the two sometimes interchange). The formation is also present in Bilin,⁸ to its kindred liquid *r*. Egyptian also the Semitic,⁹ but this is paralleled in Bedauye,¹⁰ Bilin,¹¹ Chamir,¹² Saho,¹³ Tamesheq,¹⁴ R'edamès,¹⁵ and Shilshish.¹⁶ It seems to the present writer, therefore, that we are justified in regarding the Egyptians as a Hamitic people. It seems also clear, however, that the Semites and Hamites were, at some remote epoch, one stock.

2. The Semitic cradle-land.—At least five different theories as to the cradle-land of the Semites have been put forward.

(1) Babylonia has been regarded as the earliest home of the Semites by von Kremer,¹⁷ Guidi,¹⁸ and Hommel.¹⁹ Von Kremer noted that the word for 'camel' is common to all the Semitic dialects, whereas they have no common name for the date-palm or the ostrich. He concluded that in remote antiquity the Semites migrated from the great central table-land of Asia near the sources of the Oxus and the Jaxartes, and first settled in Babylonia, whence they were by migration scattered to the other Semitic lands of history. Similar linguistic arguments led Guidi and Hommel to fix the first centre of Semitic life in Babylonia, though Hommel afterwards shifted it to Upper Mesopotamia. Driver²⁰ was at one time inclined to accept this view. Linguistic considerations, especially those based on vocabulary alone, form, however, too insecure a basis of induction for the solution of so large a problem.

(2) The most widely accepted theory at the present day is that Arabia was the cradle-land of the Semites. This theory was defended in 1861 by Sprenger,²¹ and was afterwards advocated by Sayce,²² Schrader,²³ de Goeje,²⁴ and Wright.²⁵ It is based on the observed facts that mountaineers do not become nomads, and that people do not migrate from a fertile country like Babylonia to a sterile land like Arabia. From time immemorial wave after wave of Arabs has poured forth from Arabia to the more fertile contiguous lands, and there is no evidence that the course of migration was in a large way ever in the other direction. Moreover, the Arabic language has preserved a far larger proportion of the peculiarities of primitive Semitic speech than the other Semitic tongues.

(3) A third theory, which may be regarded as a modification of the second, is that the original home of the Semites is to be sought in Africa, and that Arabia was the earliest Asiatic home and

distributing centre of this race. This theory has been advocated by Palgrave,¹ Gerland,² Bertin,³ Nöldeke,⁴ Brinton,⁵ Morris Jastrow,⁶ Keane,⁷ Ripley,⁸ and Barton.⁹ It is based in part on the linguistic evidence of relationship between the Hamitic and Semitic languages already discussed, in part on similarity of physical characteristics (such as the form of the jaw and the slenderness of the calf of the leg), and upon data secured by an ethnographic study of the peoples of the Mediterranean basin. In the opinion of the present writer, this is the most probable theory, and accounts best for all the facts.

(4) Another theory, which is an extension of the second hypothesis and reverses the third, is that Arabia was the original home of the Semites and that the Egyptians were formed by Semites who migrated to Africa and mingled with an earlier Negroid population of the Nile valley. This view has been advocated by Wiedemann,¹⁰ de Morgan,¹¹ Erman,¹² Breasted,¹³ and Ember.¹⁴ It is based, as already explained, on the fact that old Egyptian has a form of the verb which corresponds to the Semitic perfect, and that the vocabularies of Egyptian and its daughter, Coptic, are much more nearly related to Semitic vocabularies than are those of other Hamitic languages. As already pointed out, these linguistic facts are more satisfactorily accounted for in another way.

(5) A. T. Clay is the protagonist of the view that the cradle-land of the Semites was Amurru (also read in cuneiform, *Uru*), a region which lay between Syria and Mesopotamia.¹⁵ His arguments are based mainly on his interpretation of proper names. He contends that the names of antediluvian patriarchs in Babylonia—Kalamum, Zagnib, Armû, Etana, Piliqam (=Peleg), Lugalbanda, Dumuzi, Bilqa-meshi (Gilgamesh), and Enkidu—are Semitic names. He also claims that it can be shown that Humbaba (Humba) is not an Elamite god, but a despot whose palace was in the cedars of Lebanon.¹⁶ Clay also contends that the prominent Babylonian gods are of West Semitic origin, viz. Adad, Amurru (Uru), Anu, Antu, Ashur, Dagan, In-Urta, Ishtar, Mash, Shamash, Urru, Zababa, etc. He further holds that, apart from the eruption of Muhammadans from Arabia in the 7th cent. A.D.—the impetus of which was to plunder the world—there have been no examples of spilling-over from Arabia into the fertile lands.¹⁷

With reference to this theory three observations seem to be necessary. (a) The positive evidence for it is of the most unsubstantial philological character. It is based on possible phonetic changes in proper names. The wider and more fundamental linguistic phenomena, which point to kinship between the Hamites and Semites, and which must be taken into account in any adequate theory, are ignored. (b) The contention that the Islamic eruption from Arabia is the only historical one is scarcely true to the facts. That was the most spectacular, but, as is well known to those who have lived on the border of the desert, the migration from Arabia to the more fertile lands has been silently going on from time immemorial, and is in progress still. (c) Even if the theory were true, it does not prove that Arabia was not the cradle-

land of the Semitic race; it would only localize that cradle-land in that part of N. Arabia that may have at one time been called Amurru, or the land of the Amorites.

3. Relation to Indo-Europeans.—It was formerly assumed (and the view is still widely held) that all human beings were descended from a single pair. Where this view prevails, it is naturally supposed that at some time, not too remotely anterior to the dawn of history, the Semites and the Indo-Europeans formed one people. It is unnecessary to say that there are many problems connected with the origin of both the Indo-Europeans and the Hamito-Semitic stock that are still unsolved; but, in spite of this, the advance in knowledge that is made from decade to decade tends to show that there is no demonstrable relationship between the two divisions of the human race. A comparison of their languages points to this negative conclusion. It seems probable that tri-literal roots (i.e. roots consisting of three consonants, vowels being disregarded) were the basis originally of all Hamito-Semitic words. To the Indo-European mind this peculiar method of conceiving a vocal root appears most peculiar and foreign. There is no uniform tri-literality to Indo-European roots, and no such disregard of vowels. Indo-European roots sometimes consist of a single letter, and that a vowel.

Again, the whole interest in the actions of persons and the method of expressing that interest are different. To the Indo-European mind the time of an action is important; hence in the languages belonging to this group the tense-system is well developed. It is in these languages possible to make it clear whether an act is still going on, began in past time and is just reaching completion, was completed in past time, was completed in the past before some other event in the past, is still to happen, or will be completed in the future before something else happens. In some of the languages a seventh tense, expressive of momentary or timeless action, also exists. In contrast to this, the Hamito-Semitic languages had but two tenses, and primarily neither of these expressed time. One indicated that an action was complete, the other that it was incomplete. To make a narrative vivid a speaker might use of a past action the form of the verb denoting incompleteness; or to make a future deed seem certain he might employ the verbal form denoting completed action. The interest of the Hamito-Semitic mind in the time of an action was of the slightest. While the Hamito-Semite cared little for the time of an action, he was intensely interested in other phases of human activity. Whether a deed was done simply or under such strong emotion that the act was intensive, whether one did it of his own free will or some one else caused him to do it, whether he did it for himself or on himself, whether he was caused to do it for or on himself—these were the things that to the Hamito-Semitic mind seemed important. In the verbs of the languages of these races there are forms for the expression of all such shades of meaning. The Arabic, in which the most elaborate system for the expression of such shades of thought has survived, has no fewer than fifteen forms or 'stems' of the verb for this purpose. Six of them are of comparatively infrequent occurrence, it is true, but the existence of any such form is indicative of a different interest, a different psychological make-up, and a radically different method of conceiving and expressing thought from that which underlies the Indo-European verb-system. If we suppose that the two groups of races formed one people after the development of human speech (or, at least, after the development of any of the existing families of languages), it is

¹⁷ *Ib.* ch. ii.

hardly conceivable that they should have differed so radically in the conception and expression of thought, or should have transformed the daughter-tongues of a once common speech into languages that differ so widely in the most fundamental elements of speech. The conclusion seems forced upon us that, if there is any kinship between the Indo-European group and the Hamito-Semitic group, the ancestors of the two must have separated far back in the history of *homo alalus*, before the beginnings of language. We can trace the Hamito-Semitic stock to the great Mediterranean race. The origin of the Aryans is far less clear. It is probable that, wherever the human species originated, whether, as Haeckel and others think, in a continent that once occupied the area of the Indian ocean, or, as Quatrefages thought, on the roof of the world north of the Himalayas, or, as Gerland and Brinton held, in the Mediterranean basin, or, as Giddings holds, in 'a tropical or sub-tropical zone which reached half-way around the earth from Java north-westerly to England,' it had spread over most of the globe before human speech was developed. In that case the Aryan speech and the Hamito-Semitic speech are entirely independent developments in different centres. Probably there were other independent centres of development also. The older custom of classing all non-Indo-European and non-Hamito-Semitic languages together and calling them 'Turanian' was based largely upon our ignorance of such languages.

4. **Classification.**—Classifications of Semitic nations are based by scholars upon peculiarities of their languages when compared with one another. The languages fall into five groups, as follows:

1. The Mesopotamian group.
 - (1) Akkadian (spoken in Babylonia).
 - (2) Assyrian.
2. The Aramaic group.
 - A. East Aramaic.
 - (1) Babylonian Aramaic (Babylonian Talmud).
 - (2) Mandæan.
 - (3) Syriac.
 - (4) Modern dialects spoken in Kurdistan and Urumia.
 - B. West Aramaic.
 - (1) Dialect of Samal and Ya'di.
 - (2) Inscription of ZKR.
 - (3) Jewish Aramaic (Biblical).
 - (4) Palmyrene (inscriptions).
 - (5) Nabatean (inscriptions).
 - (6) Jewish Palestinian (Targums of Onkelos and Jonathan, Jerusalem Talmud, Targumim and Midrashim).
 - (7) Christian-Palestinian Aramaic.
 - (8) Samaritan.
 - (9) Dialect of Ma'lula in the Lebanon.
3. Canaanitish group.
 - (1) Phœnician.
 - (2) Hebrew:
 - (a) Biblical.
 - (b) Mishnaic.
 - (3) Moabitish.
4. The Arabic group.
 - A. North Arabic.
 - (1) North Arabic inscriptions.
 - (2) Classical Arabic.
 - (3) Modern dialects (innumerable).
 - B. South Arabic.
 - (1) Minæan and Sabæan (inscriptions).
 - (2) Mehri.
 - (3) Soqotri.
5. Abyssinian.
 - (1) Abyssinian inscriptions.
 - (2) Ethiopic (Ge'ez).
 - (3) Modern dialects:
 - (a) Tigre, Tigrina.
 - (b) Amharic.
 - (c) Hariri, Guraghe.

A comparison of these groups of tongues seems to most scholars to show that groups 1, 2, and 3 are more closely related to one another than they are to groups 4 and 5, and that there is a closer kinship between groups 4 and 5 than there is between either of these groups and 1, 2, and 3.

Most Semitic scholars, therefore, divide them into Northern Semites and Southern Semites. The Northern Semites, according to this classification, fall into three groups:

<i>Eastern.</i>	<i>Central or Aramaean.</i>	<i>Western or Canaanite.</i>
Babylonians	Syrians	Amorites
Assyrians	Damascenes	Canaanites
	Nabataeans	Phœnicians
	etc.	Carthaginians
		Hebrews
		Ammonites
		Moabites
		Edomites.

The Southern Semites are the Arabs, South Arabians, and Abyssinians. This classification rests on a sound linguistic basis. The South Semitic languages have some peculiarities, such as broken or internal plurals, that are entirely wanting in North Semitic. The grouping of the Northern Semites also rests on the fact that the languages of each group, while differing in many respects from those of the other groups, form among themselves only dialects of the same language.

Another classification has been adopted by some scholars—*e.g.*, Hommel¹ and Clay²—who divide the Semitic nations into East Semites and West Semites, the former embracing the Babylonians and Assyrians, and the latter including all the others. This division rests upon the fact that the Babylonians are supposed to have separated from the rest of the Semitic stock long anterior to any other division among the Semites, so that their language, having a longer time in which to develop peculiarities, differed (according to hypothesis) more widely from the primitive Semitic norm than any other Semitic language. This classification is not so satisfactory as the other. While it is true that the languages of the East Semites have some peculiarities that are *sui generis*, they are on the whole more nearly related to those of the Aramaean and Canaanitish Semites than to those of Arabia and Abyssinia.

5. **Characteristics.**—It is not easy to sum up the characteristics of an individual; it is well-nigh impossible accurately to sum up those of a race. Sayce, *e.g.*, declared the Semitic characteristics to be intensity of faith, ferocity, exclusiveness, and imagination. It is doubtful, however, whether Semites have ever been more ferocious than other peoples who were at the same stage of civilization as the Semites when they committed the atrocities that impress the modern man. Ferocity is characteristic of all ancient nations and of all barbarous nations. As to the other characteristics mentioned, the Aryans of India—to cite but one example—have probably surpassed the Semites in intensity of faith, in imagination, and in exclusiveness.

We shall tread on safer ground if we note certain features of Semitic social organization, religion, and art, and seek from these to discover characteristics.

(1) *Social organization.*—(a) The earliest social organization of the Semites was of a matriarchal type. Marriage was polyandrous, and the relations between the sexes were, from a modern point of view, ill regulated.³ This organization was in a sense forced upon them by the sterile environment of their cradle-land, Arabia, where the struggle for existence was most intense, driving them into a barbarous sort of civilization in advance of other savages, but making a high civilization impossible. Mentally developed by this struggle earlier than all other peoples except their Hamitic kinsmen, they were prevented by their surroundings for centuries from attaining the highest civilization. Their desert and oasis environment impressed

² Clay nowhere makes a clear statement on the subject, but in *Amurru and The Empire of the Amorites* (passim) speaks of the 'West Semites' as though he took the classification for granted.

³ Barton, *ch. li.*

distributing centre of this race. This theory has been advocated by Palgrave,¹ Gerland,² Bertin,³ Nöldeke,⁴ Brinton,⁵ Morris Jastrow,⁶ Keane,⁷ Ripley,⁸ and Barton.⁹ It is based in part on the linguistic evidence of relationship between the Hamitic and Semitic languages already discussed, in part on similarity of physical characteristics (such as the form of the jaw and the slenderness of the calf of the leg), and upon data secured by an ethnographic study of the peoples of the Mediterranean basin. In the opinion of the present writer, this is the most probable theory, and accounts best for all the facts.

(4) Another theory, which is an extension of the second hypothesis and reverses the third, is that Arabia was the original home of the Semites and that the Egyptians were formed by Semites who migrated to Africa and mingled with an earlier Negroid population of the Nile valley. This view has been advocated by Wiedemann,¹⁰ de Morgan,¹¹ Erman,¹² Breasted,¹³ and Ember.¹⁴ It is based, as already explained, on the fact that old Egyptian has a form of the verb which corresponds to the Semitic perfect, and that the vocabularies of Egyptian and its daughter, Coptic, are much more nearly related to Semitic vocabularies than are those of other Hamitic languages. As already pointed out, these linguistic facts are more satisfactorily accounted for in another way.

(5) A. T. Clay is the protagonist of the view that the cradle-land of the Semites was Amurru (also read in cuneiform, *Uru*), a region which lay between Syria and Mesopotamia.¹⁵ His arguments are based mainly on his interpretation of proper names. He contends that the names of antediluvian patriarchs in Babylonia—Kalamum, Zagugib, Armû, Etana, Piliqam (=Peleg), Lugalbanda, Dumuzi, Bilqa-mesh (Gilgamesh), and Enkidu—are Semitic names. He also claims that it can be shown that Humbaba (Humba) is not an Elamite god, but a despot whose palace was in the cedars of Lebanon.¹⁶ Clay also contends that the prominent Babylonian gods are of West Semitic origin, viz. Adad, Amurru (Uru), Anu, Antu, Ashur, Dagan, In-Urta, Ishtar, Mash, Shamash, Urru, Zababa, etc. He further holds that, apart from the eruption of Muhammadans from Arabia in the 7th cent. A.D.—the impetus of which was to plunder the world—there have been no examples of spilling-over from Arabia into the fertile lands.¹⁷

With reference to this theory three observations seem to be necessary. (a) The positive evidence for it is of the most unsubstantial philological character. It is based on possible phonetic changes in proper names. The wider and more fundamental linguistic phenomena, which point to kinship between the Hamites and Semites, and which must be taken into account in any adequate theory, are ignored. (b) The contention that the Islamic eruption from Arabia is the only historical one is scarcely true to the facts. That was the most spectacular, but, as is well known to those who have lived on the border of the desert, the migration from Arabia to the more fertile lands has been silently going on from time immemorial, and is in progress still. (c) Even if the theory were true, it does not prove that Arabia was not the cradle-

land of the Semitic race; it would only localize that cradle-land in that part of N. Arabia that may have at one time been called Amurru, or the land of the Amorites.

3. Relation to Indo-Europeans.—It was formerly assumed (and the view is still widely held) that all human beings were descended from a single pair. Where this view prevails, it is naturally supposed that at some time, not too remotely anterior to the dawn of history, the Semites and the Indo-Europeans formed one people. It is unnecessary to say that there are many problems connected with the origin of both the Indo-Europeans and the Hamito-Semitic stock that are still unsolved; but, in spite of this, the advance in knowledge that is made from decade to decade tends to show that there is no demonstrable relationship between the two divisions of the human race. A comparison of their languages points to this negative conclusion. It seems probable that triliteral roots (i.e. roots consisting of three consonants, vowels being disregarded) were the basis originally of all Hamito-Semitic words. To the Indo-European mind this peculiar method of conceiving a vocal root appears most peculiar and foreign. There is no uniform tri-literality to Indo-European roots, and no such disregard of vowels. Indo-European roots sometimes consist of a single letter, and that a vowel.

Again, the whole interest in the actions of persons and the method of expressing that interest are different. To the Indo-European mind the time of an action is important; hence in the languages belonging to this group the tense-system is well developed. It is in these languages possible to make it clear whether an act is still going on, began in past time and is just reaching completion, was completed in past time, was completed in the past before some other event in the past, is still to happen, or will be completed in the future before something else happens. In some of the languages a seventh tense, expressive of momentary or timeless action, also exists. In contrast to this, the Hamito-Semitic languages had but two tenses, and primarily neither of these expressed time. One indicated that an action was complete, the other that it was incomplete. To make a narrative vivid a speaker might use of a past action the form of the verb denoting incompleteness; or to make a future deed seem certain he might employ the verbal form denoting completed action. The interest of the Hamito-Semitic mind in the time of an action was of the slightest. While the Hamito-Semite cared little for the time of an action, he was intensely interested in other phases of human activity. Whether a deed was done simply or under such strong emotion that the act was intensive, whether one did it of his own free will or some one else caused him to do it, whether he did it for himself or on himself, whether he was caused to do it for or on himself—these were the things that to the Hamito-Semitic mind seemed important. In the verbs of the languages of these races there are forms for the expression of all such shades of meaning. The Arabic, in which the most elaborate system for the expression of such shades of thought has survived, has no fewer than fifteen forms or 'stems' of the verb for this purpose. Six of them are of comparatively infrequent occurrence, it is true, but the existence of any such form is indicative of a different interest, a different psychological make-up, and a radically different method of conceiving and expressing thought from that which underlies the Indo-European verb-system. If we suppose that the two groups of races formed one people after the development of human speech (or, at least, after the development of any of the existing families of languages), it is

hardly conceivable that they should have differed so radically in the conception and expression of thought, or should have transformed the daughter-tongues of a once common speech into languages that differ so widely in the most fundamental elements of speech. The conclusion seems forced upon us that, if there is any kinship between the Indo-European group and the Hamito-Semitic group, the ancestors of the two must have separated far back in the history of *homo alatus*, before the beginnings of language. We can trace the Hamito-Semitic stock to the great Mediterranean race. The origin of the Aryans is far less clear. It is probable that, wherever the human species originated, whether, as Haeckel and others think, in a continent that once occupied the area of the Indian ocean, or, as Quatrefages thought, on the roof of the world north of the Himalayas, or, as Gerland and Brinton held, in the Mediterranean basin, or, as Giddings holds, in 'a tropical or sub-tropical zone which reached half-way around the earth from Java north-westerly to England,' it had spread over most of the globe before human speech was developed. In that case the Aryan speech and the Hamito-Semitic speech are entirely independent developments in different centres. Probably there were other independent centres of development also. The older custom of classing all non-Indo-European and non-Hamito-Semitic languages together and calling them 'Turanian' was based largely upon our ignorance of such languages.

4. Classification. — Classifications of Semitic nations are based by scholars upon peculiarities of their languages when compared with one another. The languages fall into five groups, as follows :

1. The Mesopotamian group.
 - (1) Akkadian (spoken in Babylonia).
 - (2) Assyrian.
2. The Aramaic group.
 - A. East Aramaic.
 - (1) Babylonian Aramaic (Babylonian Talmud).
 - (2) Mandaean.
 - (3) Syriac.
 - (4) Modern dialects spoken in Kurdistan and Urumia.
 - B. West Aramaic.
 - (1) Dialect of Samal and Ya'di.
 - (2) Inscription of ZKR.
 - (3) Jewish Aramaic (Biblical).
 - (4) Palmyrene (inscriptions).
 - (5) Nabataean (inscriptions).
 - (6) Jewish Palestinian (Targums of Onkelos and Jonathan, Jerusalem Talmud, Targumim and Midrashim).
 - (7) Christian-Palestinian Aramaic.
 - (8) Samaritan.
 - (9) Dialect of Ma'lula in the Lebanon.
3. Canaanitish group.
 - (1) Phœnician.
 - (2) Hebrew :
 - (a) Biblical.
 - (b) Mishnaic.
 - (3) Moabitish.
4. The Arabic group.
 - A. North Arabic.
 - (1) North Arabic inscriptions.
 - (2) Classical Arabic.
 - (3) Modern dialects (innumerable).
 - B. South Arabic.
 - (1) Minaean and Sabæan (inscriptions).
 - (2) Mehri.
 - (3) Soqotri.
5. Abyssinian.
 - (1) Abyssinian inscriptions.
 - (2) Ethiopic (*Ge'ez*).
 - (3) Modern dialects :
 - (a) Tigre, Tigrina.
 - (b) Amharic.
 - (c) Hariri, Guraghe.

A comparison of these groups of tongues seems to most scholars to show that groups 1, 2, and 3 are more closely related to one another than they are to groups 4 and 5, and that there is a closer kinship between groups 4 and 5 than there is between either of these groups and 1, 2, and 3.

Most Semitic scholars, therefore, divide them into Northern Semites and Southern Semites. The Northern Semites, according to this classification, fall into three groups :

Eastern.	Central or Aramaean.	Western or Canaanite.
Babylonians	Syrians	Amorites
Assyrians	Damascenes	Canaanites
	Nabataeans	Phœnicians
	etc.	Carthaginians
		Hebrews
		Ammonites
		Moabites
		Edomites.

The Southern Semites are the Arabs, South Arabians, and Abyssinians. This classification rests on a sound linguistic basis. The South Semitic languages have some peculiarities, such as broken or internal plurals, that are entirely wanting in North Semitic. The grouping of the Northern Semites also rests on the fact that the languages of each group, while differing in many respects from those of the other groups, form among themselves only dialects of the same language.

Another classification has been adopted by some scholars—*e.g.*, Hommel¹ and Clay²—who divide the Semitic nations into East Semites and West Semites, the former embracing the Babylonians and Assyrians, and the latter including all the others. This division rests upon the fact that the Babylonians are supposed to have separated from the rest of the Semitic stock long anterior to any other division among the Semites, so that their language, having a longer time in which to develop peculiarities, differed (according to hypothesis) more widely from the primitive Semitic norm than any other Semitic language. This classification is not so satisfactory as the other. While it is true that the languages of the East Semites have some peculiarities that are *sui generis*, they are on the whole more nearly related to those of the Aramaean and Canaanitish Semites than to those of Arabia and Abyssinia.

5. Characteristics.—It is not easy to sum up the characteristics of an individual ; it is well-nigh impossible accurately to sum up those of a race. Sayce, *e.g.*, declared the Semitic characteristics to be intensity of faith, ferocity, exclusiveness, and imagination. It is doubtful, however, whether Semites have ever been more ferocious than other peoples who were at the same stage of civilization as the Semites when they committed the atrocities that impress the modern man. Ferocity is characteristic of all ancient nations and of all barbarous nations. As to the other characteristics mentioned, the Aryans of India—to cite but one example—have probably surpassed the Semites in intensity of faith, in imagination, and in exclusiveness.

We shall tread on safer ground if we note certain features of Semitic social organization, religion, and art, and seek from these to discover characteristics.

(1) *Social organization*.—(a) The earliest social organization of the Semites was of a matriarchal type. Marriage was polyandrous, and the relations between the sexes were, from a modern point of view, ill regulated.³ This organization was in a sense forced upon them by the sterile environment of their cradle-land, Arabia, where the struggle for existence was most intense, driving them into a barbarous sort of civilization in advance of other savages, but making a high civilization impossible. Mentally developed by this struggle earlier than all other peoples except their Hamitic kinsmen, they were prevented by their surroundings for centuries from attaining the highest civilization. Their desert and oasis environment impressed

² Clay nowhere makes a clear statement on the subject, but in *Amurru and The Empire of the Amorites (passim)* speaks of the 'West Semites' as though he took the classification for granted.

³ Barton, ch. II.

their minds with the great contrast between the fertile oasis and the sterile desert. Nothing seemed to them so divine as the power to give life, either vegetable or animal. They deified that power. A matriarchal society led them to regard the chief deity of fertility as a goddess. She gave the date-palm; she gave children; she gave the increase of the camels, goats, and sheep. Every act that in this rudely organized society tended to create life was sacred to her. The name of this goddess as Ishtar, Ashtar, Ashtart, Attar, Ashtoreth, or Athtar is the one divine name that is universal among Semites. No other deity commanded the devotion of all Semites as she did. She was on the side of life; the desert was death. Her worship continued in all Semitic lands far down into historical times, though in S. Arabia and Abyssinia she was transformed into a god. The less well regulated and barbarous sexual customs and orgies of the earliest times were protected by the reverence and devotion felt for her, and so were continued as sacred services in all Semitic countries well into the historical period. In Israel they were eradicated only by the ethical teaching of the prophets, reinforced by the providential disasters that befell the nation at the hand of Assyria and Babylon.

The worship of mother-goddesses and the matriarchal organization were not peculiar to the Semites; the former has been found in all parts of the world; the latter was coupled with it among the Hittites, Cretans, Celts, and others. The peculiarly sterile cradle-land of the Semites gave to the Semitic mind a stronger bent in this direction than is found among most other peoples. At its worst this manifested itself in such sexual orgies as the prophets denounced, though these could be paralleled, if not exceeded, by those of the Saivites of India. At its best this tendency is seen in that delight in offspring and devotion to family that is characteristic of the Jews to this day. It is this which also makes every Arab jubilant at the birth of a son. Among all peoples the perpetuation of race has become at some stage of development a chief care. Among Semites this care has been, for the reasons mentioned, more all-pervasive and persistent.

(b) While the Semites made considerable advance in the earlier forms of social organization, they contributed little, if anything, to the larger forms of political organization that build up successful and stable empires. Their long struggle for existence as small units in the desert led them to work out several forms of clan organization and developed in them a strong clan spirit. These organizations allowed the individual a good degree of freedom. The *shaikh*, or leader, was only *primus inter pares*. He had only such authority as the public opinion of his clan was willing to enforce. When more favourable circumstances permitted the construction of empire, Semites proved themselves capable warriors and despots, able to establish temporary dominion over an extensive territory. Examples of this are to be found in the empire of Sargon of Agade, that of the first dynasty of Babylon, that of Assyria, that of the Neo-Babylonians, and the various dominions of the Muhammadan khalfahs. In a lesser degree the empire of King David of Israel also illustrates it. These empires were built up by cruel and bloody conquest (though not more cruel than other conquests equally ancient) and were absolute monarchies. It has been well said that the 'Semitic form of government was a despotism tempered by assassination.'¹ There are inherent weaknesses in such a political order. Everything depends upon the energy and character of the

despot. Weakness in him causes immediate decay of the State. For this reason every Semitic state has led a chequered career, and the Semites have contributed little to the political philosophy of the world. In making this statement it is not forgotten that in modern European countries Jews here and there have proved themselves able and far-seeing statesmen, and have made contributions to sound political philosophy. They have done this, however, under the stimulus of a non-Semitic environment, and it is hardly proper to credit their achievements to their Semitic ancestry.

The failure of Semites to make a large contribution to the advanced political development of the world may be attributed in part to the early period in human development during which Semitic states flourished. There is, however, little in their history to lead one to suppose that, had they held the hegemony of the world at a later and more advanced period, the case would have been different. The aptitude for such leadership, except under outside stimulus, was apparently not theirs. The Code of Hammurabi, however, and some of the laws of the Jewish Pentateuch exhibit an aptitude for working out certain primary problems of social justice. The Pentateuch at least has had extensive influence upon Western civilization. If, then, they have lacked ability to develop a broad political philosophy, they have made a valuable contribution to the realization of social justice.

(2) *Art.*—In the field of art the productions of the Semitic peoples are on the whole not of the highest rank. While there are one or two exceptions to be noted below, broadly speaking, wherever we find the work of pure Semites, unstimulated by contact with other races, it is crude; it lacks artistic beauty. This is true of Semitic architecture, of Semitic modelling, and of the arts generally. It is true that pottery, bronze work, and the silver vase found at Telloh (Lagash) in S. Babylonia¹ are as excellent as any work of the kind known to us from a time equally ancient, but these were produced, if not by pure Sumerians, by Semites with a large admixture of Sumerian blood. The same remark applies to the busts, stelæ, and beautifully carved seal cylinders of the kings of Agade. Similarly, the art of the Muhammadan Arabs is in many respects very fine.² The mosque of 'Umar at Jerusalem is wonderfully beautiful, and the Alhambra of Spain—to mention but one example of Muhammadan art in that land—is one of the artistic wonders of the world. Such creations were not, however, the work of unaided Semitic genius, but were due in large measure to the genius of Persians and others, whom Islām had absorbed. When Phœnician civilization was at its height, Phœnician art attained a degree of barbaric finish, but it was seldom beautiful and probably never original. The Phœnicians were the carriers of the Levant for a time, and their artistic impulses were derived from Egypt or Mesopotamia. The OT echoes with the praises of the beauty of the temple of Solomon, and undoubtedly it was, like the temple of Melkart at Tyre described by Herodotus, a building of barbaric splendour. Could it be restored, however, the modern architect would not find it beautiful. Its reputation is due largely to the fact that it was the grandest building that the Hebrews, whose buildings lacked all artistic beauty, had ever seen. Whatever beauty the buildings with which Herod the Great adorned Palestine may have possessed (and their remains prove that they were beautiful), it must be remembered that Herod drew his inspiration from Hellenic models and probably employed Hellenic architects.

¹ See art. ART (Assyro-Babylonian).

² See art. ART (Muhammadan).

¹ C. H. Toy, in his lectures at Harvard University.

The one real exception to the inartistic character of Semitic work is found in the figures of animals from the palaces of the Sargonid kings of Assyria (722-626 B.C.), especially those from the palace of Ashurbanipal (668-626 B.C.). Here animals in action are not only carved more successfully than elsewhere in the ancient world up to that time, but they commend themselves for their beauty and success when judged by modern standards. The action of horses, wild asses, lions, etc., the pose of their bodies, and the delineation of their straining muscles leave little to be desired. The great artistic ability of many Jews in modern times, in music, painting, etc., is not a real exception to the general artistic inaptitude of the Semites, for such artistic production is due to the stimulus of their modern, non-Semitic environment. In general, then, it must be said that, though Semites all through their history have proved apt pupils whenever stimulated by the artistic achievements of other peoples, when left to themselves they are characterized by artistic inaptitude.

(3) *Literature.* — In literature Semitic talent shines more brightly than in art, though aptitude is not manifested for all varieties of literature. Semitic literatures were produced only by the Babylonians and Assyrians, the Hebrews, and the Arabs.¹ While the Babylonians developed a large mythological literature and constructed at least two epic poems, they produced nothing that takes rank among the literary masterpieces of the world. These poems are remarkable for their antiquity, but are the literary productions of men who were still in the childhood of the race. How much of them is due to Semitic and how much to Sumerian genius it is often difficult to tell. There is a certain art in Assyrian chronicle-writing, but there are also great faults which exclude these productions from the realm of literature. Neither the Babylonians nor any other Semitic people produced dramatic poetry. Neither the book of Job nor the Song of Songs in the OT constitutes an exception to this statement. These Hebrew compositions, which have often been claimed as examples of Semitic drama, really belong to other classes of literature. The Semite was too serious and matter-of-fact in his make-up to enjoy acting. The real contribution of the Semites to the universal literature of the world was made in quite another realm — the religious. The literature of the Hebrews that has survived is contained in the OT. This, along with the NT, is the most widely circulated book in the world. It is not of equal literary merit in all its parts. Some of its books, such as Leviticus and Chronicles, contain little in themselves to attract the general reader. The Psalter, the book of Job, and parts of the prophetic books are, however, among the literary treasures of the race. They constitute the gems of Hebrew poetry. The great Hebrew poets possessed the art of simple, direct expression. In terse phrases they set forth emotional experiences with a power almost unequalled. Their figures, drawn from the homely things of common life, are of universal appeal. No other book of religious devotion has been employed by so many people of widely different races, circumstances, and civilizations to voice the confessions, praises, and aspirations of worship as the Hebrew Psalter. To have given this to the world is in itself a great achievement. It is not, as is popularly supposed, the work of one great poet; in it the work of unknown and unnumbered poets is enshrined. Different in character as the work of these bards often is, different as are their points of view, in the Psalter their work is blended into a whole of wonderful richness and beauty, forming

a book that is at once the model and the despair of all subsequent writers of devotional poetry.

Of Arabic literature taken as a whole it must be said that much of it was composed by Muhammadans of Persian stock. There is, however, one book, the *Qur'ān* (q.v.), the greatest contribution to the world's literature in the Arabic tongue, that is purely Semitic in origin. Its author, Muhammad, was an Arab of the Arabs. Such outside stimulus as he had came from Jews and the OT — purely Semitic sources. While, as judged by the standards of literary form, the *Qur'ān* leaves much to be desired, it possesses in the original a certain rhythm and assonance that is not unpleasing and that is regarded by the Arabs as remarkable. This is, of course, untranslatable, and the subject-matter and arrangement (or rather lack of it) are such that in translation the *Qur'ān* seems confused and often incoherent. Nevertheless the book is treasured by about one-sixth of the inhabitants of the world as their supreme book, so that, whatever a non-Muhammadan may think of it, he must confess that its author possessed in a marvellous degree the genius to interpret life to men of a certain stage of culture.

As creators of religious literature which appeals to all sorts and conditions of men, the Semites are without peers among the nations of the world.

(4) *Religion.* — Behind religious literature lies religion, of which literature is the expression. As Semites have given the world its best religious literature, it is not surprising that they have given it its best religion. Of the four monotheistic religions of the world — Judaism, Zoroastrianism, Muhammadanism, and Christianity — three are of Jewish origin. Zoroastrianism, the fourth, is the least satisfactory and successful. Renan held that the Semites possessed a racial tendency to monotheism, but it has long been recognized that this claim is unfounded. Among primitive Semitic tribes a kind of henotheism is found, but this by no means denies the existence of other spirits and gods, or leads to a disinclination upon occasion to worship them. When tribe conquered tribe in that clash of interests through which larger states are built, polytheism as gross and uninspiring as any in the world flourished among Semites. That they have become the religious teachers of the world is due to the character, inspiration, and genius of a few individuals. But, just as it is the immortal glory of the Greeks to have produced Æschylus, Sophocles, Euripides, Phidias, Socrates, Plato, and Aristotle, so it is the glory of the Semites to have produced Amos, Hosea, Isaiah, Jeremiah, Ezekiel, Muhammad, Jesus, and Paul. Such men do not spring from a religiously barren soil or flourish in a wholly hostile environment. If it be objected that Jesus was not altogether of the earth, it should be remembered that nevertheless He was 'of the seed of David according to the flesh,' and His mission would have been fruitless had not the ethical monotheism of the Hebrew prophets prepared the way for Him. Even though the Semites possessed no general tendency to monotheism, they produced individuals who had the vision to perceive this truth and the ability to lead a goodly number of their fellows to accept it. This monotheism as taught by Jesus and Paul, and later in a less exalted form by Muhammad, has created two of the religions of the world that make a universal appeal. Men of almost every race are found in the ranks of Christianity and Muhammadanism. No other monotheism has been able to do this. Buddhism, the other religion that aims at universality, is unstable in its conception of God. Primitive Buddhism worshipped no deity. Some later Buddhists practically worship many gods; some revere a philosophical Absolute.

¹ See artt. LITERATURE (Babylonian) and (Jewish).

externals does not derogate from the absolute sufficiency of virtue for happiness, on which Seneca unhesitatingly insists.¹ The earlier Stoics had exalted the figure of the wise man as an ideal portrait for imitation. Admitting that the instances of his actual appearance in life were very few,² they pointed to the traditional accounts of Heracles and Odysseus, and to the examples set by Socrates and Diogenes. Seneca proudly adds that nowhere could so complete a pattern be found as in the life and death of Cato the younger.³ He even went so far as to approve the paradox that there is a sense in which the wise man is superior to God: the latter owes His freedom from fear to the bounty of nature, the former to himself.⁴

Notwithstanding the vehemence with which Seneca advocated these lofty principles, his paramount interest was to extract from them the stimulus which they might afford to the self-improvement of his readers. His writings are not to be regarded as philosophical treatises whose chief aim was to instruct. They rather resemble the utterances of a popular preacher—moral essays circulated to assist a propaganda in favour of Stoicism. They belong to that branch of philosophy—held by some to be a useless excrescence—which was known as advisory (*παρασκευαστική*), being intended to mark out the course of conduct prescribed for the various contingencies encountered in actual life.⁵ At the same time Seneca devotes a long letter⁶ to the support of his contention that these particular recommendations are insufficient unless they are accompanied by a statement of the broad principles of philosophy upon which their validity depends. To such considerations must be traced his constant refusal to put too severe a strain upon human weakness. The emphatic manner in which he enlarges on the advantages of wealth to the wise man, and admits that the younger Cato made no attempt to conform to the standard of frugality set by his elder namesake,⁷ exhibits a temper far removed from the Cynical proclivities of Zeno.⁸ Cato himself, in spite of his claim to the possession of the highest wisdom, is blamed for the useless sacrifice of his life to his principles.⁹ In their relations with the court or with other persons in authority, Seneca recommends to his readers a degree of complaisance not far removed from servility.¹⁰ He recognizes that all emotion is sinful, and should be extirpated rather than moderated;¹¹ and he consequently accepts the view that in the infliction of punishment pity must give way to reason. He who spares the evil injures the good.¹² But Cicero's mockery of the rigidity and inhumanity of Stoicism¹³ has no relevance to one who could write: 'Wherever there is a man, there is room for benevolence,'¹⁴ or: 'Make yourself beloved by all while you live and regretted after your death.'¹⁵ Another illustration may be taken from the discussion of the question when suicide is expedient (*εὐλογος ἐξαιρέσις*). Here, as is well known, the Stoics had framed rules to meet particular cases, based upon the moral indifference of life and death.¹⁶ Seneca's writings show that in his time, even if suicide could occasionally be justified, there was more frequently a danger that Cato's example would encourage a morbid craving for death; and his manly protest in favour of a healthy endurance of hardship¹⁷ cannot fail to earn approval.

It is unnecessary to trace the signs of Seneca's moderation and humanity which pervade his discussions of the varied duties of daily life (*καθημερινά*); the examples already given are sufficiently typical. But a single remark on the method of teaching morals is worth recording. The teacher is advised to exaggerate the severity of his precepts from consideration of the fact that human weakness is certain to fall short of the standard proposed.¹ Thus the occasional practice of asceticism was recommended as a countercheck to the growth of luxury,² in the same way as Apollodorus described the adoption of the Cynic life as a short cut to virtue.³

The practical outlook of Seneca's philosophy is nowhere more clearly shown than in the care with which he analyzes the conditions of progress towards virtue. Starting from the dogma which contrasted the wise man as the sole possessor of virtue with the multitude of fools,⁴ and being forced to admit that the appearance of a wise man was as rare as the birth of the phoenix,⁵ the Stoics were bound to admit the value of an approximation towards the ideal, if any practical advantage was to issue from their system. This was not a development in the later history of the school, but was clearly recognized by its earliest masters, Zeno and Cleanthes.⁶ In Seneca it is hardly too much to say that it has become the central point of his teaching. The true end of philosophy is not to convince of ignorance by force of reason, but to heal sickness and weakness by patient discipline. We do not aim at virtue as a distant goal; rather, the effort itself is inseparable from the attainment.⁷ The task of philosophy is, by means of continual admonition as well as by general precept,⁸ to prevent the inborn capacity for good from becoming choked and blinded by adverse influences. Virtue is not the gift of nature, but the product of art.⁹ It is not to be won by passive acceptance of the truth, but conviction must be strengthened by obedience to its particular behests. By the ingathering of the fruit of self-knowledge the mind of the postulant must be transformed in its outlook upon virtue.¹⁰ Seneca more than once distinguishes the various grades of progress without fixing any strict lines of demarcation. In one passage¹¹ he speaks of those who are entirely untrained as subject to continual storms of passion resembling the Epicurean chaos. They are contrasted with those who have made progress in the right direction and are described as sometimes rising aloft in their heavenward journey and again sinking to the earth. There is a third class, comprising those who have reached the confines of wisdom: they are in harbour—to change the metaphor—but not yet on dry land. In another place¹² the three classes of apprenticeship are differently described. The highest grade are those who have mastered their passions, but are as yet inexperienced in the practice of virtue. They have ceased to fear a relapse into evil, but are not yet confident in their security. The second class have conquered the greatest evils, but are not yet secure against relapse. The third class consists of those who have only partly overcome their temptations. They may be free from avarice, lust, and inordinate desire, but they are still subject, wholly or partly, to the domination of anger, ambition, and fear.

Seneca's ethical treatises may be described as follows. (1) Twelve books of *Dialogues*, addressed

¹ *Ep.* lxxiv. 26, lxxv. 57.

to various friends and relatives, treating of such subjects as providence, anger, and happiness, and comprising three on consolation. The name 'dialogue' is a misnomer, for the only trace of a debate is the occasional appearance of *inquis, inquit*, etc., which are found also in the other works. (2) The three books on *Clemency* dedicated to Nero, and the seven books entitled *de Beneficiis*. (3) A collection of 124 moral *Letters* addressed to Lucilius. These brief moral essays belong to the period subsequent to Seneca's retirement from court (A.D. 62) and contain the ripest fruit of his experience and wisdom.

LITERATURE.—The works of E. V. Arnold, R. D. Hicks, and A. Schmekel have been mentioned above. For Stoicism in general see E. Zeller, *Stoics, Epicureans, and Sceptics*, tr. O. J. Reischel, London, 1880. For the Roman period C. Martha, *Les Moralistes sous l'empire romain*, Paris, 1900, and S. Dill, *Roman Society from Nero to Marcus Aurelius*, London, 1904, may also be consulted. The best editions of Seneca's ethical treatises are: *Epistole*, ed. O. Hense, Leipzig, 1893, *Dialogi*, ed. E. Hermes, do. 1905, *de Beneficiis et de Clementia*, ed. O. Hosius, do. 1900. The *Naturales Questiones* have been edited by A. Gercke, do. 1907. A. C. PEARSON.

SENECA INDIANS.—See IROQUOIS.

SENSATIONALISM.—Sensationalism is a theory of knowledge which regards the mind as a passive receptacle, deriving its entire content from the senses, or from some foreign agency through the senses; also called 'sensualism' (Germ. *Sensualismus* regularly), though the latter term is oftener used to denote the kindred theory of ethics, and still oftener a particular moral disposition. As a theory of the origin and growth of knowledge, sensationalism in modern philosophy is combined with associationism,¹ which gives an account of the processes by which the materials given in sensation are built up into knowledge. As a theory of the validity of knowledge, it merges into empiricism (*q.v.*), which, though it may admit other elements in knowledge, allows only those ideas to be true or valid which are certified by sense-experience. As a doctrine concerning reality, it becomes phenomenalism, the view that nothing can be known except that which appears to the senses, which involves the denial of all knowledge 'in the strict sense of knowing,' either agnosticism (*q.v.*) or scepticism. In its less critical form, however, it may be allied with dualism (*q.v.*), the view being that a real external world communicates a knowledge of itself through the senses to an otherwise empty mind; or with materialism (*q.v.*), where the mental processes are identified with the physical.

1. **Primitive thought.**—Before the rise of philosophical reflexion man knew no other way by which knowledge could enter the mind than by the senses. Even knowledge of spiritual beings and of mysterious things not normally in contact with the senses, but derived in some extraordinary way, as in dreams and visions, was regarded as communicated through the senses.

As with souls, so with other spirits, man's most distinct and direct intercourse is had where they become actually present to his senses in dreams and visions. The belief that such phantoms are real and personal spirits, suggested and maintained as it is by the direct evidence of the senses of sight, touch, and hearing, is naturally an opinion usual in savage philosophy, and indeed elsewhere, long and obstinately resisting the attacks of the later scientific doctrine.²

The sensationalist view of revelation could be abundantly illustrated from the earlier history of all religions. Biblical revelation is generally represented as communicated through the senses. Isaiah received his prophetic message, first at least, as a vision of the 'Lord sitting upon a throne, high and lifted up, and his train filled the temple' (Is 6¹); and St. Paul treasured memories of 'visions and

revelations of the Lord' (2 Co 12¹). 'The word of the Lord' conveyed to the ear was a still more familiar form of revelation. It is, however, open to question how far these expressions had come to be used metaphorically. But in ordinary, unphilosophical thinking it is still assumed that all knowledge comes into the mind under some form of sensation. And, in this respect at least, modern spiritism (*q.v.*) is a reversion to primitive and popular thought.³

2. **Indian philosophy.**—On the whole the Indian systems of philosophy are monistic and mystical, but some reactions to sensationalism have also issued from them.

The Buddhist doctrine of the soul is thoroughly atomic and phenomenal, and all its knowledge is derived through the senses, though consciousness as something distinct from the senses seems also to play a part.

'Sensations, perceptions, and all those processes which make up the inner life, crowd upon one another in motley variety; in the centre of this changing plurality stands consciousness (*viññāṇa*), which, if the body be compared to a state, may be spoken of as the ruler of this state. But consciousness is not essentially different from perceptions and sensations, the contents and matter of which it at the same time superintends and regulates; it is also a *Sankhāra*, and like all other *Sankhāras* it is changeable and without substance.'⁴

The Lokāyata (*q.v.*), the doctrine of the Chārvākas or Nāstikas, combined a thorough-going sensationalism with materialism.

'Their views were revived in more recent times by a sect who named themselves Cūnyavādins, or nihilists, their one comprehensive doctrine being, all is emptiness.'⁵

3. **Early Greek philosophy.**—Speculative philosophy in the West applied itself at first to questions of being rather than of knowing, to inquiry into the material cause of the world as object. But the mind could not long reflect upon this problem without stumbling upon the question of its own powers to discover the truth as to external reality. When Heraclitus said that reality was a process of ceaseless becoming, and Parmenides that it was bare identity or pure being, philosophy was on the threshold of the problem of knowledge, for the world as it appeared to the senses was in each case contrasted with the philosopher's conception of its truth and reality, which must therefore have arisen from some other source than the senses, and it involved a presumption that the witness of the senses was unreliable or at least insufficient. In this way the earlier Greek philosophers arrived at a distinction between thought and perception which should, and in the main did, lead away from sensationalism. All thought or knowledge of truth was participation in the common world-reason, the *λόγος* of Heraclitus or *νοῦς* of Anaxagoras. The Pythagoreans, by their identification of knowledge with numbers, were the first to make a clear distinction between 'thought' and 'perception.' Yet in effect the distinction did not amount to much, because all mental processes, whether of thought or of perception, could as yet be defined only in physical terms. The common world-reason was thought of as fire or atoms or a kind of fluid in motion, and it could enter the mind of each individual only through the senses, though there must be a response of like to like in the mind. Perception was a purely physical process, the movement of effluxes (*ἀποπόα*) from external objects (through the air) to the senses, through which they entered the mind. Although the pre-Socratic Greek writers were undoubtedly feeling

after a theory of knowledge which did justice to the original contribution of the mind itself, the disability which their materialistic categories imposed upon them rendered it impossible for them to define any real difference between thought and perception, and compelled them therefore to derive the whole content of the mind from outside through the senses. 'These metaphysical rationalists maintained all of them in their psychology a crass sensationalism.'¹

4. Protagoras and Aristippus.—The first sensationalist philosophy consciously advanced as such was apparently that of Protagoras (c. 480–411 B.C.). It was but a short and obvious step from the position of his predecessors to eliminate altogether the distinction between thought and perception, and to reduce the whole mental process to perception, which, again, was only a kind of mutual motion between the object and the mind. But, if perception is the whole of knowledge, and if it is only a motion between the mind and its object, a *tertium quid* which is different from both, there can be therefore no knowledge either of the perceiving subject or of the perceived object. Knowledge then means only the perceptions of the moment in any individual mind, and it may be called indifferently true or false, for it can have no reference to any universal standard. Man, the individual at any moment, is the measure of all things. Such at least is the interpretation of this famous saying of Protagoras given by Plato. The identification of knowledge with sense-perception is seen to lead to the relativity of all knowledge and to scepticism as to the possibility of any valid universal knowledge.² But the perception included not only the cognitive elements in the mind, but also its feelings and desires; and the individual and momentary states of the mind become the criteria of ethical and social values. Aristippus the Cyrenaic seems to have been the first to develop the ethical implications of sensationalism and to teach that the pleasure of the moment is the sole criterion of moral action and the only good. Afterwards it became a commonplace of this school that sensations and feelings are one class of mental facts, and that they constitute alike the motives and criteria of action and the content and criteria of thought.³

5. Sensationalism and materialism. — While Socrates and Plato were endeavouring to disentangle knowledge from the relativity of perception, and to set up a realm of ideas eternally true and valid, the atomists, Leucippus and Democritus (c. 460–360 B.C.), turned in the opposite direction, and sought for truth and reality in the atomic elements of sense-perception. Little is known of the former, but Democritus (q.v.) taught that objects and minds alike were composed of atoms, and all their relations, including perception and thought, were the mechanical motions of atoms. The only difference was that the mind was composed of a finer, smoother kind of atoms than the body, which were called the fire-atoms. And, although Democritus distinguished between thought and perception, and between the genuine or clear (*γνήσην*) knowledge of the primary qualities and the obscure (*σκορήν*) knowledge of the secondary qualities (and also apparently opposed the relativist doctrine of Protagoras, holding that 'in the apprehension of the ultimate properties of the atoms we have objective knowledge'),⁴ yet he had no means of making these distinctions effective on the basis

of his doctrine of atoms. In fact he fell back upon the old doctrine of effluxes (*ἀπορροαί*) for his explanation of both perception and knowledge. Objects sent forth images or copies (*εἰδῶλα, δεικνῶν*) of themselves, which were thus impressed upon the fire-atoms of the soul. The only difference between sensation and thought lay in the form of the atoms and their rate of motion. The coarser atoms, moving more violently, produced sensation, while the thought-atoms are finer and their motion is more gentle. This may not be literally sensationalism, but in principle it is, for the mind itself is only a vague kind of sensorium which receives impressions directly from the external world.⁵

Antisthenes, the founder of the Cynic school, though he did not share the materialistic tenets of Democritus, seems to have held a theory of knowledge, not unlike his, which may be designated 'atomic realism.'

He is said to have conceived 'existence as made up of isolated individual elements, corresponding to which were isolated indivisible acts of apprehension. Psychologically these acts of apprehension were of the nature of perception.'⁶

The Epicureans (q.v.) were, however, the true heirs of Democritus. They adopted the doctrine of effluxes along with his theory of atoms. The soul is only a body made of finer and more mobile atoms, and as such it is capable of receiving impressions from other bodies. Its sensations are the effects produced upon it by the effluxes or images that emanate from other bodies and impress themselves upon it quite literally. All differences in sensations and in their qualities are due to differences in the form and motions of the external atoms in other bodies. It has been suggested that Epicurus seems to admit, in an obscure way, some original motion or self-determination of the mind. He also recognizes some objects, such as gods and apparitions, as being of too fine a texture for the senses to perceive them, and as being able to impress themselves directly upon the mind. But these points and their significance are rather obscure in Epicurus, and his teaching seems to come as near as possible to pure sensationalism. Morality as well as knowledge rests upon sensation, for feeling is a kind of sensation, and conduct should be determined so as to secure the most pleasurable or undisturbed state of feeling (*ἀταραξία*).⁷

6. Stoics and sceptics.—Although Plato and Aristotle had strongly criticized the whole sensationalist theory, and had developed an alternative view of knowledge as being the product of the self-activity of the mind or reason, yet materialistic metaphysics, with the accompanying theory of knowledge through sense-images, persisted down to the later periods of Greek philosophy, more through the influence of the Stoics than of the Epicureans.

The Stoics (q.v.) generally, though with some exceptions, held that the soul as well as the body was material. While their theory of knowledge is more complex and indefinite than those already noticed, involving not only reason and sense-perception, but many intermediate stages, yet they allowed no absolute distinction between sense-perception and reason, and made all knowledge to rest on sense-perception. The human mind is originally a *tabula rasa*. Its first ideas are derived from the impressions or stamp (*τύπωσις*) made by the external world upon the soul through the senses. Out of these sense-impressions the mind builds up its intuitions or preconceptions, and its notions, which constitute its store of ideas. Yet some kind of activity is also attributed to the mind itself, and some of its presentations (*φαντασίαι*), or ideas, are the product of that activity, and not derived from the senses. It is

characteristic of the Stoic philosophy that it wavers between materialism and spiritualism, and its theory of knowledge reveals the same inconsistency. Zeno and Cleanthes seem to have regarded the mind as purely passive until sensations made their impressions upon it, as seal upon wax. But Chrysippus taught that 'the result of sensation was not an impression but a modification of the mind.'¹ And the mind exercises further activity in retaining the sensations, and, by a kind of association, working them up into preconceptions (*προλήψεις*), which constitute a body of common or innate ideas that become the common heritage of men, the universal λόγος at the basis of all human knowledge, and the criterion of truth. But the Stoics had another test of the truth of an idea, which was also an original contribution of the mind, in the doctrine of conviction—the view that certain ideas (*φαντασίαι καταληπτικαί*) carried with them the evidence of their own truth. All these original activities of the mind of course carried the Stoic philosophy far beyond the sensationalism with which it began its explanation of knowledge.

Some of the sceptics (*g.v.*), such as Arcesilaus and Carneades, while generally opposed to Stoicism, and rejecting in particular its doctrines of conviction and of innate ideas, yet developed, from the initial Stoic sensationalism, their own doctrine of suspense of judgment and of the uncertainty of any truth. All knowledge was derived from the senses, and, since the senses were relative to changing conditions, they were unreliable, and all knowledge derived from them was likewise unreliable.² While the sceptics from Pyrrho downwards questioned the trustworthiness and validity of both conception and perception, their general line of attack was the relativity of the senses, and the consequent uncertainty of all ideas as being derived from them. The ten *τρόποι*, or points of view, for the criticism of knowledge enumerated by Sextus Empiricus, which Diogenes Laertius referred to Pyrrho, but which may have been collected and perfected only by *Ænesidemus*, nearly all turn upon the uncertainty of the senses.³

7. Asclepiades and Galen.—The later medical schools of the Greeks, in so far as they dealt at all with the problem of knowledge (and most of them attached themselves to some school of philosophy), naturally recognized the full significance of the senses; and some of the best known writers derived knowledge primarily or entirely from the senses. Asclepiades adopted the Epicurean philosophy and identified the soul with 'the activities of the senses taken collectively.'⁴ Galen, though an eclectic in philosophy generally, leaned towards the Stoics in his epistemology and adopted their doctrine of spirit and of reason (*νοῦς*) as regulative principle; like them also he practically identified reason with sensation, derived its material content from sensation, and placed the initiative to knowledge in sensation; but again he also recognized some element of attention as being original in mind and a condition of knowledge.⁵

8. Ecclesiastical writers.—The natural dualism of common sense, fortified by the Platonic philosophy, persisted down to modern times, and with it therefore the obvious tendency to derive all knowledge of the external world through the senses. On the other hand, the Platonic-Stoic doctrine of the λόγος, which had been developed more especially in the schools of Alexandria, and

amalgamated with Biblical doctrines of revelation, provided for a knowledge of spiritual things and of ultimate reality in supersensible ways, whether by the participation of the human mind in the universal λόγος, by inspiration of the Holy Spirit, or by immediate vision of God, so that we find but few traces of the theoretical sensationalism in the writings of the Church Fathers.

Tertullian, however, was influenced by the Stoic philosophy; he adopted the doctrine of the corporeity of the soul and with it a partially sensationalist theory of knowledge, but he combined with it a supernatural doctrine of revelation. He maintains a distinction between the intellect and the senses, but only to the extent of the difference of their objects, corporeal things being the objects of sense and incorporeal ones the objects of the intellect. Both are alike faculties of the mind, and the intellect can obtain its knowledge of the incorporeal only through the sensations of the corporeal.¹ No very precise theory can be derived from Tertullian's writings, and his sensationalism was even less thorough-going than that of the Stoics. For he held the soul to be rational in its natural condition. God had endowed it with common intelligence, and, when it was true to itself, it ever bore witness to the fundamental truths of religion.² Moreover, the Christian revelation contains truths supernaturally conveyed to the mind, which are contrary to all sense and reason, and which are to be believed because they are impossible.³

The same mingling of opposite tendencies appears, but rather more obscurely, in Arnobius. He affirms, in opposition to Plato's doctrine of reminiscence, that man acquires all his knowledge from outside, and that, if left to himself, he would ever remain as ignorant as a block of stone. Yet he also emphasizes the supernatural character of Christian truth.⁴ His disciple Lactantius, while revealing traces of Stoic influences, has divested himself entirely of its sensationalism.

The position of the Christian Fathers may then be stated summarily as follows: they all rejected Epicureanism and pure sensationalism; most of them adopted the Platonic philosophy with its idealist theory of knowledge in the form of the λόγος doctrine, but a group of early Latin writers followed the Stoic teaching and in some cases adopted their modified sensationalism, though they coupled with it an emphatic supernaturalism—Tertullian's Montanism is an outstanding illustration—and so they anticipated the theory of Hobbes and others who would make sensationalism the basis of a rigid theological orthodoxy. The soul could receive ideas of God and the truth of religion only through authoritative revelation. Yet it was the Platonic philosophy that predominated in the thought of the early Church and formed the basis of the prevailing orthodoxy, which was scarcely challenged until the rise of modern philosophy. But the principle of authoritative orthodoxy is essentially the same as that of sensationalism. It requires that the mind should passively receive its content from outside. The Platonic doctrine of immanent reason was submerged by a naive, popular, unarticulated sensationalism, which, rather than any philosophical theory, asserted itself in Catholic orthodoxy.

The sacramental doctrines of the Church, which are also sensationalist in principle, implying that all grace, power, and virtue enter into the soul from outside through the senses, may reveal the more direct influence of Tertullian, for they are largely the product of the West, whose thought he mainly influenced.

⁴ *Adv. Gent.* ii, 17 ff., 74 ff.

'Tertullian makes grace reach the soul through the body and the corporeal media . . . Tertullian's sacramental theory follows the lines of his theory of knowledge, which like Locke's emphasises the creative action of matter upon mind.'¹

Subsequent developments of the doctrine and practice of the sacraments only tended to increase the dependence of the soul upon external agencies.

Ecclesiastical ethics also became predominantly hedonistic, though the pleasures and pains which should regulate conduct were largely relegated to another world.

9. Nominalism and sensationalism.—The mediæval Church therefore presents this paradox, that its doctrines are derived from a spiritual revelation and the life that it inculcates should issue from the communion of the soul with God, while its method of teaching and practice involves that the soul should be the passive receptacle of truths and virtues communicated to it from outside by physical agencies through the senses. Mysticism (*q.v.*) was a practical protest against this view, and the prevalent philosophy, traditional and contemporary, was its antithesis. The only significant and, in the present connexion, relevant development in mediæval thought was the controversy about the reality of universals. The realist view generally accepted preserved the Platonic tradition and maintained that *genera*, or universals, were substantially real. The mind therefore by its general concepts directly apprehended ultimate reality. Roscellinus in the 11th cent. criticized this view, and held that individual things alone are real. It is doubtful whether he went so far as to maintain that universals were mere sounds (*flatus vocis*), as Anselm declares that some of his contemporaries did. But this theory is an epistemological atomism which, naturally if not necessarily, leads to sensationalism. If the individual reals are exclusively found in the world of sense, then they can be known only through the senses. And thorough-going nominalism,² if such there ever was, would necessarily identify all conceptions with sense-perceptions, for names are only heard or seen. Both Anselm and Abelard state that 'there were men who allowed their thinking to go on entirely in corporeal images,' 'but who these men were, and how they carried out their theory, we do not learn.'³ Nominalism was revived in the 14th cent. by William of Ockham in the form called terminism. And he overlaid the sensationalism which is the obvious result of his terminism with intellectual scepticism. Real things are still held to be singular. Universals exist only in the mind (subjectively); they are related to real things only as signs or symbols representing them, and these symbols alone are the objects of knowledge. There are indeed two orders of such signs—direct signs of individual things (*intentio prima*), i.e. sensations, and the indirect or general sign (*intentio secunda*), i.e. the universal concept, built up by the mind from the direct signs. Knowledge consists of these universal concepts, which are the creation of the intellect rather than the contribution of the senses, but it is therefore not knowledge of the real world. The objective world lies outside the mind and is in contact with the senses, but the senses cannot convey it to the mind. Knowledge, being therefore a very uncertain representation of reality, was easily forced to make way for dogmatic orthodoxy.⁴

It is uncertain whether there were in mediæval times recrudescences of pure sensationalism. It has

¹ J. V. Bartlet and A. J. Carlyle, *Christianity in History*, London, 1918, p. 165 f.

been alleged that the Cathari and the Albigenses reproduced the materialistic atomism of Epicurus and Lucretius.¹ But enough has been written to show that for the mediæval mind sensationalism was on the whole an alien theory. Scholasticism (*q.v.*), in so far as it was philosophical, was, on the contrary, inspired by confidence in the reasoning powers of the intellect to demonstrate all the fundamental positions of theology.²

10. Transition to modern philosophy.—The chief conditions of the new beginnings of philosophic inquiry in the 16th and 17th centuries, from which modern philosophy as such issued, were, on the one hand, a realization of the barrenness of the dogmatic and scholastic methods as instruments of knowledge, and, on the other, a determined search for a more fruitful method. The problem of knowledge has therefore been always central in modern philosophy, and the progress of philosophy has consisted mainly in the increasing realization of the import of this central problem. Modern philosophy is humanistic; man has realized that the world is primarily his own experience, and his search has been for the meaning or value of that experience. At first that meaning seemed to appear in certain ideas in the mind, and more particularly in certain general ideas.³ But, as there were ideas in the mind which clearly were not true, the problem was to discover a criterion by which true or valid ideas could be distinguished from false. Some sought such a criterion in the ideas themselves, in their clearness or consistency or in some other self-evidencing quality. Others sought it in the origin of the ideas or in their causal relation to a reality beyond them or in their correspondence with that reality, thus reverting to the old division between thought and reality. Sensationalism was one of the answers given to the latter form of inquiry. All ideas were derived from sensations; they were copies of impressions made upon the mind by the external world. Or, if there were still a doubt about external reality, the ideas were just the sensations and their copies, and no criterion of truth could be found; the inquiry must end in scepticism. This theory was the most characteristic contribution of British thought to philosophy from the 17th to the 19th century. It also determined the nature of the most important movements of French philosophy during the same period.

11. Humanism.—As a tendency in thought and literature humanism (*q.v.*) preceded and conditioned the rise of modern philosophy. It is not therefore strange to find some anticipations of the sensationalist theory in the transition stage. The return to nature through human experience necessarily brought the sensations into prominence as media of knowledge. The new interest in the study of nature and in the development of physical science led to a new appreciation of such knowledge as seemed to enter the mind by way of the senses. At first this new kind of knowledge was regarded as an addition to the dogma of the Church, subordinate to it, and, in all cases of apparent contradiction, to be corrected by it.

Two representative Roman Catholic writers who held such views were Telesius (1508-88) and Campanella (1568-1639). Both were interested in the development of natural science and held that such knowledge could be derived only from the senses. Campanella taught that God spoke to us by two codes—the living book of nature and the written book of Scripture. We appropriate the contents of the latter by faith and of the former

³ See art. IDEA.

by observation through the senses. Pierre Gassendi (1592-1655), another Roman Catholic, revived the Epicurean philosophy generally and with it the sensationalist view of knowledge. Erdmann states that 'the later sensationalists in England and France have borrowed much from him.'¹ Yet he was no thorough-going sensationalist, for as a priest he acknowledged the authority of the Church in religious matters, and even in his philosophy he seems to regard both the imagination and the intellect as independent contributors to knowledge.² But the Roman Catholic writers of this period had not as yet defined the line of demarcation between theology and science, between dogmatism and empiricism, between knowledge acquired by faith or belief and that derived through the senses. Nor is it easy to estimate the significance of their submission to the Church or to faith side by side with their pursuit of philosophical empiricism, how far the former is purely formal, and how far the latter is regarded as the whole of knowledge, 'in the strict sense of knowing.'

12. Bacon.—Francis Bacon ([q.v.] 1561-1626) occupies his unique position as a pioneer of modern thought because he consciously set himself to define the sphere of scientific knowledge and insisted upon the empirical and inductive method of inquiry as the only source of scientific knowledge. He did not, however, analyze the psychological processes involved in such inquiry, and still less the epistemological problem; but, from his comparison of his method to the activities of the bee, which both gathers and constructs, rather than to those of the spider or the ant, it may be inferred that he was neither an *a priori* rationalist nor a sensationalist, but an empiricist in the present sense of the term. Moreover, he leaves the whole field of religious knowledge as such to authority and revelation. Yet his teaching is not irrelevant to the present subject, for his exaltation of empirical knowledge tended to enhance the importance of the senses as organs of knowledge and prepared the way for subsequent developments along sensationalist lines.

13. Hobbes.—Thomas Hobbes ([q.v.] 1588-1679) emancipated himself completely from all scholastic and theological admixture with his philosophy. He was the first modern writer to propound a thoroughly sensationalist theory of knowledge, and he based it upon an atomic, mechanical, and materialist view of the mind.

'The thoughts of man . . . are every one a representation or appearance, of some quality, or other accident of a body without us, which is commonly called an object. . . . The original of them all, is that which we call sense, for there is no conception in a man's mind, which hath not at first, totally, or by parts, been forgotten upon the organs of sense. The rest are derived from that original.'³

Sensations are produced by the impressions made by external bodies or objects upon the organ proper to each sense, and this impression, which is itself a motion, sets up a motion in the body which permeates inwards to the brain and heart, and produces there a reaction which, because it is directed outwards, seems to be some matter without, and this seeming or fancy is that which men call 'sense.' It is, however, not the object, nor any image of the object, but the effect of the interaction of the object and the organ; it is an idea, phantasm, or fancy, and therefore quite subjective. Hobbes rejected the old Greek and scholastic view of the image or species or form as proceeding from the object through the sense-organ to the mind. The whole content of the

mind is derived from these effects of the impact of the objects upon the sense-organs.

They re-appear first in imagination, which is 'nothing but decaying sense,' or sense weakened by the absence of the object, and, 'when we would express the decay, and signify that the sense is fading, old, and past, it is called memory.' When these imaginations or thoughts follow one another, either casually, 'unguided, without design, and inconstant,' or 'as being regulated by some desire and design,' they are called mental discourse. But it is only imaginations that have been associated together in sense that can become associated in thought. 'We have no transition from one imagination to another, whereof we never had the like before in our senses.'⁴

This is the general principle which was later developed into the doctrine of the association of ideas, but Hobbes did not analyze further the principle of association. Up to this point he regards the mental processes of man and beast as being alike. But man by the invention of speech has the means of summing up many experiences and sequences in a few signs, which therefore render it possible to combine them voluntarily in a variety of ways other than this natural order; and this is reasoning and science.

'For REASON, in this sense, is nothing but *reckoning*, that is adding and subtracting, of the consequences of general names agreed upon for the *marking* and *signifying* of our thoughts. . . . Reason is not, as sense and memory, born with us; nor gotten by experience only, as prudence is; but attained by industry; first in apt imposing of names; and secondly by getting a good and orderly method in proceeding from the elements, which are names, to assertions made by connexion of one of them to another; and so to syllogisms, which are the connexions of one assertion to another, till we come to a knowledge of all the consequences of names appertaining to the subject in hand; and that is it, men call science.'⁵

Thus Hobbes derives the whole of man's faculties and knowledge from the senses and 'study and industry.' But why ideas should be associated and assertions connected by any rule he does not explain, nor does he seem to have been aware that they needed to be accounted for. It was by overlooking this problem that he was able to make his theory so complete. Concerning any knowledge of the super-sensual Hobbes was frankly agnostic.

'Therefore there is no idea, or conception of anything we call *infinite* . . . the name of God is used not to make us conceive him, for he is incomprehensible . . . a man can have no thought, representing any thing, not subject to sense.'⁶

So the field of religion was free for the temporal ruler to impose upon all citizens his authoritative dogmas.

Several minor writers in the 17th cent. resemble Hobbes in their tendency to subordinate reason to sensation, to adopt the formula, '*Nihil est in intellectu quod non prius in sensu fuerit*,' to cast doubt upon both sensation and reason, and so to exalt religious faith and authority—e.g., François de la Mothe le Vayer (1588-1672), Pierre Daniel Huet (1630-1721), Pierre Bayle (1647-1706). It does not follow that these were influenced by Hobbes, nor did they work out the theory with the thoroughness and fullness of Hobbes.

14. The doctrine of ideas.—But the main current of modern philosophy, from Descartes (1596-1650) to Spinoza (1632-77), was rationalist and dogmatic. The most important elements in knowledge and in the mind were regarded as original, innate, and independent of sense-experience. The philosophy of Hobbes seemed to be isolated and barren. Yet in one respect the Cartesian philosophy shared with it the function of preparing the way for British empiricism and its French offshoots. It supplied that 'system of ideas' which became the starting-point for Locke and his followers. Cartesians and empiricists held in common that the unit of the content of consciousness was the 'idea' or 'image,' regarded as individual, atomic, a *tertium quid* between subject and object, representing the latter to the former. For both schools the problem of know-

ledge was to discover the origin, validity, and relations of these ideas as they made up the content of the mind.

15. Locke. — John Locke ([*q.v.*] 1632–1704), though himself neither a sensationalist nor intending to be one, was the true originator of modern sensationalism. For Hobbes had no successors, and, notwithstanding similarities in their theories, Locke regarded himself as the antagonist rather than the follower of Hobbes. But he recognized his affinities with Descartes and some indebtedness to him, and the sensationalism that developed from his teaching stands rooted in the idealism of Descartes rather than in the materialism of Hobbes.

Besides the dualistic assumption common to Descartes and Locke, and their common recognition that the problem of knowledge is the starting-point of philosophy, 'we are certainly justified in seeing the influence of Descartes in the presupposition which Locke accepts as axiomatic, needing neither discussion nor defence, that apart from the unique presence of the mind to itself, and the cognisance of self which results therefrom, the only immediate objects of the understanding are "ideas"; while these ideas are apprehended by the mind to which they are present as signs or representations of a world of things beyond it.'¹

It was when Locke inquired into the nature of the mind and the validity and origin of its ideas that he diverged from Descartes and laid the foundation of empiricism and sensationalism. For Descartes's abstract conception of the mind as a thinking substance he substitutes conscious experience, and whereas Descartes regarded most, and in a sense all, ideas as innate, Locke made them all dependent on sense-perception. His problem was to discover what knowledge was certain as distinct from opinion or error; as he puts it, 'to inquire into the original, certainty, and extent of human knowledge, together with the grounds and degrees of belief, opinion, and assent.'²

He first examines and rejects the whole doctrine of innate ideas and principles, as it had survived from scholasticism, in Descartes, the Cambridge Platonists, Lord Herbert of Cherbury, and contemporary philosophical schools.³ This doctrine assumed certain general ideas as being originally present in the mind and therefore true, and providing the foundation from which all knowledge can be deduced. Such ideas, if they exist, must then be universally given, and Locke's first line of attack was to show that these ideas are not universal, and therefore neither innate nor certain. Having thus disposed of the prevalent criteria of certainty, he seeks a new criterion and discovers it in the origin of all ideas from sensation. He supposes the mind to be a *tabula rasa*, 'a white sheet of paper, void of all characters'; it then passively receives all the materials of knowledge from experience, either as ideas of sensation or as ideas of reflexion, which is 'the perception of the operations of our own mind within us, as it is employed about the ideas it has got,'⁴ and which might be called an internal sense. He adds:

'The understanding seems to me not to have the least glimmering of any ideas which it doth not receive from one of these two. External objects furnish the mind with ideas of sensible qualities, which are all those different perceptions they produce in us; and the mind furnishes the understanding with ideas of its own operations.'⁵

'Nihil est in intellectu quod non prius in sensu fuerit.' So far Locke's system seems to be purely sensationalist. But, as T. H. Green has elaborately demonstrated, Locke could not build up his system of knowledge merely out of these abstract ideas of sensation and reflexion in an otherwise empty and passive mind.⁶ Yet it does not seem that this was

Locke's intention. Besides ideas, he recognizes many original capacities and permanent activities of the mind.

'The first capacity of human intellect is, that the mind is fitted to receive the impressions made on it.'⁷

'Notice' or attention is affirmed as a condition of sensation and reflexion, and in the formation of complex and general ideas such processes as 'compounding,' comparison, and abstraction are required and affirmed. Locke's assumption of the knowledge of two substances, of an intuitive knowledge of the self, of demonstrable knowledge of God, and of the abstract principles of mathematics and morals implies much that he did not profess to derive from the senses. His importance in the history of sensationalism therefore comes out clearly in the use which his successors made of his new way of ideas.²

16. Partial developments from Locke. — Two Irish bishops were among the first to attempt to reduce Locke's doctrine of ideas to consistency, but in opposite directions.

(1) Peter Browne, bishop of Cork (+1735),⁸ adopted Locke's doctrine of the *tabula rasa* and the principle 'Nihil est in intellectu,' etc., but saw that the original powers and intuitive knowledge which Locke attributed to the mind were not consistent with these. He therefore reduced all psychical functions to sensation; the impressions made upon the senses were the only original elements of knowledge, and everything else was built up out of these. Supersensible knowledge we can obtain only by analogy, by transferring sensible relations to the supersensible. Browne has been regarded as a link between Locke and both the British associationists⁴ and the French sensationalists.⁵

(2) George Berkeley (*q.v.*), bishop of Cloyne (1685–1753), set himself to reduce Locke's system to self-consistency and at the same time to turn it into a polemic against materialism. He broke down the traditional epistemological dualism, and argued that, since ideas were the objects of knowledge, there was no reason for supposing any such objective external substance as the Cartesians and Locke had assumed from scholasticism to be the cause of sensations. He would thus remove the occasion for making the mind dependent upon matter and for drawing materialistic inferences from Locke's system as some were doing. There is nothing but mind and its ideas.

Human knowledge consists of 'either ideas actually imprinted on the senses; or else ideas perceived by attending to the passions and operations of the mind; or lastly, ideas formed by help of memory and imagination, either compounding, dividing, or barely representing those originally perceived in the aforesaid ways.'⁶

These correspond to Locke's ideas of sensation and of reflexion, simple and complex. But these ideas are themselves the objects of knowledge. We can have no knowledge or evidence of any substance behind them which causes them.

'Some truths there are so near and obvious to the mind that a man need only open his eyes to see them. Such I take this important one to be, viz. that all the choir of heaven and furniture of the earth, in a word all those bodies which compose the mighty frame of the world, have not any subsistence without a mind—that their *being* is to be perceived or known.'⁷

But, besides all that endless variety of ideas or objects of knowledge, there is likewise something

which knows or perceives them¹—i.e. the mind or spirit—and there is no other substance. Berkeley's whole world therefore consists of perceiving minds and their ideas. It was he who brought out explicitly the fact that sensationalism is essentially subjective, that mere sensations and their copies could give no knowledge of any reality beyond themselves. But he did not think it possible to interpret experience by means of sensations or ideas alone, for he assumed the spiritual substance or mind which perceives, and especially the divine spirit who causes our ideas and gives them objective order and reality.² Of these, however, we can have no ideas, but only notions; and here Berkeley introduces terms and principles that contradict and transcend the doctrine of abstract, passive ideas.

17. Spread of sensationalism.—At this point it will be simpler to abandon the chronological order and to trace separately the main lines of the development of sensationalist theory, in France and Britain. Very few traces of the theory are found elsewhere.

Windeband mentions some followers of Spinoza, 'both physicians and natural scientists, such as the influential Boerhaave of Leyden,' in Holland, who developed tendencies to materialist sensationalism on the basis of the master's parallelism of attributes. In Germany 'as early as 1697, a physician named Pancratius Wolff taught in his *Cogitationes Medico-legales* that thoughts are mechanical activities of the human body, especially of the brain, and in the year 1713 appeared the anonymous *Correspondence concerning the Nature of the Soul (Briefwechsel vom Wesen der Seele)*, in which, screened by pious refutations, the doctrines of Bacon, Descartes, and Hobbes are carried out to an anthropological materialism.'³ But the general trend of German philosophy has been remote from sensationalism.

In Italy the traditions of humanism were strengthened by the introduction of Locke's ideas through the teaching of Antonio Genovesi (1712-69) and the translations of Francesco Soave (1748-1816). 'The translations of the writings of Bonnet, D'Alembert, Rousseau (?), Helvetius, Holbach, de Tracy, and above all, the philosophical works of Condillac gave a powerful impulse to the doctrine, and the philosophy of the senses became predominant in the universities and colleges of the Peninsula.'⁴ Condillac resided in Italy from 1768 to 1768, and his teaching was propagated in a modified form by his disciples Melchiorre Gioja (1767-1829) and Gian Domenico Romagnosi (1761-1835).⁵

In America Locke's philosophy, though not unknown, found no outstanding advocate. The important contributions of American thought to philosophy are deeply influenced by British empiricism, but they belong to its post-sensationalist stage.

18. French materialistic philosophy.—In France the theory assumed its crudest form and developed into naive materialism. Starting from Locke, it took the opposite turn to Berkeley's idealism, eliminated the subject, and at last identified consciousness with the material object.

(1) Montesquieu (1689-1755) and Voltaire ([g.v.] 1694-1778) brought with them from England in 1729 the ideas of Locke and his circle, and applied them, the former mainly to politics, and the latter to general religious and moral doctrines.

(2) Condillac (1715-80) and Charles Bonnet (1720-93) developed the doctrine of ideas into sensationalism. Both taught that sensations are the whole content of the life of the mind. Both employed the illustration of the statue, which, through being endowed successively with one after another of the five senses, became a conscious being, and thus showed how all our ideas could be derived from outside through the senses. Both urged that Locke's ideas needed to be supplemented by principles of association in order to construct them into a mind. Both held the mind to be inactive and devoid of ideas in itself, and until it is affected by sensations. But Bonnet's analysis of the mental processes was more thorough, and

his account of them is at once more adequate and less coherent. He recognizes original and ultimate elements of mind and body which are incompatible with his sensationalist theory of knowledge. He affirmed the self-conscious unity of the Ego, which distinguishes it from matter, and held that the soul, though it derives all its ideas from sensation, has for its essence the capacity of thinking (*cogitabilité*) which responds on the occasion of sensation.

'On the other hand, he emphasizes more strongly than Condillac the dependence of psychical phenomena on physiological conditions, and endeavours to show definite brain vibrations as the basis not only of habit, memory, and the association of ideas, but also of the higher mental operations.'¹

Neither of these writers, however, discovered these doctrines to be inconsistent with their religious beliefs.

(3) A more sceptical turn was given them by the Encyclopædists (g.v.) Diderot (1713-84) and D'Alembert (1717-83), who popularized Locke's theories in France and modified them in a materialistic direction. Diderot at last reduced all psychology to physiology of the nerves. Helvetius (1715-71) inferred from Condillac's theory (a) that self-love is the only motive of human action, and (b) that man is morally a creature of his environment. All men are the same in self-love and sensibility, and differences between men are entirely due to the impressions made upon them through the senses. Hence the importance of such education and legislation as will make the desired impressions.

(4) J. O. de la Mettrie (1709-51) was the first to transform the sensationalist theory into an unqualified dogmatic materialism. He identified mind with brain and reduced all psychical activities into mechanical functions of the brain proceeding inward from the senses.² Similar ideas, reducing thought and volition to sensation, sensation to motion, and all existence to matter, were propounded as a polemic against all religion by Baron d'Holbach (1723-89).³ Essentially the same views are found in the writings of A. L. C. Destutt de Tracy (1754-1826) and Pierre J. G. Cabanis (1757-1808), with the difference that the latter regarded mental processes as chemical rather than mechanical processes. The universal prevalence of these views in the cultured circles of France in the 18th cent. cannot be better illustrated than by the following summary statement of Cabanis:

'Nous ne sommes pas sans doute réduits encore à prouver que la sensibilité physique est la source de toutes les idées et de toutes les habitudes qui constituent l'existence morale de l'homme: Locke, Bonnet, Condillac, Helvetius, ont porté cette vérité jusqu'au dernier degré de la démonstration. Parmi les personnes instruites, et qui font quelque usage de leur raison, il n'en est maintenant aucune qui puisse élever le moindre doute à cet égard. D'un autre côté, les physiologistes ont prouvé que tous les mouvemens vitaux sont le produit des impressions reçues par les partis sensibles: et ces deux résultats fondamentaux rapprochés dans un examen réfléchi, ne forment qu'une seule et même vérité.'⁴

(5) Mention should also be made here of Maine de Biran (1766-1824), who started from the standpoint of Condillac, but developed a theory of immediate consciousness of the Ego as a more fundamental element in knowledge than sensations, and was thus led from sensationalism to mysticism.

19. Positivism. — The French sensationalist-materialist tradition passed down through the 'ideologist' F. J. V. Broussais (1772-1838) and the phrenologist F. J. Gall (1758-1823) to Auguste Comte (1798-1857), the founder of the positive philosophy.⁵ Gall's main thesis was the complete dependence of all mental processes on brain conditions; hence his attempt to localize psychical processes and characteristics in particular parts of the

brain. Yet he rejected materialism, and did not inquire into the nature of mind or body, but confined himself to phenomena. Nor was he a complete sensationalist. He held that connate tendencies, both intellectual and affective, belonged to the organic structure of man. Yet the basis of those tendencies was physical, and all ideas and feelings were causally dependent upon physical processes, though not identical with them.¹ Comte followed Gall in making psychology a branch of biology, and to some extent he accepted phrenology as the science of mind. But he enunciated no clear view of the process or criterion of knowledge. He rejected the method of psychological observation of internal consciousness as being impossible. Beyond the biological study of physiological conditions of thinking, we can know the human mind only by observing other people. But he is emphatic that all knowledge is in its nature phenomenal and relative. The positive philosophy is the complete system of the sequences and co-existences of phenomena. Knowledge therefore must be co-extensive with sense-experience, though it is not necessarily identical with sense-experience. But in his sociological doctrine Comte derives all mental characteristics from the physical environment, which again presupposes the sensationalist theory. On the other hand, his polemic against empiricism as a collection of isolated facts, his demand for method and unity in knowledge, for philosophy as distinct from science, and especially his conception of humanity as a universal whole, stand in contradiction to the epistemological atomism implied in his phenomenalism.²

20. Final scepticism.—David Hume ([*g.v.*]1711-76) took his stand on the central position of Locke, on the doctrine of ideas, and proceeded carefully to eliminate all *a priori* assumptions. The epistemological dualism of Descartes and Locke is worked out to its logical issue in the scepticism of Hume. Berkeley had shown the futility of assuming an external substance of which nothing could be known. Hume applied the same logic to the spiritual substance or self (assumed by Berkeley) and to all its qualities, and he therefore reduced the human mind to 'perceptions'—a term which corresponds to 'ideas' in Locke and Berkeley. Of these there are two kinds:

'Those perceptions, which enter with most force and violence, we may name *impressions*; and under this name I comprehend all our sensations, passions and emotions, as they make their first appearance in the soul. By *ideas* I mean the faint images of these in thinking and reasoning.'³

Both impressions and ideas may be either simple or complex.

'All ideas are deriv'd from impressions, and are nothing but copies and representations of them.'⁴

Hume is careful to point out that by the term 'impression' he does not mean to express the manner in which the lively perceptions are produced.⁵ The only difference between impressions and ideas consists in the greater force or liveliness of the former.

'That our senses offer not their impressions as images of something distinct, or independent, and *external* is evident; because they convey to us nothing but a single perception, and never give us the least intimation of anything beyond.'⁶

The mind knows nothing but the perceptions themselves. Yet Hume sometimes unguardedly assumes some cause of our impressions of 'sensation,' but insists that its nature is unknown.

II.; *The 'Positive Philosophy' of Auguste Comte*³, freely translated and condensed (from the *Cours de philosophie positive*), by Harriet Martineau, 3 vols., London, 1890; J. S. Mill, *Auguste Comte and Positivism*⁵, London, 1907.

³ *A Treatise of Human Nature*, ed. Green and Grose, I. 311.

⁴ *Ib.* p. 327. ⁵ *Ib.* p. 312, note. ⁶ *Ib.* p. 479.

'Sensations arise in the soul originally, from unknown causes.'¹ Again, the mind itself is nothing but perceptions.

'When I enter most intimately into what I call myself, I always stumble on some perception or other, of heat or cold, light or shade, love or hatred, pain or pleasure. I never can catch myself at any time without a perception, and never can observe anything but the perception.'²

All general ideas, such as substance, self, and causation, are therefore nothing but the customary association of ideas. Hume thus modified the sensationalist theory in two important respects. (a) In the endeavour to render it consistent, to eliminate all *a priori* assumptions, he made its inherent scepticism explicit and complete. There can be no knowledge of any ultimate reality.³ And (b) in the search for some principle of order and unity among ideas he enunciated the famous doctrine of the association of ideas. General ideas, such as substance and causation, cannot be derived from impression; they are due to an illusion of the imagination, which arises in turn from the customary connexion of ideas in the mind—*i.e.*, ideas that have often occurred together tend to recur in the same relation and order.

'The qualities from which this association arises, and by which the mind is after this manner convey'd from one idea to another, are three, *viz.* Resemblance, Contiguity in time or place, and Cause and Effect.'⁴

But here again sensationalism breaks down, for these principles cannot be derived from the atomic perceptions which alone were supposed to be the original data of consciousness.

They are a kind of attraction whose 'effects are everywhere conspicuous; but as to its causes, they are mostly unknown, and must be resolved into *original* qualities of human nature, which I pretend not to explain.'⁵

The same argument applies to the philosophical relations which Hume attributes to intuition.⁶ It has been suggested that his purpose was not so much to maintain the sensationalist theory as to afford 'a *reductio ad impossibile* of accepted philosophical principles'—*i.e.* of the Cartesian and Lockian system of ideas. At least, he did not regard it as a possible working philosophy of life. He takes it for granted and as practically necessary that, whatever influence his sceptical argument may have on his reader's mind, 'an hour hence he will be persuaded there is both an external and internal world.'⁷

21. The associationists.⁸—So far were Hume's successors, however, from recognizing any contradiction between his analytic and his synthetic principles that they developed and applied the doctrine of the association of ideas in detail to demonstrate and perpetuate the sensationalist theory of the origin and nature of ideas.

(1) David Hartley (1705-57) related the law of association to corresponding nerve processes. He substituted it for Locke's ideas of reflexion as the constructive function of the mind. Though affirming a correspondence between the 'vibrations' of the nervous system and the sensations, ideas, and motions of the mind, he would not dogmatize on the relation between mind and body, nor reduce the one to the other.

'It is sufficient for me that there is a certain connection of one kind or another between the sensations of the soul, and the motions excited in the medullary substance of the brain.'⁹

Yet in making the external impression upon the sense-organs the primary cause of sensation, and therefore of all ideas, he gave his system a materialist bias.¹⁰

⁹ Quoted by Lewes³, II. 350.

¹⁰ *Observations on Man, his Frame, his Duty, and his Expectations*, 2 vols., London, 1749; cf. Lewes³, II. 348 ff.

(2) Joseph Priestley (1733-1804) and Erasmus Darwin (1731-1802) advocated Hartley's theory of association, but pushed the general doctrine of ideas in a materialistic direction. Priestley identified psychical with physical processes and sought to reduce psychology to nerve physiology.¹

(3) Thomas Brown (1778-1820) identifies consciousness with 'a variety of sensations and thoughts and passions, as momentary states of the mind, but all of them existing individually, and successively to each other.'² These atomic elements are built up into knowledge by means of 'suggestion' or association of ideas. Knowledge of both mind and matter is relative.³ Yet, inconsistently, Brown under the influence of Reid recognizes certain 'instinctive' or 'intuitive principles' from which he derives such conceptions as identity and uniformity.

'These principles of intuitive belief . . . are as it were an internal, never-ceasing voice from the Creator and Preserver of our being.'⁴

Here the doctrine of ideas and Reid's principles of 'common sense' stand side by side without any such attempt as Kant had made to merge them into a living unity.

(4) James Mill⁵ (1773-1836) produced 'the most systematic attempt that has been made to explain all mental phenomena by the association of ideas.'⁶ He reveals no doubt or scruple, such as Hume and Brown had, that by sensations, ideas, and association he has given a complete account of consciousness, without leaving a remainder. He might be called the only complete sensationalist. Consciousness consists of sensations, ideas, and trains of ideas.

Sensations are those feelings 'derived immediately from our bodies, whether by impression made on the surface of them, or unseen causes operating on them within'; ideas are 'the feelings which, after the above mentioned feelings have ceased, are capable of existing as copies or representatives of them.'⁷

The entire content of consciousness, all principles of knowledge and morality, are built up of those two kinds of feelings, by means of the one principle, 'the grand comprehensive law,' of the association of ideas by contiguity. If anything resists such analysis, it is due to no defect in the principles, but to our ignorance—'the term instinct, in all cases, being a name for nothing but our own ignorance.'⁸

(5) John Stuart Mill (1806-73) applied these principles of his father's psychology to the problem of knowledge in a more thorough fashion in his *System of Logic*,⁹ and to ethics in his *Utilitarianism*.¹⁰ 'His work contains the most thorough-going exposition of empiricism as a theory of knowledge which has ever been written.'¹¹ The two positive principles of his exposition are sensations and association, but he found it necessary to admit certain 'inexplicable' principles, which could not be derived from those two. All knowledge of the external world as a 'permanent possibility of sensation' is derived from sensations, association, and expectation; and the last element is 'both psychologically and logically a consequence of memory, but whence is memory? In explaining the mind's knowledge of itself he makes memory fundamental and original, and both it and the self which it constitutes (and therefore also the expectation derived from it) are admitted to be

original principles that cannot be derived from sensations.

'That there is something real in this tie, real as the sensations themselves, and not a mere product of the laws of thought without any fact corresponding to it, I hold to be indubitable. . . . But this original element, which has no community of nature with any of the things answering to our names, and to which we cannot give any name but its own peculiar one without implying some false or ungrounded theory, is the Ego, or Self.'¹²

Thus, while the sensationalist or (as Mill calls it) the psychological theory is put forward as the only possible explanation of the phenomena of knowledge, of both subject and object, it is admitted that it does not explain the most fundamental conditions of all knowledge, the self and its unity, and the unity and reality which the self bestows upon objective experience. Mill had moved from the traditional atomism of his school to the affirmation of the original synthetic unity of self-consciousness as the basic fact in experience and knowledge.

22. Evolutionary psychology.—The theory of evolution led to new emphasis being laid on the organic unity of the mind. On the other hand, some empiricists thought that it gained time for sensationalism. Factors in experience which it was now admitted could not be analyzed into sensations and their copies in one individual consciousness might be so analyzed if sufficient time was allowed for their development, and the new theory provided indefinite time.

(1) Herbert Spencer ([q.v.] 1820-1903), while adopting the main principles of sensationalism and associationism, under a somewhat changed terminology, for the explanation of the phenomena of the mind, definitely affirms a new position as to its metaphysics. The mind as observable consists of feelings or sensations and their relations or ideas, 'each with their varying degrees of relativity, revivability and associability.'¹³ He emphasized the organic unity and continuity of all mental phenomena, from the lowest to the highest, both in the individual and in the race. But he recognizes much in mind that cannot be derived from experience. (a) Instincts, intuitions, general forms of knowledge, and principles of morality cannot be derived from the experience of the individual, but they are the product of the long experience of the race. They are *a priori* for the individual, but *a posteriori* for the race.

E.g., 'the belief in an external world is the outcome of reflex intellectual actions established . . . during that moulding of the organism to the environment which has been going on through countless millions of years.'¹⁴

(b) The criterion of truth, which he calls 'the inconceivability of the opposite,' is laid down as an abstract principle without any attempt to derive it from experience. Indeed, by its nature, it stands as a judge above all the deliverances of experience.¹⁵ (c) The mind itself, as the substance of which consciousness is a modification, is unknown and unknowable; yet it has to be assumed as the reality of which feelings and ideas are but symbols.¹⁶

The last two factors Spencer does not profess to derive from experience. He rather exaggerates the distinction and separation that are now made between psychology and the metaphysical problems of epistemology and ontology.

In respect of the first point 'Spencer is open to his own objection to empiricism when he assumes that the race at any stage of its development could be subject to external influences in the absence of any existing organisation to receive these influences and determine their results.'¹⁷

Spencer and others of his school, while denying all knowledge of ultimate reality and affirming a dis-

tion between mental and material phenomena, show a marked tendency, notwithstanding, to assimilate psychical phenomena to physical processes. Spencer calls the primitive unit of consciousness a 'nervous shock,' and at least supposes the possibility of regarding it as a molecular motion.¹

(2) T. H. Huxley (1825-95) reveals this tendency most clearly. He accepts in the main Hume's account of the mind.² The ideas, however, are 'symbols in consciousness of the changes which take place automatically in the organs.' While agreeing with Spencer that we can know nothing of the substance of mind or body, he prefers the materialistic terminology, 'for it connects thought with the other phenomena of the universe.'³

(3) Alexander Bain ([q.v.] 1818-1903) carried forward the empiricist tradition of the Mills, but he consciously and deliberately repudiates the old theory that sensations alone, even with the aid of association and evolution, can account for knowledge, whether of the individual or of the race. He for the first time drew a clear distinction between the psychological and the epistemological aspects of the problem. Since his time the psychological study of consciousness has been pursued as a pure science without raising the questions of the ultimate origin and validity of ideas or of the ultimate nature of mind. These have been left to metaphysics. He thus defines the empirical theory of the origin of ideas:

'All ideas may be accounted for by our ordinary intellectual powers, co-operating with the senses; not confining ourselves, of course, to the individual lifetime. In fact, the empiricist, in adopting the *nihil est in intellectu* etc., would take along with it, as an essential of the dictum, the amendment of Leibniz—*nisi intellectus ipse*. Nay, more; he would also postulate as being equally co-present, all the emotional and volitional workings of the mind; and, having done so, he would endeavour to dispense with every other pretended source of our ideas.'⁴

What he contends for is that ideas are valid only when certified by sense-experience.

'The empiricist may not quarrel with intuitive or innate ideas; his quarrel is with innate certainties⁵ . . . the *apriorist* and the empiricist part company, not so much on the fact of intuitive suggestions, as on their value as truths. Intuition, if it means anything, implies that its suggestions are true of themselves, are their own evidence, without the verification of experience, and may therefore be made to override experience⁶ . . . the empiricist's test of Validity, and the only test that he can acknowledge . . . is consistency, or, the absence of contradiction, throughout a sufficiently wide range of conscious experience.'⁷

Sensationalism, as a theory either of the origin of ideas or of the content of the mind, is no longer maintained. And the empiricism that posits sense-experience as a criterion of truth does not rely on the senses alone, nor does it regard sensations and ideas as abstract and individual elements of thought. Present-day theories of consciousness in one essential respect all stand at the opposite pole from sensationalism, in that they regard consciousness, not as an aggregate of atomic feelings or ideas, but as an organic unity; and this living *intellectus ipse* with all its powers, conscious and subconscious, is the starting-point of all current theories of knowledge.

23. Wider implications of sensationalism.—(1) In relation to religion the theory may involve the denial of all religious values, when it assumes a materialistic form, or it may lead to the denial of religious knowledge 'in the strict sense of knowing,' which has been its more usual effect.⁸ (2) For its ethical significance see art. HEDONISM.

(3) In social philosophy and politics the theory has been adapted to different and even opposite purposes. Naturally and logically it leads to individualism (*q.v.*) and in an extreme form to anarchism (*q.v.*). Hobbes, however, combined an anarchist view of society in its natural state with the doctrine of the social contract to bolster up State absolutism. With Comte the paradoxical combination of sensationalism with an organic and absolutist conception of society was an accident of history, because he had inherited his mental philosophy from Condillac and his social ideals from the Roman Catholic Church. More recent tendencies to combine naturalism (*q.v.*) with socialism (*q.v.*) or with absolutism (*q.v.*) are equally illogical. Condillac's philosophy found its appropriate expression in the French Revolution. Locke's doctrines were the *apologia* of the English Revolution. The Mills were the prophets of 19th cent. radicalism.

'The doctrines of individual freedom and human equality . . . [were] interpreted and formulated in terms of abstract individualism, by men who had been bred on the philosophy of pure sensationalism which dominated the eighteenth century. . . . Reducing experience to isolated impressions and ideas, this philosophy treats society as an aggregate of mutually exclusive units, each pursuing as sole end his own individual pleasure.' 'Through the influence of Hegel and of Comte, and partly through the reaction of biological conceptions upon philosophy and general thinking, the nineteenth century has seen the definitive abandonment of the individualistic or atomistic view of the relation of the individual to society.'¹

SENSE.—'Sense' is the name for the receptivity of living organisms to external physical impressions, resulting in what are called sensations. The organism of which it is composed is called the 'sensorium,' and is located in the periphery of the body in the case of most of the senses, though there are internal organs of sense which represent similar functions and reactions. In all cases it represents the organism which reacts against external stimuli of some kind. The brain-centres are the points to which impressions or physiological actions are communicated before sense responds, and may be a constitutive part of sense in the exercise of function, though they are not the usually accepted part of sense physiologically understood. As a function of the organism, however, sense denotes a process of mental action distinguished from the acts of inner consciousness or the reflective function of the mind. With the organism which connects the inner with the outer world, it implies the actions by which knowledge of this outer world is obtained.

Physiologically sense, or the sensorium, is divided into six separate organs: the organs of vision, of hearing, of touch, of taste, of smell, and of temperature. Until recently it was supposed that the senses were limited to five, but the thermal sense has been added to the other five as having a distinct neural organism of its own, and it has been suspected that even the feelings of pleasure and pain have their own separate sensorium. Six senses, however, have been fully established. Each of these has its own peculiar

¹ A. Seth Pringle-Pattison, *The Philosophical Radicals and other Essays*, London, 1907, pp. 63 f., 42.

stimulus or cause for its action. Undulations of light affect vision; undulations of the air and material objects affect hearing; contact of objects affects touch, and the same affects taste; and smell seems variously affected by corpuscular emanations and other modes of stimulation; while the thermal sense is affected by the supposed undulations of ether that constitute heat. The structure of each sense is adapted to its specific stimulus and responds accordingly. Hence the various ways in which the external world appears to the same subject of consciousness.

Sense is the source of our knowledge of an external world. It may not be the sole function involved in that knowledge, but it is the primary function in the occurrence of it, and we can only suppose either that all knowledge of the external world would be excluded without sense or that it would be different from what it is if any other source were substituted for sense. But, whatever the facts, as things are at present constituted, sense is the intermediate agency in affecting our knowledge of reality, though it is accompanied by other mental functions of an interpreting kind. Sense is thus the portal through which knowledge comes, even though it does not determine the whole of its nature. In the Lockian system sense was the only original source of knowledge; in the Kantian system this source was supplemented by the active and constructive functions of the understanding, which, though they added nothing to the matter of knowledge, determined the form which it would take. In both, sense-experiences represented the limitation of all knowledge; *i.e.*, the material of all knowledge came through sense, but the processes for systematizing it were in the intellectual functions.

JAMES H. HYSLOP.

SENSIBILITY.—Sensibility has two important meanings. The first denotes the capacity for receiving sensory impressions, and the second denotes the emotional function of the mind. It is indicated in the division of mental functions into intellect, sensibility or emotion, and will. The former meaning of the term is exhausted in the definition, but the latter refers to one of the most important of the mental functions.

Considered as the second division of mental functions, the sensibilities are of two general kinds: those which accompany or follow the exercise of function and those which precede and influence action. The first type we may call reflexive emotion or feeling, and may subdivide into pleasures and pains. The second type may be called impulsive emotion or passion, and may be subdivided into desires and repulsions. Pleasures, normally considered, are reflex concomitants of healthy function; pains, of unhealthy function. This characterization, however, is only general, and describes those feelings which the normal person has to keep in mind when adjusting his life to its best tendencies. Desires are impulses or longings towards the possession or attainment of objects, and repulsions are antipathies towards them. They are the immediate motives to action or restraint. The main service of the reflexive emotions is their part as indices, in their normal action, of our adjustment to environment, and hence they serve as guides to the actions which are directly associated with welfare. The impulsive emotions serve as incentives to the realization or prevention of consequences in this environment, and so are initiatives of volition, as pleasures and pains are the consequences of it.

JAMES H. HYSLOP.

SENSUALISM.—See ETHICS AND MORALITY.

SENTIMENT.—As used in everyday speech, this word (from *sentire*, 'to feel') refers to the emotional sources of our more complex ethical and social judgments. It covers a wide range of spiritual meanings which exercise a powerful influence in the individual and collective life of mankind; for in a real sense it may be said that 'sentiment' controls judgment in many questions of manners and morals, making us alive to the bane or blessing of life's contacts and loyalties. The more precise definition of the word carries us into the field of the psychological and ethical sciences, especially in their sociological relations, where the description and explanation of the phenomena involved are more fully set forth. The main facts are as follows.

(a) The psychological genesis of sentiment is involved in the mystery that surrounds the beginnings of our more developed forms of feeling and emotion—*e.g.*, love, hate, admiration, etc. On the one hand, it is to be differentiated from sensation and perception, but partakes of their nature, like other psychical reactions, for mental life develops in the unity of the Ego. Sensation, in its origin, is a form of feeling, but, as it develops, is almost wholly confined to the activity of the physiological mechanism of sensibility. Perception, in its elementary manifestations at least, depends partly on the senses and partly on the understanding. Sentiment, however, in all its forms, involves an element of judgment, inchoate indeed in its simpler forms but nevertheless real, into which values, deeply tinged by the more complex emotions and even by passion, enter, these values centring about objects, either real or ideal, that appeal to us on the ground of their abstract truth, beauty, or goodness. Consequently our sentiments will always be found to possess a predominant tone of pleasure or pain. This is true, of course, of all psychical reactions called judgments. But the pleasure-pain feature of sentiment differs from other phases of mental activity in this: it is induced, in the self-development of the individual, by association with objects about which we have come to feel strongly, or about which we have formed judgments, or which have proved acceptable and agreeable to all persons of culture. This will become clearer as we proceed with our analysis. Meanwhile, it is obvious from this general statement that the nature of sentiment, from the purely descriptive point of view, is extremely complex, and its genesis obscure.

(b) Following the clues afforded by sympathetic and careful insight, A. F. Shand¹ called attention to a fact which long eluded the notice of psychologists, namely, that our sentiments are really highly organized systems of emotions, arising in us in connexion with the various classes of objects that excite them; that as systems, and not merely vague emotional reactions, they possess an exceedingly complex structural or psycho-physical disposition, in which function and structure are continuous. On this point W. McDougall observes:

'The structural basis of the sentiment is a system of nerve-paths by means of which the disposition of the idea of the object of the sentiment is functionally connected with several emotional dispositions. The idea, taken in the usual sense of the word as something that is stored in the mind, may therefore be said to be the essential nucleus of the sentiment, without which it cannot exist, and through the medium of which several

¹ See 'Character and the Emotions,' *Mind*, new ser., v 203-226.

emotional dispositions are connected to form a functional disposition.¹

In other words, the object which occasions the sentiment is, subjectively, organically connected with our emotional life and with the processes of ideation. Continuing, McDougall says:

'The oftener the object of the sentiment becomes the object of any one of the emotions comprised in the system of the sentiment, the more readily will it evoke that emotion again, because, in accordance with the law of habit, the connexions of the psycho-physical dispositions become more intimate the more frequently they are brought into operation.'²

Illustrations abound in the ethical and religious life. Thus the sentiments aroused and appealed to in ritual, religion, and art are so strong because they depend in so large a measure upon truth, beauty, and goodness, and the repetitive forms of memory which, structurally, are only applications of the laws of habit. On that ground alone they are among the most powerful reinforcements of the moral life—'allies,' as William James calls them, of the soul.³ Of this truth the persistence of religious systems is sufficient proof. In the same way the collective principle in social law, with its strong imitative tendency, may also be viewed as the medium for the development of the sentiments and their inbred emotional dispositions, and at their least valuation serve the practical purpose of providing the emotions with a bridge between mechanical routine and the higher creative ideals or sentiments of the mind.

(c) This very complexity of sentiment, however, precludes a naturalistic interpretation of a function which so obviously depends on our judgments of value. While somatic reactions, or systematically organized 'dispositions,' form the more or less fixed structural basis of sentiment, it would not be in accordance with the facts of common experience to say that they adequately explain its essential nature. As spiritual forms of feeling, the sentiments clearly contain certain highly abstract ideal elements, freed at times from immediate dependence on the bodily organism and its reflex actions. For not only have our sentiments, as already stated, a predominant tinge of pleasure and pain; not only does this feeling-tone depend on emotional dispositions organized about objects (or ideas), towards which we have learned to react in a habitual manner; they also involve vision of a creative sort. Thus the patriot may be said to love his country; this love is a sentiment entering into all his thoughts; pain and pleasure, love, pride, admiration, etc., are evoked by the object, entering into the warm psychoses which arise in him as he thinks of it. But, in addition to these reactions, he has a vision of still higher values. He thinks of his country, not merely as the concrete collective medium of his own self-preservation, but, under the influence of sentiment, as right and true, nay, as perfect and good. This may sometimes be an exaggerated estimate, to be modified by more mature reflexion, but sentimentally that is his deliberate judgment—the vision inspired by a passion of love which is creative of ideals. Sentiment, in this higher sense, is an ideal feeling closely akin to the artist's feeling for beauty, to the feeling of moral approbation, and to other more or less abstract or mystical emotions of religion.

No complete list of the sentiments can be made without reference to these fundamental creative ideals, or judgments of value, such as the intellectual sentiment, the æsthetical sentiment, the ethico-religious sentiment, and their combinations. In mentioning them in this connexion it must be borne in mind that they are also active in the general conditions and adjustments that underlie the

normal development of mental life; that temperament, culture, and environment also qualify the expression of the sentiments as of other mental elements and products. The point is that there are also ideal elements in all our sentiments which do not necessarily involve the activity of self-reference—i.e. do not refer to specific organized objects, but arise in us through intuition or vision, direct or indirect, of ideals, and exercise a profound influence in their evolution. Of course, the particular form of self-reference which sentiment proper reveals is found only when an emotion has acquired strength or value by reason of the object or idea with which it is associated; but, in this total complex, ideals of truth, beauty, perfection, and goodness are ever creatively at work.

(d) A final word may be said on the relation of sentiments to character. If character be the product of the total effort of self-realization (q.v.), it is undoubtedly true that the sentiments, organized into a harmony or system under ideals, constitute a large part of what is properly called character. The sentiments alone do not, of course, constitute the whole of character; that would be sentimentalism. Will, feeling, intellect—in a word, self-control—must enter in and often modify and direct sentiment, or at any rate supplement it with ideals. If, as W. Hartsen says truly, 'a man without feeling would certainly have no intellect as well,'¹ it is equally true that a man without sentiment would have no character. Yet character is not wholly a matter of sentiment. That would be equivalent to reducing character to our organized dispositions and emotions; but character depends on conation and will, on the complete fashioning of the personality in the light of some ideal of conduct higher than routine, which has become strongly entrenched and has acquired a habitual predominance in the personal life. A sentiment, it is true, may become so strong as practically to control the will, but this would not result in a well-rounded personality; it might conceivably lead to a narrow, selfish, or mean type—the tyrant or dictator, e.g.—which could hardly be called moral. For the higher results of character the sentiments must be brought into the service of a concrete ideal and organized under the control of the will. This ideal must also attain to such a predominance by sheer force of love that conflicting inhibitions or interfering unorganized desires will be overcome. Character thus grows in strength and beauty, and approximates to perfection and goodness. A sentiment, therefore, may well be a controlling motive of behaviour, but character depends, ultimately, on the habit of self-control and loyalty. We cannot therefore be too careful in selecting the sentiments, or the single sentiment, which is to attain the dignity of a fixed habit through the choice of the will. The reinforcement of religion will be found necessary to the realization of the ideal self, because it is in God we live and move and have our being. If to this we add the sentiment of love, proclaimed the rule of conduct by Jesus, we have the aim and motive of all true character clearly indicated, in which sentiment and character become one.

SEPARATIST SOCIETY.—See COMMUNISTIC SOCIETIES OF AMERICA.

SERAPHIM.—See DEMONS AND SPIRITS (Hebrew).

SERINGAPATAM (Skr. Śrirangapattana, 'city of the holy pleasure-place').—Seringapatam is a city in Mysore District, Mysore; lat. 12° 25' N.; long. 76° 42' E.; situated on an island in the river Kāveri. In the earliest times Gautama Rṣi is said to have had a hermitage here, and he worshipped the god Ranganātha, 'lord of pleasure,' whose temple is the principal building in the fort. The earliest temple is said to have been erected by Tirumalaiya, under the Gangā dynasty, A.D. 894. About A.D. 117 the whole

site was granted by one of the Chola kings to Rāmānujāchārya, the celebrated Vaiṣṇava apostle, and in 1454 the Ranganātha temple was enlarged, the materials of 101 Jain temples being used for the purpose. The place is remarkable for the two famous sieges in 1792 and 1799, the British forces being under the command of Lord Cornwallis and General Harris; in the latter attack the Sultān Tipū was slain. His remains and those of his father Haidar 'Alī rest in a mausoleum (*gumbaz*) in the garden known as the Lāl Bāgh, where prayers are still offered.

SERPENT-WORSHIP.

Introductory (J. A. MACCULLOCH), p. 399.
Indian (W. CROOKE), p. 411.

SERPENT-WORSHIP (Introductory and primitive).—The cult of the serpent exists in many forms, whether of a single serpent or of a species, of a serpent embodying a spirit or god, of a real or imaginary serpent represented in an image, of a serpent as associated with a divinity (a chief god or one of many), or of a purely mythical reptile. All these may be traced back to the cult of actual serpents, which, however, easily become a fitting vehicle for a spirit or god. The origin of the cult is to be sought in the effect which all animals more or less had upon the mind of early man—a feeling that they were stronger, wiser, subtler than he; in a word, uncanny. This was especially true of the serpent because of its swift yet graceful and mysterious gliding motion without feet or wings, unlike that of any other animal, its power of disappearing suddenly, the brilliance and power of fascination of its eye, its beauty and strength, the sudden fatal consequences of its bite or of its enveloping folds, the practice of casting its skin, which suggested its longevity or even immortality. All these contributed to arouse feelings of wonder, respect, fear, to produce worship, and also to make the serpent a fit subject of innumerable myths. In the various forms of the cult there is often found a sense of the animal's beneficence, probably because myth easily attributed to it wisdom, secret knowledge, magical power, healing properties, and inspiration. As an animal dwelling in holes in the earth, its chthonic character was suggested—it was the cause of fertility (also because it was thought to give or withhold water), and became the embodiment of a fertility daimon or earth-spirit; hence also a guardian of hidden treasure or metals.¹ In so far as the serpent is a revealer of the arts of civilization, this is probably because, where it was worshipped, it was often grafted on to a mythic culture-hero or eponymous founder. Totemism sometimes lent its aid as a factor in developing respect for serpents, if not actual cult. Ancestor-worship also assisted, in so far as certain snakes haunting houses or graves were associated with the dead. Myth connected the serpent with the waters, either because some species lived in or near them or in marshy ground, or because the sinuous course and appearance of a serpent resembled those of a river, or with the lightning, because of its swift, darting motion and fatal effects. Some serpents are harmful, others are

Teutonic and Balto-Slavic (E. WELSFORD), p. 419.

harmless; and perhaps this is one main reason why both in cult and in myth some are objects of fear and their evil traits and appearance are exaggerated or associated with demoniac beings, while others are beneficent and helpful.¹

Man's fancy and man's dreams about such an animal as the serpent must also be taken into account in considering the origins of the cult.

This is illustrated by an account from Papua, where a native recently dreamt that a large snake living on a volcano accused him of killing snakes and alligators and offered, if he promised never to do so again, to give him a herb to cure all diseases. The native went about announcing this, but some natives still disbelieved and shot an alligator, which remonstrated with them. Snakes and alligators now go unharmed.²

Here the common fancy of the solidarity of animals leading them to avenge the death of a single animal and the consequent respect paid to them are seen. This and other fancies are embodied in a dream, and might easily be the origin of a cult, as they actually are of a prohibition.

Classical writers had various theories as to the origin of the cult, from that of Diodorus that the snake was worshipped because he figured in banners or was figured on banners because he was a god, to the shrewder remarks of Philo Byblius quoted by Eusebius (see § 1 (t)).

Practically every aspect of serpent-worship, myth, and legend, and of human attitude to the serpent, is shared by other reptiles—e.g., the crocodile, to some extent the lizard, and here and there large eels.³

While some form of awe or reverence for the serpent is wide-spread, the actual worship varies in intensity in different regions. Fergusson supposed the cult to have originated among the Turanian peoples of the lower Euphrates and to have spread thence to every part of the old world where a Turanian people settled, while no Semitic or Aryan people adopted it as a form of faith, its presence among these being 'like the tares of a previous crop springing up among the stems of a badly-cultivated field of wheat.'⁴ Fergusson's

¹ Cf. *Pr* § 019.

² Perhaps also because the lightning (=serpent) was supposed to produce gold.

(j) *Mayan*.—The Mayan god Votan was probably in one aspect a variety of the Plumed Serpent, and his image represented him as a bird above and a serpent below. This culture-god was said to have built 'the city of the serpents' and to have written a book proving that he was one of the Chanés, or serpents.¹ In Mayan MSS and carvings the rattle-snake alone is represented as a symbol and is called the 'serpent-king.'²

(k) *Central American*.—Among the peoples of Central America living snakes were worshipped.

Human victims are said to have been offered to a living serpent-god by the Zacatecos.³ Near Uxmal is a spring where, according to Indian belief, an old woman sits and exchanges water for little children, whom she gives to a serpent to eat. She is perhaps the anthropomorphic form of a serpent-god to whom children were offered.⁴ All over this region, in Honduras and Nicaragua, the remains of temples show colossal feathered serpents, sometimes with a human head in the jaws, as at Uxmal, sculptured on the walls and cornices, and sometimes running the whole length of the building. Quetzalcoatl or Cuculcan is also depicted holding feathered serpents or with these coiled round his body. Such serpents are also seen painted on rocks in Nicaragua.⁵

(l) *Peruvian*.—In Peru the pre-Inca race venerated serpents and painted them on temples and houses, and offered human hearts and blood to them. They were also represented on the temples of the Inca kingdom, where reverence for snakes was wide-spread, and the spotted wood-snake was kept in the temple of Pachacamac.⁶ The god of riches, Urcagua, was regarded as a snake, in which form he was said to have appeared, and his snake-image in the form of a horned and hairy rattle-snake was revered in a building called the 'snake-house.'⁷

(m) *S. American Indian*.—The native Indians of S. America have always shown certain reverence for serpents.

Among the Caribs, who believed that the spirits of the dead transmigrated into snakes, images of snakes existed. Rakumon, one of the men drawn from the thigh of the first man and god Loguo, became a snake with a human head and twined himself round trees, the fruit of which he ate and gave to others. Afterwards he became a star. Star and snake are connected in Carib myth—the star shows by its position the time of the year's fruitfulness, the snake symbolizes the renewing of vegetation through the fertilizing rain.⁸ The serpent is also a common symbol in the ruins of the old temples of the more civilized tribes—e.g., the Muyscas, among whom the priests in processions wore masks of snakes and crocodiles.⁹ The Chibchas believed in a large snake which issued from a lake, and they made offerings of gold and emeralds to it. A snake-cult was also observed by neighbouring tribes, and the Canari believed themselves descended from a snake dwelling in a lake, to whom offerings of gold were made.¹⁰ The great boa was worshipped by tribes in Brazil, and one tribe living near the borders of Peru kept one in a pyramidal temple, fed it with human flesh, and prayed to it.¹¹ Of the snake called the manima a 16th cent. traveller in Brazil says that the natives to whom it showed itself regarded themselves as blessed and believed that they would live long.¹² The tribes of the Issa-Japura district believe that the anaconda is evil and the embodiment of the water-spirit, the *yaca-mama*, mother of the streams, who bars their passage. Hence they go in fear of the reptile, which occupies in Amazonian folk-belief the place of the sea-serpent elsewhere.¹³ Many myths and tales about serpents exist among the various tribes.¹⁴

(n) *Chinese*.—In China serpents, like other animals, occasionally have temples dedicated to them, this cult being apparently connected with the belief in metamorphosis;¹⁵ but on the whole they are feared.

Their forms are frequently the embodiments of evil spectres, which cause misfortune, illness, and death, or are instruments of punishment. Snakes cause illness by sending their souls into the bodies of men, and sick people are alleged to vomit vipers. The serpent is also a common ver-animal;¹ in early times snakes with human or partly human form—a human face, a wolf's body, birds' wings, and moving like a snake—were known. Transformation of men into snakes and of snakes into men is a very old belief. In many stories, however, in spite of the generally evil aspect of the serpent, apparitions of snakes have proved to be propitious.² The dragon as the giver of rain is worshipped in time of drought, and also in spring and autumn by certain mandarins by command of the emperor. He has a temple in Peking, and is regarded as a great benefactor and the venerated symbol of good. In the ritual, when rain is prayed for, a large image called the 'Dragon King' is carried in procession, and incense is offered to it. Boats in the shape of a dragon also play an important part in the Dragon Boat festival and in the procession of the Five Rulers. The symbol of the dragon is a common religious and artistic motif: the five-clawed dragon was the emblem of the imperial power, the protecting deity of the emperor, whose body was called the dragon's body, his throne the dragon's throne, etc. The true dragon is never all visible at once, but only his head or tail, the rest of his body being enshrouded in clouds.³

(o) *Japanese*.—The Japanese frequently worship the serpent as a mysterious being, often the embodiment of a spirit or god.

It has an important place in mythic history as progenitress of the Mikado's ancestry. Myth hardly distinguishes between snake and anthropomorphic god, the forms being interchangeable. Some divinities still assume serpent form—e.g., the goddess Bentem, to whom certain snakes are sacred and are her servants and confidants—and where certain snakes live famous temples have been built.⁴

(p) *Cretan*.—There are traces of a former serpent-divinity in Crete.

Images of a goddess, with snakes twined round the body and head-dress, have been found. Sometimes votaries holding snakes dance before her. She is probably an earth-goddess, lady of the wild creatures, and an anthropomorphic transformation of an older serpent-divinity. It is unlikely that the figures represent snake-charmers, as has been supposed.⁵ On the Mycenaean cylinders of Cyprus the goddess of Paphos is associated with a pillar entwined by a serpent, and Pausanias describes an image of Artemis holding serpents.⁶

(q) *Egyptian*.—Among worshipful animals the serpent predominated in Egypt, either because of its supposed good qualities or through fear of some species; and the cult of the cobra and asp occurs in the earliest times.

The figure of the serpent appears as a personal or house-protecting amulet all through Egyptian history. The cobra or *uraeus* was a symbol of fire or the solar disk; hence this serpent decked the forehead or crown of the solar god and of kings, his representatives, was carried by priests and priestesses of Ra, or itself occurred crowned on standards. It was identified with the flaming eye of the god; hence 'eye' and 'asp' became synonymous, and two eyes or serpents were called 'daughters of the sun-god.'⁷ The sun-god is also figured as a serpent or a double asp, and, like the solar orb, the *uraeus* was sometimes represented with wings. Serpents guarded the groves and gates of Amenti, breathing fire against the wicked, as well as the pylons of the heaven of Osiris. A serpent was the embodiment of certain goddesses—e.g., Rannut, goddess of fertility and the harvest, perhaps because snakes found in corn-fields were regarded as local spirits in snake form and were fed; Mertseker, goddess of the necropolis at Thebes; Buto and Nekheh, guardians of Upper and Lower Egypt. It was associated with Isis and Nephthys, because these goddesses were later identified with Uazet, the *uraeus*-goddess, who was gradually absorbed into all the goddesses. Hence all goddesses were adorned with or represented by the *uraeus*, or as a serpent a goddess is associated with a god.⁸ Qeb, god of the earth, was master of snakes and had a serpent's head.⁹ Live serpents were kept as guardians or sacred animals in shrines and temples behind a sacred veil or in a small cell. These serpents were mummified

or, like those sacred to Amon, buried in the temple.¹ Offerings of fruit, cakes of flour and honey, flowers, and incense were made to serpent-divinities. *Uraei* figured as temple-guardians, often in the form of a cornice or frieze. In heaven was supposed to exist the serpent Sati or Bata, the serpent 'of millions of years,' into which the soul of the dead identified with Osiris could transform or identify itself.² Divine beings have sometimes a serpent's head. The serpent was much represented in later times as its cult increased, sometimes in pairs, and then often with the heads of Sarapis and Isis. Stars were regarded as snakes or these were their symbols.³ Generally the serpent was regarded as an *ἀσπίς δαίμων* connected with life and healing. So even now 'it is believed that each quarter in Cairo has its peculiar guardian-genius or Agathodæmon, which has the form of a serpent.'⁴ In early times dwarf figures like Bes tear up and devour serpents—symbols of hostile powers; and the heavenly gods are said in one myth to have left the earth because of the serpents who drove them away—primeval reptiles of the abyss or a serpent of the earth-god or a serpent created by Isis.⁵ There is also a confused reference here to a serpent of great size embodying darkness and evil, enemy of Ra and the gods and destroyer of souls. This is Apap, referred to from early times, and probably a reminiscence of the python.⁶ Apap dwelt in the ocean over which travelled the divine boat of Ra, which he sought to upset, or in that part of Hades through which the god travels daily. Ra daily attacks and slays him, and the destruction is described with grim realism.⁷ The dead fought Apap and other demoniac serpents with Ra's aid, and protected by amulets and formulae of repulsion.⁸ In other forms of the myth gods (often with serpents' heads) attack and bind Apap under the earth or sea. Apap tended to be identified with Set, attacked by Horus. These myths may be connected with the Babylonian myth of Bel and Tiamat. Apap was also devourer of the souls of the wicked, and was head of all powers hostile to the sun. Serpents of demon aspect met the soul on its way to the other world, but against those the *Book of the Dead* provided a way of escape. Horus, as protector against venomous snakes, was called 'stopper of snakes' and is represented holding snakes in his hand. Hence amulets of the god in this aspect were worn as protectives.⁹

(r) *Babylonian*.—In Babylonia there is little trace of worship of the serpent.

Herodotus¹⁰ speaks of a live serpent worshipped there, but this may be a reminiscence of the conquest of Tiamat by Bel-Merodach.¹¹ Ea had the serpent as symbol and was called 'god of the river of the great snake'—i.e. the deep or the Euphrates. The names of the river in early inscriptions show the connexion of the serpent with Ea and also with Innina, his daughter, whose name is interchangeable with that of the snake, the anthropomorphic transformation of which she probably was.¹² Serpents abounded in marshes at the mouth of the river. Serakh, god of corn, was a snake-god. Sala, consort of Rimmon, had a name meaning 'goddess of reptiles.' Certain goddesses associated with the under world are depicted with serpents in their hands.¹³ Among what appear to be emblems of gods on boundary-stones recording sales of land a snake is a prominent figure—possibly symbolizing Ea.¹⁴

On the whole the serpent tended to assume or already generally had an evil aspect in Babylonia.

This is seen especially in the myth of Tiamat, of Sumerian origin, and in 'the evil serpent' or 'serpent of darkness,' often identified with her, or 'the great serpent with seven heads.' Tiamat represented the primeval, anarchic waters, as a monster dragon or raging serpent, which Merodach conquered and slew or, in another version, subdued and bound.¹⁵ Among her forces were 'the dragon, the great serpent, the devouring reptiles.' Traces of this myth are found in the OT as a survival or borrowing. The serpent is associated with the deep, is called by various names—Leviathan, Behemoth, Rahab, as well as dragon or serpent—and is represented as conquered by Jahweh,¹⁶ or as bound by Him or set in the sea and again to be conquered.¹⁷ This being is apparently identified with historic

nations (Babylon, Egypt, Assyria), and is sometimes duplicated,¹ and it has many heads. Other references to 'the dragon that is in the sea' may imply Tiamat's consort, Kingu.² Monstrous forms of reptiles and serpents are mentioned by Berosus as existing in early times in Babylon. Horned serpents occur in Chaldean monuments, and winged dragons on the lintel of a doorway of the palace of Sennacherib. The demoniac or evil aspect of the serpent is seen also in the myths of Labbu and of Etana, and in the serpent which steals the plant of life from Gilgames, while demons were often given a serpent form.³ The seal with an erect serpent between two seated figures on either side of a sacred tree still lacks interpretation, though some have supposed it to represent a Babylonian version of the Fall story.⁴ Serpents were believed to guard holy places and were set up on entrances of temples and palaces.

(s) *Canaanite and Hebrew*.—In Canaan serpents of brass or terra-cotta and actual serpents' heads have been found. These suggest a cult, and perhaps a pit in which was a serpent of brass may have been a serpent shrine.⁵

Ashtart, like the Cretan goddess, is represented with serpents in her hands. These brass serpents recall the Hebrew brazen serpent, which has been variously explained as a pre-Israelite image of a serpent embodying the spirit of a well,⁶ adopted by the Hebrews; as an early Hebrew image connected with healing worshipped down to the days of Hezekiah, who destroyed it; as a totem of the family of David,⁷ or the symbol of a serpent tribe; or as originally a representation of Tiamat, later misunderstood and associated with healing.⁸ Was it the image of an actual serpent or of a spirit (*jinn*) embodied in a serpent? Probably the latter, as the fiery serpents of the ætiological myth explaining its origin⁹ suggest demoniac beings in serpent form, such as are still believed in by the Arabs. The cult of every form of creeping thing and abominable beast portrayed on the walls of the Temple may have been a recrudescence of an earlier Hebrew cult or a borrowing from exterior sources.¹⁰ Serpents or dragons, as in Arab belief, were doubtless also connected with wells, giving or withholding the waters, and in Syria springs are named after serpents, or as in Palmyra a female serpent-demon dwells in a spring and can hinder its flow.¹¹

The fiery flying serpents of Nu 21⁸ and Dt 8¹⁵ are still known to Eastern superstition, and are mentioned by Herodotus¹² as inhabiting the desert. A serpent of this kind is threatened against Philistia, and is mentioned as a creature of the land of trouble and anguish.¹³

The talking serpent of Gn 3 represents a primitive stage of thought, while the story supplies an ætiological myth answering the questions, Why are serpents and men at enmity?, and Why does the serpent crawl instead of walk? It is doubtful whether the serpent was intended in the original story to be evil. More likely he was a divine being, with superior knowledge and a kindly desire to help man to knowledge denied him by other divinities. A later recension made his act have evil consequences, and therefore he himself had evil intentions. The story doubtless arose with a people to whom the serpent was sacred, and who were impressed with its wisdom.

Frazer connects the story of the Fall with myths of the origin of death (the 'perverted message' group) and of the cast skin (the serpent casting its skin renews its youth and never dies, and hence was considered immortal).¹⁴ He assumes that in the earlier form of the story there were two trees, one of life and one of death. God wished man to eat the former and so become immortal, but man, misled by the serpent, ate the fruit of the other tree and so forfeited immortality. The serpent ate of the tree of life and so lived for ever.¹⁵

The connexion of the serpent with the devil is nowhere hinted at in OT, but appears first in Wis 24, and was a Rabbinic conception,¹⁶ with profound influence on Christian and Gnostic thought. The idea of a chaotic force, personified—e.g., as a dragon (Tiamat)—hostile to creative divinities, was more or less combined with this. Hence such a conception as Rev 12, esp. v. 9. Here is also the idea of a dragon hostile to a heavenly goddess and her son (Leto, Apollo, Pytho; Isis, Horus, Typhon or Set; Marduk, Tiamat—here the goddess is lacking). These various ideas recur in Christian and Gnostic literature, and language is exhausted to express the evil character of the devil-serpent or dragon. Partly because of the myth of the

dragon cast into the abyss, partly because of the existing conception of death as a devouring monster, Hades is often described or depicted as a dragon.

(t) *Phœnician and Arabian*.—For the Phœnicians we have the evidence of Eusebius, quoting Philo of Byblus:

Taautos (the Egyptian Thoth), and after him the Phœnicians and Egyptians, divinized dragons and serpents, because they of all reptiles have the strongest respiration and a certain fiery nature. Their swiftness and variety of movements, in spite of possessing no feet, their longevity, their power of renewing their youth, all contributed to the respect in which they were held. The Phœnicians called the serpent Agathodaimon, and it was adopted into the mysteries and temples. Sacrifices were offered to serpents, and they were regarded as great divinities and mediators.¹ This evidence is supported by the fact that Tyrian coins show the serpent in connexion with trees, pillars, and altars,² while Asklepios, the Greek serpent-god of healing, was identified with Eshmun, a Phœnician god with similar functions.³

In Arab belief the *jinn* are embodied in snakes, especially those haunting houses and thickets, appearing and disappearing suddenly.⁴ The prophet says in the book *Mishkât al-Ma'âbâh* that such snakes are *jinn*, some infidels, some believers. They must be asked to leave; if they refuse, they are infidels and may be killed.

(u) *Greek*.—In Greece serpents were regarded as guardians of graves, sanctuaries, and dwellings, and were kept there or represented in symbol.

Snakes were sacred because heroes or the dead generally might appear as serpents; certain gods had once been snakes or might become visible as such; and snakes were associated with them in myth, ritual, and art. The snake as a chthonian animal—'a son of the earth'⁵—was associated with fertility, and had been early revered as house-spirit, οἰκουρὸς ὄφις, or earth daimon, or ἀγῶνις δαίμων, promoting fertility, and hence worshipped or at least fed.⁶ Eponymous founders regarded as heroes were thought of as snakes or as having twin-nature, like Cecrops,⁷ Kychreus of Salamis,⁸ and Erechtheus of Athens.⁹

The presence of snakes in sanctuaries and in the rites of certain divinities suggests that these had once been worshipped as snakes.

Snakes were kept in shrines sacred to Asklepios (whose name may be connected with ἀσκάλαρος, ἀσκάλαρος = 'snake')¹⁰ and were fed by virgin priestesses. They gave omens of health and plenty.¹¹ In these shrines the snake (= the god) suggested a cure to the sufferer in dreams or gave fruitfulness to women, and the child was believed to be begotten by the god. Asklepios appears as a snake in myths and art as well as in the sorcery of Alexander of Abonoteichos,¹² and in stories of the founding of temples. The snake is also his symbol, twined about his staff, or side by side with him. Asklepios had once been a divine snake, giving fertility and health before he became anthropomorphic. He was brought from his sanctuary at Epidauros to Sicily in the form of a snake, and an embassy went from Rome to Epidauros and brought back a serpent which caused a plague to cease and received divine honours.¹³

In some of his aspects Zeus had snake form, as certain bas-reliefs show—Zeus Ktesios, the fertility-giver, Zeus Meilichios, and Zeus Sospolis, who as a child was placed by Eileithyia before the arms of Elis when the Arcadians invaded it, and vanished into the ground as a snake. A sanctuary was afterwards built on the spot.¹⁴ Snakes fed by a naked virgin priestess lived in Apollo's shrine at Epirus and were said to be descended from the Python, and to be play-things for the god. If they took the honey-cakes with which they were fed, the year would be fruitful; if not, the reverse.¹⁵ Demeter had the snake Kychreus as her attendant at Eleusis, probably an old local snake-god, and as goddess of the Phigalians in Arcadia she had snakes twined in her hair, and her chariot was drawn by winged snakes. The Erinyes, as chthonic beings, are called ὀφράκται, and had the form of snakes, or snakes were coiled in their hair.¹⁶ In so far as they originated from ghosts, their snake form is obvious.

Zeus as a serpent violated Persephone, who then gave birth to Dionysus (Sabazios),¹ a god with occasional snake form,² in whose rites women put snakes in their hair or round their bodies, or rent them asunder.³ The god was doubtless embodied in the snakes, for 'the symbol of the Dionysiac orgies is a consecrated serpent.'⁴ In Roman myth the parallel was the violation of the Bona Dea by her father Faunus, and a consecrated serpent was placed beside her image in her ritual.⁵ Sabazios, the god of Asia Minor kindred to Dionysos (or some personal name of whom was read in Greek as 'Dionysos'), was represented as a snake along with Cybele.

Some divine beings were represented as partly snake in form—besides those already mentioned, Typhon, Boreas, Hecate (also with serpents in her hair), and the giants.⁶

Snakes kept in shrines were fed with honey or honey-cakes, as the ghosts were also propitiated with the same food.⁷

(v) *Roman*.—Among the Romans a serpent-cult is mainly connected with the animals as embodying the genius, and snakes were kept in large numbers in temples and houses.⁸ The Greek cult of the serpent Asklepios probably influenced the Romans, as the embassy to Epidauros just mentioned suggests. A more native aspect of the cult is seen in the serpent-cave at Lanuvium, whither virgins were taken yearly to prove their chastity. If the serpent accepted the offerings brought by them, their chastity was proved and also a fertile season ensured, as at Epirus.⁹

A survival of an older cult or totem-clan rite is probably to be seen in the yearly procession of men with coils of live serpents before the image, hung with serpents, of St. Domenico of Poligno at Cocullo, near the territory of the ancient Marsi snake-clan. The people claim immunity from snake-bite as well as power over serpents, as did the Marsi.¹⁰

(w) *Celtic*.—Among the Celts details of a serpent-cult are lacking.

A horned serpent is figured with twelve Roman gods on a Gallo-Roman altar, and the serpent frequently occurs along with images of Celtic gods who hold serpents in their hands or present a torque to two ram-headed serpents.¹¹ These gods are probably all forms of an underworld god; hence the chthonic character of the animal as his symbol or vehicle may be suggested. The ram-headed serpent accompanies a goddess of fertility on a monument at Epinal.¹² What myth was told of such twin-natured serpents is unknown, but the ram has been supposed to be connected with a cult of the dead or with the god of the under world.¹³ Serpents were entwined round oaks in the Druidic grove described by Lucan. The serpent also occurs on a group of Scottish monuments regarded as of the Christian period, either alone or with the doubly bent rod.¹⁴ These symbols are probably derived from the pagan period, but their meaning is unknown.

W. Stukeley, in his works on Avebury and Stonehenge, advocated the theory that the megaliths there were connected with serpent-worship, but archaeologists see no reason for dissociating these from similar remains known to be burial-sites. A similar theory has been connected with a so-called 'serpent-mound' near Oban.

Dragons and serpents are mentioned frequently in Celtic myth and story in association with lochs or sacred trees, and in many saintly legends they are overcome by the saints. A white serpent is king of the snakes in Celtic lore.¹⁵

(x) *Ophite*.—Reference may here be made to the cult or symbolism of the snake among the groups of Gnostics collectively known as Ophites.

With some of these the serpent was a symbol of evil. This was the case with some groups described by Irenæus, with

whom the son of Ialdabaoth was Nous $\delta\alpha\delta\iota\mu\omicron\rho\phi\omicron\varsigma$, from whom were derived spirit, soul, and mundane things, and the cause of all wickedness. Hence, as the enemy of mankind, he was not honoured by these groups of Ophites.¹ In the system of Justin, Naas, or the serpent, is the principle of evil, commits adultery with Eve, and afflicts the spirit of Elohim in man.² The Severians also regarded the serpent as evil and the vine as the product of intercourse between it and earth—perhaps the reflexion of a pagan myth.³

Others regarded the serpent as good, thus reverting unconsciously to the belief adumbrated in the Semitic Fall myth of the wise serpent, because his action produced good results in disobedience to the Demiurge, or he represented an intelligent principle—e.g., in the case of the sect which identified Sophia and the serpent.⁴ To the Peratæ the Son and the serpent were identical, and the Naassenes worshipped Naas as the moist principle which is good and in which all things subsist.⁵ An actual cult of a serpent was probably limited to a few extremists—e.g., some described by Epiphanius; the others regarded the serpent merely as a symbol of higher powers.

Epiphanius says of this group: 'They keep a living serpent in a chest, and at the time of the mysteries entice him out by placing bread before him. The door being opened, he comes forth and having ascended the table he twines himself round the bread. This they call a perfect sacrifice. They not only break and distribute this among the votaries, but whoever desires may kiss the serpent. This they call the Eucharist, and they conclude by singing a hymn through him to the Supreme Father.'⁶

On Ophite gems the serpent is frequently represented in various aspects; e.g., the Egyptian god Chnubis, identified with Iao Sabaoth, is depicted as a serpent with a human head.

In the apocryphal *Acts of Philip* the apostle is said to have preached in Ophiorhyma (Hierapolis), 'where they set up images of serpents and worshipped them,' and his persecutors are 'children of the serpent,' or Echidna, who is identified with the devil. Finally Philip and John expel the serpent—a distorted reading of fact, for the serpent-cult must have continued in Hierapolis long after apostolic days.⁷ This serpent-cult was probably connected with that of Cybele. On coins of Hierapolis snake-emblems appear, or Cybele presents a cup to a snake, and in the *Acts* serpents are called 'sons of the goddess'—i.e. her sacred animals or representatives. Wine was offered to a viper in the temple.⁸ Possibly the Gnostic reverence for the serpent was influenced by the pagan cult of a goddess associated or identified with a snake.

2. The serpent as embodiment of the dead.—Certain snakes haunt houses and burial-places, and partly for this reason they are thought to embody ghosts of the dead, returned to their old abodes or lingering round the grave.

(a) *Lower races.*—This is a common Bantu belief, and with the Zulus the *amatongo* are the dead in snake form, the reptiles having come out of their bodies. If a man sees a snake on his son's grave, he says, 'This is my son,' and snakes in houses are identified with the dead by marks or scars once borne by these. They cause a happy feeling to the living, who sacrifice to them and feed them with milk.⁹ Among the Thonga woods where ancestral chiefs are buried are tabu, and the dead frequently appear as snakes. Sacrifice is made to them from time to time.¹⁰ Among the Eastern Bantu spirits sometimes take this form for mischief. Such a snake is killed, because this slays the ghost or prevents its further embodiment, but an apology is made to it.¹¹ The Suk regard the appearance of a snake in a house as denoting that the ghost is hungry, and that, if it is not fed, all in the house will die. But such a snake may be killed outside the hut.¹² The El Kiborun, a Masai tribe, think that the bones of married men become a snake and return to the hut, where they are fed with milk.¹³ Ghost-snakes are fed with honey and milk by the Aikuyu, and, if one is accidentally killed, the elders are summoned, a sheep is killed, and all must partake of it, the culprit wearing part of the skin lest his wife and children die.¹⁴ The Nandi kill snakes in houses, but, when one is found on a woman's bed, it is the spirit of an ancestor and an omen that her next child will be safely born. It is fed with milk.¹⁵ Among

the Bahima the bodies of dead princes and princesses are thought to produce snakes, which are cared for in temples by the priests.¹ The Kafirs venerate the python, because it embodies the spirit of a dead chief; to slay a python was punishable by death.² Medicine-men and the rich among the Masai become snakes when the body decays, reappear in their huts, and are fed with milk.³

The belief occurs sporadically in N. America, the Moquis holding that men of the Rattle-snake clan become rattle-snakes at death, and the Apaches that snakes are connected with the elders or dead men of the tribe.⁴ The snake is sometimes identified with the soul, as when seen coming out of a dead person's mouth. Several S. American tribes also have this belief. Women who look upon the Jurupari mysteries of Brazilian tribes become serpents or crocodiles at death, instead of going to paradise.⁵

Among the Tami of New Guinea spirits may be called up as snakes which give oracles through a seer, and among the Papuans of Geelvink Bay, who make images of the dead in which the spirit resides and communicates with the living, those of dead women are represented holding a serpent with both hands.⁶ In Kiriwina (E. New Guinea) a chief may appear as a snake in a hut and is honoured but also asked to go, as his appearance is a bad omen.⁷ In central Melanesia the dead may appear as snakes—e.g., in a sacred place—and are held sacred, and in the Pelew Islands such snakes are never killed. According to New Britain belief, the dead are men by day and snakes by night.⁸

In Indonesia soul-substance, as distinct from soul, may animate snakes which come out of holes from the under world.⁹ The Dayaks believe that spirits (*untu*) appear as snakes, and, if they enter a house, it is to carry off the living. But they are fed, and anything found in their mouths is kept as a charm.¹⁰ With the Ibans of Borneo, who believe in a man's *ngarong*, or secret spirit-helper, usually an ancestor, the *ngarong* may be a snake, and all of the same species are revered by the individual who is helped.¹¹

(b) *Japanese, Chinese, and Arabian.*—Ancestral snakes are also believed in by the Chams and Assamese,¹² and in older Japan and China there are legends of snakes appearing from graves or in coffins, as if the belief also existed there.¹³ This is also an occasional Arab belief, for in Upper Egypt at Shaikh Haredi, the tomb of a saint of that name, in cases of sickness a virgin was sent to it and a serpent came forth, hung about her neck, and was carried to the sick man's bedside. Another account says that several women visit the place once a year, and the serpent twines round the neck of the loveliest.¹⁴ In ancient Egypt it was the privilege of the dead to assume any form by means of 'words of power,' and among them were those of serpent or crocodile.¹⁵

(c) *Greek and Roman.*—Among the Greeks the snake was the symbol of the grave and of the spirit contained in it, especially spirits of worshipful heroes, often represented in art and tradition as snakes or accompanied by snakes, their doubles. The idea was doubtless derived from the fact that snakes haunted tombs. In legends snakes were seen close to the dead or crawling from their beds, or the dead turned into snakes (Cadmus and Harmonia).¹⁶ There was also a theory that the marrow of the dead became a snake.¹⁷ A woman or goddess (Hygieia, daughter of Asklepios) feeding a snake with milk is a common Greek artistic motif, recalling the savage custom of thus feeding spirit-snakes and perhaps arising from a similar custom in Greece. Analogous to this among the Romans was the symbolizing of the *genius* or *juno*—the guardian-spirit or other self—as a snake, and the keeping of tame snakes in large numbers in temples and houses.¹⁸ The snake is already figured on Etruscan monuments, and it was painted on the walls of Roman houses, sometimes approaching

an altar. Doubtless all this was connected with an older belief in the ghost embodied in a snake. Æneas, seeing the snake coming out of his father's tomb and tasting his offering, was perplexed as to whether it was the *genius loci* or an attendant on his father.¹ In some cases life was supposed to be dependent on the safety of the house-snake; e.g., when the tame serpent of Tiberius was devoured by ants, he drew the augury from it that he must guard against attack from the multitude.²

(d) *Russian*.—In Russia the presence of snakes in a cottage is a good omen. They are fed with milk, and to kill them is a sin. This is apparently a relic of the time when a belief in ancestral snakes existed among the Slave, Lithuanians, and Wends.³

3. Serpents in the mysteries.—The ritual use of a serpent in Asiatic and Greek mysteries is connected with the aspect of certain divinities as snakes.

In the initiation to the rites of the Phrygian Sabazios, whose symbol and embodiment was a snake, a golden snake was let down into the bosom of the candidate and taken away again from the lower parts. Clement of Alexandria calls this 'the serpent gliding over the breast'—this serpent crawling over the breasts of the initiated being the deity.⁴ This rite was also adopted in the Dionysiac mysteries.⁵ In these a snake was carried in a *cista*, the snake being the god himself. The *cista*, with the snake emerging from vine leaves, is represented on coins of the cities of Asia Minor of the Roman period, and Clement speaks of the *cista* in which was a snake, the symbol of Dionysos Bassareus, having previously spoken of the box in which the Kabeiroi exhibited the *φάλλος* of Dionysos to the Tyrrhenians to worship.⁶ In the Arretophoria, performed for the fertility of women and fields, 'sacred things which may not be named were carried about, made of cereal paste, i.e. images of snakes and of the forms of men,' viz. *φάλλοι*.⁷ Snake and *φάλλος* are here parallel as symbols of a deity, under both of which Dionysos was represented.⁸ In the Eleusinia, according to Clement of Alexandria, some object was taken by the initiate from a *cista*, put into a basket, and from the basket again put into the chest.⁹ This object has been conjectured to be a *φάλλος*, for a representation of the mystic basket shows a *φάλλος* among fruit, and Dieterich thinks that what was done with the snake—drawing it through the bosom—was also done with the *φάλλος*.¹⁰

The rite was one expressive of sexual and mystic union with the god, as Zeus or Sabazios as a serpent had entered *εἰς κόλπον*. The god was hailed as *ὑποκάτω*, according to an Orphic hymn. 'In relation to the god both men and women were as female.' In such a rite snake and *φάλλος* were one and the same, and women imitated the divine action. Such rites may have given rise to the stories of sons born of human mothers by divinities in the form of a serpent.¹¹

The *cista* of the mysteries of Isis may also have contained a snake.¹²

Besides the above, certain facts point to the connexion between serpent and *φάλλος*.¹³ In Algonquian myth, at creation, the *φάλλος* of Gechee Manitoh being in his way, he wrung it off and threw it into the bush, where it became Wau-kau-thee, the Rain-Serpent.¹⁴ Elsewhere in America the *φάλλος* 'was correlated or identical with the serpent.'¹⁵ If the boundary-stones in Babylon were phallic, the presence of the serpent wreathed round them is significant. The figure of Nergal as a monster on a Babylonian plaque shows the *φάλλος* as a serpent, and 'the serpent of conception' is spoken of in certain texts.¹⁶ In India the serpent—e.g., in the Saiva cult—is associated with sexual powers, and in the temple of Viśveśvara at Benares the *lingam* is sometimes represented with a serpent coiled round it.¹⁷ O. Schoebel, following certain Talmudists, Agrippa of Cologne, and others, identifies the tree of knowledge, serpent, and *φάλλος* in the narrative of Gn 3.¹⁸ The connexion of snake and *φάλλος* is perhaps one

reason, added to the snake being regarded as an earth-spirit, why it is so commonly associated with fertility, as so often noted above.¹

4. The serpent in magical rites.—It is not surprising that such a mysterious animal as the serpent should be used in magical rites, and in some languages the word for 'serpent' has derivatives or cognates referring to magic or intercourse with demons, while the serpent is often a symbol of culture-gods and gods of wisdom, and is connected with healing.

(a) The common idea that the representation of a noxious being will drive off that being or other noxious creatures is perhaps one explanation of the brazen serpent story in Nu 21^{6a}.

In Egypt a serpent-head amulet guarded its wearer from snake-bite in this world and the next. The *uraeus* on the crown was supposed to throw itself on the king's enemies, and to have compelling power over the gods when the *uraeus* crown was placed by Nut on the head of the deceased.² In Athens snake-amulets are placed on the newly-born to protect them against snake-demons.³ Perhaps the golden serpents which Clement of Alexandria condemns as a female decoration were really worn as amulets.⁴ Gregory of Tours tells of a bronze serpent found in a Paris sewer on the removal of which snakes infested the city.⁵ Among savages, too, amulets resembling snakes, or a snake tattooed on the body, protect against snake-bite.⁶ In Romagna serpents, head downward and interlaced, are painted on walls to keep away the evil eye.⁷

(b) The skin of the snake forms a part of the American Indian 'medicine-bag,' and medicine-men among the Nandi receive power from snakes carried in their bag.⁸ A wand in the form of a snake was used by Egyptian magicians, and also in the death ritual to heal the wound made by the adze in opening the eyes and lips of the deceased. Buried with him, such a wand gave him power over the dead.⁹ The skin of a serpent is also mentioned as a magico-medical remedy by Marcellus in the 4th cent., and it has still such properties in modern Tuscany.¹⁰

(c) Eating a serpent's flesh, or anointing with its fat, or applying part of its body to the wound, was a remedy against snake-bite among Greeks, Romans, Arabs, Jews, American Indians, Abipones, Thonga, and other races, and is also found in folk-medicine in many lands still—an example of the principle that like cures like.¹¹

Hence fennel cured snake-bite because snakes ate it.¹² Again, part of the war medicine of the American Indians was a fragment of a serpent, to give skill in war. Its blood was given to women in child-bed, because, the snake being immortal, the blood had vital influences.¹³ Here, too, the virtue of the 'serpent's egg' and of the so-called adder's stone may be noticed.¹⁴

(d) The serpent is associated with healing rites over a wide area, for no very obvious reason, but perhaps because of its supposed wisdom.

This is seen in the case of the Greek Asklepios and other divinities and in the Semitic association of serpents with healing springs. In Madagascar a god of healing was patron of serpents, and his priest carried a serpent in the procession of the god.¹⁵

As the snake sloughed its skin, this became a folk-explanation of its connexion with Asklepios. The sloughing symbolized the healing art.¹⁶

(e) Omens are often drawn from the sight of serpents, and it is often considered unlucky to see one, as among the Kenyahs and Thonga and many other peoples.¹⁷

(f) Power over snakes is sometimes ascribed to sorcerers, or the snake is used by them as a 'sending'—a creature sent forth to produce disease, to wound, or to kill.¹

Serpents were thus sent as agents of his anger by the Malagasy deity already mentioned.² In Calabar a tribe levied toll on all who passed. Refusal to pay resulted in a snake being sent after them, which tied their legs, and the people then came and robbed them. Medicine-leaves also protect houses in Calabar, and fetiches among the Baganda; and, if any robber approaches, snakes rush out at him.³ Bushmen sorcerers are said to be able to whistle up snakes, which coil round their neck in the presence of spectators.⁴ The Chiriguano believe that they would never die unless, *inter alia*, bitten by a snake—really a sorcerer in that form.⁵

(g) Charms and magic formulæ are often used as remedies for snake-bite or as protection against snakes.⁶

(h) As certain snakes are susceptible to musical, rhythmical sounds or movements, these are used by snake-charmers to exhibit their power over them.

This has occurred in Africa and in many Eastern lands from ancient down to modern times; among the American Indians charming was used by magicians to prove their intercourse with unseen powers and the power given them by these so that they handled snakes with impunity.⁷ Possibly snake-charmers produce some cataleptic or hypnotic state in the animals.⁸ The supposed immunity of the charmer should be compared with that seen in the case of the Hopi, the devotees in the Dionysiac mysteries, the Psylli and Ophiogenes, and the *kebeet* among the Abipones.⁹

5. **Demoniac and mythical serpents and dragons.**—Although the serpent is frequently worshipped, its harmful character and the repulsion which it arouses, its frequent large size and strength, and the mystery of its movements have often caused a sinister character to be given it, and made it an embodiment of demoniac powers. Because of the brightness of its eye and its power of fascination over animals the serpent was commonly supposed to have the evil eye. The larger species, possibly also the dim memory of extinct species or species no longer found in any region, affected man's imagination, and both fear and fancy gave rise to a belief in mythical serpents or dragons of vast size and powers, and often the cause of various natural phenomena. They have frequently many heads; they have wings and feet; and they breathe fire and smoke. Demoniac and mythical serpents are often the object of belief where a cult of serpentexists, showing that very different emotions are aroused by serpents of various kinds.

Some examples of demoniac and mythical serpents have already been referred to. The Sea Dayaks of Sarawak tell of a huge snake which came down from heaven and fed on the rice. A man slew it and ate its flesh; the result was the deluge.¹⁰ Another myth tells how the python was once the most poisonous of snakes, and killed a man who took fish from its fish-pond. Thinking afterwards that he had come to life, it vomited its poison into the sea, where a snake, Ular Berang, swallowed some of the poison, and the sea-snakes took the rest. The Ular Berang is rarely seen, but is very dangerous.¹¹ Certain snakes, like other animals, possess *badi*—i.e. a bad spirit or mischief of a dangerous kind—while the *badi* of some large trees is a more individual spirit which may appear as a snake.¹² Both in Burma and in Borneo dangerous snakes are held to be embodiments of evil spirits.¹³ Among the Negrito tribes of Borneo eclipses are caused by a python trying to swallow sun and moon or to embrace the latter.¹⁴ According to the Ibans, the Flood was the result of men's wounding a huge python. Soon

after the rain caused a flood which drowned every one except a woman.¹ The American Indian myth of the great horned serpent²—the embodiment of lightning or of the waters, and slain by a god or hero—is perhaps a variant of the myth of chaos, represented by a monster, and overcome by a god. In Musquakie myth a huge snake with hard, white scales, deer's horns, and spitting fire, rose from a lake, but was vanquished by the hero, Hot Hand.³ In the arid south-west region, where the cañons are quickly flooded, men are said to have lived underground at one time, but to have been driven to earth's surface by a huge snake which caused a deluge.⁴ In other American Indian myths (Ojibwa, etc.) serpents who have slain the hero's brother cause a deluge when the hero avenges them.⁵ On the other hand, in British New Guinea, Raudalo, king of snakes, put an end to the deluge by pursuing the waters to their accustomed bed.⁶ A Toba Battak myth tells how a great serpent lay on the primal ocean and engulfed the earth at its creation by turning it over. But the Heavenly Maid caused eight suns to dry up the waters and then pinned the serpent to a rock.⁷ The Thonga believe in the vast snake, Buwumati, dwelling in lakes invisibly and heard crying when rain falls. If any one should chance to see it, he dies.⁸ The Mexican sun-god Tonatiuh cut in pieces the coloured wood-snake, as Manco Capac in Peru and Bochica in Bogota slew the serpents of the waters.⁹ The Ayni believe that evil spirits are incarnated in serpents, as do also the Ibibios of S. Nigeria.¹⁰

The monstrous demoniac serpents of Babylon and Egypt have already been described.¹¹ But Egyptian myth knew also of a beneficent serpent, its body overlain with gold, and 30 cubits in length, living on an island, where it apparently was the guardian of the dead, just as serpents guarded the under world and are figured on tombs as guardians. A human-headed *uraeus* of large size is sculptured on an Ethiopian temple.¹² In Greece Typhon, son of Tartaros and Gaia, was demon of the whirlwind and possessed 100 serpent-heads. He attacked Zeus, who felled him with a thunderbolt and set Ætna upon him. His consort was Echidna, half-woman, half-serpent, whose progeny were the Sphinx, Chimæra, Hydra, and the Dragon of the Hesperides.¹³ Hydra, with nine heads, dwelt in the swamps of Lerna, laying waste all the land till Heracles slew it. Heracles also slew the dragon or snake of the Hesperides, which is represented as twined round a tree from below which issues a well; therefore it is guardian of the waters.¹⁴ Jason, Perseus, and Cadmus were also slayers of dragons in Greek myth. Python, a dragon born of Gaia, sought to kill Leto because he learned that her son would be fatal to him. Zeus interfered, but Leto's son Apollo slew the Python at Delphi, where he buried the body and instituted the Pythian games.

Behind this lies the myth of the cult of a prophetic snake at Delphi, embodiment of a goddess. The combat with Apollo has been explained as the seizing of the oracle by a tribe of Apollo-worshippers, who changed the shrine to his. The shrine in N. Greece where serpents, the god's play-things, were fed by virgin-priestesses may also have been an ancient shrine of a snake-goddess.¹⁵

Ancient Persia, in its dualistic scheme, regarded some animals—e.g., the serpent—as of the evil creation, while certain others were created to destroy them. It also embodied the evil power in a mythic dragon created by Angra Mainyu to destroy the faithful—the dragon Azi Dahāka, three-headed and immensely strong, sometimes also identified with Babylon (Bawri) or the Arabians.¹⁶ He was conquered by Atar, son of Ahura Mazda, a personification of fire,¹⁷ or, in another myth, by Thraētaona, who bound him on Mt. Demavend. At the end of time he will escape and destroy a third of mankind, cattle, and sheep, as well as water, fire, and vegetation, but will be slain by Keresāspa.¹⁸

¹⁴ W. W. Skeat and C. O. Blagden, *Pagan Races of the Malay Peninsula*, London, 1906, ii. 203, 224. A dragon-like monster is supposed to swallow candidates for initiation in New Guinea (see *ERE* viii. 626^a, ref.).

In Firdausi's *Shāh Nāmāh* Azi Dahāka is an Arab king with a dragon-like face and two snakes on his shoulders, the product of the kisses of Iblis. These were fed with human flesh. The poem follows closely the Armenian Zoroastrian version of the myth, in which Hruđen (Thraētaona) is the conqueror of Azi.¹

Dragons exist frequently also in Hindu, Teutonic, Slavic, and Celtic myth and folk-tale, in Mandæan and Manichean mythology—in both cases derived from Babylonian or Persian belief—and also in Gnosticism.²

In the *Pistis Sophia* the disk of the sun is described as a great dragon with his tail in his mouth—an Egyptian conception;³ and dragons form the rudder of the ship of the moon. The outer darkness, where souls incapable of redemption are cast, is a great dragon encircling the earth, with its tail in its mouth, and containing twelve chambers of punishment. So in a Gnostic system described by Epiphanius⁴ the archon of the lowest heaven is a dragon encircling the earth and swallowing souls which have not knowledge. Both in Gnostic and in Catholic prayers for deliverance of the soul on its upward way there is mentioned the opposing dragon or serpent. The dragon as Hades in *Pistis Sophia* is probably a reminiscence of the Egyptian Apap. In the *Apocalypse of Baruch* there is a huge dragon in the third heaven and also in Hades. Its belly forms Hades, and the dragon devours the wicked.⁵

The Gnostic idea of the dragon or serpent as an evil world-principle, identical with the devil, encircling the earth and holding it in his power,⁶ may be referred to in the *Hymn of the Pearl*, ascribed to Bardesanes. The pearl is in the sea, hard by the serpent.⁷ The sea is the mythic chaotic deep, which, encircling the world, is sometimes compared in Babylonian mythology to a snake—the river of the snake.⁸ This idea is also found in Egypt, where the myth of Apap bound in the deep is also figured as that of the ocean itself representing Apap bound, girdling the earth and keeping it together, yet ever trying to burst his bands and destroy it.⁹ A Ptolemaic writer, Horapollo, says that the Egyptians represented the universe as a serpent devouring its tail—a subject depicted also in Gnostic gems.¹⁰ In Rabbinic belief Leviathan was coiled round the earth, and the sea appeared to Alexander, when carried into the air by griffins, as a snake encircling the earth.¹¹ So, too, the *mō-garāš-ormr* of the Edda, the serpent encircling the earth, is probably the ocean.¹² The Sīa believe in cosmic serpents, one for each quarter and one for each earth and heaven.¹³ The serpent was one of the symbols of the elements in Mithraism.¹⁴

6. Myths about serpents.—(a) Earthquakes.—

The previous idea of the serpent coiled round the earth is perhaps connected with a series of myths in which earthquakes are caused by serpents or dragons which support the earth or swell underground, and whose movements shake the earth.¹⁵

In Polynesian myths the sea-serpent, by standing erect, raised the sky from the earth—the two having previously cleaved together.¹⁶

(b) *The serpent and the waters.*—In many myths a dragon or huge serpent lays waste the land, until the king offers his daughter in marriage to the knight who will slay it. Or a maiden must be given to it at intervals; at last it is the turn of the king's daughter, and then the monster is slain by a hero or saint or divinity. In some of these tales the serpent lives in a lake and keeps back the water-supply. In others a water-spirit does this, or the spirit is embodied in a serpent. Such tales are found in ancient Babylon and Greece, in all European countries, as well as among Negroes, Mongolians, Japanese, Ainu, Kabyles, Eskimo, and American Indians.¹⁷ They have a basis in fact—in the terror inspired by huge serpents, perhaps propitiated by human sacrifice. Instances of such sacrifices occur sporadically, and divine serpents fed with human flesh have already been referred

to. The association of huge serpents with water is in accordance with wide-spread belief.

Bushman belief connected a monstrous horned snake with the waters, and in Hottentot myth fountains contain a snake, and they dry up if it is killed.¹ Arab belief associated the *jinn* in serpent form with medicinal waters, and in Neh 21³ a 'dragon's well' is mentioned, probably a sacred pool with serpent guardian.² In the Greek myth of Cadmus the dragon guarded the well of Dirce, and the Styx was also believed to be guarded by dragons. In Annam the spirit of the waters appears as a serpent, which also takes human form.³ Celtic myth knows of dragons and serpents in lochs,⁴ just as in Guiana and Zuni tales a serpent lives in a pool sacred to him.⁵

Other myths speak of a serpent-race, like the Indian Nāgas, dwelling under water, and capable of assuming human form.⁶ The *dracs* of French folk-lore and water-dwelling snakes in Montenegrin belief are hostile to men, like those of Cambodian and Laotian belief.⁷

(c) *The serpent and creation.*—Sometimes the serpent figures as the origin of the world (cf. the Tiamat myth) or as creator.

In the Netherland Islands the serpent which pushed up heaven from earth was cut in pieces, which became the islands, and its blood the stars. In Bushman myth snakes were struck by Cagn and became men. A Saliva myth tells how the Caribs sprang from the flesh of serpents. Among the S. Massim a huge snake cut to pieces is said to have been changed into the reefs.⁸

In the Solomon Islands Kahausiware, a spirit in snake form, made men and animals, but was chopped to pieces by a woman, when good things became bad and death entered. The Sioux myth of the first men tells how their feet grew in the ground like trees till a great snake set them free as men.⁹

(d) *Origin.*—The origin of snakes themselves is sometimes mythically related.

They were made from fragments of the god Angoi, slain by another god (S.E. Borneo); from the breast of the child of a sky-maiden and a mortal, cut in two (fugao of the Philippines, Mandaya); or from a bark-cloth twisted and filled with thorns (E. Africa).¹⁰

(e) *Rainbows and eclipses.*—The rainbow is regarded as a great snake among the Semang (who think that the places where it touches earth are unhealthy to live in), the Shoshone, the Australian aborigines, the Dahomans, the ancient Persians, and many other races.¹¹ Eclipses are often regarded as caused by the efforts of a serpent or dragon to swallow the sun or moon.¹²

(f) *The serpent and immortality.*—The serpent was believed to have no fear of old age,¹³ or to be immortal, because it casts its skin,¹⁴ apparently renewing its life. According to many 'origin of death' stories, man was meant to be immortal by the same process, but the serpent received the boon because the messenger sent to man told the serpent this secret, or snakes heard the message and men did not, or because the creator was angry with them.¹⁵ Hence the cast skin of a serpent is a powerful 'medicine.' Among the Lenguas of Para-

guay all animals, except fish and serpents, are thought to share immortality with men.¹

In a wide-spread myth a hero restores a friend by using a plant which he has seen a serpent use to bring back another serpent to life, as in the Greek story of Polydus and Glaucus.²

(g) *The serpent and the language of birds.*—A common belief existed that eating the flesh or heart of certain snakes, especially of a fabulous white snake, gave the eater wisdom or a knowledge of beast language. As the serpent was regarded often as an embodiment of supernatural wisdom, to eat its flesh caused transference of that to the eater. The serpent was supposed to know beast and bird language, as Democritus thought, because it was generated from the mixed blood of birds.

This belief forms the theme of innumerable folk-tales and existed in ancient times. The gift could also be conferred by a grateful serpent licking the ear of a man, as in the Greek myth of Melampus, or in other ways.³ In many quarters the snake is believed to give inspiration through its spirit, or to cause possession,⁴ and in all parts of the world—Central America, Mexico, among the Huidas and Tingits, in New Ireland, New Zealand, and the Solomon Islands—representations of a man holding a snake, a lizard, or a frog with its tongue to his tongue are found.⁵ The idea is probably that of receiving inspiration from the animal.

(h) *The serpent and the magic stone.*—There is a wide-spread belief in the king of serpents who wears a jewelled crown—a magical possession which men try to win.⁶

On such a huge serpent wearing a golden crown the earth was founded, according to a Borneo myth.⁷ That the serpent has in its head a jewel or magic stone much coveted by adventurous men, who try to obtain it, is the subject of many tales in India, Malaysia, and Indonesia, and among the American Indians.⁸ In Sinhalese myth the stone is dropped by the serpent to give it light; in a similar Nigerian myth, to attract its prey, when the seeker is able to obtain it by craft.⁹ Among the Roro-speaking tribes of British New Guinea a sorcerer obtains a black stone from a snake after ritual preparation and by worrying it till it drops the stone, when he runs off with it, pursued by the snake. The stone kills any one touched by it. This bears some resemblance to the Gaulish method of obtaining the 'serpent's egg'.¹⁰ Other tales speak of a magic ring in a serpent's mouth which, once obtained, grants every wish.¹¹ The Dayaks keep anything found in the mouth of an ancestral snake as a charm.¹²

Somewhat analogous is the Andamanese belief that a small snake produces streams of oxide of iron and white clay by emitting a fluid when disturbed.¹³

(i) *The serpent and treasure.*—Another common belief is that dragons lie upon gold, or guard treasure, or have magic possessions—a common Teutonic and Scandinavian belief, shared by the Arabians (the winged serpents guarding incense-trees), and by the Greeks (the dragon-guardian of the golden apples of the Hesperides), Romans, Chanés of S. America, and the tribes of E. Africa.¹⁴

Because of this mythical connexion with treasure, as well as because deities or heroes with some serpent-attribute—Quetzal-

coatl, Kneph, Ea, Indra, Cadmus—were pioneers of civilization and taught men mining and agriculture, A. W. Buckland thought that serpents may have played some part in aiding man to discover metals, and hence were worshipped.¹

(j) In a number of stories having a very different provenance, but showing a certain parallelism, a small worm or snake taken into a house grows to monstrous form and is with difficulty got rid of.² Or the snake enters the body of a person, causing great discomfort.³

7. *Woman and the serpent.*—In folk-tale and myth, and occasionally in ritual, woman is brought into relation with the serpent, which is often her lover or husband. This is but one aspect of the world-wide myths in which an animal marries a woman, though frequently the animal is a god in disguise or a being now human, now animal, often as a result of enchantment. But in many instances, especially among savages, the snake is a snake *sans phrase*, because of the method of thought by which no clear distinction is drawn between human and animal forms,⁴ possibly also because of the connexion of snake and *φαλλός*.

(a) Of the first series the European examples are mainly variants of the Beauty and the Beast cycle, and the serpent is a youth bewitched to serpent form till a maiden releases him from the enchantment by kissing him or burning his snake-skin.⁵

Greek mythology contains similar stories, though here the serpent is usually a god in disguise.⁶ A similar myth was told of Faunus in Roman mythology, possibly because serpents were kept in the temple of the Bona Dea.⁷ Both Greek and Roman legend related that gods as serpents were fathers of well-known personages by human mothers.

Olympias, wife of Philip, was approached by the god Ammon as a serpent, and gave birth to Alexander the Great. A serpent was found lying by her as she slept, and, as Olympias was given to the cult of Dionysos, in which serpents figured, the germ of the legend may be found in this.⁸ The mother of Aristomenes had united with a god in serpent-form, as also the mother of Aratus. In her case the serpent was Asklepios, and a figure of her sitting on a serpent existed in the temple of Asklepios at Sicyon.⁹ Augustus was the son of a serpentiform deity, and his mother could never get rid of the spots left by the serpent on her body.¹⁰ A similar legend was told of the mother of Scipio the elder.¹¹ Possibly all such stories arose from the use of serpents in the cult of Dionysos, or from the fact that barren women visited the temple of Asklepios.¹²

According to Athenagoras, Kore, daughter of Rhea, had a monstrous aspect and horns. Then he tells how Zeus did violence to Rhea, who changed herself to a *δράκαινα* to escape him, when he now became a dragon. In that form also he violated Kore.¹³ Reinach sees here two parallel traditions, and thinks that Zeus and Kore had both serpent form and that Zagreus was hatched from an egg as a horned serpent.¹⁴ Parallels from savage folk-tales exist.

In a New Guinea tale a youth is enabled to take serpent form and obtains a girl, afterwards resuming human shape. Or a serpent can take human form and marry human brides.¹⁵ In a Zuni tale Kóloowisi, the serpent-god, catches a girl, but takes human shape, renouncing his serpent-skin.¹⁶ In Polynesian legend such tales are told of a huge eel which can take human

form.¹ Similar tales of snakes that can take human shape and marry girls are told among the Kafirs, Formosans, and Negroes of Jamaica.² A Rabbinic idea was that, through intercourse of the serpent with Eve, her descendants were corrupted, the serpent having then almost the form of a man.³

(b) In the second group the serpent has no human form, and the tales, mainly of savage provenance, are extremely realistic and disgusting.

Examples occur among the tribes of New Guinea, the Admiralty Islanders, Eskimo, American Indians, and Guaranos.⁴ Echoes of such stories are found in early Christian literature—e.g., the *Acts of Thomas*, where a dragon or snake loved a girl. In the *Visio Pauli* faithless virgins must endure the embraces of serpents in hell.⁵

(c) These tales may be connected with actual custom and belief.

The python god Dahh-gbi of the Ewe has many priestesses, and is supposed to marry young novices secretly. According to one writer, the girl is placed in a pit with serpents and told that one will take human form—really one of the priests.⁶ The Onyckolum compel a woman to marry, saying that, if she does not, she will marry the great snake Aké.⁷ Among the Akikuyu, at the worship of the snake-god, who requires wives, women and girls go to the huts built for him, where, however, the priests visit them. The children are fathered on the god.⁸ Girls at initiation among the Basutos are taken to a stream where they are told a great serpent will visit them.⁹ The Hottentots believe in a serpent with human organs which visits women in sleep, and a somewhat similar belief is found among the Macusi.¹⁰ A 16th cent. treatise on Brazil says that barren women among the Indians were struck on the hips with a snake, with which soothsaying was also observed, as a means of their having children.¹¹ Some Australian tribes believe in a serpent which attacks women.¹² In many other instances the serpent seems to be associated with the fruitfulness of women.¹³ —e.g., in Greece women slept in the temple of Asklepios and thought themselves visited by the serpent-god in their dreams, and their offspring was believed to be the result of this visit. Again, virgin or married priestesses are often associated, though not exclusively, with serpent shrines or ritual, in some instances probably because the serpent representing an earth-goddess was best served by women. The shrines of the pre-Apollonian Pytho and of Gaia, later consecrated to Apollo in N. Greece, the shrine at Lanuvium, that at Shaikh Haredi in Egypt, the temple of the python in Uganda, as well as the ritual of the Thesmophoria, and the wives of the serpent in Dahomey, are cases in point. The ritual with serpents in the Dionysiac mysteries and 'the snake gliding over the breast,' with the meaning already referred to, doubtless give rise to some of the Greek myths. It is also certain that women had serpents as pets among the Greeks and Romans, and that lascivious practices were followed with them. Perhaps these snakes as well as those at Dahomey were trained to these practices.¹⁴

(d) Conversely a man is sometimes the lover of a snake-mistress.

The Koranas believe that the first man and a snake lived together.¹⁵ In Hudson's Island the sea-serpent as woman and earth as man united, and their progeny was the race of men.¹⁶ The Snake clan of the Pueblo Indians is believed to be descended from a snake (alternatively snake and woman) and a man who gained access to the *kiva* of the Snake people. When they assumed snake form, he seized the ferecest, which changed to a beautiful girl, the Snake Maid—a personification of underworld life which fertilizes the maize. The snakes to which she gave birth changed to men and women, ancestors of the Snake

clan.¹ In Japan stories of men's wives that are also serpents or dragons at times exist in the early mythology and in popular belief.² So in the Greek story the mistress and bride of Menippus is a lamia or serpent, and disappears when discovered by Apollonius.³ In some folk-tales and ballads a girl is enchanted so that she appears as a reptile until a youth kisses her, when she is retransformed, as in the parallel tales where the hero is thus bewitched.⁴ Hindu folk-lore has examples of beings (e.g., the *nagas*) who are women by night and serpents by day.⁵ In other instances we have a composite being, half-woman, half-serpent in the lower part of the body. Herodotus cites a myth regarding the origin of the Scythians, progeny of Heracles and Echidna, who was a serpent from the waist down.⁶ Such composite beings are known also in India, but the typical example is found in the well-known tale of Mélusine, who, married to Raymond, asked that she should spend one day each week in seclusion. One day he spied upon her and saw her in a bath, half-woman, half-serpent, and, when he called her 'odious serpent,' she left him for ever. In one version she had been cursed by her mother, a fay, to assume this form every Saturday.⁷ The story belongs to the 'supernatural bride' cycle, but Mélusine has parallels in Greek nymphs who are serpents from the waist downwards, in Egyptian art, and in the sirens—half-woman, half-fish—the form also of the Semitic Derceto or Atargatis, of Triton, and of Oannes.⁸

The converse form, in which divine beings have snake-faces, is of frequent occurrence in Egypt, as well as *vice versa*. They are also referred to in the so-called Mithras liturgy; and in some mediaval representations of the Fall the serpent has a human head and arms, or even two such heads, to address Adam and Eve at once.⁹ Among the Araucanos the servants of Pillan, the chief god, are snakes with men's heads.¹⁰

(e) The fondness of snakes for milk has perhaps given rise to a belief in their sucking the breasts of women, but in certain cases the practice may have been an erotic perversion.

The Hottentots believe that serpents come by night for women to suckle them, and bite them if they refuse.¹¹ The Mayas believe in an imaginary snake Ekoneil which glides into houses of nursing mothers, covers their nostrils with its tail, and sucks their breasts.¹² In Welsh tradition the wings of mythical flying snakes arose because they had drunk women's milk spilt on the ground and had eaten sacramental bread.¹³ The story of Caradoc, which forms part of the French Perceval cycle, relates how a serpent fastened on his arm and sucked away his life. He was saved by a young maiden presenting her breast to the serpent, which took the nipple in its mouth. Cadur then cut off its head, but with that also the nipple, which was magically replaced by one of gold.¹⁴ A close parallel exists in a Gaelic folk-tale, and less close in a Scots ballad,¹⁵ but it is probable that the source is Celtic, as the name of the wife of the Welsh Karadawe is Tegau Eurfron, Tegau 'with the golden breast.' The Egyptian goddess Neit is represented with a crocodile at either breast, and in French mediaval architecture serpents are represented suckling the breasts of women. Women are seen by visitors to hell suckling serpents as a punishment for refusing nourishment to their children.¹⁶ Some frescoes in Byzantine churches show a parallel to this.¹⁷ Lucian says that in Macedonia women pressed serpents in their hands and gave them the breast.¹⁸

(f) In some instances menstruation is ascribed to the bite of a reptile or other animal.

This is shown by images from New Guinea in which a crocodile or snake enters or emerges from the female organ.¹ Among the Chiriguano, at a girl's first menstruation, women try to drive off with sticks 'the snake which has wounded her.'² Among the Macusi girls at this time are not allowed to go into the woods lest they be amorously attacked by serpents. Basuto girls at this period dance round the image of a snake.³ Certain families at Kumano in Japan send their female children to the mountains to serve the god Sussa-no-wo. When they show signs of puberty, a dragon is said to come and glare at them.⁴ In Portugal menstruation is traced to a serpent, or women are thought liable to the bite of a lizard at this period.⁵ Cognate with these beliefs is the superstition current in Germany in the 18th cent. that the hair of a menstruous woman, if buried, becomes a snake, and the gypsy custom whereby unfruitful women become fruitful by spitting on and sprinkling with menstrual blood the place where they have seen a snake.⁶ It is also believed among the Orinoco tribes that serpents try to have connexion with menstruous women; hence they are forbidden to go into the forest. Such a woman who died of jaundice was believed to have thus exposed herself to the attack of a snake.⁷ Among the Matacos a cure for snake-bite is to drop menstrual blood into the wound.⁸

Reinach suggests that the hostility between the serpent's seed and the seed of the woman, i.e. the daughters of Eve (Gn 3¹⁰), originally referred to some such myth of the origin of menstruation.⁹ The rationale of such myths is probably to be found in the connexion between snake and φάλλος, the latter drawing blood at devirgination; menstrual blood was supposed to be produced by a similar wounding by a snake.

8. Children and serpents.—The test of the legitimacy of children by the Psylli¹⁰ is paralleled by Greek myth.

When Alcmena bore Heracles and Iphicles, respectively sons of Zeus and Amphitryon, the latter placed two serpents in the bed to see which was his son. Iphicles fled—a proof that he was son of a mortal.¹¹ In another version Hera sent the serpents to destroy the infant Heracles, who strangled them.¹²

In many tales which suggest a source for these myths serpents appear friendly to children, and visit or play with them.

Pausanias tells how a prince at Amphiclea, suspecting a plot against his child, put him in a vessel. A wolf tried to reach him, but a serpent coiled round the vessel and kept watch. The father killed it; but, learning the truth, he made a funeral-pyre for it.¹³ Vopiscus¹⁴ tells of a snake attached to a boy and regarded as his familiar, and Spartianus¹⁵ has a similar tale. Pliny tells a story of an asp in Egypt regularly fed. The son of the house died through the bite of one of its young ones, whereupon the asp killed it.¹⁶ O. W. Holmes¹⁷ cites some 17th cent. instances of the alleged friendliness of snakes for children. In Calabar a woman found a snake in her child's cradle, which the priests declared to be Olaga, a local god.¹⁸ House-snakes in Germany were supposed to watch infants in the cradle and sip milk out of their bowl.¹⁹ Numerous parallels to Grimm's *Märchen* with this incident of the snake and child exist and are doubtless connected with the fact that house-haunting snakes are regarded as spirits of ancestors.²⁰

9. Serpent origin of men.—Tribes, clans, and rulers were sometimes supposed to be descended from serpents, as in the instances of the Hopi Snake clan and the Scythians, already cited.

The Psylli were an African clan known to classical writers; in their bodies was a virus deadly to serpents, its smell rendering them senseless. To test the legitimacy of their children, they exposed them to serpents, and, if these did not avoid them, the children were illegitimate, i.e. not of the clan. Serpent-descent is indicated here.²¹ In Senegambia there is a Python clan, and each child is supposed to be visited by the

python within eight days after birth.¹ In the case of the El Kiboron clan of the Masai, who do not kill snakes, and the married men of whom are supposed to become snakes after death, it is believed that snakes never bite members of the clan—another indication of serpent descent.² A clan in Phrygia was called Ophiogenes, because they were descended from the eponymous goddess Alia and a serpent—probably the god Sabazios in that form.³ At Parium another clan bore the same name, probably for a similar reason, and the males of the clan could heal a person bitten by a snake by touching him. The saliva of some of them had the same effect.⁴ Whether the name Ophiusa, formerly applied to Rhodes and Cyprus, and the stories that Tenos, Crete, and Seriphus once swarmed with serpents, denote that serpent clans dwelt there is uncertain. The Caribs were descended from a water-spirit, with both human and serpent form, and a girl, whose child was ancestor of the Carib race.⁵ The Hudson Bay Islanders believe that men are descended from earth (the male) and a serpent.⁶ If the name Eve (Havvah) is equivalent to 'serpent,' the belief in serpent descent may have been held by the Hebrews or some branch of them.⁷

Probably such legends are connected with totemism, since, where this exists, the snake is often a totem, and the immunity from snake-bite attributed to some of the clans referred to may be explained from the belief that the snake species would not hurt its fellow-clansmen, who also would protect it. The healing of snake-bite by such people,⁸ as well as their power of handling snakes with impunity (as among the Hopi), is curious. But some of the myths may be related to a cult of a serpent as chief god, from whom men believe themselves descended.

The Peruvians were progeny of the divine sun-serpent and his consort, and a similar myth existed among the Mexicans.⁹ Kings and rulers also had a serpent origin in some instances—from a serpent-god or an ancestor conceived as a serpent. In Abyssinia the royal line began with the serpent Arwe; the semi-human serpent Cecrops was first king of Athens and ancestor of the Cecropidae; and the Mikados of Japan were also believed to have serpent descent.¹⁰

These myths should be compared with those of serpent and woman unions,¹¹ with others in which a serpent has human children,¹² and with a third group telling how serpents and other reptiles were once men, afterwards transformed to reptile shape.¹³ In others, again, women give birth to snakes, and in the Welsh laws of Hoel (A.D. 928) a woman declaring a man to be father of her child says, 'May I be delivered of a snake, if it be not true.'¹⁴

other part of the world is it more widely distributed or developed in more varied and interesting forms. This results from the wide distribution of the reptile.

India is the only country in the world inhabited by all the known families of living snakes. The chief characteristic of the reptile fauna of the Indian region is the great variety of the generic types and the number of their species, the latter amounting to no fewer than 450, which is nearly one-third of the total number of species known in the world, referable to about 100 genera, of which the majority do not range beyond the limits of India.¹

2. **Origin of serpent-worship.**—The abundant distribution of these reptiles and the serious loss of life caused by them sufficiently explain the fear with which they are regarded and the respect and worship paid to them. The animal is dreaded and revered on account of the mysterious dangers associated with it, its stealthy habits, the cold fixity of its gaze, its sinuous motion, the protrusion of its forked tongue, and the suddenness and deadliness of its attacks. It haunts houses, old ruins, fields, and pools. It is particularly dreaded by women, whose habits of walking barefoot in fields in the early dawn and groping in the dark corners of their huts render them specially exposed to its malice. Its long life and its habit of changing its skin suggest ideas of immortality and resurrection, or of purification, one festival being held at the time when its skin is sloughed.²

Attempts have been made to prove that serpent-worship was introduced into India by Scythian and other invaders from Central Asia. J. Tod,³ relying on authorities now obsolete, traced its origin to a so-called Tāk or Takshak tribe of Central Asia. But an examination of the latest authority on the Scythians⁴ shows that, while a serpent barrow and the use of the snake as an ornament or symbol are found among this people, there is no indication of a general cult of the reptile. On the whole, the wide distribution and loss of life caused by the snake in India warrant the conclusion that the cult is probably local.

3. **Distribution of serpent-worship.**—During the census of 1891 some attempt was made to collect statistics of the numbers of the followers of the various serpent-cults, but without much success, because these merge in other types of animism prevailing among the lower classes.

In the United Provinces of Agra and Oudh 35,366 persons were recorded as worshippers of the *nāga*, and 122,991 as worshippers of the snake-hero, Gūgā Pīr, with other groups less numerically important; in the Panjāb 35,344 persons were said to worship Gūgā.⁵ The results from other Provinces equally failed to indicate the wider distribution of the worship.

Some of the more important types of cult, according to their local distribution, are the following.

(a) North-West Frontier.—

In Abisāra, the modern Hazāra country, Strabo speaks of two enormous snakes, probably kept in a temple as objects of worship.⁶ A Kāfir legend tells of the destruction by Imra of an enormous snake in the Bashgul valley, whose tracks are to this day indicated by some light quartz veins, which show distinctly against the darker ground of the rocks; a tarn was formed by the blood flowing from the snake's severed head.⁷ In Baluchistan the mountain known as Koh-i-Mārān, 'peak of snakes', and the petrified dragons of Bisūt and Bāmiān indicate an ancient cult.⁸

(b) *Kāsmīr*.—In Kāsmīr and the neighbouring hills there is evidence of wide-spread worship.

The early legends are full of tales of snake-gods, especially in connexion with water-springs.¹ The Chinese pilgrim Hsien Tsang (or Yuan Chwang) states that, as Kāsmīr is protected by a dragon, it has always assumed superiority among neighbouring people.² Abul Faḥl, the historiographer of Akbar, records that 'in seven hundred places there are graven images of snakes which they worship and regarding which wonderful legends are told.'³ Legends still abound of dragons, particularly in connexion with springs.⁴ It was at one time supposed that all Kāsmīr temples were originally surrounded by artificial lakes as abodes for the Nāga water-deities, but this theory is now abandoned.⁵

(c) *The Panjāb*.—In the Panjāb, both in the plains and in the hill country, snake-worship has prevailed from ancient times.

Ælian⁶ tells how Alexander the Great found in many places snakes kept in caves and worshipped; the people implored the king to spare them, and he consented to do so; one of enormous size is described.⁷ The city of Taxila (Skr. *Takṣaṣila*, 'hewn stone,' or more probably 'rock of Takshaka,' the great Nāga king, or 'rock of the Takkas,' a snake-worshipping tribe) was apparently the site of a snake-cult which has been localized at a fountain near Ḥaṣan Abdāl.⁸ The tradition of snake-worship still exists among the Gaur Ṭagā tribe of N. India, which claims descent from the Takkas.⁹ Another centre of the snake-cult is Safidon in the Jind State, the name of which is supposed to mark the snake holocaust by Janamejaya (Skr. *sarpa-damana*, 'snake-subduing').¹⁰ Serpents, again, are connected with the widely spread legends of Rājā Rāsālū and Nīwāl Dāi.¹¹ The famous iron pillar at Delhi, erected about A.D. 415, is said to have sunk into the earth so as to rest on the head of the serpent Śeṣa, which supports the world; the king Prithivī Rājā, to make its position certain as a pledge of the permanence of his dynasty, ordered it to be taken up, when blood and flesh of the snake's head were found adhering to it—an omen which foretold his ultimate defeat.¹² In the Panjāb plains snake-worship is widely spread.¹³ In the Chambā State it is associated with the cult of Devi, the mother-goddess; she is not connected with springs like the *nāgas*, or serpent deities, but it is common to find a Nāga and a Devi temple side by side and common attributes are assigned to both. There is in Mandī, another hill State, a close connexion between the cult of Śiva and that of the *nāgas*, the latter being his, or Kālī's, favourite servants. In Kulū the rainbow is called Bughī Nāgan or Nāgin, 'the old female snake,' which points to the *nāga* being regarded as a rain- or water-god, as is usually the case in the Simla hills; but in Chambā he is described as a whitish-coloured snake that frequents house-walls, is said to drink milk; and, being regarded as a good omen, he receives worship (*pūjā*) and incense is offered to him.¹⁴ In the Panjāb hills the cult of the cobra, and in one place that of harmless snakes, is prevalent. The Nāga temples, according to C. F. Oldham, are not dedicated to the serpent, but to the Nāga Rājās, the ancient rulers of the race.¹⁵ The Gaddis, Ghirthis, and the people of Churāh worship the snake; the people of Kanaur pray thus to Nāges Deotā: 'O thou, who livest within the wall, who livest in holes, who canst go into a vessel, who canst swiftly run, who livest in the water, on the precipice, upon trees, in the waste land, among the meadows, who hast power like the thunderbolt, who livest within the hollow trees, among the rocks, within the caves, be victorious!'¹⁶

(d) *United Provinces*.—In the United Provinces of Agra and Oudh among the chief centres of the cult may be named Mathurā, Ahichhatra, and Benares.

Mathurā was a scene of *nāga*-worship, as is indicated by the local statuary and the legends of Kṛṣṇa as a slayer of dragons.¹⁷

¹⁷ Smith, p. 138 f.; F. S. Growse, *Mathurā*, Allahabad, 1883, p. 57 f.

At Jait, in the Mathurā District, there is an image of a five-headed *nāga*, whose tail was said to extend seven miles underground, until the belief was dispelled by excavation.¹ Ahichhatra, 'umbrella of the dragon Ahir,' the great ruined city in Rohilkhand, like many other places of which the names are connected with the *nāgas*—Nāgpur, Nāgaūr, Nāgōd, etc.—has a legend of an Ahir whose claim to kingship was attested by a snake shading him with its expanded hood.² In Benares Śiva-Mahādeva is worshipped as Nāgeśvar, 'Lord of *nāgas*,' with a serpent twined round his image; the Nāg Kuān, or 'serpent-well,' lies in one of the oldest parts of the city and is surrounded by snake symbols.³ In Dehra Dūn the local folk-lore is full of tales of the *nāgas*.⁴ The Agarwālā caste of traders perform the worship of Āstika or Āstika Muni, a sage descended from the 'snake-worshippers.'⁵ Their castes and tribes.⁶ Āstika is a centre of the cult. There are numerous traces of *nāga*-worship in the Himālayan districts of the United Provinces, but now chiefly connected with the special cults of Viṣṇu and Śiva.⁸

(e) Bengal.—

In Bengal the goddess Manasā (Skr. *manas*, 'mind'), or Bishahri (Skr. *vīśaharī*, 'remover of venom'), holds the foremost place. If her worship is neglected, some one in the family is sure to die of snake-bite; she is worshipped by placing an earthen pot marked with vermilion under a tree; clay images of snakes are arranged round it, and a trident is driven into the ground; sometimes the plant named after her is taken as her emblem; sometimes she dwells in a pipal-tree (*Ficus religiosa*); in places where snakes abound a special shrine or a separate room is dedicated to the goddess; her sister, Jagat Gauri, has also power over cobras and other snakes, and Ananta Deb is king of the snakes in Orissa.⁹

(f) Central Provinces and Central India.—In the Central Provinces and Central India the snake-cult is widely spread.

At Sāgar worship is offered to Nāg Deo, the serpent-god, sometimes at a shrine, sometimes at the snake's hole, by adorning him and making an image of him with butter and cow-dung on the house wall; people of the Nāth tribe carry about snakes during the Nāgpanchami¹⁰ festival and receive fees for allowing them to be worshipped.¹¹ The Kāwars greatly dread a mythical snake with a red crest on its head, the mere sight of which is believed to cause death; it lives in deep pools in the forest known as Śegakunda, and, when it moves, it sets fire to the grass along its track; if a man crosses its path, he becomes black in colour and suffers excruciating pains, which end in death, unless he is relieved by the *baiga*, or medicine-man; in one village where the reptile recently appeared the owner never dared to visit his field without first offering a chicken.¹² The cobra is specially worshipped by the *barais*, or betel-growers, who associate the tendrils of the plant with Vāsuki, queen of serpents; and the cobra is the tutelary god of the nomadic Kalkāris.¹³ In Central India almost every village has a platform built over a snake's hole, to the occupant of which is offered a wicker cover which protects the snake; a brilliant coloured picture represents the snake when it is absent; some persons tie a thread of fourteen knots round the wrist and arm and go to worship at the abode of the snake, making an image of the reptile in sacred grass, which they worship; Bhils and Bhilālas worship the python and never injure it; there are legends of families said to be immune from snake-bite and able to cure it.¹⁴ In the month of June, the first month of the rains, snakes frequently appear; in this month the Gonds try to kill a cobra, and will then cut off the head and tail, and offer them to Nāg Deo, inside the house, while they cook and eat the body, supposing the eating of the snake's body will protect them from the effects of eating any

poisonous substance throughout the year.¹ In Berār the cult prevails more among the people of the plains than among those of the hills, metal or clay images of snakes are worshipped, sometimes on an ant-hill, and, should a cobra be seen, it is regarded as a good omen; twigs of sacred trees are fixed round the ant-hill, a yellow thread is wound round them, and within the circle offerings of grain and milk are laid; the simplest form of worship is pouring milk on an ant-hill.²

(g) Assam.—In Assam the most remarkable form of serpent-worship is that of U Thlen, a gigantic snake which demands to be appeased by the sacrifice of human victims, and for whose sake, even in recent times, murders have been committed.

It lived once in a cave near Cherrapunji, and was tamed by a man who used to place lumps of meat in its mouth. Finally this hero, having heated a piece of iron red-hot, induced the reptile to devour it, and so killed it. He cut up the body, and sent pieces of it throughout the country, with orders that the people were to eat them. Wherever this edict was obeyed, the land became free of the *thlens*. But one small piece remained which no one could be induced to eat, and from this sprang a multitude of *thlens*, which still infest the neighbourhood.

When a *thlen* takes up its abode in a family, there is no means of getting rid of it, though it occasionally departs of its own accord, and often follows property when it is given away or sold. The *thlen* attaches itself to property, and brings wealth to its owner, but on condition that it is supplied with human blood. The murderer cuts off the tips of the hair and the finger-nails of the victim with silver scissors, and extracts in a bamboo tube a little blood from the nostrils, which is offered to the *thlen*. This offering must be constantly repeated. In order to drive it from a house, all the money, ornaments, and other goods must be thrown away, and no one dares to appropriate such things lest the *thlen* should follow them. Persons who are supposed to keep *thlens* are regarded with awe, and no one will even mention their names lest ill luck should follow. The superstition is probably of very ancient date, and it is supposed to be connected with the primeval snake-cults of Eastern and Further India.³

Among the Meitheis the ancestor of one clan, Pākhangba, manifests himself as a snake. 'When it appears it is coaxed on to a cushion by the priestess in attendance, who then performs certain ceremonies to please it.' Among the same tribe the *nōngshā*, or stone-dragons, symbolize the luck of the State.⁴

Among the Lushais a man acquires the right to heaven by slaying certain animals; when a snake coils round the antlers of a *sāmbhar* stag, the man sitting on the coils is conveyed to heaven.⁵ The Kābhās worship a serpent-god which once dwelt in a cave and was propitiated by the annual sacrifice of a boy and a girl.⁶

(h) South India.—In no part of India is the cult more general than in S. India.

Here we find the *kāvu*, or snake-grove, which resembles the *nāgavana* of N. India.⁷ A clump of wild jungle trees luxuriantly festooned with graceful creepers is usually to be found in the S.W. corner of the gardens of all respectable Malayāli Hindus. The spot is left free to Nature to deal with as she likes. Every tree and bush, every branch and twig is sacred. This is the *viśattum kāvu* (poison shrine) or *nāgakotta* (snake shrine). Usually there is a granite stone (*chīra kuṭakallu*) carved after the fashion of a cobra's head set up and consecrated in this waste spot. Leprosy, itch, barrenness in women, deaths of children, the frequent appearance of snakes in the garden, and other diseases and calamities brought about by poison, are all set down to the anger of the serpents. If there be a snake shrine in the garden, sacrifices and ceremonies are resorted to. If there be none, then the place is diligently dug up, and search is made for a snake stone, and if one is found it is concluded that the calamities have occurred because of there having been a snake shrine at the spot, and because the shrine had been neglected. A shrine is then at once formed, and costly sacrifices and ceremonies serve to allay the serpents' anger.⁸

Serpent-worship in S. India is of early date, if the Aioi of Ptolemy¹ take their name from Skr. *ahi*, 'a snake.'² An inscription at Banavāsi, in Kanara, records the erection of a cobra stone in the middle of the 1st century A.D.³

In Tanjore the worship of the cobra is common at the present day. People of the higher castes consider it a sin to kill a cobra, this offence being followed by childlessness, while children may be obtained by its worship. The Vellālas make an old woman cry aloud in the backyard that a sacrifice will be offered to the cobra next day, with a prayer that the offering may be accepted. Generally in the evening cooked jaggery, rice, and an egg, with a burnt offering of butter, are laid out for its acceptance.⁴ In Bellary the worship was formerly more common than at present; snake stones may be seen in every village, but few of them seem to receive much attention. Vows, however, are made before them to procure children, and, if a child is afterwards begotten, it is given an appropriate name—Nāgappa, Nāgammā, etc.⁵

(i) *The Deccan and W. India.*—In the Deccan and W. India the cult assumes various forms.

One of the favourite guardian-deities in the Deccan is Nāgobā, 'father snake.'⁶ In Gujarāt, to make amends for chance injury to a snake resulting in barrenness or loss of children, childless women worship an image of the serpent on the bright fifth of every Hindu month; this is done for one or three years, and at the final service a cobra is drawn on the ground with rice, and a silver snake is laid on the drawing; the woman and her husband bathe, dress in white clothes, and worship; after this the wife buries an iron image of a cobra at a place where four roads meet.⁷ At Thān in Kāthiāwār the twin snake-brethren are worshipped.⁸ Khāmbda in Kāthiāwār owes its fame to the shrine of the Khāmbdia Nāg, or snake; it is supposed to guard the village, which therefore needs no gates; snakes are frequently seen near the gateway and are never molested.⁹ Bhuj, the chief town of Outch, is said to take its name from the 52-yard snake which the people used to worship and feed every day with rice and milk.¹⁰

(j) *The forest tribes.*—As will have been seen from instances already given, the worship is common among the forest tribes.

The Gonds in Chhatīsgarh worship images of snakes every three years by setting out a vessel of milk for the cobra.¹¹ Members of this tribe are said to have always appeared naked before the shrine of their god Sek Nāg or Sesa Nāga.¹² The cult is common among the tribes of the Vindhyan ranges.¹³ Some Bhils, however, in W. India are reported to kill snakes when they have the chance, and the Khalbās of Gujarāt are reported not to reverence them.¹⁴

4. *The Nāgas.*—The chief serpent-worshipping race in ancient India is known as the Nāgas, who appear both in history and in folk-lore, and to whom much vague speculation has been devoted.

(a) *The Nāgas in history.*—One of the latest authorities, C. F. Oldham, distinguishes between the Nāga demi-gods in heaven and the Nāga people on earth, the former being assumed to be the deified ancestors of the latter. He concludes that the Asuras and the Sarpas, 'serpents,' of the *Rigveda*, the Asuras and Nāgas of the *Mahābhārata* and Manu, and the Asuras, or demons, of Brāhmanical tradition all represent hostile tribes, who opposed the Aryan invaders, and that the Asuras Menon, *Cochin State Manual*, Ernakulam, 1911, p. 100; B. L. Rice, *Mysore, a Gazetteer compiled for Government*, Westminster, 1897, i. 464 ff., *Mysore and Coorg from the Inscriptions*, London, 1909, p. 202 f.; for the Komati cult of nāgas see H. V. Nanjundayya, *Ethnographical Survey, Mysore*, monograph no. vi. p. 29.

were Dravidians.¹ Others regard the race of Nāgas as of trans-Himalayan origin, who adopted the snake as their national emblem, and hence gave their name to the cobra.²

'The great historical fact in connection with the Nāgas . . . is the fierce persecution which they suffered at the hands of the Brahmans; the destruction of serpents at the burning of the forest of Khandava, the terrible sacrifice of serpents which forms the opening scenes in the *Mahābhārata*, and the supernatural exploits of the youthful Krishna against the serpents sent to destroy him, are all expressions of Brahmanical hatred towards the Nāgas. Ultimately this antagonism merged into that deadly conflict between the Brahman and the Buddhist, which after a lengthened period of religious warfare terminated in the triumph of the Brahman. From these data it would appear that the Nāgas were originally a race distinct from the Aryans and wholly without the pale of Brahmanism; that those who became Buddhist were either crushed or driven out of India during the age of Brahmanical revival, and that the remainder have become converts to Brahmanism and appear to be regarded as an inferior order of Kshatriyas.'³

Much of this is little more than speculation, and all that can be stated with confidence is that the Nāgas appear to have been a foreign, perhaps non-Aryan, people, found chiefly in N. India, but occupying other parts of the country.⁴ They were powerful in Central and S. India.⁵ Castes like the Maravans, Agamundaiyans, and Kallans in Madras are possibly descended from them.⁶

(b) *The Nāgas of folk-lore.*—In Buddhist tradition, folk-lore, and art we have frequent references to the Nāgas, personages half-human, half-divine. In the legends chiefs and kings are mentioned who displayed special reverence for Buddha; his alms-bowl was their gift; their kings approach and consult the Master.⁷ The folk-tale collections of Somadeva, *Kathā-sarīt-sāgara*, and the *Jātaka*⁸ abound in tales of the Mélusine and other types in which Nāgas figure.

The king of the Nāgas dwells amidst dance and song in a happy land; 'filled with troops of Nāga maidens, gladdened constantly with their sports day and night, abounding with garlands and covered with flowers, it shines like the lightning in the sky. Filled with food and drink, with dance and song and instruments of music, with maidens richly attired, it shines with dresses and ornaments.'⁹ Their palaces are under water, or beneath the roots of a great tree, or under the Vindhyan hills.¹⁰ Their king wears a magic ring and he spits fire; he is offered honey, tried grain, and frogs, but dares not eat them;¹¹ the erection of ancient buildings is attributed to them, apparently because they were regarded as foreign artificers.¹²

5. *The historical development of serpent-worship.*—Serpent-worship in a fully developed form does not appear in the *Rigveda*, but it is found as an element of religion in the *Yajurveda*.¹⁴

'But there can be no doubt that a belief in serpents had its origin in the Veda, though the serpents meant there were at first the serpents of the dark night or the black clouds, the enemies of the solar deities, such as the *Asvins*, and not yet the poisonous snakes of the earth. The later development of these serpents and the idea of pacifying them by sacrificial offerings is likewise, as has been well shown by Dr. Winternitz, thoroughly Aryan, nor is there any necessity for adopting that laziest of all

expedients, that of ascribing all that seems barbarous in Indian religion to the influences of the aboriginal inhabitants of the country of whom we know next to nothing.¹

E. W. Hopkins remarks that in Vedic times 'serpent worship is not only known, but prevalent.'² We meet with references to Ahibudhnya, the serpent of the deep, and to Ahi, another designation of the demon Vrtra; in the later *Samhitās* the serpents (*sarpaḥ*) are a class of divine beings.³ The post-Vedic Rāhu, the eclipse demon, is, in modern belief, a serpent.⁴ The *Atharvaveda* contains numerous charms against serpents and a rite of propitiation on the full-moon day of Mārgaśīrṣa; they are recognized as gods, and called euphemistically 'biting ropes.'⁵ In later tradition many legends are connected with them, like that of Nalusha, turned into a serpent because he insulted the Ṛṣi Agastya.⁶ A series of tales describes the enmity between Garuḍa, the chief of the feathered race, and the Nāgas.⁷ Garuḍa has been compared with the Simurgh of Persian and the Rukh, or Roc, of Arab tradition, the latter of which attacks snakes,⁸ and with the Hebrew Cherub.⁹ It has also been suggested that the bird was the totem of tribes hostile to the Nāgas.¹⁰ In the *Brāhmaṇas* serpents, as developed objects of cult, occupy a prominent place, and in the *Mahābhārata*, amidst a mass of folk-tradition, the divine snakes are grouped with other celestial powers.¹¹

6. Serpents in the later orthodox cults.—The serpent is closely associated with Brāhmanical Hinduism, Buddhism, and Jainism.

(a) *Brāhmanical Hinduism*.—

The association of the snake with Śiva's symbol, the *liṅga*, is very intimate.¹² A brazen serpent surrounds the great *liṅga* at the Rājpūt shrine of Eklinga.¹³ As symbols of Śiva's energy, they appear in the remarkable Natarāja image.¹⁴ In the Hīmalāya Bhairava, one of the Śaiva group of deities, is represented by a coloured stick in the form of a hooded snake, and Śiva himself, as Rikheśvar, lord of the Nāgas, is surrounded by serpents and crowned with a chaplet of hooded snakes. If, in ploughing, the share injures or kills a snake, a short ritual is prescribed to appease the lord of the snakes. Gapeśa, the Mātṛis or Mother-goddesses, and Kētrapāl, the field guardian deity, are first worshipped on the spot; then the figure of Śiva in his form as Mṛityunjaya, 'he that overcomes death,' is drawn on cloth, and with it that of the snake-god; both are worshipped, the snake spell (*sarpamantra*) is recited, and a fire-sacrifice (*homa*) is made.¹⁵ The *Lingāyats* (*g.v.*), as Śaivas, naturally worship snakes.¹⁶ Other deities are also associated with the serpent. At Ter, probably the ancient Tagara, the hooded snake accompanies an association of Śiva, Viṣṇu, Brāhmā, and Sūrya, the sun-god, and Śakti Devi, impersonation of the female energy at Chitrāri in the Chamba State, bears a bell and snake in her right hand.¹⁷ At Jaipur, in Orissa, Kālī is represented with her hair brushed back under a snake fillet and surmounted by a distended head of a cobra,¹⁸ while in S. India Bhadrakālī's image, with two wings, is covered with serpents.¹⁹ Probably in commemoration of his feats as a dragon-slayer, a living snake guards Kṛṣṇa's shrine, and at Pandharpur

his consort, Rādhā, holds snakes in her hands.¹ Viṣṇu resting on Ananta or Śeṣa, the world-serpent, is a common subject in religious art. He sleeps upon the serpent whose heads support the world, during the intervals of creation.² In his form Nārāyaṇa, at Bālaḥi in Nepāl, his image has a snake-hood projecting over the water.³

(b) *Buddhism*.—The records of the Chinese Buddhist pilgrims supply numerous examples of the serpent-cult in Buddhism, particularly as guardians of trees and springs.

Two dragon-kings washed the infant Buddha; the dragon grants a site for monasteries in his lake; the Nāga Rāja, Muchilinda, protects Buddha with his folds.⁴ On the Bodhi Gaya rails the nāga spreads his hood, and at Bharhut a king with a five-headed snake-hood kneels before an altar behind which is a tree.⁵ At the Sarpa (or serpent) cave, excavated about the time of Aśoka, a three-headed serpent of a very archaic type appears.⁶ In W. India the Śaiva Buddhist converts preserved their original snake-worship.⁷ In the records of the Chinese pilgrims we find Buddhist *śramanas* worshipping the nāga and conducting rites at nāga shrines.⁸ A favourite gift at modern Buddhist pagodas in Burma is a representation in gold of the Lord Buddha, with a hooded snake raising itself over him.⁹

(c) *Jainism*.—

In Jainism the symbol of the Tīrthakara Pārśvanātha is a serpent (*sarpa*).¹⁰ The colossal statue of Gomatesvara at Srāvāna Belgola (*g.v.*) is surrounded with white ant-hills from which snakes emerge.¹¹ The Nāgamalai, or snake-hill, is said to be the remains of a great serpent formed by the magic art of the Jains, and prevented by the power of Śiva from devouring the Śaiva city of Madura, and at the Rāmatīrtha stands a Jain image covered by a cobra with expanded hood.¹²

(d) *Sikhism*.—Sikhism also has associations with the snake.

Guru Har Gobind, as a child, destroyed a cobra sent by an enemy to attack him, and he killed a monstrous python which in its previous birth had been a proud *mahant*, or prior, who embezzled the property of his disciples; Guru Har Rai acted in the same way to a python which in a previous existence had been a *paṇḍit* who used falsely to vaunt the power of the Vedas.¹³

7. The serpent in its various manifestations.—The snake-cult assumes many forms.

(a) *Controlling water*.—The belief that serpents live in, guard, and control water—lakes, springs, and rivers—is a belief common to many races.¹⁴

In the records of the Chinese pilgrims a nāga rides on the winds, passes through space, and glides over the waters; another brings fertilizing rain; on a mountain pass 'there are poison dragons, who when evil-purposed spit poison, winds, rain, snow, drifting sand, and gravel-stones'; other wicked dragons are restrained from sending rain-storms; people resort with their shamans to the tank of the Nāga Rāja Elāpatra, and by cracking their fingers and praying they obtain rain or fine weather.¹⁵ Many lakes and tanks in N. India are sacred to serpents.¹⁶ All the wells in Kāśmīr—especially hot springs—are associated with snake-worship.¹⁷ The tutelary guardian of the largest Kāśmīr sinuous motion of the snake suggests its connexion with rivers, as in Burma, where three snakes, one of which is cut into three pieces, produce three rivers and four canals, and in Sikkim, where the course of the river Tista is straight because the king of serpents led it into the plains.¹⁸

(b) *The chthonic snake.*—The snake living in crevices of the earth is often identified with deceased ancestors and is regarded as chthonic.¹

Marmots in the Himalaya are credited with the power of producing storms because they live in the bowels of the earth with the *nāgas* that cause thunderstorms.²

In the *Brāhmaṇas* 'they chant the verses (seen) by the Queen of the Serpents (*sarpa-rājñī*), because the earth is the Queen of the Serpents, for she is the Queen of all that moves (*sarpat*).'³ Thus the snake becomes associated with fertility and eroticism.⁴ Therefore the cult is largely in the hands of women.

Among the Komatis of Mysore women worship snake images set up in performance of vows, and believed to be specially efficacious in curing sores and giving children.⁵

Hence snake-worship is often performed at marriages, as among the Bedars of the Deccan by married women, by Brāhmins in Kanara, by Lambādīs in Madras.⁶ The cult of earth fertility-goddesses, like Ellammā or her impersonation, the Mātangī, is accompanied by snake symbols.⁷ This is specially the case with the house-snake, which is regarded as the family-genius.⁸

(c) *Snakes representing ancestors.*—The conception of the snake as a fertilizer is, again, connected with the belief that the spirit of an ancestor, which takes shape as a snake, is re-embodied in one of the successors.⁹

In the Central Provinces Sonjharā women will not mention the name of the snake aloud, just as they refrain from naming their male relatives.¹⁰ When Mandalay was founded, the king of Burma ordered that a pregnant woman should be slain in order that her spirit might become the guardian *nat* of the city; offerings of fruit and food were made to her spirit, which was supposed to have taken the shape of a snake.¹¹ In the Central Provinces it is said that a man had three wives, who were cremated with his body. 'While they were burning, a large serpent came up, and, ascending the pile, was burnt with them. Soon after another came up and did the same. They were seen by the whole multitude, who were satisfied that they had been the wives (of the deceased) in a former birth, and would become so again after this sacrifice.'¹²

When Chitor was stormed by the Muhammadans (A.D. 1313), the Rājputs, with their wives and children, perished by fire in an underground chamber. 'Superstition has placed as its guardian a huge serpent, whose venomous breath extinguishes the light which might guide intruders to the place of sacrifice.'¹³

(d) *Snakes guardians of treasure.*—The chthonic snake is naturally guardian of treasure buried in the earth. This incident often appears in folklore.¹⁴ J. Forbes tells a ghastly tale of a snake which actually occupied a cavern in which treasure was supposed to lie.¹⁵

(e) *Snakes identifying and protecting kings or heroes.*—The basis of this belief, according to one suggestion, is that, as representing the ancient rulers, they naturally protect their successors.

The Nāgas of the Central Provinces derive their name from the *nāg*, or cobra, and assert that a cobra spread its hood to protect the tribal hero from the sun.¹⁶ The claim to the throne of Sanga, the hero of Mewār and Kekar of Jaisalmer, was recognized in the same way.¹⁷ The same tale is told of the great chief Holkar,¹⁸ and of the infant Buddha, whose image at

Sārṇāth represents him sheltered by the coils and hood of a three-headed snake.¹ The world-snake, Śeṣa, protected the infant Kṛṣṇa from a rain-storm.²

(f) *The snake as a healer.*—Throughout India the *nāga* is invoked to heal disease of all kinds, particularly loathsome sores. Hence parts of its body are valued as remedies.

Among the Taungthas 'there is but one medicine current, the dried gall bladder and the dung of the boa-constrictor, which is supposed to be, and is used as, a remedy for every thing.'³

In the Garo hills the skin of a certain snake, when applied to the part affected, cures pain.⁴

(g) *The snake-jewel.*—The snake has in its head a jewel possessing magical powers.⁵

'It is sometimes metamorphosed into a beautiful youth; it equals the treasure of seven kings; it can be secured only by cowering or horsedung being thrown over it; and if it is acquired the serpent dies. . . . Its presence acts as an amulet. . . . It protects the owner from drowning . . . allowing him to pass over rivers dry-shod.'⁶

Snakes make precious stones, like those in Malabar, which are formed by divine serpents blowing on gold in the depths of the earth.⁷

8. *Places immune from snakes.*—Like Sardinia, Ireland, and other places, certain localities in India are immune from snakes.⁸

It is believed that no poisonous snakes exist in those parts of the Kāśmīr valley from which the peak of Harāmāk is visible.⁹ On the Ratnagiri and Talaimalal hills venomous snakes are said to be innocuous.¹⁰ The family saint of the Kālīār Rājputs in the Panjāb is Kālā Sayyid; any one sleeping near his shrine must lie on the ground lest he be bitten by a snake; but, if a snake bites a man on a Kālīār's land, he will suffer no harm.¹¹

9. *Snakes and totemism.*—The worship of the serpent seems to have originated independently of totemism.¹² Descent from the snake, the use of its name as a sept title, the tabu which prevents its slaughter, and the respect paid to it when dead all appear in India.

(a) *Descent from the snake.*—

The Muāls and Nāgvansis of the Central Provinces claim descent from a male and female snake, and the Hajjām barbers of Bombay from the world-serpent, Śeṣa.¹³ Some Nāgar Brāhmins in Nimar are said to be the offspring of Brāhmins and Nāga women; some Brāhmins for this reason refuse to eat with them, and in Baroda they call their women Nāg-kanyā, 'snake-maidens.'¹⁴ In Burma there are people who say that they are descended from the egg of a *nāga*.¹⁵ The Gandhmāls believe their ultimate ancestor to have been a cobra; hence they specially observe the Nāga-pācāmī festival¹⁶ and eat no cooked food on that day.¹⁷ A group of Vellālas in Madras say that they spring from a Nāga-kanyā;¹⁸ and the ruling family of Chota Nāgpur claim their origin from the serpent Pundarika Nāg.

(b) *Septs and sub-castes named after the snake.*—Nāg is a common title of caste-sections in Bengal, Madras, and other parts of India.¹⁹

(c) *Tabu against killing snakes.*—This is partly general and partly confined to groups which claim descent from the serpent.

According to Manu, killing a snake degrades the offender into a mixed caste, and a Brāhman must give a spade of black iron.²⁰ In Madras a cobra is popularly believed to be a Brāhman;

²⁰ *Laws*, xi. 69, 134.

it is a deadly sin to kill it, and the offence necessitates an extreme form of penance.¹ The Badagas of the Nilgiri hills will not kill a snake nor pass near a dead one.² In W. India, in spite of its destructive nature, a cobra is never killed; when one appears in a house, the people bow to it and pray it not to harm the inmates; at the most, if it is caught, it is put in an earthen jar, and this is laid in a lonely spot; the Vāpīs of Ahmadnagar, if they wish to get rid of a cobra, have it caught with round wooden scissors and set at large in a neighbouring field.³ One penalty for killing a snake is leprosy, and this disease attacks any one who destroys its eggs by disturbing the ground in which it dwells, or by setting on fire jungle or grass in which it lives and breeds.⁴

Among the Khātrīs of the Panjāb a snake was once born to one of the Abrolā sept, and another fed the ancestor of the Ohhotrās; both septs worship and will not kill the reptile.⁵ In the Central Provinces the Hatwās are descended from a snake, belong to the Nāg gotra, will not kill a cobra, will save it from death at the hands of others, and sometimes pay snake-charmers to release those which they have captured; an oath by the snake is their most solemn form of affirmation.⁶ The same tabu prevails among the Nāgēsh sept of the Kaltyās in Bengal and the Nāgbel sept of the Nāhāls in the Central Provinces.⁷

(d) Respect paid to dead snakes.—

In the Central Provinces, if a Parjā of the snake sept kills one accidentally, he places a piece of new yarn on his head, praying for forgiveness, and deposits the body on an ant-hill where snakes are supposed to dwell.⁸ In Travancore, if a dead cobra was found, it was burned with the same ceremonies as a man of high caste.⁹ In W. India a special rite (*nāgabali*) is performed by those who desire children, by those who suffer from bodily disease, who have killed a snake, or whose nearest relative has died from snake-bite.¹⁰

10. Persons dying from snake-bite.—The person dying of snake-bite is considered tabu, because his body has been occupied by the snake-god. Hence the corpses of such persons are usually disposed of in a way different from that observed by the group.

Among the Sāgars of Bombay those who die of snake-bite are cremated on the village common, probably in the hope that the spirit may depart at once, and, if this is not done, it is said that they will fail to receive absolution.¹¹ The Jātapu Kandhs generally burn their dead, but those dying of snake-bite are buried.¹² In parts of the Central Provinces, if a person has died by hanging, drowning, or snake-bite, his body is burnt without any rites, but, in order that his soul may be saved, a fire-sacrifice (*hom*) is performed after the cremation.¹³ In N. India a person dying in this way is believed to be re-born as a snake in the next life. In order to avoid this, an image of a snake is made of silver, gold, wood, or clay, offerings are made to it, a Brāhman is fed, and a prayer is made to Vāsuki Rājā to release the soul.¹⁴

11. Magical cures for snake-bite.—

In Baroda an expert is summoned who applies charmed cowdung ashes to the bite, and, with a charm, ties knot after knot on a thread; if the patient is restless, he dashes some handfuls of water on his eyes, and tries to force the snake to leave his body; after this treatment the snake explains why it bit the man; if the injury which prompted the snake to bite was trivial, it agrees to leave the patient; if severe, it refuses to leave, and death follows; members of a Nāgar Brāhman family are expert in this treatment.¹⁵ In the *Atharvaveda* there are numerous charms for the exorcism of snakes from houses or against snake-bite; a central feature of such charms is the invocation of the white horse of Pedu (Paldwa), a slayer of serpents.¹⁶ A favourite means of cure is by the 'snake-stone,' which is supposed to suck the poison from the bite.¹⁷

Certain clans, families, and individuals claim the power of curing snake-bite or are closely identified with the snake.¹

Such are the Kir of the Central Provinces,² the Snake-tribe in the Panjāb,³ and the Bodlās in the same province.⁴ Ghāsīdās, the founder of the Satnāmī (*q.v.*) sect, is said to have been gifted in the same way.⁵ Among the Todas certain men have a reputation for curing snake-bite: the limb bitten is bound in three places with a cord of woman's hair; with a piece of a certain tree the healer strikes the limb, repeating an incantation.⁶

Various charms are used to repel the attacks of snakes. These are often made in the shape of the reptile.

Such is the *nāgapatam*, the most primitive form of ornament worn by Nāyar women in S. India, which represents a hooded snake.⁷ Men and women in Vizagapatam are very fond of wearing earrings of brass or gold wire twisted to symbolize a snake, with one end flattened out and pointed to represent the head.⁸ The head ornament of a Marāthā Brāhman woman bears in the centre an image of a cobra erect, representing Śeṣa Nāga, the serpent-king.⁹ Ladākhi women wear, as their national head-dress, a snake-shaped plaited strip of red cloth.¹⁰ In Bengal a *karabi* root (*Nerium odoratum*), pulled whilst the breath is held, on the night when the snake-goddess, Manasā, is worshipped, protects the wearer from snake-bite, but its efficacy lasts only one year.¹¹ A rosary made of the vertebrae of snakes is used in Tibet for necromancy and divination.¹²

Many sacred places are in repute for the cure of snake-bite.

In the Central Provinces a visit to the shrine of Bhīlat Bābā, a local saint, cures possession by devils and snake-bite.¹³ That of Mahā Siddhā, 'the great saint,' has the same reputation in Berār.¹⁴

With the same object *ex votos* in the form of snakes are often dedicated.

Brāhmans in Madras offer images of snakes to appease the wrath of Rāhu during an eclipse, and in Tamil temples models of snakes, especially those coiled in *coitu*, are offered to propitiate serpents.¹⁵ Coiled snakes are constantly represented on Indian temples.¹⁶

12. Tree- and serpent-worship.—The connexion between tree-worship and serpent-worship has probably been overstated by J. Fergusson;¹⁷ but some instances are forthcoming.

In Buddhist times 'the tree-deities were called Nāgas, and were able at will, like the Nāgas, to assume the human form; and in one story the spirit of a banyan tree who reduced the merchants to ashes is called a Nāga-rājā, the soldiers he sends forth from his tree are Nāgas, and the tree itself is "the dwelling-place of the Nāga."¹⁸ This may explain why it is that the tree-gods are not specially mentioned in the Mahā Samaya list of deities who are there said by the poet to have come to pay reverence to the Buddha.¹⁹ On the Bharhut *stūpa* are various reliefs of *nāgas* engaged in worshipping sacred trees or possibly the Buddha immanent in them.²⁰ A similar subject from S. India is described by Tod.²¹

In Mysore 'the stones bearing the sculptured figures of serpents near every village are always erected under certain trees, which are most frequently built round with a raised platform, on which the stones are set up, facing the rising sun. One is invariably a sacred fig, which represents a female, and another a margaśa, which represents a male; and these two are

married with the same ceremonies as human beings. The bilpatre (*vilva-bilva-patra*) (*Figle marmelos*), sacred to Siva, is often planted with them.¹

In Bellary it is said that the five Pāṇḍava brethren concealed their arms on a *saini*-tree (*Prosopis spicijera*), and that their weapons turned into snakes and remained untouched till they returned.²

13. Worship and propitiation of snakes.—The worship and propitiation of snakes are so closely connected with orthodox and unorthodox cults that it is often difficult to disentangle them.

(a) Worship of the living snake.—

A snake temple at Calicut contains several live cobras, which are fed by priests and worshippers; they are carefully protected, and allow themselves to be handled and made into necklaces by those who feed them; they are venerated as representing the spirits of ancestors.³ The worship of living snakes is also found in Mysore and at Vaisarpadi near Madras, where crowds of votaries assemble, generally on Sundays, in the hope of seeing the snakes preserved in the temple-grounds.⁴ In the island of Nainativoe, Ceylon, consecrated snakes used to be tenderly reared by the Pandāram priests, and fed daily at the expense of their votaries.⁵ At Bhāṇḍak, in the Central Provinces, a cobra appears in the snake-temple on all public occasions, and similar cases are reported from Rājāmudri, Sambalpur, and Manipur.⁶

(b) Snake temples.—Temples in which snake-worship is performed are numerous.

At the most ancient temple in Bilāspur and in Chhattisgarh the only image is that of the cobra.⁷ At Nāgarcoil, in Travancore, is a temple of the snake-god containing many stone images of snakes; snake-bite is not fatal within a mile of the temple; at Mannarsala the sacred enclosure contains several living cobras.⁸ At Nimbargi, in Bijapur, a woman saw her cow dropping its milk on a serpent's hole; she was ordered in a dream to build a temple over it, and to close its doors for nine months; but in her impatience she opened it prematurely, and found that a half-finished image of Sītārām and a *liṅga* had sprung from the ground—a legend obviously invented to explain the form of the image.⁹ Among the Jādējā Rājputs of Kachh the chief procession is that of the Rāv to the snake temple in Bhuj fort.¹⁰ A curious illustration of the fusion of Islām with animism is found in the snake mosque near Manarghāt, at the foot of the Nigiri hills, where an annual festival is held and alms are collected for the mosque.¹¹

(c) Snake-worship at ant-hills.—Snake-worship is often conducted at ant-hills supposed to be the home of snakes.¹²

The Dhangers of the Central Provinces say that the first sheep and goats came out of an ant-hill, and, to stop the damage which they caused to crops, Siva created the first Dhanger; hence they revere ant-hills, never remove them from their fields, and at the Divāli, or feast of lights, worship them with offerings of rice, flowers, and part of the ear of a goat.¹³ Some tribes in Madras worship snakes by pouring milk on ant-hills.¹⁴ The worship of the ant-hill at marriages and the custom of bringing the lucky earth from them are possibly connected with the fertility cult of snakes or of ants, because they multiply in great numbers.¹⁵

(d) Propitiation of snakes.—

In N. India the Agarvālā branch of traders, who have a legend of snake-descent, have an annual rite for propitiation of snakes at which various ceremonies are performed, and sesameum charmed with a spell is sprinkled in the house to preserve the inmates from snake-bite.¹⁶ In Central India, to propitiate the snake-god Nāgdeo, milk is placed by Bhils near the hole of a cobra.¹⁷ A solemn annual service to propitiate the Nāga rain-deities is held in Tibet.¹⁸ In an important cycle of folk-tales a monster or dragon is appeased by the periodical sacrifice of a

victim, often a girl, who is finally rescued by a hero.¹ Frazer regards the tales as reflecting a real custom of sacrificing girls or women to be the wives of water-spirits, who are often conceived as great serpents or dragons.²

In the worship of serpents it is important to note that the offerings made to *nāgas* are not such substances as are usually eaten by snakes, but things suitable for the food of men.³ In S. India among the rites performed by the twice-born classes are *nāga-pratishṭha*, the worship of the cobra in the form of a carved stone image, and *nāgabali*, or the performance of the obsequies of a dead cobra with all the formalities observed in ordinary funeral-rites.⁴

(e) Worship of snake-heroes.—Many deified snake-heroes are found in India.

Such are Gūgā or Guggā Pir in the Panjāb and Rājawa and Soral in Hoshangābād.⁵ In the Central Provinces the Bharias worship Karuā, 'the black one,' the cobra who, they say, was born in the tribe; he hid in the house-oven because he happened by accident to see one of his brothers' wives without her veil, was burnt to death, and is now deified by the tribe.⁶ Another worthy of the same class is Bilat, a deified cowherd, whose disciples are believed to be able to cure snake-bite with the long sticks which they carry.⁷

(f) Snake-festivals.—The chief snake-festival is that known as the Nāgpañchamī, 'dragon's fifth,' in N. India and Nāgara-panchamī in S. India, because it is held on the 5th day of the light half of the month Srāvana, or Sāvan. Its occurrence in the rainy season is possibly connected with the power of the snake to give rain.

In S. India, on the eve of the festival, worship is rendered with offerings of flowers and incense at snake-holes, and milk is poured into them; the stone images of snakes under sacred trees are visited with reverence; on the day of the feast these images are washed, milk, curds, etc., are poured on them, flowers are presented, and other offerings made.⁸ In the Central Provinces, during the month of Srāvana, a man must be sent on a certain day to eat cakes at the shrine of the snake-god and return; if this is neglected, the family will be attacked by cobras.⁹ In other parts of the Province Brāhmins on the day of the feast must not cut vegetables with a knife, but only with a scythe, and may not eat bread baked on a griddle; the priest comes to the house in the morning, and, if he tells the owner to do something ridiculous, he is bound to do it; on that day every guest who eats in the house must be branded on the hind-quarters with a burning stick, the host doing this stealthily; schoolmasters take their boys to a stream, where they wash their slates, worship them, come home, and eat sweetmeats.¹⁰ Wrestling contests are held on this day, and it is suggested that this is done because the movements of the wrestlers resemble the writhing of a snake.¹¹ In the Deccan, on the first day of the feast, images of snakes are painted on the walls of the house, worship is offered to them, and an old woman recites a legend explaining the origin of the rite.¹² In the Himālayan districts of the United Provinces Siva is worshipped under the title of Rikhegwar, as lord of the *nāgas*, in which form he is represented as surrounded by serpents and crowned with a chaplet of hooded snakes; the people paint figures of serpents and birds on the walls of their houses, and seven days before the festival steep a mixture of wheat, grain, and pulse in water; on the morning of the Nāgpañchamī they take a wisp of grass and, tying it up in the form of a snake, dip it in the water in which the grain has been steeped, and place it with money and sweetmeats before the pictures of the serpents.¹³

At the temple of Jagannāth (g.v.) at Puri 'the supremacy of Vishnu is declared in the festival of the slaughter of the deadly cobra-da-capello, Kālī-damara, the familiar of Siva and his queen.'¹⁴ Vispu, in the form of Ananta, 'the infinite,' the snake-god Śeṣa, is worshipped at the feast of the Anant Chaudas, on the full moon of Bhādon, which, like other snake-festivals, falls in the rainy season.¹⁵ A remarkable rite in N. India is that of the *gurūi*, when girls go to a tank or stream and float dolls, which are beaten by the boys with long switches, possibly a purgation, fertility, or rain cult.¹⁶ A similar rite is known as

godhan in Bihār.¹ In other parts of N. India people go about begging during the rainy season for two and a half days, during which time they do not sleep under a roof or eat salt; the object is said to be to avert the danger of snake-bite.

14. The snake in Hindu religious art.—Representations of the snake and its worship appear throughout Hindu religious art.

Figures of the Nāga Rājā, often in connexion with those of Buddha, appear in many cave-temples.² The figures of the nāgas at Ajanta (q.v.) are specially interesting.³ A favourite subject is Viṣṇu as Nārāyaṇa resting on the world-snake, Śeṣa.⁴

15. The snake in folk-lore.—The snake naturally plays a leading part in the folk-lore of India. Here only a few instances can be given.⁵

The snake knows the powers of life-giving plants, and the language of birds and animals can be acquired by eating some part of the flesh of a serpent.⁶ According to Philostratos of Lemnos, their hearts and livers were eaten in India, and knowledge of the language and thoughts of animals was thus attained.⁷ According to the Santāls, the power of understanding the speech of animals is given by Manasā, king of serpents.⁸ In another Santāl tale a snake teaches a woman an incantation which, if used when dust is thrown into the air, will cause the person against whom it is aimed to be burned to ashes.⁹ Omens are naturally taken from snakes. In Madras a person should postpone his journey if he sees a cobra or a rat-snake; and in Kumaun, when a snake crosses a man's path, he must tear a rag from his clothing and place it on the trail of the reptile; if he fails to do so, he falls sick or suffers some other evil.¹⁰ In Madras any one who dreams of a snake is considered to be proof against its bite; if a man dreams of a cobra, his wife or some other near female relative has conceived.¹¹ If a man has marks of a snake on his right foot, or a woman on her left, they are incarnations of some deity.¹² In the Panjāb some snakes which drink buffaloes' milk are so swift as to be able to bite a galloping horse; two-headed snakes are common; there is a snake which poisons the breath of a sleeper, strikes him with its tail, and is able to remove from the bedside sticks which might be used against it.¹³ The Sanskrit names for the snake, *drig-visha*, *drishiti-visha*, 'having poison in the eyes,' imply that it can poison by a mere glance.¹⁴ The hamadryad is supposed to pursue its victim over hill, dale, and water.¹⁵ Among the Todas a person whom a snake has bitten must not cross a stream; if it is absolutely necessary that he should cross, he must be carried over it.¹⁶ The same people explain eclipses by the fact that a snake once hunted a hare, which took refuge in the moon; the moon promised to protect it. 'The snake still goes sometimes to catch the hare in the moon, and when he goes the moon becomes dark and some people fire guns and send up rockets and the Todas shout.'¹⁷

The Kadu Gollas of Mysore believe that, if a woman in her courses enters the house, they will be bitten by snakes or stung by scorpions.¹⁸ In N. India a snake is said to become blind on seeing a pregnant woman.¹⁹ In the Konkan the bite of the rat-snake is poisonous on Sunday, but harmless on other days; if it is in a field with a buffalo, whichever sees the other first will survive, while the one first seen will die; when buffaloes bathe, this snake sucks their milk under water.²⁰ One snake in Ratnagiri can kill people by merely casting its shadow on them from a tree or the roof of a house.²¹

LITERATURE.—To the knowledge of the writer no comprehensive monograph on serpent-worship in India has been published. Some aspects of the subject have been investigated by J. Fergusson, *Tree and Serpent Worship, or Illustrations of Mythology and Art in India*², London, 1873; C. F. Oldham, *The Sun and the Serpent*, do. 1905; W. Crooke, *PR*², do. 1896,

ii. 121 ff.; A. de Gubernatis, *Zoological Mythology*, do. 1872, ii. 388 ff. For other references see *EB* xi. 676 ff. Some of the abundant and scattered literature on the subject has been quoted in the article.

W. CROOKE.

SERPENT-WORSHIP (Teutonic and Balto-Slavic). — I. *TEUTONIC*. — 1. Lombard snake-worship.—In the 7th cent. St. Barbatus melted down the golden image of a viper, which the Lombards worshipped in secret. Unfortunately we know nothing further of this cult.¹

2. Wisdom and healing powers.—The Teutons, like most other peoples, believed in the wisdom of the serpent and in his powers of giving health and strength.

Hother, the adversary of Balder, came to his enemy's camp, and heard that 'three maidens had gone out carrying the secret feast of Balder. . . . Now they had three snakes, of whose venom they were wont to mix a strengthening compound for the food of Balder, and even now a flood of slaver was dripping on the food from the open mouths of the serpents.' The eldest maiden refused to give the food to Hother, 'declaring that Balder would be cheated, if they increased the bodily powers of his enemy.'²

Saxo also tells us how Roller saw his mother preparing a meal for himself and his step-brother Eric. 'He looked up at three snakes hanging from above . . . from whose mouths flowed a slaver which dribbled drops of moisture on the meal. Now two of these were pitchy of hue, while the third seemed to have whitish scales . . . Roller thought that the affair looked like magic. . . . For he did not know that the snakes were naturally harmless, or how much strength was being brewed for that meal.' Eric chooses the broth made from the dark snake, 'judging the feast not by the colours but by the inward strengthening effected,' and so he attains 'to the highest pitch of human wisdom,' knowledge of animal language, and success in war.³

Somewhat similar results come from the eating of the heart of the snake or dragon, Fáfnir, by Sigurd the Volsung.⁴ We find a parallel for this superstition of the potency of the snake's slaver in the Lithuanian custom of putting their sacred house-snake on the table and letting him touch their food.⁵

3. The snake and the soul.—The cult of the house-snake probably prevailed at one time among the Teutons.

'Plenty of old tales are still told of *home snakes* and *unkes*. On meadows and pastures, and even in houses, snakes come to children when alone, sip milk with them out of their bowl . . . they watch infants in the cradle, and to bigger children they shew treasures: to kill them is unlucky. . . . If the parents surprise the snake with the child, and kill it, the child begins to fall away, and dies before long.'⁶

'In some districts they say every house has two snakes, a male and a female, but they never shew themselves till the master or mistress of the house dies, and then they undergo the same fate.'⁷

The cult of the house-snake is a wide-spread religious practice, and seems to be a form of ancestor-worship, arising from the notion that snakes embody the souls of the dead. In some Teutonic legends and superstitions the snakes appear to embody the souls of those who are still alive—a survival perhaps of the primitive belief in the 'external soul.'

Paul the Deacon tells the story of King Gunther, whose 'soul crept out of his mouth in the shape of a snake . . . passed a little brook and entered a mountain, afterwards returning again to the mouth of the king. . . . The king in the meantime had dreamt that he crossed a bridge over a river, and arrived in a mountain full of gold. The treasure . . . was afterwards actually lifted.'⁸

Several Northern stories appear to contain reminiscences of the custom of rearing house-snakes.

Thora, daughter of Herod, king of Sweden, at the command of her father, 'endured to rear a race of adders with her maiden hands,' which grew until they became a public nuisance and were killed by her wooer, Ragnar Lodbrok.⁹ According to the version of the story in the *Saga of King Ragnar Lodbrok*,¹⁰ the

princess kept a snake in a box, with gold under him. The snake grew until he encircled the whole room, and the gold grew with his growth.

Both snakes and dragons (which often play a very similar part in popular belief) are frequently supposed to bring wealth or guard gold.

Fáfnir was originally human, but guarded his treasure by lying on top of it, in the form of a great snake or dragon.¹ The dragon in *Beowulf* kept watch over treasure in a burial-mound. It is probable that originally the dead man was thought to appear in the form of a snake or dragon guarding the treasures that were buried with him in his grave.

Saxo tells of another snake-rearing princess:

'Siward, the king of the Goths, is said to have had . . . a daughter Alfhild, who showed almost from her cradle such faithfulness to modesty, that she continually kept her face muffled in her robe. . . . Her father banished her into very close keeping, and gave her a viper and a snake to rear, wishing to defend her chastity by the protection of these reptiles.'²

Saxo has probably misunderstood the king's motive. Sacred snakes are often tended by virgin priestesses, who are supposed to be their wives, the fundamental belief being that women 'can conceive by the dead in the form of serpents.'³ A legend recorded by Grimm⁴ is noteworthy in this connexion:

'Once, when a woman lay asleep, a snake crept into her open mouth, and when she gave birth to a child, the snake lay coiled tightly round its neck, and could only be got away by a milk-bath; but it never left the baby's side, it lay in bed with it, and ate out of its bowl, without doing it any harm.'

4. The snake in the other world.—Saxo gives a detailed account of Thorkill's visits to the other world:

After crossing the bridge which divided the world of men from the world of monsters, he came to the dwelling of Geirrod where 'the flooring was covered with snakes.' Afterwards Thorkill and his companions went to visit Utgarda-Loki. They came at last to a cave of giants, situated in a land of eternal night. 'The entrance was hideous, the door-posts were decayed . . . the floor swarming with snakes.' Then in another cavern 'he beheld a number of iron seats among a swarm of gliding serpents. Next there met his eye a sluggish mass of water gently flowing over a sandy bottom. . . . Again . . . a foul and gloomy room was disclosed to the visitors, wherein they saw Utgarda-Loki, laden hand and foot with enormous chains. . . . They could scarcely make their way out, and were bespattered by the snakes which darted at them on every side.'⁵

We may compare this with the description of the place of punishment in the Prose Edda:

'In Corpse Strand there is a great and evil hall, and the doors face the north; it is all wrought of snake-backs, but the snake-heads look into the house, and breathe out poison, so that the poison-streams run along the halls, and oath-breakers and murderers wade those rivers as it is here said:

"I know a hall standing
Far from the sun
In Corpse Strand,
The doors face north
Poison drops fall
In from the windows."⁶

'There Niðhöggr devours
The corpses of the departed.'⁷

Niðhöggr lives with a great number of snakes in the spring Hvergelmir under the great World-Tree, the Ash Yggdrasil.

'The Ash Yggdrasil,
Suffers hardships
More than men know . . .
Niðhöggr crawls underneath.'⁸

'More snakes lie
Beneath the Ash Yggdrasil
Than unwise fools can think of . . .
I think they will always
Be spoiling the boughs of that tree.'⁹

The conception of the universal tree was perhaps suggested by tree-sanctuaries such as the Upsala sanctuary and the great Romove sanctuary of the

Baltic peoples.¹ The above-quoted lines point to the conclusion that at one time it was customary to keep snakes in these sanctuaries; we know that a sacred serpent was kept at Romove.² Snakes evidently appear in the other world because they embody the souls of the dead. Two of the snakes who gnaw Yggdrasil's Ash are called Ofnir and Sváfñir—names which are also given to Odin, the god of death.³

5. The world-snake.—Just as the sacred tree seems to have given rise to the idea of a universal world-tree, so probably the sacred snake gave rise to the idea of Miðgarðsormr, the great world-snake, which lies in the sea, coiled round the whole earth.

Miðgarðsormr, Hell, and the wolf Fenrir are children of Loki and adversaries of the gods. At the end of the world Miðgarðsormr will come up on to the land, breathing out poison. Thor, the thunder-god, will do battle with him and be killed by his poisonous breath.⁴

6. Conclusion.—We know something of the beliefs about snakes prevalent among the Teutonic peoples, but practically nothing about the ritual of the snake-cult. The Teutons seem to have regarded the snake as possessed of special gifts of knowledge and healing power; but on the whole its malignant aspect seems to be predominant. The snake is clearly regarded as an embodiment of the soul, and so comes to be connected with death, the land of the dead, and the powers of destruction.

II. LETTISH, LITHUANIAN, AND OLD PRUSSIAN.

—1. The house-snake.—The cult of the house-snake was one of the 'almost incredible things' which Jerome of Prague related to the Council of Basel (1431-37) when describing his experiences as a missionary among the Lithuanians. Each *paterfamilias* had his own serpent in a corner of the house, to which he gave food and did sacrifice.⁵

In the middle of the next century Joannes Meletius (Menecius) gives similar evidence:

'Moreover the Lithuanians and Samogitæ keep snakes warm under the stove, or in a corner of the steam-room where the table stands. These snakes they worship as they would a divine being; and at a regular season of the year the sacrificers summon them forth to share the meal. They come out and climb up over a clean cloth and sit on the table. When they have there tasted the several dishes, they go down again and hide themselves in their holes. When the snakes have gone away the men gladly eat up the dishes of which they have had a first taste, and expect that for that year all things will turn out happily for them. If, however, the snakes have not come in answer to the prayers of the sacrificer, or have refused to taste the dishes placed on the table, then they believe that in that year they will suffer some great calamity.'⁶

About thirty years later Alexander Guagnini describes the worship of house-snakes, which was still kept up by many of the country people in Samogitia.

They revered a particular kind of snake 'with four tiny feet, like lizards, and black and fat in body, called in their native tongue *givojitos*.' Guagnini tells the story of a pagan, living in a village near Vilna, who, having been persuaded by a Christian to kill his sacred snake, was horribly deformed, because, as he said, he 'laid wicked hands on the serpent, his domestic god.'⁷

The Letts also were in the habit of rearing and worshipping house-snakes, which were so tame that they could not harm man or beast belonging to the house; even the children would play with them and have them in their beds.⁸ It was the duty of the Lettish goddess Brehkina to cry out to all who entered: 'You must leave the milk-

mothers [i.e. house-snakes, toads] unharmed in the house.¹

Matthæus Prætorius quotes from Bretkius a detailed description of the consecration of the house-snake.

'A *weidulut* or *maldininks* is called, who brings with him one or more snakes. Thereupon the table is laid, and a *kauzele* (i.e. bowl) full of drink, and a can of beer set out.' The *weidulut* prays and the snake creeps up on to the table. 'Soon he makes a circle round the snake, which thereupon lies as if dead, until the *weidulut* has finished his prayers, which are many. Then the snake is sprinkled with beer out of the consecrated *kauzele* and after that it moves again, and, on the command of the *weidulut*, touches some of the food and gets down from the table by means of a towel. The *weidulut* notices the place that the snake will occupy and hallows it by prayer. Thereupon the snake establishes itself in its place. The host, however, with the *weidulut* and the inmates of his house, is joyful and concludes this consecration with much drinking and all manner of amusements.'²

Erasmus Stella and Guagnini call the sacred serpents of the Baltic peoples *penates*. It is almost certain that here, as elsewhere, the cult of the house-snake was a form of ancestor-worship. The Lithuanians named their house-snakes *givojitos*, *givoitos* (cf. above), 'the living ones' (cf. Lith. *gyvatė*, 'snake,' derived from Lith. *gyvas*, 'living'). It is therefore highly probable that they shared the almost universal idea that the snake, owing to his power of sloughing his skin, is immortal and a fit embodiment for the spirit of the dead, the ever-living ancestor.³ The association of the *paterfamilias* with a special snake, and the Lettish term *peena maates* (cf. below), point to the same conclusion.

The snake as household god or ancestral spirit would naturally further the interests of his own family at the expense of others. The Letts, we are told by Fabricius, reared huge serpents which would steal milk-pails from neighbouring herds and bring them back to their own people.⁴ From the same authority we learn that these people knew how to injure their enemies' crops by magic arts, but he does not state that they used snakes for the purpose. Prætorius, however, gives an interesting piece of evidence for such practices among the Lithuanians in the 17th century:

A certain man who had been a servant in Insterburg, near Lithuanian Georgenburg, told how various villages in the neighbourhood still kept (though in great secrecy) a *monininks*. At certain times in the year, usually spring or autumn, the *monininks* called the people together and collected various snakes through magic prayers, and charmed them by certain magic characters. The table was then laid, food and drink set out, a special place prepared for the snakes, and milk set out for them. The snakes were brought up on to the table, and at the command of the *monininks* touched all the food, after which the feast took place and was concluded with much drinking. After the meal each person present told the *monininks* the name of his enemy, and how he wished him to be injured. 'If some one wished his enemy's grain to be injured in the field, the *weideler* took a snake in his two hands, charmed it anew, prayed again some magic prayers, and let it dart away to the door or window, with these words: *Szmiksst per Esze, i.e., Go through the fields . . . thereupon the specified corn, and other grain in the field was injured through hail . . . If the *weideler* said: *Szmiksst per arnida*, then the supply of bread was injured.'⁵*

This seems to be a survival of beliefs and practices connected with the house-snake.

2. The sanctuary-snake.—The serpent cult was not confined to the house. In Samland, it seems, large numbers of snakes were reared in an oak-wood in honour of the gods.⁶ Prætorius⁷ explains that *zaltones* were snake-charmers, who had charge of the snakes consecrated to Padrympus. This information, however, can scarcely be drawn from personal observation, as Prætorius tells us else-

where that in his day Padrympus was no longer invoked by name.¹ Padrympus, or Potrimpus, was one of the deities to whom the famous Romove sanctuary was consecrated. In his honour a snake was kept in a large jar, crowned with sheaves of corn, and fed with milk by virgin priestesses.² Grunau's account of Old Prussian beliefs has perhaps been regarded with undue scepticism. In this case his statement is supported by the evidence of comparative religion. In diverse parts of the world snakes are tended by virgins, who apparently are considered as their wives.³ The custom of giving milk to serpents is even more universal, most likely because milk is the food of children. The fundamental idea seems to have been that the dead could be born again into their own families. We find traces of this belief among the Scandinavians and elsewhere.

'Behind the Greek notion that women may conceive by a serpent-god seems to lie the belief that they can conceive by the dead in the form of serpents.'⁴

Hence the snake's influence over human fertility. The term *peena maates*, 'mothers of milk,' suggests that some such conception prevailed among the Letts. The word *maates*, 'mothers,' is due to the Lettish preference for female deities.

It is easy to understand why the snake was the peculiar treasure of Potrimpus.

Among the Eve-speaking peoples of the Slave Coast 'a close connexion is apparently supposed to exist between the fertility of the soil and the marriage of these women to the serpent. For the time when new brides are sought for the reptile god is the season when the millet is beginning to sprout.'⁵

Snakes are commonly credited with power over the weather and the crops; Potrimpus is an agricultural deity—one of the many agricultural deities whose cult was ultimately merged into that of Zemynle (Lettish, *semmes maat*, 'mother of earth'), the great earth-goddess. It is worth noting that the name Potrimpus may be connected with Old Prussian *trumpa=fluvius*, and that David tells us that 'flowing waters were appropriated to him.'⁶ Water-spirits are often thought to have the appearance of snakes, and, like Potrimpus, they 'have an especial taste for human blood.'⁷ Possibly Potrimpus was originally a water-snake deity. This, however, is mere conjecture.

It is not improbable that at one time the serpent was a common feature of Northern sanctuaries, but here again we have no conclusive evidence.⁸

3. The god of healing.—Michalo, a Lithuanian writer of the 16th cent., believed that his nation was of Italian origin on account of the striking similarity of Lithuanian and ancient Roman rites, 'especially on account of the cult of Æsculapius, who is worshipped in the form of a serpent—the same form in which formerly he migrated from Epidaurus to Rome.'⁹ This serpent-god can be none other than the Ausschaits who in the 16th cent. was still worshipped by the Sudavians in Samland, and who is equated with Æsculapius in the *Constit. Synod. Evangel.* of 1530. His name occurs in various forms:

'Auscentum deum incolunitatis et aegritudinis.'¹⁰ Auschleuts (also Auschkaute) 'der Gott aller Gebrechen, Krankheiten und Gesundheit.'¹¹ 'Auszweltis, nach Bretkius Auszwelkus, ein Gott der Kranken und Gesunden, von sweikas gesund, sweikata Gesundheit.'¹² This derivation is probably correct.

⁷ P. 46.

David gives us a further piece of information about Ausschauts. He describes in detail the usual harvest festival at which four special gods were invoked.

If, however, the harvest was unsuccessful, the priest prayed 'to their excellent and most mighty god Ausschaut, that he would intercede for them with the above-named four gods: Pergubius, Perkunus, Schaystix and Palwittis.' Every one must then contribute some barley, for the brewing of the beer, and atonement must be made for every breach of village law. The women then brought bread (made from the first crop of wheat) for them to eat at their consecrated feast. The festival lasted until all the beer had been consumed.¹

There is a parallel to this in the customs of the Eve-speaking people.

'They invoke the snake in excessively wet, dry, or barren seasons; on all occasions relating to their government and the preservation of their cattle; or rather, in one word, in all necessities and difficulties in which they do not apply to their new batch of gods.'²

4. The mythical serpent. — The worship of actual, living snakes may develop into the belief in an imaginary, idealized serpent, and so give rise to snake- or dragon-myths. Some such process may be traced in the customs and superstitions of the Letts, recorded by Fabricius and Paul Einhorn.

'Some of them rear dragons, in their houses, which steal crops, which they bring back to their own people; others nourish huge serpents, etc.'³

Paul Einhorn seems to have been much puzzled as to the true nature of the Lettish house-dragon, of whose appearance and habits he gives a detailed description:

'This nation has also had just such an evil and horrible god of wealth (i.e. as Pluto), whom they call Puke . . . but the Germans . . . call him the dragon.' This dragon was still kept by many people even in Einhorn's day. He would steal riches and crops and bring them to the people who entertained him. 'He is fiery-red in appearance and flies quietly through the air like a burning fire.' 'He is red when he is hungry; when he is well-fed with the corn he has stolen, he is quite blue and horrible to see. If any householder wishes to keep him and gain wealth through his services, he must prepare a special chamber for him . . . which must be kept perfectly clean . . . nobody must enter there, except the master of the house, and those whom he will have within . . . not every one must know what sort of a chamber it is.' He must always have the first share of all beer and bread and other food, otherwise he will consider himself insulted and burn down the house. He is often to be seen in the evening, but those who keep him do so in great secrecy, and either cannot or will not say much about him.⁴

The Lettish *puke* may be compared with the Lithuanian *aitwars*. Opinions seem to have differed as to the appearance of this being.

'The Aitwars, or Incubus, is described by the Nadraivian peasant as having human shape, but with incredibly large hands and feet.'⁵

The Nadraivians draw a distinction between the *aitwars*, the *barsdukkas*, and the *kaukuczus*, who bring wealth and crops to people.

'The Barsdukkai live beneath, the Aitwars above, the earth. These Barsdukkai look like men, but the Aitwars have the appearance of a dragon or great snake, with fiery head.'⁶

The *aitwars*, like the *puke*, sometimes does good and sometimes ill to those with whom he lives. He is in the habit of stealing. He flies through the air. He must have the first taste of all food. Occasionally he burns down the house in which he lives.⁷ It is dangerous to have an *aitwars* in the house during a thunder-storm, because Perkunus, the thunder-god, is likely to strike him for being too familiar with men, and, since it is owing to men that he is punished, he will revenge himself by burning down their home.⁸

5. Conclusion. — We have some detailed descriptions of the ritual, but little direct information as to the ideas which lay behind the serpent-cult of

the Letts, Lithuanians, and Old Prussians. To a certain extent we can supply this gap in our knowledge by comparison with the beliefs and rites of other peoples, there being no important feature of Baltic serpent-worship for which we cannot find parallels elsewhere. The Lithuanians, Letts, and Old Prussians seem to have credited the snake with healing powers and with influence over the weather, crops, and human fertility. The souls of the dead were probably thought to be incarnate in snakes. The serpent, in its malignant aspect, seems to have played little part in Baltic religion, unless, perhaps, we may trace it in the superstitions connected with the *aitwars* and the *puke*.

III. SLAVIC. — The Slavic snake-cult was probably very similar to that which prevailed among the Baltic peoples.¹

According to Afanasief, Russian peasants 'consider it a happy omen if a snake takes up its quarters in a cottage, and they gladly set out milk for it. To kill such a snake would be a very great sin.'²

Popular superstition preserved the belief that the snake brings wealth and has the gift of healing. In Slavic fairy-tales the power of the snake depends on its possession of 'living waters.'³

Certain features of the old cult of the house-snake survive in the superstitions connected with the *domovoy*, a house-spirit not unlike the Lithuanian *aitwars* and the Lettish *puke*.⁴ The *domovoy* lives behind the stove, but may be found wherever fires are lighted. He hides behind the stove in the daytime, but comes out at night and eats the food that has been left out for him. He is in the habit of robbing neighbouring peasants for the sake of his own people; occasionally he even harms those of his own household, sometimes going so far as to burn down the house. His close connexion with the domestic hearth, and the fact that he appears at times in the likeness of the master of the house, show that he is really an ancestral spirit. He is usually thought of as in human shape, but

'in White Russia the Domovoy is called *Tsmok*, a snake, . . . This House Snake brings all sorts of good to the master who treats it well and gives it omelettes, . . . if this be not done the snake will burn down the house.'⁵

Długosz, in his *History of Poland* (15th cent.), mentions a certain 'deus vitæ quem vocabant Zywie.'⁶ Brückner⁷ suggests that this Zywie, and also perhaps 'Siwa dea Polaborum' mentioned by Helmold, may be really the house-snake. Both names may be derived from *živ* (cf. Lith. *gyvas*, 'living'; cf. Lith. *gyvôte*, 'snake').

The snake, as the 'living one,' was often supposed to embody a dead man's soul, and so came to be connected with death, and to assume a malignant character. It is this aspect of the snake that appears in Slavic fairy-stories.

'In that kingdom in which Ivan lived there was no day, but always night: that was a snake's doing.'⁸ 'The Serpent (Zmyel) is described in the stories as "winged," "fiery," "many-headed" . . . he is spoken of as guarding treasures of bright metals and gleaming gems, and as carrying off and imprisoning fair maidens.' He is the great antagonist of the hero.

In some of the stories he bears a surname which points to his connexion with the Deity of the Hearth, being called Zapechny, or Zatrubnik, or Popyalof—from *pech* (the stove), or *truba* (the stove-pipe or chimney), or *pepel* (ashes).⁹

The snake seems to be similar to, or even identical with, other evil beings who figure in the stories, especially 'Koshchei the Immortal' and the flying witch, or Baba Yaga.

* In the Ukraine the flying witch is usually called a snake; in a Slovak tale the sons of a Baba Yaga are described as "baneful snakes." One of the tastes which characterize the snake of fable is sometimes attributed to the Baba Yaga also. She is supposed "to love to suck the white breasts of beautiful women." Like the Snake, also, she keeps guard over and knows the use of the founts of "Living Water"—that water which cures wounds and restores the dead to life. . . . But, as a general rule, the Baba Yaga is described as a being utterly malevolent and always hungering after human flesh. According to some traditions, she even feeds on the souls of the dead. The White Russians, for instance, affirm that "Death gives the dead to the Baba Yaga, with whom she often goes prowling about."¹

ENID WELSFORD.

SETTLEMENTS.—I. Origin and development.—Settlements (university, college, public school, or generically social) represent an attempt made by the Christian spirit in the latter part of the 19th cent. to obviate one of the gravest moral and social dangers attendant on the growth of great cities. In the days of small towns all classes—the feudal chief or lord of the manor, the leading citizens, the tradesmen, the working people—were housed not very far apart. In the cluster of villages which afterwards expanded into the metropolis there was a similar juxtaposition of the various social grades. This meant always the possibility, and often the reality, of neighbourly relations. Rich and poor, high and low, were personally known to each other and could be mutually helpful. But the expansion of the town and the absorption of the adjoining villages almost entirely swept away the old neighbourliness. The well-to-do chose for their residence the most desirable regions, where the soil, the elevation, the salubrity of the atmosphere, made for the general amenity of life. The less desirable areas were left to the inflowing tide of the wage-earning poor. Thus arose that menace to civic stability and negation of Christian neighbourliness known as the residential separation of the classes. Revolutionary Paris had shown what fearful evils might result. It was to bridge over the social chasm thus formed that the settlement came into being. It was the direct outcome of the Christian spirit.

The first modern settlement practically began when the Rev. Samuel Barnett and his well-to-do bride decided to accept the living of St. Jude's, Whitechapel, which the then Bishop of London described as the 'worst parish in his diocese, inhabited mainly by a criminal population, and one which had, he feared, been much corrupted by doles. Animated by as profound a spirit of Christian self-sacrifice as any Francis or Damien, the pair who were married on 28th January 1873 entered on their work in Whitechapel on March 6 of the same year. Two years later they paid their first visit together to Oxford, when they talked over to the men 'the mighty problems of poverty and the people.' Mrs. Barnett writes: 'We used to ask each undergraduate as he developed interest to come and stay in Whitechapel and see for himself: and they came, some to spend a few weeks, some for the Long Vacation, while others took lodgings in East London.' Among these men

was Arnold Toynbee (1852-83), who stayed with the Barnetts rather oftener than the other men, and once for a few weeks took rooms in Commercial Road; but his health was too fragile to bear the pain and strain of residence, and the experiment soon ended.

It was in the rooms of Mr. Cosmo Lang (afterwards Archbishop of York) that the undergraduates in Oxford 'first gathered to support the founding of a settlement to enable men to live with the poor.' After eleven years of service at St. Jude's in Whitechapel, the settlement premises having been built, Canon Barnett consented to become its Warden. On the anniversary of Arnold Toynbee's death, 10th March 1884, when Balliol Chapel was filled with men to do honour to his memory, and after Barnett had spoken on Arnold's example, the idea came to Mrs. Barnett and to Mr. Bolton King, 'Let us call the settlement Toynbee Hall.' So the first settlement began in the spirit of Arnold Toynbee. And of him Benjamin Jowett wrote:

'The "imitation of Christ" was to him the essence of Christianity; the life of Christ needed no other witness. His labours among the poor were constantly sustained by the conviction that some better thing was reserved both for them and for us: he saw them as they were in the presence of God; he thought of them as the heirs of immortality.'¹

Thus, prompted by the ethical and religious motive, the first university settlement at Toynbee Hall was founded in 1884. The aim of this, as of every true settlement, was to heal the breach between the classes, to bring at least representatives of all classes into helpful contact, to create a better mutual understanding, to promote by personal friendship and social study a truer civic synthesis. In other words, the settlement is designed to bring those who have many social advantages, such as education, influence, leisure, or wealth, into touch with those who have few social advantages or none, to become acquainted with the real needs of the people, to supply where lacking the elements of social leadership, and to smooth down the rough edges of social antagonism.

This general idea is capable of vast variation. There are in the British Isles nearly 50 settlements; in the United States, it is reckoned, more than 400. Kindred institutions have sprung up in Paris, Berlin, and other cities on the Continent. Almost every settlement has developed differently. The two chief causes of difference are the difference of the neighbourhood and the difference of the staff. Some settlements are pre-eminently academic; they have become a permanent resident society for university extension. Others have been intensely ecclesiastical in motive. Others, again, have been what may be termed broadly religious, shading off into merely ethical or cultural centres. A number of settlements, particularly in America, have been chiefly training schools for social workers. American settlements are often on a larger scale than British. With characteristic munificence money is poured out on large buildings and in many salaries. Perhaps the most important work of the American settlements has been the development of a common spirit and of a civic unity amid the crowd of different nationalities and languages among which they were planted.

Women's settlements, both in England and in America, have done excellent work, chiefly among women and children, in tending invalid children, in providing children's country holidays, maintaining maternity societies, co-operating with employment exchanges and care committees, training and shepherding domestic servants, health visiting, relief committee work, and training of social workers. Where the women's settlement works in conjunction with the men's settlement, the effect

¹ Arnold Toynbee, *Lectures on the Industrial Revolution* London, 1887, prefatory memoir, p. xvii.

² Ralston, p. 162 f.

upon the neighbourhood is greater. Greatest of all is that produced by settlements in which the residents are men and women, and sex is regarded as no barrier to co-operation.

2. Religious motive.—The religious motive is undoubtedly dominant in the chief workers. Graham Taylor, president in 1918 of the National Federation of American Settlements, reports:

'If the Settlement undertook either to encroach upon the prerogatives of the Churches or to show preference for any one cult or creed by maintaining religious services itself, it would forfeit its own prerogative of being common ground for all, and might be promptly and disastrously ostracized. We seem to be shut up to one of two courses: either to take the whole crowd along with us together as far as they will go, stopping short of religious divisive points; or to take far fewer as much further as we would like to, and run the risk of having no following at all as the racial transformation becomes more rapid and radical. We increasingly feel and express the broadly religious spirit, which seems to actuate Protestant, Roman Catholic, Jew and Ethical Culturist alike. But it would be impossible to agree upon any creed or ritual which would be a common denominator among us.'

A worker in the oldest settlement in Great Britain says that the dominant note in the founders was religious, in the majority of the first residents ethical.

'Religion is easy in a strictly denominational Settlement, hard in an undenominational or inter-denominational, unless the Head, like Samuel Barnett or Jane Addams, has sufficient spiritual force to give unity and expression to the various impulses and goodwill of the residents. Without such a Head, religion and even ethics evaporate.'¹

3. Schemes of residence.—The scheme of residence is varied. The common idea of a post-graduate sojourn in the slums, to enable university men and women to learn, in a few months, how vast masses of their fellow-countrymen live, was soon found to be insufficient. Permanent residents were needed to secure permanent effects, and to introduce to the general life of the neighbourhood those residents who stayed for a shorter period. Much is to be said for the ideal expressed in the homely phrase that resident households should be scattered over the neighbourhood to be helped 'like currants in a cake.' The difficulty is to get households in sufficient number and of sufficient courage to settle in the derelict district. Experience proves that such families are few. The combination of permanent settlers with a succession of sojourners has been found to be the most useful. The influence of residents is saved from becoming occasional, haphazard, or sporadic by the continuous presence of the permanent staff, who, again, are saved from sinking into the merely parochial rut by the continual advent of fresh life, with different horizons and new points of view.

4. Methods.—There is no limit to the methods employed by the settlements in their endeavour to integrate the local society. The general principle is that, wherever the settlement comes upon an unsatisfied need, it aims, so far as its resources in friends and funds permit, to meet that need. Almost every form of educational appliance has been used, from university extension to the humblest kindergarten. Some settlements have been almost exclusively educational, partaking more of the nature of a polytechnic than the usual social colony.

All kinds of social clubs for men, for women, for youths, for girls, for boys, for children; boy scouts, girl guides; lectures and discussions on all social topics; reading circles; study circles; organizations for promoting thrift, co-operative purchase, co-operative travel; adult schools, brotherhoods; concerts, art exhibitions; classes for instruction in almost every subject; 'people's drawing-rooms'; in seasons of distress, distribution of relief; medical missions, hospitals, old age homes, holiday homes, lodging houses are among the variegated forms of service undertaken by settlements. Residents very often take some part in local government, as town councillors, poor law guardians, school managers, members of care committees and distress committees.

¹ Letter to Mrs. Barnett from private secretary of Canon Barnett.

5. Results.—(a) *Social and civic.*—A generation of settlement service permits one to speak of its results. Settlements have created, in almost every district where they have been at work, a better social atmosphere. They have brought higher ideals into active touch with most sides of local life. They have done much to purify and humanize most of the forms of local administration. In American cities, where civic corruption had flourished, the work of the settlements has been in this direction vigorous and effective. Hull House, which is one of the greatest settlements in the United States, has, under the intrepid leadership of Jane Addams, rendered exceptional service in checking local abuses, and in preparing the way for the civic regeneration of the Lake City. Settlements have been especially useful as social laboratories wherein experiments have been carried out that have afterwards been taken over by the municipalities.

The cripples of London, e.g., had been entirely overlooked by the metropolitan education authority. But the Passmore Edwards Settlement, under the direction of Mrs. Humphry Ward, the Bermondsey Settlement, and the Browning Settlement took up the care of cripples in their neighbourhoods, gave them the only training that they had received, and together brought such pressure upon the London School Board that in its last days it began the work of providing for the instruction of cripples. The work was continued under the London County Council on lines that had been initiated by the settlements. Similarly, the vacation schools were introduced into London under the Passmore Edwards Settlement by Mrs. Humphry Ward. In the most central district of London they were developed by the Browning Settlement, with the aid of the municipal tramway, into a method of transporting the children of the slums day by day, for the whole day, to the school-houses, parks, and commons of the more salubrious suburbs. From this experiment the settlement has developed a further suggestion (and won for it before the war influential support) that, except for infants, there should be no schools provided in the central districts, but that boys and girls should be carried out every day by the municipal tramways to schools provided for them in the more healthy outskirts, where their playground would be the common or the heath. The holiday schools have first been recognized, and to some extent imitated, by the education authority, besides being widely copied in other cities of Great Britain. The feeding of necessitous children, carried out on scientific lines by some of the London settlements, supplied a valuable precedent and experiment to the London County Council before it finally decided to adopt the Act of Parliament. Settlements have been frequently visited and studied by municipal authorities, when devising schemes for the welfare of their school-children and of the poor in general. The more active settlements are continually engaged in making different kinds of experiments. The fittest that survive the crucial ordeal of practice are then commended for adoption by local authorities.

As settlements came into being to remedy the evil consequences of the residential separation of the classes, it is specially worthy of note that the measures that promise the ultimate extinction of slums have received their chief currency under settlement auspices.

It was from a settlement that the idea was launched that improved locomotion offered the first step to meeting the housing difficulties of our great cities, and from the same centre this idea was pressed, in a series of conferences, upon the municipal bodies of the metropolitan area as well as upon the general public. As a consequence, the fatal idea of increasing the central congestion by erecting residential barracks in the heart of great towns, where the site would be much more profitably employed for industrial and commercial purposes, was abandoned; and electrical and other improved forms of transit have not merely relieved the congestion of the central districts, but have brought all parts of the urban area into closer and easier touch with one another, have made possible a wise reconstruction at the centre, and have offered opportunity for judicious town-planning in the new suburban areas into which the population is flowing. A garden suburb, with dwellings let at rents ranging from the lowest to the highest figure, so that members of all classes can reside near each other, is a fitting culmination of the career of Mrs. Barnett, one of the initiators of the settlement movement. If only the population now being dispersed by swifter and cheaper means of transit round the circumference of our great cities were housed under these conditions, then the chief menace to the life of great cities would be removed.

(b) *Political.*—In the political life of the nation settlements have left their enduring mark. Many statesmen have owed much of their new outlook on life to the months or years they spent as re-

sidents in a settlement; and with this new social sense they have infected their comrades in Parliament and Cabinet. First-hand acquaintance with the needs of the people has also impelled settlements to seek and press for practicable measures that will meet these needs, and as a consequence settlements have done much to supply what has been termed the 'raw material of legislation.' As distinguished from the academic socialism of certain middle-class societies and from the revolutionary visions promulgated under the red flag, the demands of settlements for legislation bear the impress in almost every point of an actual social environment and of the reaction of that environment on minds continually handling concrete facts.

In Great Britain, before there were many representatives of organized labour in the House of Commons, the needs of the unemployed were voiced chiefly by settlements, and it was in response to a settlement's appeal that Queen Alexandra initiated the Queen's Fund for the Unemployed (1905), which first provided work for the workless on a national scale. From a settlement resident in a poor law union, noted as the classic instance of aged poverty, sprang the national movement which resulted in the enactment of old age pensions. This achievement was the more remarkable in that it followed the practical abandonment of the reform by both the historic parties in the State, as one that involved insuperable difficulties, financial and other. By stripping it of its partisan associations, and by an appeal characteristic of settlements to all good citizens, notably to organized labour and to organized religion, a measure was carried through with the practically unanimous support of the entire nation. It was also the experience of a settlement in its own homes for the aged which proved that it cost much less to provide the aged with a pension and with homes of their own than it did to sustain them in the workhouse with its attendant disfranchisement and degradation. The bill to establish national old age homes in place of the workhouse bore the mark of the settlement which initiated it, in that it was backed by representatives of the five parties then existing in the House of Commons. Unexpectedly and unintentionally national old age homes were made legally possible by the Housing Act (no. 2, 1914), passed without opposition shortly after the European war began.

(c) *Influence on Church and Labour.*—On ecclesiastical life the influence of settlements has been pronounced. A large number of ministers of religion have, as residents, acquired an intimate knowledge of the conditions under which the poor live, with inevitable reaction upon their teaching and the attitude of the Church. There has been in consequence a greater emphasis laid on the social teachings of Christianity. The present Bishop of London (Dr. Ingram) bears the inefaceable marks of the experience which he acquired as head of Oxford House in Bethnal Green. What is known as the Institutional Church (*q.v.*) in its distinctive methods owes much to the settlement. It has been humorously described as a settlement that does not require from its workers residence on the spot. Central missions in great cities have adopted many forms of social service first introduced by the settlement. The new religious synthesis implicit in settlement life has not yet found widely recognized expression in theology.

Graham Taylor does not think that settlements have affected the religious, much less the theological, development of the United States. But the whole social movement in which they have their part does influence the thinking, the teaching, and the methods of the Church, especially

through its nurture and evangelism, both of which, however, are very predominantly individualistic.

The settlement may be regarded as the outcome of that drift in English religious life roughly known as the Broad Church movement. The spirit of Frederick Denison Maurice (*q.v.*), operating through Charles Kingsley and his fellow-workers, took effective shape in Samuel Barnett and the settlement. But the spirit of social cohesion, which is the essence of the settlement, could not be restricted to any one ecclesiastical compartment. It has found expression in groups that are High Church, Roman Catholic, Quaker, and Congregational.

Constrained by its working-class environment, the settlement has been brought into ever closer and closer touch with the leaders of Labour and with their religious inspirations. But the leaders of the working-classes in Great Britain have for the most part sprung from that great religious awakening of the people which swept through all the Churches and may be broadly described as the Methodist movement. The lay preachers whom it inspired became the spokesmen and artificers of the new industrial democracy. Under the pressure of the social needs, which they most keenly felt and most ardently strove to meet, the individualistic tendencies of Methodism were corrected, and their religious demands assumed a social tinge entirely akin to the spirit that actuated the settlements. So at one of the London settlements were held for a number of years (1910-15) a series of 'Labour Weeks,' in which the first seven days in May were devoted to a series of appeals for personal religion by Labour members of Parliament. The speakers comprised nearly all the most important and influential Labour legislators. Visitors from over-seas spoke of the meetings as 'a revival of the old primitive Christian enthusiasm,' and remarked upon the distinctive stress laid by all speakers on personal devotion to Jesus Christ and on the ideal of the Kingdom of God on earth. The proceedings were published in English, Danish, Finnish, Spanish, and German, and have been circulated round the world. They were welcomed with a chorus of approval by the archbishops and other leaders of Churches in England, Scotland, and the Continent. Invitations were arriving, asking the settlement to organize similar 'Labour Weeks' in Norway, Finland, and in different parts of Germany, and in some cases preparations were in train, when the war broke out. It was felt that here was something more than either Methodist or Broad Church movement had advanced. Here was veritably vocal and manifest the *Labour movement in religion*. The series before the war culminated in an 'International Labour Week' (1915). Among the speakers then were M. Vandervelde (the elective head of Continental socialism), Jean Longuet (the grandson of Karl Marx and a French socialist deputy), Einar Li (a delegate from the social democratic parties of Norway and Sweden), and Hans Wirz (the editor of the official organ of the Swiss social democracy). They joined with their English colleagues in extolling the religion of Jesus Christ, in varying notes, from that of reverent agnosticism to the full assurance of evangelic faith. After the war the movement was resumed at Browning Hall in September 1919, when an International Conference on Labour and Religion endeavoured to elicit and make explicit the religion implicit in the Labour movement.

6. *Effect of the war.*—The seismic changes consequent upon the war will inevitably produce great transformations in the social landscape, and correspondingly affect the future of settlements. The claims of the war having intercepted the supply of

residents, both men and women, settlements have been reduced to carrying on their work with the minimum of assistance; and they are necessarily affected by the general uncertainty as to what will happen in the future. The trend of legislation and administration suggests the happy prospect of the eleemosynary work of settlements being abrogated or undertaken entirely by the State. In Great Britain, if the reforms promised by the Government are carried out in respect of education and housing and the elimination of the liquor traffic, a large part of the previous work of settlements will be ultimately no longer necessary.

In the transitional period of reconstruction the social experience and local knowledge of the settlements ought to make them of priceless value to the nation. The social situation which will follow the time of transition is too uncertain to be sketched in any probable forecast. Even if the dreams of Labour were fulfilled, or if our great cities were so designed and rebuilt as to make each of them a magnified garden suburb, wherein all classes dwell together in nearness and neighbourliness—which most people will consider a very remote possibility—there would still remain important functions for the settlement to discharge. It would still be needed as a social and equal meeting-ground of all classes, of all economic grades, of differing degrees of culture, of varying schools of opinion, of all the religious bodies. Mrs. Barnett considers that the war has made the work of settlements more than ever valuable as centres of union of classes. The social unity which has been precipitated by the war needs to be made permanent by the settlements. The warden of an East End settlement¹ feels that amidst all social changes the settlement should remain as a sort of civic bishopric, a centre of local synthesis, a spiritual counterpart to the administrative unity which centres in the town hall or county council chamber, wherein all the local endeavours to supplement and spiritualize the action of the State, as well as all forms of independent religious and educational activity, might find a congenial home, an exchange of ideas, and a common centre for local initiative and propaganda. The head of a Chicago settlement² judges that the initiative, interpretation, and common denominator furnished by such little groups of well-qualified personalities as are found in settlement residence promise to be indefinitely necessary. Another leader in the movement in Great Britain³ suggests that, however radically political action may readjust the interior relations of society, the settlement will for generations yet have a great part to play in bringing the inspiring influences of art and the teaching of history into the life of the people. Certain it is that those who have had the greatest experience of settlements are most ready to admit that the defects in our social system which the settlement is intended to remedy are likely to persist for generations yet to come, and that consequently it will be long before it can be said that the occupation of the settlement is gone. Whatever be its place in history, the settlement has supplied another chapter in the annals of high purpose and resolute self-sacrifice and what has been termed 'social chivalry.'

F. HERBERT STEAD.

SEVEN DEADLY SINS.—Greek philosophy tended to regard evil as a necessary defect of human nature rather than as moral wrong. Christian thought, on the other hand, though not uninfluenced by Greek speculation, followed the guidance of Hebrew Scripture and inclined more to the view of sin as a principle of rebellion on the part of free agents against the divine will. Christian teachers, brought face to face with actual cases of delinquency, naturally became more concerned with the relations of sin to the Church's creed calling for disciplinary rather than speculative treatment. At an early period in ecclesiastical history an attempt was made to fix and classify those faults of conduct which were subversive of the law of the Church and perilous to the salvation of its members. These, though their number was not at first defined, came to be called 'the deadly sins.' They occupy an important place in the order and discipline of the Roman Catholic Church and, along with the cardinal virtues, constitute its moral standards and tests. As several of these vices are separately treated in this work,¹ this article will be confined to a consideration of (1) the nature, (2) the history, (3) the unity, and (4) the general influence of the classification on literature and life.

1. **Definition and nature.**—Mortal, or 'deadly,' sins were so named in contradistinction to 'venial,' or pardonable. They are such as wilfully violate the divine law, destroy the friendship of God, and cause the death of the soul. In this they differ from venial sins, which, though tending to injure the higher life, do not of themselves involve eternal death. Mortal sins cut off the perpetrator entirely from his true end; venial sins only impede him in its attainment. According to Stoic teaching, all sins are equally heinous, and without distinction in regard to nature and consequences. The early Church, however, in accord with Scripture, contended that, in respect both of character and of effects, some sins are graver than others. Augustine affirms that he who commits a mortal sin transgresses (1) in regard to a grave matter, (2) with clear knowledge of the evil, (3) with deliberate desire ('deliberata complacentia').² The distinction between mortal and venial sins was based on 1 Jn 5¹⁶. Though the apostle clearly recognizes a difference in the character of sins, it is questionable if the passage can justify the inferences which the later usage of the Church has deduced from it. But this passage does not stand alone. In the letter of the apostolic council to the Gentile

churches (Ac 15) four things are forbidden: believers are to abstain from things offered to idols, from fornication, from things strangled, and from blood (murder). These constantly reappear as an outline of a scheme of sins so grave as to exclude the sinner from communion. In other portions of the NT are lists of condemned actions—Mt 15¹⁹, Mk 7²¹, Ro 1²⁹⁻³¹, Gal 5¹⁹⁻²¹, 1 Co 5, 2 Co 13, Rev 21⁸. In these it is difficult to find a principle of selection. The vices mentioned by Paul in Romans may be regarded as falling under the heads of selfishness, malice, pride, indifference to others. In other Pauline passages works of the flesh are emphasized—impurity, impiety, hatred, excess—while in Revelation falsehood, idolatry, unfaithfulness, impurity, and cowardice are mentioned. In general, it may be said that the sins of the NT are the ordinary vices likely to be prevalent in a semi-pagan society. The NT doctrine of sin (*g.v.*) is clearly ethical rather than ecclesiastical.

2. *Origin and history.*—As the Church grew in variety and complexity of character, it became necessary to define more clearly the difference between various sins. By some of the early Fathers (Clement and Hermas) the question was raised whether there were not some kinds of sin which, if committed after baptism, could never be forgiven.

(a) *Treatment of early Fathers.*—Hermas is the earliest writer who offers any sort of classification. In one passage¹ he gives a list of twelve virtues with their corresponding vices. The parallel is, however, not exact. The significance of his classification is (1) that it indicates within the Church a growing sense of the ethical as distinguished from the ecclesiastical import of sin; and (2) that it names some vices which suggest the germs of the classification of deadly sins as afterwards defined—*e.g.*, ἀρετή, ἀνάρη, and λύπη. To Tertullian, a severer moralist than Hermas, we owe the earliest recognition of the distinction between mortal and venial sins. Cyprian, an ecclesiastic rather than a moralist, adds little to the systematic treatment of sin, and is naturally more interested in the bearing of the Church's discipline upon offences. Not till we come to Augustine, the greatest authority upon the problem of evil, do we find the nature and variety of sin treated with fullness. But even he affords no fixed classification. The meaning and origin of evil, rather than its legal or judicial aspect, chiefly concern him. Moral guilt, he tells us, depends entirely on the will and takes its shape from the character of the individual offender. You cannot formulate a definite law for all forms of evil. Sins generally are of three kinds, he says—those which arise from infirmity, those flowing from ignorance, and those depending upon innate viciousness. In one passage he recognizes three principal types—*voluptas carnis*, *superbia*, and *curiositas*.² In another passage he traces all sin to *cupiditas* and *timor*,³ while in a third he divides vices into three general classes—sins of thought, of word, and of deed, ascribing all alike to *concupiscentia*.⁴ The germs of the list, as it was ultimately fixed, are undoubtedly latent in the writings of Augustine, but neither in his nor in those of Basil or Chrysostom, who have much to say of the evils of their age, is there any direct reference to the sevenfold hierarchy of sins.

(b) *Influence of monasticism.*—The earliest mention of the classification comes from the monks of the Egyptian desert. In the intense struggle with the flesh of which the cloister was the arena the catalogue of principal vices which afterwards held an established place in mediæval ethics was first

framed. Although the *peccata capitalia* were eight or more (sometimes regarded as eight 'states' or 'motions' of the soul), the fascination for mystical interpretations characteristic of mediæval thinking, and especially the sanctity attached to the number seven by Oriental peoples, led to its adoption as the perfect circle both of virtues and of vices. In a passage in Origen's *Hom. in Jeremiam* the seven nations of Palestine whom Israel overcame are spoken of as types of the sins of the soul. Cassian¹ refers to this as the view entertained by Serapion, a hermit of Egypt. According to Serapion, there are really eight *principia vitia*, but he explains that the seven nations of Canaan typify the seven deadly sins. On being asked why, if there are only seven nations, there are eight sins, he replies: besides the nations of Canaan there is Egypt itself, which 'stands in the elementary condition of the soul under the influence of sin'—the basis of all evil, the conquest of which gives entrance into the true monastic life. The seven others constitute the elements of the after ascetic conflict. The list as mentioned by Cassian is essentially a list of vices besetting the monastic life. The ascetic character of the deadly sins long prevailed in the East. In the West, however, largely under the influence of Gregory the Great, the deadly sins lost their monastic limitation. Their scope was widened, and they were regarded as tests of life generally. Alcuin, a follower of Gregory, maintained that laymen not less than monks ought to strive after a life of virtue, and that to all men those sins were perils.

3. *Unity and relation of sins.*—From Gregory's time onwards, while there are differences in the number and names, the list of the *principia vitia* is practically fixed. Gregory himself generally speaks of seven, separating *superbia* from the others as the root or 'leader' among the powers of darkness. The catalogue is commonly notified by the catchword, *saligia*, composed of the initial letters of the following: *superbia* ('pride'), *avaritia* ('covetousness'), *luxuria* ('lust'), *invidia* ('envy'), *gula* ('gluttony'), *ira* ('anger'), *acedia* ('sloth'). Gregory is not content with describing the seven 'rulers' or 'spirits of wickedness,' as Nilus of Sinæ calls them; he sets forth their unity and connexion. They are to be regarded as successive stages in a downward course of evil. Pride comes naturally first, since it is really the source of all the others. Selfishness or egoism is the root of all sin. Pride leads to vainglory, vainglory to envy, envy to anger, anger to melancholy, and that again to avarice. Gluttony and lust follow as natural consequences. Thomas Aquinas discourses with great fullness and acuteness upon the seven deadly sins,² which he places over against the seven cardinal virtues. After his time most scholastic writers treat of them, though the list does not always occur in the same order, and sometimes different interpretations are given to different sins. *Superbia* is variously explained. By some it is regarded as vainglory; for others it stands for selfishness generally. So also *tristitia* has sometimes been substituted for *acedia*, in regard to the interpretation of which there has been considerable difference of opinion.

It is hard to say on what principle the classification has been made. The list is somewhat arbitrary and can hardly be regarded as exhaustive. It is strange that 'lying' does not occur. *Timor*, 'fear,' is mentioned by Aquinas as a defect of the virtue of courage, implying a lack of fidelity. It is obviously a grave fault, and heads the list of evils in Rev 21⁸ which exclude from God and His salvation; yet it has no place in the catalogue of mortal sins. So, too, it is difficult to understand

² Summa, ii. ii.

why luxury and gluttony are classed as co-ordinate vices with envy, sloth, and avarice. There is a sense in which all sins are spiritual and psychical; but some are more purely mental, while others are more immediately carnal or fleshly. These are indiscriminately mixed in the classification. At first sight it may not be obvious why *acedia*, 'sloth'—the thankless distaste of life, the general feeling of apathy and irritation arising from a low bodily tone—should be regarded as a sin, and especially as a fault so grave as finally to separate the person affected by it from God. But, as we come to examine this state, we see that, even more than an outbreak of passion or coarse excess, it may be the outcome of deep-seated selfishness and the cause of alienation from, and rebellion against, God, which proves that sin in its most selfish form has been gradually though unconsciously eating into the heart.

It has been said that the classification reveals its monastic origin, but, though the separate sins are such as could be dealt with in a definite legal way, they do not represent outward acts alone. They really stand for moral conditions of the soul by no means exclusively connected with the monastic life. They cannot be regarded as laying special emphasis upon ascetic practices. All of them have a social aspect and may be considered as the perils and tests of every one, whether he be a monk or a layman living his life among the ordinary conditions of the world. The classification can hardly be said to bear witness in any excessive degree to a special age or particular order of ecclesiastical life. It includes the obvious and common sins which belong to all men and to all times and traces them back to pride of self, the source from which all other forms of sinfulness really flow—that self-assertion which is the point at which the human will breaks away from allegiance to God.

4. Influence on literature and life.—It is not wonderful that 'the seven deadly sins' have deeply impressed the consciousness of Christendom and left their mark upon literature and art. Our own poets—Chaucer, Shakespeare, Dunbar, Burns, and others—allude more than once to the familiar catalogue, and every reader of Dante knows that the 'mortal vices' enter largely into the texture and framework of the *Divina Commedia*.¹ Though the use of the list disappeared in England after the Reformation, Protestant divines of every Church and ethical writers of Britain and the Continent have acknowledged the spiritual importance of a classification of sin reached after centuries of discussion by some of the acutest intellects of the race.

SEVEN SLEEPERS.—1. Content of the legend.—The legend of the Seven Sleepers is one of the most wide-spread and pleasing of hagiographical legends. The elements of the story common to the earliest texts are briefly as follows:

The emperor Decius comes to Ephesus and there revives the worship of idols, commanding that all, and especially the Christians, should offer sacrifices to them; some Christians abjure the faith, others remain steadfast and suffer tortures. Seven youths (or, according to some texts, eight),² who live in the

imperial palace and whose names are variously given,¹ are accused of being secretly Christians, and, when brought before Decius, refuse to sacrifice to the idols. In the hope that they may waver in their resolution, Decius grants them a respite and then leaves Ephesus. The youths leave the city and hide in a cave in the neighbouring Mount Anchilus.² One of them, Diomedes (or Iamblichus), disguised in rags, goes down into the city, to inquire about what was happening in it and to buy food. Decius, returning after a short time to Ephesus, orders the youths to be conducted to his presence. Diomedes informs his companions of the order; sadly they take food, and then they all fall by divine Providence into a deep, long sleep. When Decius cannot find the youths in Ephesus, he summons their parents, who try to excuse themselves for the flight of their sons, and tell that they are hidden in a cave on Mount Anchilus. Decius orders the entrance of the cave to be blocked with large stones, so that the youths may be buried alive. Two Christians, Theodore and Rudinus,³ write the story of the young martyrs on metal plates, which they place under the stones closing the cave. After 307 years,⁴ in the reign of the emperor Theodosius II., a heresy breaks out, led by a bishop Theodore,⁵ denying the resurrection of the dead, and the emperor is greatly perturbed. Then God suggests to Adolius, the proprietor of the field where the cave is, to build a sheepfold for his flocks; for this purpose the workmen use the stones which close the entrance of the cave and thus the cave is reopened. God awakens the youths, who think that they have slept only one night, and exhort each other in turn to suffer martyrdom at the hands of Decius, if need be. Diomedes goes down to Ephesus as usual, and is so surprised to see the cross over the gates of the city that he asks a passer-by if it is really Ephesus. He is anxious to return to his companions with the news, but first he buys food, paying for it with the money he had about him, which was of the time of Decius. The vendor and the market-people, seeing the ancient money, think that the youth has found a hidden treasure and wish to share it with him; they drag him with threats through the city; many people assemble, and the youth looks in vain among them for some one of his acquaintance. The bishop and the governor question Diomedes, who narrates the whole story, and invites them to come to the cave and see his companions. They climb the hill and find the two tablets of lead, which confirm the youth's story; they then enter the cave and find his companions alive and shining in appearance. Theodosius is informed of what has happened and comes to Ephesus to the cave. One of the youths, Maximilian (or Achillides or others), tells him that, in order to demonstrate the truth of the resurrection, God had caused them to fall asleep and then resuscitated them before the Judgment Day; after this the youths fall asleep in death. A basilica was erected on the spot.

The legend in this form is clearly Christian, but it is strange, as Heller observes, that in many points, and especially in regard to the resurrection, the references are rather to the OT than to the NT.

2. Diffusion.—The legend occurs in numerous Oriental and Western texts, showing the close intellectual relations between the East and the West, but it is not always easy to arrange the texts in definite groups, and to determine exactly their interdependence.⁶

(a) Oriental.—(1) *Christian*.—The Christian Oriental literatures in which the legend occurs are: Syriac, Coptic, Arabic, Ethiopian, and Armenian. The most ancient texts are the Syriac, which are divided into two groups: (i.) *Acta* and prose accounts, (ii.) poetical elaborations. The second group is represented by a homily by James of Serugh, which has reached us in two somewhat varying forms. Of the *Acta* four distinct texts are known, the earliest seems to be one, half of which is contained in a codex of the British Museum, belonging to the latter part of the 6th century. Since James of Serugh died in 520 (there is no reason to doubt the authenticity of the homily), and it is natural to suppose that the *Acta* were earlier than the poetic elaboration, we may believe that the Syriac prose account arose at the end of the 5th or, at latest, at the beginning of the 6th century.

Only a single fragment of the legend is known in Coptic so far; it represents about a quarter of the complete text. There are various indications that the Coptic text is closely related to the Syriac *Acta*, though not directly, but through the medium of a Greek text.⁷

Two MSS are known in Arabic Christian literature, showing two distinct texts;¹ but the Ethiopian translator (see below) had at his disposal a third and better text. The Ethiopian translation,² two codices of which may be traced back to the 15th cent., must have been made at the beginning of the 15th or perhaps at the end of the 14th cent., and it forms one of that rich series of hagiographical texts whose translation from the Arabic was inaugurated by the metropolitan Salāmā.³ The general fact of the Ethiopian literature in its second period, viz. that hagiographical texts of no local saints were translated from the Arabic, and, in particular, the change of letters in the proper names—changes which are easily explained by supposing the Arabic script—leave no doubt that the Ethiopian text is derived directly from an Arabic text.

There are two Armenian texts, the shorter one certainly not later than the first half of the 13th cent., the other, much longer and more important, appearing in the *Sufferings (Labours) and Martyrdom of the Saints*, attributed to Gregory Vgayasēr, the second Armenian patriarch of this name⁴—a work belonging to the second half of the 11th cent. and probably dependent on Syriac and Greek sources.⁵ Gregory's legend of the Seven Sleepers is probably to be traced to a Greek text.

The present writer does not know whether the Georgian literature, closely connected with the Armenian, possesses a text of the legend.

Besides these full accounts there is more or less brief mention of the legend in many later historical and hagiographical works of the same literatures.⁶

(2) *Muhammadan*.—In the Arabic Muhammadan literature the legend appears in two quite distinct forms: (i.) in the Qur'ān⁷ and (ii.) in the later literature. (i.) The Qur'ān account is short and disjointed, omitting important points and adding details which are wanting in the other text. Its source is undoubtedly oral tradition; it goes back probably to Christian monks, and from them directly or indirectly the story reached Muhammad, who attached great importance to it because of its value for the belief in the resurrection—a belief often inculcated in the Qur'ān. A certain resemblance to the homily of James of Serūgh, which must have been very well known and often repeated among the Syrian monks, confirms this supposition. The passage in the Qur'ān has given rise to much research among the Arabs, and many exegetical, historical, and geographical texts attempt to settle a point about which great uncertainty prevailed, viz. the whereabouts of the cave. (ii.) The later legend agrees generally with the ancient Christian texts, viz. the Syriac *Acta*, except for the inevitable contaminations occasioned by the Qur'ān account. Considering the peaceful relations which existed between learned Muhammadans and Christian Syrians (who possessed the *dhimmah*, 'protection'), it is natural that the former should have received the account from the latter.

The long Muhammadan text starts for the most part from Muhammad b. Ishāq (†768).⁸ In other texts—e.g., the *al-Kisā'i*—the legend is mixed and confused with others.⁹ There are noteworthy Haggadic elements, especially in the Arabic texts.¹⁰ The legend is mentioned more or less briefly in many Muhammadan (Arabian, Persian, etc.)

literary works, but they generally merely copy or abridge the above-mentioned sources.

(b) *Byzantine and Western*.—In the Byzantine literature the legend is merely mentioned by Theophanes (758–816), but it is narrated at length, in a form corresponding to the Syriac, in a MS of the 9th century. There are three distinct texts published critically by Huber.¹ The story occurs in Photius² and afterwards in the *Menaea* and other texts.³

In the Latin West there is a very short account in the *de Situ Terræ Sanctæ* (520–530) of the deacon Theodosius,⁴ while Gregory of Tours († 593 or 594) narrates at length the *Passio* of the Seven Sleepers and says: 'Quam Syro quodam interpretante in Latinum transtulimus,' giving thus his authorities.⁵ But the long Latin legend is already found in MSS which go back to the 9th cent. and have been frequently copied—which shows the great popularity of the legend in the West; it is also narrated more or less shortly in many subsequent writings.⁶ Huber⁷ concludes, contrary to all probability, that the legend was written originally in Latin, though he does not exclude the possibility of its being a translation from the Greek—which is far more probable. Thanks to the Latin text, the legend found its way into the mediæval literature of the West, first in the homily and *Passio* of Aelfric (bet. 1020 and 1025).⁸

Texts are found in Anglo-Saxon, mediæval and modern English, mediæval and modern High German, ancient Norse, Swedish, French, Italian, Spanish; there is also a mediæval Irish translation from the *Passio* of Gregory of Tours. These texts are partly prose and partly verse, and some (Spanish and Italian) are in dramatic form. There is also a dramatic elaboration in Latin *senarii* by an author of the 17th century.⁹

3. *Cult.*—The Seven Sleepers have taken a place in Christian worship as much in the East as in the West, giving rise to short liturgical texts, hymns, and commemorations in the martyrologies,¹⁰ but the day of their commemoration varies greatly.¹¹ According to the legend, a church was erected above the cave by the emperor Theodosius; a church dedicated to the Seven Sleepers was built at Rome, on the Appian Way, and several in Germany.¹² Marseilles¹³ and other cities boasted of possessing their relics.¹⁴ There are miniatures representing them in the *Menologion* of the emperor Basil II. in the Vatican library, but the celebrated Vettori gem, now lost, does not seem to have represented them.¹⁵

Muhammadans also venerate the Seven Sleepers,¹⁶ and their names occur, more or less disfigured, on amulets.

4. *Parallel myths and legends*.—A characteristic motive of the legend—the long sleep¹⁷—is of wide occurrence in ancient myths and legends, such as the myth of Endymion, of the Nine Sleepers of Sardinia recorded by Aristotle,¹⁸ and especially the story of Epimenides.¹⁹ But a greater resemblance to the story of the Seven Sleepers appears in the Talmudic legend of Onias (Honi) Ha-Me'aggel,²⁰ who sleeps for 70 years and is convinced of the

¹ *Beitrag zur Siebenschläferlegende*, II. There is nothing to justify the doubt that Zacharias of Mitylene has narrated the legend in Greek and that this ancient text has been lost (Huber, pp. 10, 37). As for John of Ephesus (native of Āmid or Diarbekr), he wrote his story in Syriac, not in Greek.

ally; and indeed, where the mind and will alone rule and the heart is denied expression, the moral character lacks completeness; as Paul says, 'Love is the fulfilment of the law.' Like the other cardinal virtues, 'benevolence' has been variously interpreted, being identified by early monotheism with charity, and only later receiving a larger significance. It has been maintained, however, by some that the Platonic list is adequate and compact, covering the whole field of morality. There is no need for the special mention of benevolence or charity, since a proper conception of justice involves all forms of generosity. It is true, we must 'be just before we are generous.' But there is no such thing as bare justice. He who is just naturally recognizes the claims of others; and benevolence, charity, and even kindness and mercy are the implicates of true justice.

2. *Virtues of NT.*—The NT does not elaborate a system of ethics. Christ and His apostles deal with moral questions as circumstances dictate. While several passages set forth a catalogue of virtues (Mt 5¹⁻¹⁶, Ph 4⁸, Gal 5²², 1 Co 13, Col 3¹², 2 P 1⁵⁻⁷), these summaries are not systematic or formal, though they are characterized by a remarkable similarity in spirit and tone. They usually emphasize what have been called the 'amiable graces,' and derive all excellence of character from the spirit of love. Conspicuous among the moral ideas constantly recurring in the apostolic writings are the three virtues of faith, hope, and charity (1 Co 13, 1 Th 1², Col 3¹⁴, Ro 5, 1 P, He 10²²)—which suggests that these were regarded as moral conditions of the Christian life. They connect man with God and form the mainspring of the type of character which Christ sought to create. These graces are not set in opposition to the classical virtues. Paul at least, who had some acquaintance with Stoic philosophy, was not likely to be ignorant of the place that the latter held in Greek and Roman morals. There is no repudiation of them in the NT. All are mentioned, at least separately if not in conjunction, and indeed strongly commended.

3. *Recognition by the Church of the cardinal virtues.*—When Greek philosophy began to exercise its influence in early Christianity, it is not surprising that the cardinal virtues, so long regarded as the basal elements of character, should gradually find a place in Christian ethics. But the early Fathers, being persuaded that these virtues had reference to man's mundane life alone, added to them the Pauline graces as expressive of man's relation to the spiritual world. The four first were consequently called 'natural,' the three last 'supernatural' or 'theological' virtues. The adoption of the cardinal virtues did not come about immediately. The problem before the Church was a complex one. Though Christianity might be willing to acknowledge what was good in the moral teaching of the ancient world, it could not ignore the associations which clung to many of the ideas and practices of pagan times. If, then, the Church was to assimilate any of the existing data of morals, it was bound to impose upon them its own interpretation and to bring them into harmony with its own system of belief. Only gradually, therefore, did there come about a spirit of mediation between the old morality and the new. The earliest sub-apostolic writers were disposed to emphasize the contrast and to repudiate everything that savoured of pagan ethics. Among the first to draw attention to the importance of the cardinal virtues was Origen, who, though mentioning them as indispensable to the moral character, made no attempt to give them a distinctively Christian significance. With Ambrose, whose

de Officiis—practically a reproduction of Cicero's book bearing the same name—is the first real treatise on Christian ethics, a change of attitude becomes apparent. An effort is now made to connect the Platonic virtues with Christian ideas. 'Wisdom,' he maintains, is primarily theological as having God for its object. 'Fortitude,' or courage, is essentially firmness in withstanding the seductions of the world. But, strongly influenced by OT notions, Ambrose does not relinquish the narrower martial view of the term. 'Temperance' retains the Stoic meaning of 'observance of due measure' in all conduct, while also the Stoic idea of justice, as the union of all human interests, is enlarged to embrace the notion of Christian benevolence.

4. *Transformation under Christianity.*—There are undoubtedly indications in this earliest treatise on Christian ethics of the transforming influence of Christian thought, but it is in the writings of Augustine, Ambrose's greatest pupil, that the decisive step is taken of Christianizing the virtues. The old names frequently recur, but they are now employed in a new sense and are directed to a new object—viz. the vision of and devotion to God. Faith, hope, and love are now introduced and regarded by Augustine as the formative factors of Christian virtue, while the four earlier virtues are but the different aspects in which the love of God manifests itself.

Thus he defines fortitude as 'love cheerfully enduring all things for the sake of God; temperance, love keeping itself entire and inviolate for God; justice, love serving God only and things which to God.'

Under the influence of Ambrose and Augustine the cardinal virtues henceforth form a generally accepted scheme for the Christian treatment of systematic ethics. The triad of Christian graces is frequently simply placed at their side. Sometimes the 'seven gifts of the Spirit' enumerated by Is 11² are added, while over against them are arrayed under the head of the 'seven deadly sins' (*q.v.*) the forces of wickedness. It is possible to trace the effects of Augustine's teaching upon the writings of Gregory the Great, who by his frequent use of allegory prepared the way for scholasticism. But it is when we come to the schoolmen themselves, and particularly to Thomas Aquinas, that we discover the full effect of Augustinian thought. The scholastics go back to the old sources of moral speculation. Aristotle is *par excellence* their 'master.' In Aquinas Aristotle reappears; but it is Aristotle read in the light of Augustine. The Aristotelian division of the soul and the doctrine of the 'mean' are preserved, but the cardinal virtues are now referred to the supernatural end of man and are derived from the divine gifts of love.

Thus, in the development of Christian truth, the cardinal virtues have come to hold an acknowledged place. But they have undergone a marked transformation. The Christian cannot afford to neglect them. They stand as essential qualities. But, baptized into the spirit of Christ, they are endowed with a new meaning and worth. The religion of Jesus has so profoundly modified the moral ideas of the past that they have become new creations. The old moral currency was still kept in circulation, but it was gradually minted anew.² Courage is not disparaged, but it is shown to be not less real when evinced, not on the battlefield, but in the conflict of the soul. Temperance is still the control of the physical passions, but it is widened out to embrace the right placing of the affections. Wisdom is no longer the selfish cal-

¹ *De Mor. Eccl.* 25.

² Strong, *Christian Ethics*, p. 129 ff.

culatation of worldly prudence, but the true interpretation of the things of God. Justice involves, as before, the suppression of self in conflict with the rights of others; but the source of it lies in giving to God the love which is His due and in finding in the objects of His regard the subjects of our thought and care.

5. Unification.—Can the virtues be unified? May it not be shown that the various aspects of the 'good' are but different manifestations of one principle? Augustine was the first to recognize the great Christian truth that it is man's relation to God that gives cohesion and unity to the moral life; and he was but true to the spirit of the NT when he re-affirmed the Pauline triad—faith, hope, and charity—as the primary and co-ordinating elements of Christian character. According to him and later moralists, these qualities were not simply added to the classical virtues, but so fused and incorporated with them as to create the spiritual disposition which penetrates the entire personality and qualifies its every thought and act. So essential are these graces to the Christian life that, as we have seen, they were called 'the theological virtues'; because, as Aquinas says, 'they have God for their object, they bring us into true relations to God, and they are imparted to us by God alone.'¹ They are but different manifestations of one virtue, three facets of one gem, the supreme passion of the soul and lord of its emotions; and, like justice in the Platonic theory, the intimate spirit of order alike in the individual and in society, harmoniously binding together all the other virtues. Faith, hope, and love are one, and are at once the root and the fruit of all moral excellences. They constitute the attitude and spirit of the man whom Christ has redeemed. But, if they are to be called 'virtues,' it must be in a different sense from what the ancients understood by virtue. They are not elements of the natural man, but spiritual states which come into being with a changed moral character. They connect man with God and constitute him a member of a new spiritual order. Hence these graces must not be considered as outward adornments merely. They are radical and inherent in the Christian. They claim the whole man. They re-create and transfigure all his powers of mind and heart and will. They do not supersede or render superfluous the natural virtues. They transmute and complete them, giving them coherence and purpose by directing them to a divine object.

A. B. D. ALEXANDER.

SEX.—I. Phenomena of sex.—The general phenomena of sex as exhibited by the higher animals are familiar to all. The individuals of a species are divisible into two groups, males and females. Biologically the essential property of the male is that he comes to carry a certain type

of minute cell known as the spermatozoon. So also is the female the bearer of a peculiar form of cell known as the ovum. Death is the lot of these cells except of such as chance to fuse one with another. Through the fusion of two gametes, a sperm with an ovum, the combined product, the zygote, receives an impetus to growth, and a new individual results. The bearing of one or other of the two types of gamete is the fundamental distinction between the two sexes, and in some of the lower animals—e.g., sea-urchins—no other is to be found. But in the higher animals the sexes are further differentiated in a number of ways. Appropriate ducts and glands, differing in the sexes, facilitate the transference of the sperm from the male to the female, while in the latter sex further elaborate mechanisms are often found, serving to nourish the embryo before and after the time of birth. Besides such sexual differences as are directly subservient to the needs of the developing zygote, and are generally termed 'primary' sexual characters, there are many others of a less essential nature. The gayer plumage and the song of cock-birds, the mane of the lion, the horns of the stag, and the beard of man are well-known examples of a host of features in which the male sex differs from the female. Characters of this sort, not directly concerned in the formation and nutrition of the embryo, are termed 'secondary' sexual characters. They offer special problems of their own, especially in man, where mental characters as well as physical are doubtless to be included in this category. Owing to their social and ethical importance, a more detailed account of them is given below.

2. The reproductive process.—The process by which a new individual results from the fusion between two gametes—spermatozoon and ovum—is frequently termed 'sexual reproduction,' but from a comparative standpoint the term is not strictly accurate. Reproduction in most of the lower and smaller forms of animals is brought about by division. In the most minute forms, such as the protozoa, the whole animal divides into two portions of equal or nearly equal size, each of which becomes a fresh individual. In more complex yet still lowly animals, such as polyps and certain worms, the division is unequal, resulting in the production of one or more smaller portions or buds which eventually grow up into the adult form. In forms of life which are yet more complicated, in which the various organs are more highly differentiated, the place of the bud is taken by a single cell, the egg. Reproduction consists in the formation of numbers of eggs, which in some species develop straight away into fresh individuals of the species. In some cases only one sex is known, and reproduction may be regarded as the formation of numerous internal buds which sever their connexion with the parent while still in the unicellular stage. In higher animals the eggs are incapable of further development under normal conditions unless they fuse with another cell, the spermatozoon, though, as will appear later, even the eggs of such highly organized creatures as the frog can be artificially stimulated to develop without the intervention of the male. Reproduction has been accomplished with the formation of the eggs and sperms; the fusion with the sperm, by which the eggs are stimulated to develop, is a distinct phenomenon. It is comparable to the curious and complicated process known among the protozoa as conjugation, of which the biological significance is still a puzzle. The discovery of this phenomenon, coupled with the pronounced speculative tendencies prevalent among zoologists at the close of last century, led to the production of much literature on the question of the

¹ *Summa*, II. II. qu. 62, art. 1.

origin of sex. With the fashion then in vogue of arranging comparable phenomena in a series from what was judged the most primitive to that considered the most highly specialized, it was inevitable that attempts should be made to construct a scale with the simplest protozoan at one end and man at the other. Moreover, it was argued how each step in the scale should theoretically confer an advantage on the species which took it, thus bringing the whole process into line with natural selection operating upon the required variations of which the existence was assumed. But, while biologists remained so ignorant of the nature of variation, these essays failed to carry conviction among the more critically minded; and with the renewal of interest in the experimental study of variation and heredity, they have for the present been relegated to the background. The feeling prevalent among biologists to-day is that, if attention is concentrated upon the experimental analysis of the nature of sex, the question of its origin, in so far as there can be certainty in this matter, will gradually solve itself.

3. **Parthenogenesis.**—Parthenogenesis (*g.v.*), the development of an egg without fertilization by a sperm, is a phenomenon which invites attention in connexion with sex. Various experiments show that even in the vertebrate the egg alone may contain all the constituents necessary for a fresh individual, provided that the appropriate stimuli are forthcoming. Eggs which are naturally parthenogenetic usually differ from normal eggs in extruding one polar body instead of two, and it was suggested by Weismann that the retention of the second polar body was a form of auto-fertilization. In view of the facts of artificial parthenogenesis, this thesis can hardly be maintained, since development occurred after the extrusion of both polar bodies. Moreover, in the honey-bee the eggs which produce the drones are undoubtedly parthenogenetic, and at the same time form two polar bodies.

4. **Importance of the ovum.**—The study of parthenogenesis suggests the question whether the gametes found in the two sexes are of equal value in so far as the next generation is concerned. The matured ovum can be induced to develop without the sperm. Can the sperm be induced to develop into a fresh individual without fusing with an ovum? So far no medium has been found in which the sperm will develop except the cell protoplasm of the egg. Boveri's experiments¹ showed that a fragment of egg protoplasm is all that is required in certain species. But, until the sperm can be shown to develop in some other medium, it is possible to maintain the view advocated by some writers that the ovum is the all-important gamete, the sperm an accessory which is not always essential. There are certain characters which, on this view, are carried independently by either egg or sperm, and such characters generally exhibit some form of Mendelian heredity. But the essential characters which determine the capacity for existence reside in the cell protoplasm of the ovum, and there alone. The factors which determine the colour of the eyes or hair, the shape of the nose, or perhaps the grade of mental ability, are to be found in either ovum or sperm. But the factors which decide the existence of lungs or a backbone reside only in the cell protoplasm of the egg. In short, as one writer has expressed it, we are vertebrates because our mothers were vertebrates.

5. **Mendelian nature of sex.**—With the outburst of experimental work that followed the rediscovery of Mendel's paper on heredity,² attention was early turned to analyzing the nature of sex by the new

methods. Indeed Mendel himself had suggested in his letters to Nägeli that the inheritance of sex might follow the same lines as that of other characters. The heterozygous dominant mated with the recessive gives equal numbers of heterozygous dominants and recessives. In such matings these are the only two forms of individual produced in so far as a given character is concerned. If therefore one sex could be regarded as a heterozygous dominant and the other as a recessive, the rough equality of numbers in which the two sexes are usually produced, as well as the normal absence of transitional forms, would receive a simple explanation. For since, from the nature of the case, the mating must always be of the same type, viz. heterozygote \times recessive, only males and females of the same constitution can be formed. The question then arose which sex was to be regarded as the heterozygous dominant and which as the recessive. The matter was decided by a study of the inheritance of certain characters which have been termed 'sex-linked' or 'sex-limited.' As an example of this type of heredity, we may take the following case from poultry:

In c is completely black; in other 'barred'.
Across rse bands of black and white, the sum a bird its characteristic barred appearance. 'Barring' (*B*) behaves as a simple dominant to black (*b*). Barred cock \times black hen produce barred offspring of both sexes; and, when these are mated together, the F_2 generation consists of barred and black in the ratio 3:1,¹ thus establishing the recessive nature of black. But the remarkable fact of the case is that all the blacks are females. The explanation now generally adopted is that the female is heterozygous for a sex factor (*F*) which the male does not possess. When a female which is heterozygous for the barring factor, and therefore in constitution $FfBb$, comes to form gametes, the cell division is of such a nature that the factors *F* and *B* will not enter into the same gamete. The gametes which are formed in such a bird are therefore of the two kinds Fb and fB only. The heterozygous male (fBb) forms gametes of the two kinds fB and fb . It is clear, therefore, that every F_2 bird which is homozygous for *b* ($=bb$) must at the same time be heterozygous for *F*, i.e. must be a female. This view of the case is confirmed by the result of mating barred hens with black cocks. In every case, no matter how 'pure-bred' the barred hen was, this mating has given barred cocks and black hens only. The barred hen, however bred, is always heterozygous for the barring factor (*B*), and, since she transmits this factor only to her sons, never to her daughters, it must be supposed that her gametes are of two sorts from the point of view of sex, viz. those which give rise to males and those which give rise to females. There is at present no evidence from experimental breeding for regarding the spermatozoa as other than of the same type from the point of view of sex—in other words, the male may be considered as homozygous. Breeding experiments have shown that the same holds good also for pigeons and for certain moths.

6. **Experiments with *Drosophila*.**—There is, however, another group of cases where the breeding evidence points to the converse condition holding good—the male is the heterozygous and the female the homozygous sex.

The little pomace-fly (*Drosophila ampelophila*) normally has red eyes. Some years ago a white-eyed variety appeared, at first only in the male sex. Breeding experiments showed that white was recessive to red. From the cross red-eyed female \times white-eyed male all the offspring were red-eyed. When these F_1 flies were mated, the F_2 generation was found to consist of reds and whites in the ratio 3:1, but all the whites were males. Subsequently white-eyed females were produced, and these, when mated to any red-eyed male, gave only red-eyed females and white-eyed males. The case is the converse of that of the barred poultry. The male must be regarded as the heterozygous and the female as the homozygous sex for some factor, transmitted along Mendelian lines, upon which the manifestation of sex depends. Many other characters in *Drosophila* have recently been shown to follow the same type of inheritance as that of the white eye.

This type of transmission is of special interest owing to the fact that it is found in man also. The heredity of certain human defects, notably hæmophilia and colour-blindness, appears to be precisely parallel to the series of sex-linked *Drosophila* cases, and, so far as the evidence goes, we are forced to conclude that in man also the male is the heterozygous and the female the homozygous sex.

¹ Cf. below, § 9.

² Cf. art. HEREDITY, § 7.

¹ Cf. art. HEREDITY, § 7.

These two groups of cases, the bird-moth group and the man-fly group, at present stand sharply apart. It is, however, difficult not to believe that future work will reveal them as forming part of some more general scheme. Indeed, attempts have already been made to effect this synthesis by the assumption of selective fertilization. On this view, the difference between the sexes would depend upon more than one factor, the male and the female being heterozygous respectively for different factors. This involves the assumption of two classes of sperms and two classes of eggs, such that the sperm of class *A* would fertilize the ova of class *A* to give females, and the sperm of class *B* would unite with the ova of class *B* to give males. In the absence of direct evidence, however, any attempt at explanation based on selective fertilization cannot be regarded as having more than a suggestive value. Nevertheless, the idea that the manifestation of sex depends upon definite factors distributed among the gametes along the well-known Mendelian lines of segregation is an idea that is already firmly based upon a secure foundation of fact.

7. The X chromosome.—During the past few years a notable advance in our knowledge of the phenomena of sex has been made by American workers, among whom should be mentioned more especially E. B. Wilson and T. H. Morgan. It was discovered that in many insects the number of chromosomes in the individual cells is different in the two sexes. Where this was the case, the number and arrangement in the female were symmetrical, so that all the ova formed were alike in these respects. In the male, however, the number was less, and asymmetry occurred, so that two classes of sperm were formed. The sperms with the lower number of chromosomes united with the ova to form the number characteristic of males, while the sperms with the higher number, on fusing with ova, gave the number characteristic of females. The deduction was made that the males were heterozygous for sex, forming two classes of sperm which were male-determining and female-determining respectively. This conclusion has been strengthened by recent work on *Drosophila*, where microscopical examination of the germ cells has accompanied experimental breeding. In this fly there is a certain type of chromosome, the so-called X chromosome which, like all the other chromosomes, is duplicated in the cells of the female, but represented by a single number only in the cells of the male. Every gamete formed in the female therefore contains an X chromosome, whereas one half of the sperms contain it and the other half are without it, its place being taken by a chromosome of a different type. This accords with the breeding work on the pomace-fly, which, as already stated, indicates that the female of this species is homozygous and the male heterozygous for sex. The two kinds of gametes produced by the same individual male and differing in their sex-determining properties, which are postulated to explain the results of breeding experiments, have been shown actually to exist as the result of independent histological work, and we are led to suppose that the factor upon which the manifestation of sex depends can be definitely identified as attached to a particular element in the gamete—the X chromosome. It may be mentioned that Morgan and others are inclined to take a quantitative view of sexual difference and to suppose that the formation of a female results when the zygote receives two X chromosomes (normally one from each gamete), and a male when the X chromosome enters from one side only. Whether this hypothesis will hold good generally must be left for future work to decide.

8. Sex-determination.—The problem of sex-determination—a problem which for centuries has excited deep interest—may be regarded as in large measure solved by the results of recent work. We now know that the sex manifested by any given individual depends upon the nature of the two gametes through whose conjugation the individual was formed. This is decided at the moment of fertilization, and there is no reason for supposing that any subsequent event can influence the fundamental sexual nature of the zygote produced, though, as will appear later, extrinsic influences may lead to modification of secondary sexual characters. The various attempts before the present century to solve the problem were largely based on the assumption that external influences (exerted either upon the parent or upon the developing offspring at an early stage) could determine the sex to which the latter was to belong. This assumption was not unnatural at a time when the most critical technique available was unable to distinguish any sexual difference in the early embryos of mammals and other animals. The newly-formed creature was regarded as indifferent with respect to sex, differentiating into male or female only at a somewhat later stage. In attacking the problem, the method adopted was generally statistical. A possible cause affecting the determination of sex was suggested, and statistics of births were collected when the suggested cause was in operation, to be contrasted with similar statistics brought together when the cause was operating either slightly or not at all. Since the greater part of available statistics refer to man, it was for this species that most of the work was done. Many authors have seen in nutrition the determining cause of sex; and it was held that a richer and more abundant nutrition of the embryo tended to lead to the production of females, while under-feeding the mother, in the case of mammals, tended to increase the output of males. Many statistics have been collected on this point, but, while some of them appear to offer support to the contention, others are directly opposed to it. Nor does the experimental evidence that exists for smaller vertebrates, such as rats, mice, and frogs, indicate that nutrition appreciably affects the sex ratio. That it should do so is not inconceivable, even though sex is determined at fertilization, for it is possible that different conditions, particularly unfavourable ones, may be better resisted in the earlier embryonic stages of one sex than of the other. On this view, a change in the external conditions would not have affected the determination of sex, but would have brought about an alteration in the sex ratio through an increased mortality among the early embryos of one sex as compared with those of the other.

9. The theory of auto-regulation.—Among the theories of sex-determination based upon statistical data mention may be made of Düsing's theory of auto-regulation. The assumption is made that the newly-formed gametes of either sex tend to produce individuals of the same sex as that from which they are sprung, whereas older gametes tend to produce the opposite sex. Thus the more freshly produced sperm has a greater tendency to give rise to male individuals than older sperm which has been for some time in the ducts. A stallion whose services are much utilized should produce more male offspring than one which is more rarely put to the mare. The fewer the males in a species, the oftener they serve the females, and in consequence the younger are the sperms they emit; and, as the younger sperms give rise to more males, the tendency is for a dearth of this sex in any generation to be compensated for by an increase in the next. The net result is an auto-

regulation of the sex ratio, which is maintained at the level that is most advantageous to the species.

The leading idea in Düring's theory, that the determination of sex depends upon the relative maturity of the gamete, was borrowed from Thury, though by him it was applied to the female sex only. According to this author, ova freshly liberated from the ovary have a stronger tendency to produce females than ova which have become staler; the latter more often give rise to males. When first enunciated, the few statistics available strongly supported the idea, and 'Thury's law' had an immediate vogue; but, as fresh and unconformable data came to hand, it fell into disrepute. More recently, however, the idea has been revived in connexion with certain experimental work. Richard Hertwig and his pupils have shown that it is possible to raise the proportion of males in frogs by delaying fertilization of the ova. As they became staler, the ratio of males increased, and in some cases the offspring were all of this sex. It is possible that in stale ova the chromatin, in which the sex-determining factors presumably reside, becomes impaired, while the cell protoplasm as a whole retains its vitality. If this were so, the sex would be determined by the entering sperm alone; and, if we suppose the male sex in the frog to be the recessive one, the resulting offspring would be male. Such a view receives some support from the work of Boveri on the fertilization of sea-urchins. By shaking the eggs it is possible to fragment them so that some pieces are produced which contain no chromatin. Boveri found that such pieces were penetrated by the sperm with the production of normal though undersized larvae. The chromatin of the male alone is sufficient for the production of a new individual, though the sperm cannot develop except in unison with the cell protoplasm of the egg. There appears to be good evidence in some cases for an alteration in the sex ratio when the ova are stale, but whether the explanation suggested will be found to hold good can be decided only by fresh observations.

10. Secondary sexual distinctions.—Throughout the animal kingdom the primary distinction between the sexes—the bearing of either ova or spermatozoa—is nearly always accompanied by other differences of a more or less deeply seated nature. In some of the lower animals the sexes are so unlike as to have been regarded as belonging to entirely different groups. Among the vertebrates, with which we are chiefly concerned, the secondary sexual distinctions are often striking enough. They vary greatly from species to species, being very marked in some and practically non-existent in others. In pheasants and in many breeds of poultry the cock is totally different in appearance from his hens, while in pigeons it is often exceedingly difficult, if not impossible, to distinguish the sexes by means of external features. But, remarkable as these sexual differences often are, they were for long taken as a matter of course, and excited little attention until an explanation of the forms of life in terms of evolution through natural selection was formulated by Charles Darwin. Then it began to be felt that some of these secondary sexual characters offered a difficulty. The mane of a lion or the antlers of a stag might conceivably be brought about by natural selection acting within the species. Both may be serviceable in combat, and the better endowed male is enabled to drive off his rivals and satisfy his sexual instinct, leaving progeny which tend to inherit and transmit their father's advantages. But of what conceivable use was the gorgeous plumage of the male bird of paradise or of the cock pheasant in a stern struggle for existence? Would not the possessor

of such adornments rather be placed at a disadvantage? The theory of natural selection demands that, if a thing exists, it must exist in virtue of its utility either to the individual or to the species. It was in terms of the species rather than of the individual that Darwin put forward his subsidiary theory of sexual selection. Beauty appeals to the æsthetic taste of the female. Beauty in the male excites her and renders her more apt for mating. Though the more gorgeous male may, through his striking beauty, be at a disadvantage in the struggle for existence, yet this is more than counterbalanced by the exciting effect which his superior attractions exert upon the female. She is the more readily induced to mate and to leave progeny, whereby the species gains, even though the more conspicuous male runs greater individual risks. Moreover, if the æsthetic ideal of the female is high, variation in the direction of more pronounced beauty of plumage or song will always meet with its reward, and the cumulative effect of sexual selection will constantly heighten sexual distinctions. The reality of sexual selection turns upon the exercise of choice by the females, and, though Darwin assiduously collected all the facts that he could, it cannot be said that the theory is firmly based. In some cases, such as that of the black-cock (*Tetrao tetrix*), observations on the courtship habits favour the idea that the female exercises a definite choice. On the other hand, there are many observations which tell against the theory. In some species of birds, such as peafowl and turkeys, the male is conspicuous from the female in plumage as well as in the persistence with which he parades his plumes in the breeding season; yet it is a matter of common observation that the hens show no apparent interest in the performance. Again, many of the characteristic so-called courtship actions of the male, as well as the exercise of his song, frequently commence after mating has already taken place. Among lepidoptera, where most marked sexual dimorphism is often found, there is some experimental evidence against its being in any way concerned with a choice exercised by the female. Males deprived of the wing scales, or painted with a colour to obscure their characteristic pattern, have been found to be just as acceptable to the female as normal ones.

Since the publication of Darwin's book more attention has been paid to the behaviour of animals in relation to the breeding period. Particularly has this been the case with birds, where courtship actions are usually more marked and observation is less difficult. Fresh facts suggested that these actions doubtless serve as an aphrodisiac, by means of which the male advertizes his readiness to mate and attempts to stimulate the female to a like condition. A more brilliant coloration in the male may serve to enhance the display, but it is not a necessary condition. The male of the little sober-coloured warblers, where the sexes are alike, goes through postures similar to those found in species such as the sun bittern (*Euphyga helias*), where the beautifully marked cock is quite distinct from the hen. On the other hand, it seems certain that in many cases the elaborate display does not serve as a direct incentive to pairing. An excellent example of this is afforded by the great crested grebe, recently studied with much care by J. S. Huxley and others. Many curious and definite posturings take place continually in this species during the breeding season. As both sexes take part in them, the term 'mutual display' has been applied to these performances. They are quite distinct from the posturings which lead up to the act of coition, and Huxley has suggested that, if we are to attribute to them a purpose, we may

suppose that they serve to keep the two individuals of the pair together during the mating season. Whether this speculation be adopted or not, it is clear that these peculiarities of behaviour are dependent upon the enhanced activity of the sexual glands and probably upon the hormones¹ secreted in greater abundance during the breeding period of the year. They are of interest in showing that alterations in the metabolism of these glands may act as a stimulant to performances which, though not directly connected with reproduction, are normally in abeyance. They open up a suggestive line of inquiry on the influence of the hormones produced by the sex glands in stimulating phases of mental activity usually regarded as outside the sphere of sexual influence.

11. Wallace's view of sexual diversity.—Wallace, who put forward the theory of natural selection at the same time as Darwin, definitely rejected the theory of sexual selection. He took up a totally different standpoint with regard to sexual diversity, and considered that it is due rather to the female having diverged from the male than *vice versa*, as Darwin held. On his view, the female is less brilliantly coloured than the male owing to greater need of protection. The hen pheasant on the nest is less conspicuous in her own dress than if she were decked out in the plumes of the cock. The more sober her costume, the less likely she is to attract the attention of enemies. Her coloration is protective, and, having a utility value, it can be supposed to have been brought about through the action of natural selection. On Wallace's view, natural selection represses in the female the brilliant colours and patterns which survive only in the male. He leads us to infer that in earlier times the female was as splendid as the male, but he cannot offer, in terms of natural selection, any satisfactory explanation why these magnificent and conspicuous colours should ever have arisen in the first place. It is true he suggests that they are correlated with greater vigour, and that this has a selective value which more than counterbalances the dangers due to increased conspicuousness; but this can hardly be regarded as more than a conjecture.

12. Goodale's experiments.—When we turn from theories regarding the origin of secondary sexual characters to the nature of the characters themselves, we are met with a considerable body of facts which have been accumulated for the most part during the present century. In studying these characters the first point to be decided is the extent to which their manifestation depends upon the sexual glands themselves. An obvious method of attacking this question is to remove the glands and note the effect produced on the secondary sexual characters. Experimental castration has been performed in a number of animals, for the most part domestic ones, and on the whole more frequently in the male sex than in the female. The results are not always free from ambiguity, due to the difficulty of removing the gland completely; for even a small piece of testis or ovary will often proliferate and invalidate the experiment. Perhaps the most interesting and instructive operations are those which have been performed on domestic poultry and on ducks by Goodale in America. This observer took the precaution of using pure breeds, in which the secondary sexual differences are very marked. The testes and the ovary were in certain cases successfully and completely removed, the latter being an operation of considerable difficulty. The breeds used were the Brown Leghorn in poultry, a race very similar both in the males and in the females to the wild *Gallus bankiva*, while in ducks recourse was had

to the Rouen, a variety very like the wild mallard in both sexes. In both of these species castration of the male was practically without effect upon its plumage. The Rouen drake, however, did not assume the 'eclipse plumage' which is normally exhibited for a short time at the close of the breeding season. In the Brown Leghorn the comb failed to reach the size characteristic of uncastrated cocks, and there was a tendency to develop the brooding instinct—a fact well known where caponization is practised. In neither species, however, was there any evidence for the acquisition of female plumage as the result of the operation. The removal of the ovary from the hen offered a sharp contrast to these results. The Rouen duck assumed more or less completely the characteristic plumage of the drake, even to the small curly sex feathers of the tail. And not only did she acquire the male breeding plumage, but, in one case at any rate, she moulted annually into the male eclipse plumage, as does the normal male. The Brown Leghorn hen also assumed the totally distinct and far more gorgeous feathering of the cock with its flowing hackles and tail sickles, but the comb remained small, and the general build of the body remained that of the hen. The result of this work is to show that removal of the sex gland in the female leads to the assumption of the male plumage, whereas the normal male plumage is retained when the testes are taken out. The significance of this will be referred to below.

13. Effects of castration.—Striking results have also been obtained in other animals. The stag, with its great antlers, obviously invites experimental treatment, and castration work has proved that the development of these structures is dependent upon the presence of the genital gland. The precise result obtained depends upon the age at which the operation is performed. Castration of the young fawn before the formation of the frontal tubercles completely prevents the growth of the horns. If development of the antlers has already begun, the operation hinders further growth. They remain covered by the velvet and are never shed. Castration of the adult stag results in the precocious shedding of the antlers. They may be replaced by small imperfect ones, and these are never shed again.

In Herdwick sheep, a breed with horned rams and hornless ewes, castration of the young ram prevents the further growth of horns. On the other hand, castration of the ewe does not lead to the formation of horns, from which it must be inferred that this case is not strictly comparable with those of the duck and the fowl.

In man castration is an operation rarer to-day than in times gone by, though it is still practised in China and among certain sects in Russia. The principal effect is to arrest sexual development, and its consequences depend upon the stage at which it is performed. Generally speaking, apart from its effect in stunting the sexual organs themselves, it results in a deposition of fat over certain parts of the body; the skeleton is modified without, however, becoming feminized; the larynx does not develop normally, and the voice fails to break if the operation takes place early enough. The hair is also affected. It fails to develop in the axillary and pubic regions, while on the head it is abundant and falls out less readily than in normal men. With the possible exception of this last point, it cannot be said that eunuchs show a tendency to develop female characters as the result of castration.

The influence of the sex gland upon the development of secondary sexual characters among mammals and birds is confirmed by what is known for certain lower vertebrates. The dorsal

¹ Cf. below, § 14.

fin of the male newt and the thickened skin pad on the thumb of the male frog are characters which are also affected by castration. It would appear, therefore, that among the vertebrates the dependence of these characters upon the sex gland is a general feature, and the recognition of this has recently led to a physiological explanation.

14. Hormone production.—One of the most interesting and striking advances in modern physiology is that connected with what are termed 'internal secretions.' Certain glandular structures occur in the human body which, though evidently forming a secretion, are unprovided with a duct to carry it away. The function of these bodies, among which the most conspicuous is the thyroid gland of the neck, long remained a puzzle. They were known to be affected in the case of certain diseases. Cretinism, *e.g.*, was found to be associated with an abnormal condition of the thyroid gland, while an unhealthy state of the adrenals was closely connected with Addison's disease. The function of these glands was eventually elucidated by the experimental method. It was found that removal of the thyroid quickly led to death. Death, however, could be averted either by transplanting another thyroid into the patient—whether in the original or in some other position did not matter—or else by injecting an extract of the gland. The experimental results made it clear that these ductless glands elaborate various substances essential to the life of the organism. These substances leave the glands by means of the blood stream instead of through proper ducts, whence the application of the term 'internal secretion.' The active principle in the secretion is spoken of as a 'hormone,' referring to the changes which their output awakens in the organism. Later experiments have shown that hormones are produced not only by the ductless glands but also by glands possessing a more obvious function. The pancreas, *e.g.*, in addition to elaborating a digestive secretion which flows into the intestine, produces a hormone of which the cessation leads to symptoms of acute diabetes in the patient.

15. Hormones and sexual structures.—Not the least important of the hormones are those set free from the genital gland, and it is to them that we must look for the link which connects the secondary sexual characters with the sex gland itself. The ovary and testis are not merely the organs in which the germ cells mature. They also contribute substances which exercise a profound effect upon the general metabolism of the individual. In the testis the hormone is probably elaborated by the so-called interstitial cells, the packing material in which the sperm tubules lie embedded. This, however, cannot be ascertained through direct experiment, because it is at present impossible to remove these cells without removing the whole testis. In the ovary, however, the inquiry as to the seat of hormone production has been pushed a stage farther. When an ovum matures in a mammal, there is formed round it from the follicle cells of the ovary a comparatively large vesicle known as the 'Graafian follicle.' After the rupture which accompanies the liberation of the ovum this vesicle, which is on the surface of the ovary, becomes transformed into a body known from its colour as the *corpus luteum*. The subsequent fate of this body depends upon what happens to the liberated ovum. If this is not fertilized, the *corpus luteum* is rapidly absorbed. If, however, fertilization occurs, the *corpus luteum* increases in size and persists during pregnancy. Recent researches have shown that this body is to be regarded as a temporary gland producing an internal secretion of which the action is twofold,

viz. to bring about changes in the wall of the uterus which allow of the formation of a placenta, and to stimulate the mammary gland to increased activity.

It is clear that the genital glands give rise to hormones which produce a marked effect upon the sexual structures in the female that are directly concerned with the development and nutrition of the foetus. How far their influence stretches to secondary sexual characters is not easy to determine in mammals, where these differences are not so marked as they frequently are in birds. Ovariectomy in the human female might be expected to yield interesting data, but, as the operation is of comparatively recent origin, and is resorted to only in abnormal cases after the adult state is attained, not much is yet to be learned from it. Though satisfactory instances of complete removal of the ovary are rarely available for study, there are many cases on record where the gland has atrophied through either old age or disease. The human female under such conditions may exhibit male characteristics in the gruffness of the voice and in the development of hair on the face. So also the hind may develop horns, and the mare may acquire the development of the canines which is a normal feature of the stallion. It is interesting that among such birds as fowls and pheasants the assumption of male plumage to a greater or less degree is known to accompany degeneration of the ovary through disease or old age.

16. Transplantation experiments.—Besides the method of castration, the method of transplantation has also been used in connexion with these studies. Castrated male rats can be distinguished from normal males. If, however, the testis of another individual be grafted into the body of a castrated animal at an early age, it is stated that such animals exhibit the characters and instincts of a normal male. Steinach, to whom we owe these observations, made some further experiments which are of the highest interest and importance. Into the young male rat he transplanted, after castration, the ovaries and oviducts of the female. It is stated that the graft succeeded, and that the animal became literally feminized. The quality of the hair and the adiposity were feminine; the mammary glands were such as are found in the young female; even the instincts were more or less inverted so that the impression of a female was produced on other rats.

One other transplantation experiment deserves mention here as illustrating a different method of attacking the problem. In the experiments just outlined the gland of one sex was grafted into the body of the other and the effects on the sexual characters were noted. In the following experiment the reverse procedure was adopted, and a structure showing a secondary sexual character was grafted on to an individual of the opposite sex. In the male newt the dorsal fin enlarges during the breeding season and becomes markedly serrated. When the dorsal fin of the female, which normally undergoes no alteration at this period, is grafted on to a male, it can produce the characteristic serrated edge, doubtless under the influence of the testis.

17. Castration of insects.—While the intimate connexion between the sexual glands and secondary sexual characters is beyond doubt in vertebrates, this connexion is by no means so certain in another of the great groups of the animal kingdom—the insects. Several investigators have studied by the method of castration the common gipsy-moth (*Lymantria dispar*). The subject is a favourable one, for the sexual dimorphism is marked, the male being far smaller and darker than the female, and having also the peculiar feathered antennæ

more potent than those from *Lymantria dispar*. When the secondary sexual factors of *Lymantria japonica* come to be associated with the sex factors of *Lymantria dispar*, or *vice versa*, the normal equilibrium between the two sets of factors is disturbed and gynandromorphous individuals result.

Lateral gynandromorphism is extremely rare in vertebrates, and never so complete as among insects. In view of the influence exerted on sexual characters by the sex glands, this is not surprising. For, since the hormones circulate freely in the general blood stream, a difference in the sexual characters of the two sides of the body would be very remarkable. It is not improbable that, when we know more of the functions of the sympathetic nervous system, the few cases on record will eventually receive a somewhat different explanation. Partial gynandromorphism is, however, not rare among vertebrates. One of the commonest forms which it takes is the association of the external genitalia of the female with the male gland and ducts. In such cases the testis generally fails to descend with the scrotum, nor does it contain ripe spermatozoa. The gynandromorphism may be less marked, taking the form known as hypospadias. The male is then generally fertile, and there is evidence that the condition is hereditary. It may be that some abnormality of the sex gland, such as the failure to develop this or that particular hormone, lies at the bottom of the various forms of gynandromorphism. Again, it may be that the sex gland itself is normal, and that some hereditary factor has been dropped out from the complex which is concerned with the sexual characters. Which view is to be taken must depend largely upon the results of future experimental work.

23. **Mentality and sex.**—For social and for ethical reasons the experimental analysis of sex is of fundamental importance. Recent research has demonstrated that there is reason for supposing that mental qualities are inherited on the same lines as physical ones. Owing to the newness of the methods involved and to the difficulties in procuring satisfactory data, little progress has yet been possible, but there is good evidence already in existence for regarding some forms of feeble-mindedness and musical sense as recessive to the normal condition. There is no doubt that, as time goes on, the analysis of mental qualities will be placed upon a more satisfactory basis, though, as this analysis must be based upon human material, the time will necessarily be long. Mentality, as every one knows, differs profoundly in the two sexes. A vast amount has been written on this subject; endless speculations have been devoted to it; but little of value has been evolved. To-day we begin to recognize that what is required is experimental analysis—analysis of mental traits on the one hand, and analysis of the sexual mechanism on the other. Consider, *e.g.*, the case of intellectual achievement by the two sexes, upon which so much has been written. Achievement of the first rank stands almost without exception to the credit of the male sex. In the things of the intellect the male is the creative sex. The fact is beyond dispute; but, when we seek to explain why it is so, we obtain very little satisfaction from those who have discussed it. Before we can begin to understand it, we must have some analysis of the nature of intellectual activity—whether it depends upon definite hereditary factors, like so many other qualities, and, if so, in what way these factors are transmitted. Are they sex-linked, as is known to be the case for colour-blindness, and is the woman of outstanding intellectual attainment rare for the same reason that a colour-blind woman is rare? Or are they dependent upon the activity of the sex gland, either directly or indirectly through the

influence of some inhibitor which itself is activated by the gland? Again, are they acted upon differently by the ovarian and by the testicular hormones? Until we can answer such questions as these, further discussion is idle.

LITERATURE.—Works dealing with the nature of sex in its biological aspect are very numerous. Ample bibliographies are given in several of the volumes of the appended brief list, which, either from authority or modernity, will be found of especial value to those who wish to inquire further on this subject: C. Darwin, *The Descent of Man*, 2 vols., London, 1871; L. Doncaster, *The Determination of Sex*, Cambridge, 1914; P. Geddes and J. A. Thomson, *The Evolution of Sex*, London, 1901; T. H. Morgan, *Hereditarity and Sex*, New York, 1914. To these may be added the following list of books or papers more especially mentioned in this article: E. Bataillon, *Arch. de Zool. Exper.* xlv. [1910] 101-135; K. Düsing, *Jenaische Zeitschrift*, xvii. [1884] 593-910; R. Goldschmidt, *Zeitschr. für induktive Abstammungs- und Vererbungslehre*, viii. [1912] 1-62, xi. [1914] 280-316; H. D. Goodale, *Publ. no. 243*, Carnegie Inst. of Washington, 1916; O. Hertwig, *Arch. für mikroskop. Anat.*, lxxvii. [1913] pt. ii. pp. 1-63; J. S. Huxley, *The Ark*, xxxiii. [1916] 142-161, 256-270; F. R. Lillie, *Journ. Exp. Zool.*, xxii. [1917] 371-462; J. Loeb, *Artificial Parthenogenesis and Fertilization*, Chicago, 1913; G. W. Smith, 'Studies in the Experimental Analysis of Sex,' pts. i.-xi., *Quart. Journ. Micr. Science*, 1910-1914; A. R. Wallace, *Darwinism*, London, 1889.

SHADOW.—See SOUL.

SHAF'ITES.—See LAW (Muhammadan).

SHAHIDS.—As applied to Sikhs the term *shahid* means 'martyr,' just as it does in the case of Muhammadans, and it appears to have been in use as early as the time of Guru Govind Singh.¹ The Shahids are first found as an organized company in 1734 as one of the five which constituted the Tarū Dal, or young army of the Sikhs. Its leaders were Dip Singh, Natha Singh, Gurbaksh, and others.² But among the Sikhs the name Shahid is generally confined to the disciples and followers of Dip Singh and Sadā Singh. Dip Singh was a Khāra Jāt of Polupind in Lahore and became one of the Khālsa's earliest adherents. He fought under Guru Govind Singh and Banda. At Damdama he acquired learning, and Sadā Singh became his disciple. At this time the imperial governor of Lahore had set a price upon the Sikhs' heads, but Diwān Kaura Mal Khatri warned them of an impending attack. Dip Singh dismissed all his followers who had earthly ties, and only 60 men remained with him. With these he encountered the imperial troops till all the Sikhs had fallen, Dip Singh continuing to fight even after his head had been struck off. Thereby he earned the title of Shahid, and the imperial governor, alarmed by a dream, sought his pardon and bestowed Pohupind in *jāgīr* upon his sister Mālan. The place where she burned the bodies of the fallen at Amritsar is still known as the Shahid Bānga. Other accounts connect the story with Sudhā or Sadā Singh, and make Karm Singh and Dharm Singh, Sindhū Jāts, his disciples.³ According to Khazān Singh, this Shahid was killed fighting with the governor of Jullundur.⁴ Khazān Singh also says that Shahid Dip Singh took possession of the Siālkot tract in 1759, and made it over to his disciples Dīāl Singh and Natha Singh, who eventually assigned it for the maintenance of the shrine of the Ber of Bābā Nānak at that town. Sudhā Singh, who succeeded Dip Singh as head of the *misl*, was killed in 1762, and Karm Singh was then elected its head. In 1763 he occupied Shāhzādpur and other tracts in

SHAMANISM.¹—Shamanism is the name given to the native religion of the Ural-Altaic peoples from Bering Straits to the borders of Scandinavia. Weakened through the progress of Buddhism, Islām, and Christianity, it still exists even among tribes professing these faiths. On the whole, it is in a more or less moribund condition; and, although its nature was everywhere much the same, its development varied in different tribes. Analogous phenomena are found among the Eskimo, and also among many American Indian tribes, whose medicine-men are often called shamans by investigators. How far it exists elsewhere, either as a system of religion or with its various aspects more or less reproduced, is discussed below.

The word 'shaman' appears to be derived from the native Tungus name for the priest or medicine-man, *samān*, used also with other names among the Buriats and Yakuts. *Samān* has been thought to be an adaptation of the Pāli *samana* (Sk. *śramaṇa*), a Buddhist monk or mendicant, through the Chinese *sha mēn*, but evidence is lacking. Still less likely is the derivation from Persian *shemen*, an idol or temple. Other native names are: Yakut, *oyun*, fem. *udayan*; Buriat, *dō*, fem. *odeyon*, *utyyan*; Altaian, *kam*; Ostyak, *senin*, fem. *senim*; Samoyed, *taadbei*; Lapp, *noid*.

1. What is shamanism?—The primitive religion of these tribes is polytheism or polydemonism, with strong roots in nature-worship, and generally with a supreme god over all. While the shaman exercises certain priestly functions, his main powers are connected with healing and divination. These he exercises by virtue of his intimate relations with the supernatural world. Certain spirits aid him, possess him, are at his command. He has direct intercourse with spirits, and actual (bodily or spiritual) access to the spirit-world. With the aid of these he obtains knowledge superior to that of ordinary men, and can overcome or drive out hostile spirits or powers. All his magical acts are done by virtue of his power over or influence with spirits. And generally, during the exercise of his powers, the altered mental state of the shaman is in evidence. Through auto-hypnotism, caused by different methods, a state of trance or alternate personality is produced. The initiation of the shaman has also distinctive features. Though his functions and methods are more or less paralleled in many other regions, there are differences. The medicine-man of other tribes may use other methods, on the one hand as far as magic is concerned, on the other as far as an empirical medical science is concerned—sweat-baths, herbal remedies, crude surgery, and the like. And, while the shaman has priestly functions, the priests of other faiths have characteristics and functions in which they differ from him. On the whole, the Ural-Altaic shaman, as priest but much more as magic-wielder, is distinguished by his active relation to the spirit-world and by his regular consecration to his office.

¹ For particular forms of shamanism see art. BURIATS, OSTYAKS, SAMOYED, TUNGUS, YAKUTS.

He is a mediator between gods and spirits on the one hand and men on the other. He knows the secrets of gods and spirits, often malevolent, and the well-being of all depends on his power to cajole or overcome them by various actions, rites, and sacrifices. By these he can enlist the services of spirits. Among the Yakuts a shaman has an *emkhet*, or guardian-spirit, a divinity or the spirit of a dead shaman, who aids and advises him. In other cases he may have many spirits in his control, and the more of these he has the more powerful he is.

2. The shaman.—In some tribes (Samoyeds, Ostyaks) the office is hereditary; in others a predisposition to it suffices. The youth shows signs of it in childhood, which are thought to prove that he has been chosen by the spirits¹ (Tunguses, Yakuts, Altai tribes). Among the Buriats, while any one may become a shaman or be chosen by the gods, the office is usually hereditary. Both systems are also found among the Lapps. Yet, whether hereditary or selected, the youth generally shows a predisposition to the office. He is nervous, moody, irritable, dreamy, given to hallucinations and trances, or he is epileptic. The Tungus youth declares that a dead shaman has chosen him in a dream as his successor, but he also shows himself crazy, timorous, and stupefied. Similarly among the Yakuts he gabbles like a maniac, takes to the woods, jumps into fire or water, injures himself with weapons. Among the Ostyaks the shaman chooses one of his sons according to his fitness, but the youth then spends his time in practices which irritate the nervous system and excite the imagination. The Buriat hereditary shaman shows special signs as a child: he is subject to fits and trances, has visions, and is fond of solitude, and it is then thought that his soul is with the spirits, being trained by them. On the whole, the shaman is abnormal, neurotic, and epileptic; his functions are based on his abnormal qualities and aggravate these in turn. But in any case a period is devoted to training and austerities. The youth may live for a time in the woods in a half-crazy state, practising austerities or shamanist exercises.² In addition he is usually taught for a longer or shorter period by an old shaman regarding the different kinds of spirits and the manner of summoning them.³ Thus the whole preliminary period is given up to methods which augment the abnormal state and still more separate the postulant from other men. These methods, including aggravation of the nervous system, trances or fits, austerities, communion with spirits, visits to the spirit-world in trance, acquisition of knowledge from the spirits, are reproduced in the rites of the shaman, once he is consecrated to his office.⁴

Then follows the consecration to his office.

¹ The shaman assumes an exceptional position, takes vows upon himself, becomes the property of spirits who, though subject to his summons, have yet full power over him.⁵

Among the Yakuts an old shaman takes him to a hill or an open field, clothes him in shaman's dress and gives him the tambourine and drum-stick, and, setting him between nine chaste youths and nine chaste maidens, makes him promise that he will be faithful to the spirit who will fulfil his prayer. He tells him where the spirits dwell, what diseases they cause, and how they may be appeased. Then, having killed a sacrificial animal, he sprinkles the candidate's dress with the blood.

⁷ See art. BURIATS, § 30.

ated. As to his priestly functions, while he acts occasionally as sacrificer and takes part in public and family sacrifices, his presence as priest and sacrificer is of secondary importance to his other functions. He performs sacrifices from time to time, and at these carries on dialogues with the gods, but there are many sacrifices at which his presence is not essential, and which are offered, e.g., by the elder of a tribe or head of a household. As far as the shaman is concerned, his connexion with sacrifice is mainly the fact that he knows what sacrifices will be pleasing to the gods on any particular occasion and the right means of appeasing them, since they are most particular about the form of sacrifice and prayer. Sacrifice is an important part of the shamanistic rites of healing and divination, but the shaman merely directs the nature and method of the offering from his knowledge of the gods and spirits. In healing, after the magical ceremonies, aided by the presence of spirits, it is indispensable to appease the gods who have relieved the patient, and the shaman decides what offerings are to be made to them.

The priestly functions of the shaman, and their connexion with magic, may be seen from his actions at the great sacrifice to the god Bai-Yulgan among the Altai.

On the first evening a *yurta* is prepared in a place selected by him, and a young birch-tree, with the lower branches lopped, is set up in it. A cattle pen is made outside, and a horse is chosen, which is held by a man called 'the holder of the head.' The shaman waves a birch twig over it, thus driving its soul to the gods, accompanied by the holder's soul. Then he assembles the spirits in his tambourine, sits on the image of a goose, and is supposed to be pursuing the soul of the horse upon it. Having captured the soul, he blesses it, and with the aid of assistants slays the horse. The bones and skin form the offering; the flesh is eaten by the shaman and the company. Next evening, having fed the spirits in the tambourine, he cleanses the souls of all present by certain rites, and prepares the head of the household to understand the prophecies which he is about to utter. In a state of ecstasy he describes how he is mounting the heavens on the soul of the victim or on the goose. He describes what he sees in the heavens, prophecies and utters secrets learned there, and, finally, having reached the ninth or even the tenth or twelfth heaven, he invokes Bai-Yulgan, learns whether he accepts the sacrifice, and obtains information regarding the coming weather, the harvest, etc., as well as the sacrifices which will then be required. He now falls exhausted. Frequently a third day is devoted to feasting and libations to the gods. The number of heavens scaled by the shaman depends upon his powers.¹

In this rite the prophetic powers of the shaman are seen, and these, as well as his healing powers, distinguish him from a regular priest. While divination may be practised by means of a shoulder-blade, a stick covered with runes, or the flight of arrows, the method of foretelling the future, supplying information regarding the winning of success or averting of misfortune, or explaining the perplexities of inquirers is the *séance*, or what is locally known as *kamlanie*.

In this the shaman, his assistants, and the spectators are collected in a darkened hut. The dress necessary to the occasion is donned. The shaman beats his tambourine, summoning the spirits, and collects them in it. He sings, dances, cries out, converses with the spirits, and by these means proves his inspired state. He rushes round till he falls fainting and produces delirium. While he is in this state, the spirits reveal their will to him or give him the desired information.² He foretells the future and declares the will of the gods. When he awakens, he remembers nothing of what has passed. During the performance voices and noises of various kinds are heard, and these are believed to be produced by the spirits. Or, again, the shaman will allege that he is rising through the heavens, pushing aside the stars, and he describes his experiences. Rhythmic songs, prayers, and adorations are used by the shaman in the *kamlanie*.

The healing powers of the shaman, while they are partially medical, are mainly connected with the belief that diseases are caused by spirits which have lodged themselves in the sufferer. Hence the purpose of the ceremonies is to placate them or drive them out.

¹ V. V. Radlov, *Aus Sibirien*, ii. 20 ff.

² Cf. *ERE* x. 124^b, 125^a.

The shaman may take over the spirit causing the disease into himself, and indicate the necessary sacrifice, into which he now conveys it; or he may decide that the patient's soul has left his body or been carried off to Erlik's realm. Wherever it is, during the course of the performance he pursues it, even to its prison with Erlik, who may release it for certain sacrifices or may demand another soul in its stead. This soul is ensnared by the shaman and taken to Erlik, and its owner now dies. Such a performance is lengthy and expensive. Or, again, after much smoking, tambourine-playing, noise-producing, and singing (by which the shaman brings down his guardian-spirit), he dances and sings, and, having discovered the cause of the illness, is assured of the help of powerful spirits. Still dancing and beating the tambourine, he approaches the patient, expels the possessing spirit or sucks it out, and drives it away. Finally, sacrifice is offered to propitiate the gods who have relieved the sufferer. Among the Samoyeds, if it is thought that the supreme deity Num has sent the illness, the shaman refuses to oppose the divine will, but in other cases he will persuade a *tadebtsi* (spirit) to go and implore Num to lend his aid.¹

At all such *séances* the spectators are much impressed by the whirling, dancing, singing, screaming, tambourine-playing, and ecstatic behaviour of the shaman, and believe that spirits are present. Equally they believe in all that he is asserting—his flight through the air or into the heavens and his visits to distant regions. They are terror-struck, and their nerves are much affected. Frequently the shaman proves his power by conjuring tricks, or by being bound and then released by the spirits whom he has summoned, or by thrusting knives into his body. But this 'does not exclude the possibility of a profound conviction on the part of the shamans that they are chosen by the spirits, have intercourse with them, and possess a mysterious power over the forces of nature.'²

In the south of Siberia mystery-plays in which the shamans are the actors are common. Among the Altaians the shaman's supposed journey to Erlik's realm is acted in the most dramatic fashion. This dramatization is also found among the Buriats, the shaman acting the part of the deity and other personages.³ At the *séances* the dialogues carried on by the shaman with the spirits—their voices being produced by himself—are also of a highly dramatic character. Here we approach what is fully developed among many American Indian tribes—the dramatization of the life of the gods by members of a mystery-cult who represent the various divinities.

4. The shaman's dress and accessories.—At his ceremonies the shaman wears a special dress—a coat hung with iron, rattles, rings, and representations of mythical animals, or with twisted handkerchiefs representing snakes, a mask, a breast-plate, a hat, and embroidered stockings. All these have a definite meaning and purpose, and often a mystic character. Among the accessories are a tambourine and a drum-stick. The tambourine has a cross-bar hung with rattles and is decorated with figures of a symbolic kind, intimately connected with shamanistic beliefs and mysteries. The spirits give this tambourine to the shaman, and spirits are called up by it and collected in it, while on it he is carried through the air. Horse-staves of wood or iron, specially prepared and decorated, are also used in the rites, and on them the shaman flies to heaven.⁴

5. Organization.—Shamans do not appear to be organized into an ecclesiastical caste or hierarchy, but they have varying grades and are held in differing degrees of respect according to their powers and their relation to the gods and spirits. Among the Buriats there is a distinction between hereditary shamans and those who have become shamans for some accidental reason. Among the Buriats also there are 'white shamans,' i.e. those who serve the good *tengris* of the west, and 'black shamans,' i.e. those who serve the evil *tengris* of the east. The former are honoured as those who can help men through their influence with beneficent powers; the latter are feared, because

¹ M. A. Castrén, *Reiserinnerungen*, Petrograd and Leipzig, 1853, p. 104 ff., quoted by Mikhailovskii, p. 143; cf. art. OSTYAKS, vol. ix. p. 550^b.

² Mikhailovskii, p. 138.

³ Cf. art. BURIATS, § 27.

⁴ For details of all these see art. BURIATS, vol. iii. p. 16^b, OSTYAKS, vol. ix. p. 580^b; DRUM, vol. v. pp. 90^b, 94^a; Mikhailovskii, p. 78 ff.

through the evil spirits they may work ill to men—e.g., steal their souls—and they are sometimes murdered for their evil deeds. Their lore is of a much more secret character than that of the white shamans, and there is a standing feud between them. Female shamans are also found among the Tunguses, Ostyaks, Buriats, and Yakuts, though with the last they are regarded as inferior to the male shamans, yet are preferred for the cure of mental disease. Among the Kamchadals the place of the shaman was usually taken by specially gifted old women.¹ The importance of the shaman is sufficiently upheld by the nature of his training and experience, his consecration, and the ceremonies performed before awed spectators. Usually implicit faith is put in him, except among the Chukchis, where his functions are limited to healing and conjuring.² The ideas concerning a shaman's death also reveal the manner in which he is regarded. Possessed by spirits, shamans do not die by the will of the gods, but by their demons being sent to kill each other. The elaborate nature of the funeral continues these ideas. Their burial-places in groves are inviolate and sacred, and dead shamans are the objects of a cult with sacrifices, while the dead shaman protects his people against the spirits of hostile shamans.

Although shamanism is described as moribund, it still exercises considerable power both in Buddhist Tibet and among nominally Christian tribes.

6. The shaman among the Eskimo.—The position and function of the so-called shaman among the Eskimo are analogous to those just described. The shades of the dead and supernatural beings called *tunghät* are controlled or owned by certain men, and even women, among the Eskimo of Bering Strait. The more of them each shaman, or *tun-gha-lik*, can subject to his will, the more powerful does he become. Usually a man becomes aware of spirit-power by remarkable circumstances in his life. He then goes to an old *tun-gha-lik*, in order to secure control of powers sufficient to enable him to announce himself as a *tun-gha-lik*, or he practises his art in private. In some districts he causes the death of a new-born child, steals its body, dries and preserves it, thus gaining control of its shade as a very powerful helper. Through his power over the spirits he drives off evil influences, or joins with other shamans in doing so if these influences are too strong. Both shades of the dead and shades of animals come at his call, and he claims to journey to the land of the dead and reports what he has seen there, the shades and spirits being visible to him. Like the Asiatic shaman, he knows what rites and sacrifices will be acceptable to the shades and spirits; hence his instructions are usually followed in the observance of festivals and ceremonies. He can change the weather, and cure the sick by means of incantations and performances. He is feared, and his advice is usually obeyed; but, if he uses his powers for bad ends or fails in what he sets out to do, the results may be fatal for him. Amulets and fetishes possess virtues which are secured to them by his means.³

Similarly among the Central Eskimo the *angakok* (plur. *angakut*) is protected by the spirits, especially by the spirit of the bear, which is acquired by a mysterious ceremony. These spirit-helpers, the indwellers of things, or *inuc*, are known as *törnäk* (plur. *tornait*). The chief office of an *angakok* is to discover the cause of sickness, misfortune, or death.

Within a darkened hut he sits down, his body shakes, and inhuman sounds are heard. He invokes the *tornait* with sing-

ing and . . . and then announces what the atonement must be. . . of the *tornait* regarding the cause of . . . appears to be used in such stances. Or the *törnäk* is heard approaching, the hut shakes, and the *angakok* is supposed to fly with the spirit to distant regions. Or, again, the *angakok's* body is tied up, while he invokes the *tornait*. His body remains motionless, while his soul flies off, and on its return the things are found untied. In the Sedna feast, as in shamanistic rites, the *angakok* allows, or pretends to allow, his body to be pierced with harpoons. Sedna and other spirits come while the *angakok* is busy praying. He falls into a trance, and on awakening promises the help of the good spirits against the *tupilik*. The hardest task is to drive away Sedna, and this can be done only by the most powerful *angakut*. The *angakok* performs jugglery, and in the songs and incantations uses a sacred language. Most of the *angakut* believe in their powers, and in the stances go into ecstasy and trance.⁴

Among the Greenland Eskimo the *angakut* are said to obtain power by applying to an exalted spirit, who makes the *inuc*, or invisible rulers, become their *tornait*, or helping and guardian-spirits. The *angakut* give counsel on all supernatural affairs, as well as in matters of daily life, and procure good weather or success in hunting by invoking a *törnäk* and conciliating the *arnar-kuagsak*. They cure the sick by extraordinary actions, give oracles, and use conjuring. The spirit *stance*, with use of the magic drum, and the bodily or spirit flight of the *angakok* are also found here. The *angakut* are the authorized teachers and judges in all questions of religious belief.⁵

7. The American Indian shaman.—Among the American Indians the most complete parallel to Asiatic shamanism is found among the tribes of the north-west, the priestly character being also here combined with it. The shaman performs religious functions and is also healer through being possessed by a supernatural being. He bears the name of this spirit and imitates its appearance. At a *stance*, by throwing himself into an ecstatic condition, he learns from the spirit the cause of sickness (which is then got rid of by blowing upon the patient or by other methods) or things and events hidden and future. The shaman has also the power of recovering the soul; he proves his powers by a variety of conjuring tricks. Yet, even where shamanism was strongest (Tlingit, Haida, Kwakiutl, Tsimshian), the chief was apt to act as priest—e.g., in secret society performances.⁶ On the whole, the shaman of the north-west tribes is still less of a priest than he is in Asia.⁴

The greatest development of shamanism is found among the Tlingit, with whom the shaman's spirit-helpers are many, as compared with the single helper of the Haida shaman. He has several masks, each representing one principal spirit, together with lesser spirits for each feature. He is specially aided by the spirit of the crest-animals of the family to whom these emblems belong. In the treatment of the sick the shaman draws out the material object which caused the sickness, not a spirit tormenting the patient. This method, including sucking out the disease, is also followed among the Haida, Tsimshian, Songish, and other tribes,⁶ but the *stance* as used by the Asiatic shaman is lacking. Where the disease is judged to be caused by the absence of the soul, after singing, use of the rattle, dancing, etc., the shamans go to the place where the soul is supposed to be, or one of them sends his *tl'k'-a'yin*, or guardian-spirit, after it (Songish), or dispatches his

³ E. W. Nelson, 'The Eskimo about Bering Strait,' 18 RBEW (1899), pt. I, pp. 388, 427 ff.

own soul to catch it (Chiliwack).¹ The soul is then restored to the patient. The Tlingit shaman can put spirits into material objects and send these out to do mischief. He locates supplies of food, aids in war, and fights hostile shamans by means of the spirits. The succession is from uncle to nephew, the nephew receiving his uncle's spirit in a trance after the burial. Offerings are made at the graves of shamans, and their houses in the forest are avoided lest the intruder should be made sick. The shaman's power is more dreaded among the Tlingit than among the Haida.²

With the Chinooks gods are invoked by the shaman for the cure of the sick, and the search for the soul by the souls of shamans is also practised. Here also, not an invading spirit, but a material object, causes sickness and is removed.³

Among the Dénés shamanism of this type is prevalent, with the curious addition (found also among the Eskimo to some extent) of the patient's confession of sins to the shaman.⁴ With the Cherokees the type of shamanistic methods of healing resembles those already detailed, but there is appeal to the spirits to aid the shaman rather than compulsion or control over the spiritual world.⁵

Among many tribes the shaman's functions were divided among different kinds of shamans. With the Maidu (among whom all the children of a shaman must become shamans, else the spirits would kill them) there are a class of curative shamans and another class known as dreamers, who hold communion with spirits and ghosts. During the winter the latter have *séances* in darkened houses, when they hold converse with spirits. One who has not a shaman for his father goes to the mountains and there performs certain ceremonies, as do also shamans who wish to obtain more powerful spirits.⁶ Or, again, as with the Ojibwa, there is the *midē'wiwin*, or society of the shamans, in which the candidate for admission is supposed to die and come to life again full of spirit-power. The members use incantations and exorcisms and administer remedies. There are, again, the *jěssakids*, prophets or jugglers, who speak with the *manidōs* in a hut at a *séance*. The hut shakes violently, and the voices of the spirits are heard from it. There are also *wābēnōs* (who prepare charms) and herbalists, but only the *midē* are combined in a society. A similar division is found among the Menomini—the *mitāwit* (society of shamans), the *tshisagka* (jugglers), and the *wābēnō*. The magical feats of the *midē* and *mitā* are done by the help of their *manidōs*, the power possessed by the shaman's 'medicine,' which typifies his tutelary spirit. The *jěssakids* at the *séance* obtain information from the spirits—e.g., regarding sickness, the person causing it, its cure, etc. They also remove the substance causing sickness by sucking, after singing incantations and using the rattle.⁷ Divisions of a similar kind are found among the Chippewas and Delawares.

With the Chippewas the method of healing included a fast on the part of the shaman and the erection of a medicine-lodge for him, into which the patient was brought. The shaman chanted to his tambourine, causing a spirit to descend. The spirit entered the patient and removed his sin, already confessed to

the shaman, and also inserted his soul which had escaped. Sucking out the material cause of disease was also used.¹

These mystery-societies are found among all but the lowest tribes, and the aim of their ceremonies is physical and spiritual well-being. The rites are frequently shamanistic in character.²

Among the tribes of the eastern plains the shaman is merged in the priest. There are societies which work at healing and use definite remedies, yet invoke supernatural powers. There is also a limited number of men who conduct the national rituals.³ In more advanced tribes the shaman gives way to the priest, or is merely a medicine-man or wizard—e.g., in the Navaho, Hupa, Apache, Choctaw, Hopi, and other Pueblo tribes, and the Natchez. Here the priest's authority is not based on individual action. He works for the tribe, or is associated with a society. But here, too, these priest-healers perform long ceremonies and medicindances for healing or life-giving, as in the mystery-societies of other tribes.⁴

In general, except among the tribes of the north-west (where possession of or by spirits as the fundamental fact in healing and wonder-working marks the true shaman) and in the case of mystery-societies where shamanistic methods are in vogue, the medicine-man is more in evidence than the true shaman. While not always unaided by spirits, he uses more empiric methods than those found among the Asiatic tribes—e.g., the sweat-bath, bleeding, bathing, sucking, noises, and gestures. Even the north-western shaman has little to do with directing sacrifices, and the general belief that illness is caused by sorcery rather than by a spirit possessing the patient divides both the theory and the method of cure from those used in Asia.

A somewhat closer parallel to the Asiatic shaman is found among some S. American tribes. With the natives of Guiana the office of *piai* or *paje* is usually hereditary; but, if there is no son, the *piai* chooses a boy, preferably an epileptic, and subjects him to a course of fasting, vigils in the forest, drinking tobacco liquor, and lessons in ventriloquism. He is now able to work himself into a mad frenzy, to converse with *kenaimas*, after invoking them by chants, and to overcome them. By drinking tobacco-juice he falls into a trance, in which he believes that he is received into the company of the spirits and consecrated by them to his office. He also learns the tribal traditions and the properties of plants. His insignia consist of a rattle, various crystals, a kind of doll, and other things, which are tabu, and would lose their power if profaned. All evil is produced by *kenaimas*, human or superhuman, and by his power over them the *piai* gains great influence. He can call up and question the spirit of any Indian or dispatch his own spirit to question an absent tribesman or to speak with spirits. In cases of illness, where blowing off the evil spirit is not sufficient, other methods are resorted to. A healing *séance* is held in a dark hut, where fearful noises are produced for hours. Winged creatures seem to approach the house, enter by the roof, and fly off again. These are the *kenaimas* coming and going, and each one must give an account of itself and promise not to trouble the patient. At a later time the *piai* produces, e.g., a caterpillar, which represents the possessing *kenaima*. In curing, the *piai*, by singing to them, calls up spirits to aid him. They are his friends, who inform him whence the disease

comes, whether from another spirit or a wizard. If from a bad spirit, he gets one of the helpful spirits to remove it. The *piat* is also employed to drive off *kenaimas* from a village. He fixes the appropriate times for attacking enemies, and can transform himself to animal shape or make himself invisible. The natives firmly believe in the powers of the *piat*, he believes more or less in them himself, and he exerts his influence in autocratic ways and shares with the headman the authority in a village. He is respected and feared, as arbiter of life and death, and when dead his spirit is propitiated.¹

In other tribes the methods used are less clearly those of a shaman and more those of the medicine-man.² But in some tribes a regular priesthood exists, the members of which also practise medicine and cure, and have spirits in their service.³

8. The shaman in Malaysia. — Among the different peoples of the Malay Archipelago and Malay Peninsula shamanistic methods are common, and both sexes act as shamans. Priests, i.e. officiants in purely religious services, are sometimes a separate class, but they sometimes also act as shamans.⁴ The office of shaman is often hereditary; it may also fall to men to whom spirits have revealed themselves or whom spirits have chosen, and who have been trained by another shaman. Some are self-created and do not possess a familiar spirit. To prove their calling, the shamans fast or use other means, by which they pass into trance, ecstasy, or an abnormal mental state, acting as if possessed.

The process of initiation in the case of a Dayak *manang* includes the committing to memory of the traditional lore and incantations; his treatment as a sick man by other *manangs* (he thus learns how to feel a disease in the body and to apply charms); the alleged taking out of his brains by the *manangs*, in order to wash them and give him a clear mind to penetrate the mysteries of evil spirits.⁵

The methods of curing sickness, which is caused by spirit-possession or by an object in which a spirit resides, are various: sometimes the spirit is extracted from the patient in the usual fashion of the medicine-man and propitiated by prayer and sacrifice; sometimes the shaman falls into a trance or ecstasy, and then ejects the spirit with the help of his familiar spirit; or sometimes the familiar spirit indicates the method of treatment to the shaman. When the sickness is caused by the wandering of the soul, the shaman recaptures it by a variety of means—e.g., by sending his soul, when in trance or a dreamy state, after it to Hades or wherever it may be. He describes its wanderings while it is absent, and on reviving shows the soul (or a small object), which he pretends to replace in the patient.⁶ Spirits are also driven off by chanting or by the familiar spirit of the shaman. Oracular messages are also obtained through conversation and communion with spirits or gods. To some extent the Malaysian shaman, male or female, acts, like the Asiatic shaman, as mediator between men and the supernatural world.⁷

The native names of the shaman are numerous—e.g., Malay, *parang*; Dayak, *brilan*, *basir*; Iban, *manang*; Battak, *sibaso*; Kayan, *dayong*. Most of these use the 'sending' to kill or harm others, and can change themselves into tigers.

9. Shamanistic methods elsewhere. — One of the main aspects of shamanism, viz. possession (*q.v.*) by spirits or divinities for a particular purpose, is of wide occurrence. Among the Ainus the wizard or medicine-man, when called in to explain the cause of illness, works himself into a frenzy, falls into a trance, and tells why the disease has come and who sent it. He makes charms to be worn by the patient in order to drive away the possessing demon. In a state of trance he also prophesies as the mouthpiece of the gods.¹ Zulu diviners in their performances sometimes use the trance and are the mediums through which the spirits speak in a whistling voice, explaining the cause of illness or whatever is inquired about. The spirits go to secure the buried poisons causing the illness and fight with the spirits of the place where they are buried.² In other parts of Africa the phenomena of possession, often in connexion with rites of an elaborate and prolonged kind, are reproduced by priests, priestesses, medicine-men, or magicians, or, as among the Baganda, by mediums associated with the priests or particular gods, for healing the sick or giving oracles.³ The Maori *tohunga*, or priest, was similarly possessed or inspired; and in Polynesia generally, where the priests were called 'god-boxes' because possessed by the gods, they used the method of frenzy, which proved their possession, in order to discover the cause of illness or in announcing the will of the gods.⁴ In Fiji and other parts of Melanesia similar methods were in use, often in connexion with a *séance*.⁵ The Veddā *kapurale* has the necessary power to call the *yaku*, or spirits, to accept the offerings. He invokes them, dances round the offerings, and then, in a semi-trance condition, he becomes possessed by them. They speak through him, announcing their acceptance of the offerings, and promise success in hunting. Others present may also become possessed by them.⁶ In the religion of many Dravidian tribes, with their cult of spirits and demons, these possess the frenzied magician for the time being and utter their communications through him.⁷ Such are only a few examples drawn from a wide field; the phenomena are met with in many of the higher religions also.⁸ Sometimes, too, persons not specially marked out as priests or medicine-men become possessed or simulate the phenomena, and hold converse with spirits.

10. Conclusion. — The phenomena of possession are to a large extent based on the theory that sickness and diseases, especially those of a nervous and epileptic character, result from a spirit having entered the patient and speaking through him. He was regarded therefore as inspired, and in some cases such persons themselves become shamans—to use the word in a wide sense. It was easy then for others either to simulate the

⁸ See artt. LYCANTHROPY, § 5.

own soul to catch it (Chiliwack).¹ The soul is then restored to the patient. The Tlingit shaman can put spirits into material objects and send these out to do mischief. He locates supplies of food, aids in war, and fights hostile shamans by means of the spirits. The succession is from uncle to nephew, the nephew receiving his uncle's spirit in a trance after the burial. Offerings are made at the graves of shamans, and their houses in the forest are avoided lest the intruder should be made sick. The shaman's power is more dreaded among the Tlingit than among the Haida.²

With the Chinooks gods are invoked by the shaman for the cure of the sick, and the search for the soul by the souls of shamans is also practised. Here also, not an invading spirit, but a material object, causes sickness and is removed.³

Among the Dénés shamanism of this type is prevalent, with the curious addition (found also among the Eskimo to some extent) of the patient's confession of sins to the shaman.⁴ With the Cherokees the type of shamanistic methods of healing resembles those already detailed, but there is appeal to the spirits to aid the shaman rather than compulsion or control over the spiritual world.⁵

Among many tribes the shaman's functions were divided among different kinds of shamans. With the Maidu (among whom all the children of a shaman must become shamans, else the spirits would kill them) there are a class of curative shamans and another class known as dreamers, who hold communion with spirits and ghosts. During the winter the latter have *séances* in darkened houses, when they hold converse with spirits. One who has not a shaman for his father goes to the mountains and there performs certain ceremonies, as do also shamans who wish to obtain more powerful spirits.⁶ Or, again, as with the Ojibwa, there is the *midé-wiwin*, or society of the shamans, in which the candidate for admission is supposed to die and come to life again full of spirit-power. The members use incantations and exorcisms and administer remedies. There are, again, the *jéssakids*, prophets or jugglers, who speak with the *manidōs* in a hut at a *séance*. The hut shakes violently, and the voices of the spirits are heard from it. There are also *wābēnōs* (who prepare charms) and herbalists, but only the *midé* are combined in a society. A similar division is found among the Menomini—the *mitāwit* (society of shamans), the *tshisagka* (jugglers), and the *wābēnō*. The magical feats of the *midé* and *mitāw* are done by the help of their *manidōs*, the power possessed by the shaman's 'medicine,' which typifies his tutelary spirit. The *jéssakids* at the *séance* obtain information from the spirits—e.g., regarding sickness, the person causing it, its cure, etc. They also remove the substance causing sickness by sucking, after singing incantations and using the rattle.⁷ Divisions of a similar kind are found among the Chippewas and Delawares.

With the Chippewas the method of healing included a fast on the part of the shaman and the erection of a medicine-lodge for him, into which the patient was brought. The shaman chanted to his tambourine, causing a spirit to descend. The spirit entered the patient and removed his sin, already confessed to

the shaman, and also inserted his soul which had escaped Sucking out the material cause of disease was also used.¹

These mystery-societies are found among all but the lowest tribes, and the aim of their ceremonies is physical and spiritual well-being. The rites are frequently shamanistic in character.²

Among the tribes of the eastern plains the shaman is merged in the priest. There are societies which work at healing and use definite remedies, yet invoke supernatural powers. There is also a limited number of men who conduct the national rituals.³ In more advanced tribes the shaman gives way to the priest, or is merely a medicine-man or wizard—e.g., in the Navaho, Hupa, Apache, Choctaw, Hopi, and other Pueblo tribes, and the Natchez. Here the priest's authority is not based on individual action. He works for the tribe, or is associated with a society. But here, too, these priest-healers perform long ceremonies and medicine-dances for healing or life-giving, as in the mystery-societies of other tribes.⁴

In general, except among the tribes of the north-west (where possession of or by spirits as the fundamental fact in healing and wonder-working marks the true shaman) and in the case of mystery-societies where shamanistic methods are in vogue, the medicine-man is more in evidence than the true shaman. While not always unaided by spirits, he uses more empiric methods than those found among the Asiatic tribes—e.g., the sweat-bath, bleeding, bathing, sucking, noises, and gestures. Even the north-western shaman has little to do with directing sacrifices, and the general belief that illness is caused by sorcery rather than by a spirit possessing the patient divides both the theory and the method of cure from those used in Asia.

A somewhat closer parallel to the Asiatic shaman is found among some S. American tribes. With the natives of Guiana the office of *piai* or *paje* is usually hereditary; but, if there is no son, the *piai* chooses a boy, preferably an epileptic, and subjects him to a course of fasting, vigils in the forest, drinking tobacco liquor, and lessons in ventriloquism. He is now able to work himself into a mad frenzy, to converse with *kenaimas*, after invoking them by chants, and to overcome them. By drinking tobacco-juice he falls into a trance, in which he believes that he is received into the company of the spirits and consecrated by them to his office. He also learns the tribal traditions and the properties of plants. His insignia consist of a rattle, various crystals, a kind of doll, and other things, which are tabu, and would lose their power if profaned. All evil is produced by *kenaimas*, human or superhuman, and by his power over them the *piai* gains great influence. He can call up and question the spirit of any Indian or dispatch his own spirit to question an absent tribesman or to speak with spirits. In cases of illness, where blowing off the evil spirit is not sufficient, other methods are resorted to. A healing *séance* is held in a dark hut, where fearful noises are produced for hours. Winged creatures seem to approach the house, enter by the roof, and fly off again. These are the *kenaimas* coming and going, and each one must give an account of itself and promise not to trouble the patient. At a later time the *piai* produces, e.g., a caterpillar, which represents the possessing *kenaima*. In curing, the *piai*, by singing to them, calls up spirits to aid him. They are his friends, who inform him whence the disease

9. Shamanistic methods elsewhere.—One of the main aspects of shamanism, *viz.* possession (*q.v.*) by spirits or divinities for a particular purpose, is of wide occurrence. Among the Ainus the wizard or medicine-man, when called in to explain the cause of illness, works himself into a frenzy, falls into a trance, and tells why the disease has come and who sent it. He makes charms to be worn by the patient in order to drive away the possessing demon. In a state of trance he also prophesies as the mouthpiece of the gods.¹ Zulu diviners in their performances sometimes use the trance and are the mediums through which the spirits speak in a whistling voice, explaining the cause of illness or whatever is inquired about. The spirits go to secure the buried poisons causing the illness and fight with the spirits of the place where they are buried.² In other parts of Africa the phenomena of possession, often in connexion with rites of an elaborate and prolonged kind, are reproduced by priests, priestesses, medicine-men, or magicians, or, as among the Baganda, by mediums associated with the priests or particular gods, for healing the sick or giving oracles.³ The Maori *tohunga*, or priest, was similarly possessed or inspired; and in Polynesia generally, where the priests were called 'god-boxes' because possessed by the gods, they used the method of frenzy, which proved their possession, in order to discover the cause of illness or in announcing the will of the gods.⁴ In Fiji and other parts of Melanesia similar methods were in use, often in connexion with a *séance*.⁵ The Veddā *kapurala* has the necessary power to call the *yaku*, or spirits, to accept the offerings. He invokes them, dances round the offerings, and then, in a semi-trance condition, he becomes possessed by them. They speak through him, announcing their acceptance of the offerings, and promise success in hunting. Others present may also become possessed by them.⁶ In the religion of many Dravidian tribes, with their cult of spirits and demons, these possess the frenzied magician for the time being and utter their communications through him.⁷ Such are only a few examples drawn from a wide field; the phenomena are met with in many of the higher religions also.⁸ Sometimes, too, persons not specially marked out as priests or medicine-men become possessed or simulate the phenomena, and hold converse with spirits.

10. Conclusion.—The phenomena of possession are to a large extent based on the theory that sickness and diseases, especially those of a nervous and epileptic character, result from a spirit having entered the patient and speaking through him. He was regarded therefore as inspired, and in some cases such persons themselves become shamans—to use the word in a wide sense. It was easy then for others either to simulate the

phenomena of possession or, by a special training for the purpose, to reproduce them and to believe themselves (and to be believed by others) possessed by spirits and their mediums of communication. Such persons are probably often mentally unstable and subject to hysteria.¹ The main aspects of the Asiatic shaman's procedure as well as the idea of possession by spirits are found to be of well-nigh universal occurrence in connexion with healing, discovering the will of spirits or gods, or prophesying. One may occur without the others, or, again, all are found as parts of the practice of a wonder-worker. This suggests, therefore, that the shamanism of the Ural-Altaic tribes is but a specialized and highly elaborated form of a universal practice—a form associated with a full and varied religion, polytheism and polydæmonism, of which it is an essential and central part, and connected with sacrifices and the use of liturgical prayer, chant, and hymn formulæ. It probably formed the religion of the early Mongol-Tatar peoples, and others akin to them—e.g., in China and Tibet, where much of it is still reproduced—and it is still very largely connected with the religion of the Malaysian tribes. Whether among the Eskimo and certain American Indian tribes it is a native growth, or has been the result of influences from Asiatic peoples, or has been brought thence in early times, is uncertain.

Kearse says that the American Indian medicine-man is 'a sort of Asiatic shaman in embryo, arriving in the late Stone Age, and afterwards diverging in various directions from his Siberian prototype.'²

While retaining the word 'shamanism' as descriptive of the religion of the Ural-Altaic tribes, we must none the less admit that the practices of the shaman are found in greater or less completeness over a wide area. At the same time the methods of the medicine-man and the magician, as distinct from the shaman, are also found everywhere, and frequently enter into shamanistic practice. While the shaman's methods are connected with the cult of spirits, and are therefore semi-religious and not fundamentally magical, but rather mysticism of a primitive kind, seeking intimate communion with the spirit-world, those of the medicine-man are partly magical, partly empiric with the use of naturalistic modes of healing, and are not necessarily connected with spirit-help, though they may be used against hostile spirits. No doubt the differing methods are often interchangeable, and, as often, the various functions of shaman, medicine-man, and magician are shared by different classes of men in one tribe. Priests, too, sometimes combine these various functions in themselves, apart from their purely religious work. On the whole, it is better to use the word 'shaman' to denote one whose procedure is based on the fact that he is *en rapport* with spirits or has them at his command, and to consider the medicine-man as one who acts generally by methods in which the aid of spirits is not essential. The Asiatic shaman is a highly specialized user of shamanistic methods.

SHAME.—Shame is an emotion of self-abasement experienced by one who is conscious of acting contrary to, or below, the standards which he approves and by which he knows others judge him. This sense of self-abasement is stronger than in the related states with which it is often confused—modesty, bashfulness, shyness, and coyness. These are marked rather by hesitation, caution, and inhibition. They arise through consciousness of being under the gaze of others whose attitude is that of curiosity or superiority or searching criticism. But shame involves a sense of unworthiness and demerit. Like these kindred states, it may arise in connexion with matters of sex, but it is also found in a great variety of situations not concerned with sex. The sense of shame consists in the consciousness of failure and exposure before other persons in connexion with a point of honour or of strong self-esteem.

Darwin discussed blushing as an expression of this emotion. Other accompanying signs are the drooping of the body, lowering of the head, and averting the gaze. The subject tends to hide, to escape notice, and, in extreme cases, to inflict injury upon himself as a kind of self-imposed retributive punishment. Modern psychologists have shown that all emotions involve more or less of a conflict of opposing impulses. McDougall has treated shame in terms of the conflict between positive and negative self-feeling. He says:

'Shame, in the full sense of the word, is only possible when the self-regarding sentiment has become well developed about the idea of the self, its attributes and powers. Then any exhibition of the self to others as deficient in these powers and attributes, which constitute the self in so far as it is the object of the self-regarding sentiment, provokes shame. The self may appear defective or inferior to others in all other respects and no shame, though perhaps bashfulness, will be induced.'¹

W. James noted this fact and pointed out² that the man who has great proficiency as a pugilist or as an oarsman may be shamed to death if there is one rival in all the world who can excel him. On the other hand, a puny little fellow who has no athletic prowess or ambition is not depressed by the fact that every one can surpass him. In the fraction of self-esteem represented by success over pretensions shame results when success is inadequate to the pretensions.

Interesting manifestations of the outward behaviour expressive of shame in man may be seen in the lower animals. An observer noticed that on more than one occasion when he was approaching his home after an extended absence his dog would rush towards him, barking threateningly as he would at a stranger. When he came nearer, the dog would suddenly lower his head to the ground, rub his nose with his paw, and, after a moment, bound forward with all his usual signs of friendliness. Children reflect their environment and training in the acts and circumstances in which they show shame. Apparently there are no innate endowments determining the feeling. In well-regulated homes children shrink from being discovered with muddy clothes, dirty faces, holes in their stockings, and the like. A child is ashamed to be seen with a nursing-bottle after having learned to eat. A boy of fourteen was willing to stay at home from school and assist his mother, but was painfully humiliated when his school-mates found him in the house washing dishes. Sensitiveness to awkwardness, to social blunders, and to one's appearance in the eyes of others, particularly of the opposite sex, is greatly intensified in adolescence, and hence

¹ *An Introd. to Social Psychology*, p. 147 f.

² *Psychology*, New York, 1890, i. 310.

the sense of shame is often greatly deepened. It is doubtless on account of the dawning consciousness of sex in this period that capacity for shame in these matters is so much increased as compared with the earlier years.

The Freudian psychology has thrown new light upon the conflict of such impulses as those involved in shame. In this view, normal persons are subject to the play of many antagonistic tendencies. In their waking life the upper stratum of consciousness, representing the higher self, acts as a censor to exclude from the stream of thought ideas of a baser sort. But in dreams the suppressed tendencies may be released and 'arouse the upper personality to feelings of horror and remorse.'¹ At times this actually happens in waking life; a person's lower tendencies get expressed, the evil deed is committed, and the better self suffers keen remorse and shame.

Social psychology emphasizes the fact that one's social group furnishes the determining influences in forming an individual's standards of taste and conduct. The infringement of the conventions, or *mores*, is likely to be accompanied by shame. The divergencies among races in reference to the situations in which they experience this emotion are astonishing and give weight to the impression that education and environment are the chief factors.

* Though the Bakairi of Central Brazil have no feeling of shame about nakedness, they are ashamed to eat in public: they retired to eat, and hung their heads in shamefaced confusion when they saw him [the white man] innocently eat in public.'² Sumner gives many illustrations from various sources.

SHAMMAI.—Shammai was a famous Jewish teacher of the 1st cent. B.C., the most distinguished contemporary of Hillel (*q.v.*), to whose views on Halākhāh as well as on many a point of general Jewish theology he was almost invariably in diametrical opposition. The two men are usually coupled together in the Talmud, and the antithesis between them was reproduced, often with actual violence, for a considerable period after their lives, in the two opposing schools which they founded and which figure prominently in Rabbinical literature as Beth Hillel and Beth Shammai. The influence exerted by these schools on the subsequent evolution of Jewish legalism is paramount.

According to the Mishnāh,³ Shammai held the office of vice-president (*ab beth din*), whilst Hillel was president (*nasi*) of the Synhedrion—Shammai having succeeded a certain Menahem, who, according to Josephus,⁴ was a great sage endowed with prophetic power, and in his childhood had foretold that Herod would one day rule over the Jews. The Talmud, however, makes no mention of this point. Graphic emphasis is given in the Rabbinic records to the marked contrast between the hasty, excitable, and uncompromising temper of Shammai as compared with the imperturbably sweet and patient nature of Hillel. In T.B. *Shabbāth*, 31a, three analogous illustrative anecdotes are given of this:

(a) A heathen comes to Shammai and Hillel in turn with the request that he be admitted as a convert to Judaism, whilst believing only in the 'written' and not in the 'oral' Law. Shammai reproachfully shows him the door, whereas Hillel by his kindly treatment wins him over to Judaism and a belief in

both 'Laws.' (b) A heathen wishes to be taught the whole 'Law' (and thus become a proselyte to Judaism) whilst 'standing on one foot,' i.e. in a very brief space of time. Whereas Shammai, before whom he first appears, gives him a sound trouncing with a builder's measuring-rod that he happens to be holding in his hand at the moment, Hillel receives him into the Jewish faith with the advice, 'That which is hurtful to thee do not unto thy neighbour. This is the whole Tōrah. All the rest is commentary. Go and learn.' (c) A heathen is desirous of becoming converted to Judaism, with the object of ultimately becoming eligible for the office of high-priest. Shammai rejects him outright, whereas Hillel admits him, whilst at the same time tactfully convincing him of the futility of his ambition to become high-priest. It was Shammai's bad temper, says the Talmud in summing up, that 'put this man out of the universe' (i.e. made him forfeit the bliss reaped by a convert to Judaism), whereas it was Hillel's meekness that brought him near to dwell beneath the wings of the Shekinah.

In all probability the truest interpretation of these contrasts is to say that they point to the rigid, uncompromising attitude of Shammai towards the things of religion exclusively, and that they have no reference to his personal temper or character. That the latter was by no means so bitter and misanthropic as is popularly imagined is proved by the motto ascribed to him in *Abhōth*, i. 15, 'Receive all men with a cheerful countenance.' A statement in T.B. *Bābhā Bathrā*, 134b, shows that Shammai could, on occasion, show real meekness even towards subordinates such as his disciples. Shammai was the redoubtable upholder of inherited custom, a relentless follower of the old beaten tracks, to depart from which was to call forth his measureless rage.

Further striking instances of Shammai's exceptionally stringent veneration for the letter of the Law are the following:

Mishnāh *Sūkkāh*, ii. 8, relates that, when once his daughter-in-law gave birth to a son on the Feast of Tabernacles, Shammai pierced a hole through the roof of the chamber in which she lay, thus converting the room into a ritual *sūkkāh* ('booth') so as to enable the new-born infant to fulfil the religious precept of Lv 23:42, 'Ye shall dwell in booths seven days; all that are home-born in Israel shall dwell in booths.' This was opposed to the dominant Rabbinic view, which maintained that the obligation did not become incumbent upon a child until he had reached at least some rudimentary stage of reasoning power.

To similar effect is the story in T.B. *Pōmā*, 77b, which relates that Shammai on a certain Day of Atonement refused to handle food even in one of his hands in order to feed his young son (who was exempt from the ordeal of fasting by reason of his tender age), because such handling of food would entail the preliminary ritual washing of the hand in question. The sages, however, out of a feeling of sheer humanity, 'decreed' that it was his duty to perform the ritual washing of both his hands in order to feed the child and avoid risking its life through so long an abstention from food.¹

That, nevertheless, such instances of uncompromising obedience to traditional formulae can consist with a fine and lofty idealism in religious outlook is proved by a Baraita in T.B. *Beṣa*, 16a, as follows:

'They said concerning Shammai the Elder that throughout all his days whatever he ate was in honour of the Sabbath. Should he alight upon a fine beast, he would say "Let this be for the Sabbath." Should he afterwards find a finer one, he would leave it and partake only of the first.'

The observance of the Sabbath was to Shammai the welcome opportunity of the soul's joyous union with God. Hence the smallest act performed during the week was felt to have some bearing upon the Sabbath's sanctified joy.

The Mishnāh *Eduyōth*, i. 1-4, mentions three Halākhic questions disputed between Hillel and Shammai. These refer to (1) *niddah* (laws concerning female impurity), (2) *hallah* (laws concerning the priest's share of the dough, as alluded to in Nu 15:17-21), and (3) *mikveh* (laws relating to the ritual bath). The views taken by Shammai on some of the points in connexion with these show that he was, at times, capable of adopting the more lenient standpoint in Halākhāh.²

There is an interesting allusion in *Sifrē*, Deut.

⁴ Ant. xv. x. 5.

§ 203,¹ to three Halākhic laws which Shammai deduced exegetically from the words of Scripture, one of which is that a ship going on a long voyage should not start later than three days previous to the Sabbath.² This he deduced from Dt 20²⁰.

Many of Shammai's teachings and maxims are probably incorporated in those handed down in the name of the school which he founded—the Beth Shammai. The Halākhic decisions of this school reflect all the stringency of their founder. In all the 316 controversies between it and its rival, the Beth Hillel, as alluded to spasmodically throughout the domains of the Rabbinic literature, the Shammaites took the lenient view in only 55 cases. The Mishnāh generally prepares the reader for these 'leniencies' of the Shammaites by an introductory remark such as 'The following are of the lenient views of Beth Shammai and the stringent views of Beth Hillel.'³ Judea was, at the period of the existence of these schools, the storm centre of much political faction; and the Shammaites, as was perhaps natural, carried their religious austerities into the arena of the current politics. They particularly hated the Roman domination and the Roman system of taxation. They were merciless in their opposition to all intercourse with Romans or with Jews who showed countenance to Roman laws and practices. In order to carry these views into effect, they sternly forbade Jews to buy any article of food or drink from their non-Jewish neighbours. Such bitter hostility did these and other Shammaite stringencies arouse in the minds of the conciliatory Hillelites that, as the Talmud relates in many parallel passages,⁴ 'the day on which the Shammaite enactments gained the ascendancy over the Hillelites was as unfortunate for Israel as the day on which the golden calf was worshipped.'

The Talmud nowhere affixes a date to the beginning or ending of these disputes; but internal evidence shows that they were carried on for some time after the destruction of the Temple by Titus. The 'war of the schools' resulted in victory for the Hillelites over the Shammaites.⁵ The Halākhāh was fixed in accordance with the Hillelite view, and ratified by all subsequent Rabbinic codifiers.

ASH-SHA'RĀNĪ or Sha'rāwī, Abū-l-mawāhib 'Abd al-Wahhāb b. Ahmad b. 'Alī al-Ansārī ash-Shāfi'ī ash-Shādhilī, rarely al-Aḥmadi ash-Shinnāwī al-Ash'arī (MS Leipzig-Vollers, no. 353), was born in the month of Ramaḍān, A.H. 898 (899) near Qalqashanda, in the delta of the Nile, and spent his youth in Sāqiyyet Abū Sha'ra, in the same neighbourhood. He traced his genealogy back to the rulers of Tilimsēn (Tlemcen) in the times of the saint Abū Maaldyan (Médine), about A.H. 600, and even to the Khalifa 'Alī. An ancestor is said to have migrated from Tilimsēn into

Upper Egypt, where ash-Sha'rānī was born near Behnesa, according to another account. At the age of twelve he went to Cairo, where he studied seventeen years in the mosque of al-Ghamri; from there he betook himself to the *madrasa* of the mosque Umm Hawand. Egypt had passed in 923 (1517) into the hands of the Ottomans, and the writings of ash-Sha'rānī often speak of the condition of the country, which became worse and worse under the new rule. It was his life in the mosque Umm Hawand that made him famous. He won friends, and made enemies who were jealous of his reputation. About this time, in the year 931, began also his literary activity. The report that he was a weaver in private life is due to a misunderstanding on the part of Von Kremer. His whole life was consecrated to devotional exercises and to teaching. He repeatedly made the pilgrimage to Mecca, first in the year 947, then again in 953 and 963. He mentions only one journey undertaken by him in Upper Egypt. His reputation grew extraordinarily when a Coptic patron founded for him (with unjustly gotten money!) a school and a house for the poor, where ash-Sha'rānī worked to the close of his life (cf. *Description de l'Égypte*, 'Plan du Caire,' fig. 8; Baedeker's plan, D 2). His popularity became boundless; great officials consulted him on important matters; the pious multitudes filled his school and environment; even the theologians (*ulamā*) who were hostile to him were forced to change in great part their attitude. In the year 960, as he felt his death draw near—he believed like other pious people that he would die at the age of sixty-three like the Prophet—he began to write his autobiography (see below). But he lived ten years longer, and died in Jumādā I. 973. His funeral was as magnificent as only a popularly venerated saint could receive. He was buried in the basin (*fāṣṣiyya*) of his mosque-school, which later was named after him and still exists. He was four times married—successively, it would seem, not simultaneously. Of his sons, Ḥasan seems to have died early, but 'Abd ar-Raḥmān survived him, and died A.H. 1011.

The extraordinary significance of ash-Sha'rānī lies in the fact that he was practically and theoretically a mystic of the first order, and at the same time a prominent and original writer in the field of theology and jurisprudence. His writings number over seventy. Among these he names twenty-four that were entirely original (*ibtikār*), their central idea having previously been treated by no one. The fields of his literary activity were, first, mysticism, i.e. Ṣūfism (*at-taṣawwuf*), then law, dogmatics, the Qur'ān, tradition, poetry, and even grammar and popular medicine. The most characteristic feature of his nature, both from a theoretical and from a practical standpoint, is mysticism. His teachers and patterns in the practice of Ṣūfism were Afdaladdīn, Ibrāhīm al-Matbūlī, 'Alī al-Hawwās al-Burullusī, and 'Alī al-Marṣafī—especially al-Hawwās. Like him, ash-Sha'rānī claimed the gift of miraculously hearing *all* things, and thus of knowing also the secrets of his fellow-men, of foreseeing things to come, and of warning like a prophet. In his youth ash-Sha'rānī gave himself to an austere asceticism, hunger, watching, scourging, miserable food and clothing. Like the Christian Stylites, he used often to climb the mast (*ṣārī*) of the mosque al-Ghamri and remain swinging there, to escape sleep. He distinguishes three degrees in the Ṣūfī life: the beginner (*murīd*), the *shaikh*, and the saint (*walī*). But the highest rank of the *walī* is still far from the lowest rank of the prophet. Within the domain of the Ṣūfīs he distinguishes a narrower (esoteric) and a broader (exoteric) circle,

and a stricter and a looser practice. The great multitude of them, that is without understanding, is called by him *al-ḡaum*, 'the people'; the non-Ṣūfī multitude is called, with a synonymous expression, *al-ḥalq*. We must not communicate to the *ḡaum* all truths and mysteries; that would be to throw pearls before swine. Also in ethical and ritual things we must allow them a certain latitude (*taḥṣīf*), because they cannot bear everything. The austere manner of life (*tashdid*) is only for the strong. The Ṣūfīs must lead a solitary, despised, and modest life; the Prophet (as he was in the Meccan period of his life) must be their comforting pattern. They must as a rule have no intercourse with the great ones of the world; only few have the gift of safely doing so. Envy and jealousy reign among the *ḥalq*, and disputing (*jidāl*) among their men of learning; peace, harmony, forgiveness, humility, patience, on the contrary, rule among the *ḡaum*; they know nothing about learned disputes, because they have full certainty. The Ṣūfī mode of life is necessary for the attainment of holiness; but the highest gifts, ecstasy (*jadhb*) and revelation (*kashf*, *fath*), cannot be attained through actions, but only through divine grace.

A main point which separates Ṣūfīs from orthodox Muslim men of learning (*ʿulamā*) is their conception of revelation. While the *ʿulamā* regard revelation as closed with the Qur'an and content themselves with explaining the tradition founded by the Prophet and built up by the great masters (*mujtahidīn*), the Ṣūfīs believe in the possibility of a continuous God-given revelation (*ilhām*, *kashf*). Thus an ever-flowing mystical knowledge and verity (*ḥaqīqa*) stand here over against the law (*sharīʿa*), which rests on tradition and is closed. The *ʿulamā* confine themselves to speculation and rational thinking (*nazar*, *fikr*); the Ṣūfīs by their path attain full contemplation (*shukūd*) of the truth. The *walī* assumes the rôle of the *mujtahid* of the more ancient times. The *ʿulamā* reject all this as sorcery (*sihr*), madness (*junūn*), and heresy (*zandaqa*). The Ṣūfī hermeneutics also are determined by this conception of revelation. The sense of a passage of the Qur'an may be not only external (*ẓāhir*), but also internal (*bāʿin*). The inner sense may take as many as seventy forms. It is intelligible, then, how the belief in miracles among Ṣūfīs assumes fantastic forms even in a man of such high standing as ash-Sha'rānī. When he was a child he was saved from drowning by a crocodile, which took him on its back. Another time he scared a crocodile away by jumping into the water. Like the Prophet (*Qur.* lxii.), ash-Sha'rānī received from God the privilege of having the *jinn* (cf. art. DEMONS AND SPIRITS [Muslim]) as hearers at his lectures. Many of his works were occasioned, in apocalyptic fashion, by visions; among others, *Kashf al-ḥijāb ʿar-rān* was suggested by a *jinnī* in the shape of a dog, who delivered a letter to him. On the authority of 'Abd al-Ghaffār al-Qūṣī, he tells as a perfectly credible story that a man who had spoken disrespectfully of the Khalīfas Abū Bakr and 'Omar was transformed by God into a swine. In A.H. 923, he had a trance (*jadhb*) in Cairo, in which he received the gift of hearing and distinguishing all voices (like his teacher al-Ḥawwās); he also perceived how the animals and the stones and the fishes of the Mediterranean praised God (cf. St. Francis of Assisi). The gift of having a share in such wonders (*karāmāt*) rests on Ṣūfī theory and practice; the *ʿulamā*, therefore, cannot attain thereto. On the question of the freedom of the will and its relation to the omnipotence of God, he contends against the Mu'tazilites; God 'creates' the actions of men; only the 'appropriation' (*al-iktisāb*) is left to them.

He regards al-Junaid (d. A.H. 297) as the greatest representative of the earlier mysticism, because he knew how to reconcile the law (*sharīʿa*) with his views. Ash-Sha'rānī himself belonged to the brotherhood (*ṭarīqa*) of ash-Shādhilī (d. 656), which is still widely spread in Egypt and in the Maghrib. He quotes very frequently from the works of the principal Ṣūfī writers (al-Qushairī, al-Yāfi'ī, Ibn al-Jauzī, etc.). The epithets cited above from a Leipzig MS hint at his pattern, Aḥmad al-Badawī, the great saint of Tanta, at his teacher Muḥammad ash-Shinnawī, and at al-'Ash'arī (*q.v.*), the great theologian of old Islām. He names such men, for example, as Ibn Taimiya and Faḥr ad-Dīn ar-Rāzī as antagonists of mysticism.

How numerous his writings are has already been pointed out. A good many data have come down to us concerning their order in time, but these do not all agree. It would seem that many writings existed in different editions. His earliest work is apparently a methodology for lettered Ṣūfīs (*Al-anwār al-ḡadsiya*), composed in 931. His activity closed with a collection of biographies of all famous Ṣūfīs, and with his own autobiography (*Laṭā'if al-minān*). Several MSS have been preserved of most of his works, and even autographs of some of them are still extant.

As would naturally be expected, most of his works are devoted to mysticism. But almost all which deal with other topics, like law or dogmatics, serve the interests of mysticism in so far as ash-Sha'rānī endeavours to harmonize his mystical ideas with the other ruling views. His attitude is partly an apologetic and defensive one, meeting the objections brought by the *ʿulamā* against the Ṣūfīs, and partly one of reconciliation, showing that the doctrines of the Ṣūfīs, far from contradicting 'the law,' are rather its completion and development. Through these efforts ash-Sha'rānī evolves such ideas as are far above the average level of Islāmic theology, and secure for him an abiding place in the history of religion. He touches the principle of Protestantism, when in his 'Hodegetics' (*Ad-durar al-manthūra*) he exhorts his readers to study the earlier, shorter original texts dealing with the sciences rather than commentaries and later works of a diffuse verbosity. Several of his writings are marked by a far-reaching doctrinal and practical tolerance. Instead of treating Christians and Jews with the usual scorn and haughtiness, he praises their modesty and presents them as good examples to the Muslims. Although he himself was a member of the Shāfi'ite 'school' (*madhhab*), yet two of his most significant writings, *Al-mizān* and *Kashf al-ghumma*, seek to harmonize the four great *Madhāhib*, and to demonstrate that all four are justified and stand on a common basis. Similarly his main dogmatic work (*Al-yawāḡit wal-jawāhīr*) seeks to reconcile the conceptions of the Ṣūfīs (*ahl al-kashf*) and of the dogmatists (*ahl al-fikr*). He would contend only against philosophers and heretics, who shake the foundations of the law (*sharīʿa*). Several of his other works (*Lawāḡih al-anwār*; *Sawāʿif al-anwār*; *Al-ḡaul al-mubīn*; *Al-kibrīt al-aḥmar*) deal with the great mystic Ibn al-'Arabi (d. 638). Two others (*Al-jawāḥīr wad-durar* and *Durar al-ghawwās*) deal with the sayings of his master al-Ḥawwās; two similarly of his teacher al-Matbūlī; in the *Tanbīh al-mughītarīn* the morals and manners of the good old times are held before his lax contemporaries as a mirror; his *Mashāriq al-anwār* exhorts to a greater moral strictness. The above-mentioned biographical work, *Lawāḡih (lawā'ih) al-anwār*, generally known under the simpler name of *At-ṭabaqāt (al-kubrā)*, had also a pedagogical aim, in that he portrays in it 426 (in the last edition 442) of the pious of the past, from Abū Bakr and the

Companions of the Prophet down to his own times. He composed also a mystical *Divān*, which has not yet been sufficiently investigated. It is owing to his tolerance and fear of God that he often warns against *takfir*, i.e. charging a fellow-man with being an unbeliever (*kāfir*). He gives evidence of true courage when in his *Baḥr al-maurūd* he dares to attack the cupidity, the ostentation, the office-seeking and moral indifference of the 'ulamā. In the same work he rises above the prevailing ideas of Islām by declaring monogamy to be better than polygamy, and in his autobiography he demands of men chastity before marriage. His conception of brotherly love among believers does not differ at all from that of primitive Christianity; and he reaches the highest summit of theological thought when he looks for a progressive perfection of Islām at the hands of theologians who have a real calling to this task.

The influence of ash-Sha'rānī over his contemporaries and upon the ages after him has been extraordinarily great. And yet his doctrinal and ethical requirements were too ideal to inspire faith in their practical realization, and his mystical views were altogether too subjective to encourage any one to maintain and develop them. It is not quite correct to speak of a 'sect' of Sha'ranians, as some do; but the number of those who have fed on the riches of his ideas is immense. He was still living when his writings had spread as far as the regions of Takrūr (central Sūdān, Wadai, Dārūr), and at present they are studied in the Maghrib with a perhaps greater devotion than in Egypt. The best evidence for his Maghribite extraction is his fervour for theological questions, and the close affinity of the bent of his mind with that of the people of the West. He was a reforming spirit such as Islām has seldom seen.

His biography was written soon after his death by al-Munāwī (d. A.H. 1031). MSS of it are preserved at London in the British Museum, and at Berlin. Another account is preserved in the *Shadharāt adh-dhakab* (MS at Cairo, iv. 808-811). Many of his works have been printed at Cairo, among them the 'Balance' (*Al-mizān*), the 'Dogmatics' (*Al-yawāqit wal-jawāhir*), his biographical work (*At-ṭabaqāt*), several times his autobiography (*Latā'if al-minan*).

SHEKINAH.—'The majestic presence or manifestation of God which has descended "to dwell" among men' is known as the Shekinah.¹ The word as well as the conception originated after the close of the Hebrew canon,² and is characteristic of Jewish theology. The term is first used in the Targum, where it forms a frequent periphrasis for

¹ JE xl. 258; see also Schechter, *Some Aspects of Rabbinic Theology*, p. 38.

² See HDB iv. 487.

God, considered as dwelling among the children of Israel. Jewish philosophy regards the Shekinah as a suitable expression for a divine intermediary between God and the world.¹ In the Talmud the Shekinah is regularly the source of inspiration. The Rabbis affirm that the Shekinah first presided in the Tabernacle prepared in the wilderness by Moses, into which it descended on the day of its consecration, in the figure of a cloud.² It passed then into the sanctuary of Solomon's Temple on the day of its dedication by this king in Israel, where it continued till the destruction of the Temple and Jerusalem by the Chaldeans,³ and was not afterwards seen there any more.

There are innumerable references to the Shekinah in the Talmud. According to the Rabbis, 'the Shekinah is omnipresent.'⁴ This contention is inferred from the phrase, 'Behold the angel that spake with me went forth and another angel went forth to meet me.' Since it is not said 'after him,' but 'to meet me,' it shows that the Shekinah is omnipresent, and, therefore, sends his messengers from wherever they happen to be. Again, tradition teaches that Rabbi Josi said:

'The Shekinah has never descended below, nor have Moses and Elijah ever ascended on high; for it is said (Ps 116¹⁶): "The heavens, even the heavens, are the Lord's: but the earth hath he given to the children of men."⁵

The context explains that the Shekinah in the Temple stopped short ten handbreadths of the earth, and Moses and Elijah a similar distance from the heavens.

There are several conflicting theories regarding the Shekinah among the Israelites. According to several Rabbinical theories, the Shekinah rested continuously upon Israel throughout her wanderings.⁶ In the first place the Rabbis tell us:

'In three⁷ places did the Shekinah rest upon Israel: in Shiloh, Nob or Gideon, and the everlasting house (the Temple), and all these three were in the portion of Benjamin; for it is said (Dt 33¹²): "The Lord shall cover him (Benjamin) all the day long."⁸

And again we read:

'In the days of Ezra, the Shekinah did not rest (visibly) in the Temple; for it is written (Gn 27): "God shall enlarge Japheth, and he shall dwell in the tents⁹ of Shem." Although God enlarged Japheth (i.e. counted his descendants, the Persians, worthy of building the Temple), yet the Shekinah rests only in the tents (built by the descendants) of Shem.'

And thirdly:

'Rabbi Simon ben Yohi said: "Come and see how beloved Israel is by the Holy One, blessed be He. Wherever they are banished, there the Shekinah¹⁰ is with them"; as it is said (1 S 27): "Did I (God) plainly appear unto the house of thy father when they were in Egypt?" etc. When they were banished to Babylon, the Shekinah was with them; as it is said (Is 43¹⁴): "For your sake I have sent to Babylon." And when they will be redeemed the Shekinah will be with them, as it is said (Dt 80⁸): "Then the Lord thy God will return with thy captivity"; it is not said: He will cause to return, but He will return.'

Rav Hīsa says:

'The Shekinah used to rest with each individual Israelite

⁷ *Zebahim*, 118b.

⁸ *Yomā*, 9b.

⁹ *Meḡ.* 29a; Num. *Rabbāh*, vii. 10. It might be well here to compare the somewhat fanciful and imaginative interpretation found in Lam. *Rabbāh* (Introd. xv.), and to note a Rabbinic inconsistency as shown in a passage in Lam. *Rabbāh* (Introd. xxix.), where a different interpretation is given: 'Before Israel was redeemed from Egypt, they dwelt by themselves and the Shekinah dwelt by itself. When they were redeemed, the Shekinah and Israel became one. But when Israel went into captivity the Shekinah again separated from them.'

before Israel sinned, for it is written (Dt 23¹⁴): "For the Lord thy God walks in the midst of thy camp." But after they had sinned, the Shekinah departed from them¹ (individually), as it is said (Dt 23¹⁴): "That He see not the nakedness of anything in thee, and turn away from thee."

Rabbi Hanina, however, held a different view.

He insisted 'that the Shekinah rested among the Israelites in the midst² of their uncleanness, for our sages tell us that, when a certain Sadducee remarked to him, "Now surely the Temple is no more and you cannot cleanse yourself from your uncleanness, you are defiled, and therefore, God no longer dwells with you; for it is written (La 1⁹): "Her filthiness is (abideth) in her skirts," he replied: "Come and see what is written concerning them (the Israelites) (Lv 16¹⁰): "Who (God) remaineth among them in the midst of their uncleanness"; i.e., even when they are unclean the Shekinah rests among them.

Again, other Rabbis contend that the Holy Spirit disappeared from Israel only after the death of the last prophets, Haggai, Zechariah, and Malachi; the Holy Spirit departed from³ Israel, but they were still availing themselves of the daughter (echo) of a voice for the reception of divine communications.

The wrong administration of justice causes the departure⁴ of the Shekinah from Israel, for it is said (Ps 12²): "On account of the oppression of the poor and the sighing of the needy, now will I arise (i.e. depart), saith the Lord."

'Whoever prays behind his Rabbi and whoever salutes or returns the salute of his Rabbi,⁵ and whoever contends against the school of his Rabbi, or broaches anything which he had not heard from his Rabbi, he causes the Shekinah to depart from Israel.'

'The righteous in the⁶ presence of the Shekinah are compared to a rushlight in the presence of a torch.' But, 'compared with Shekinah, man is the same that anape is⁷ compared with man.' "And I praised mirth" (Ec 8¹⁵) teaches that the Shekinah does not rest with people when in a melancholy mood, in illness,⁸ hilarity, levity, when gossiping, or when indulging in idle talk, but with those who rejoice in the performance of a work which is alike meritorious and joyous.' Again, it is said that 'the Shekinah rests only upon one who is wise, physically strong, materially rich, and of high⁹ stature.'

'Whoever passes from the synagogue to the debating-room, and from the debating-room to the synagogue, is worthy to¹⁰ receive, and does receive, the presence of the Shekinah; for it is said (Ps 84⁷): "They go from strength to strength; he shall be seen unto God in Zion." Whoever 'engages in the study of the Law¹¹ by night has the Shekinah before him; for it is said (La 2¹⁰): "Arise, cry out in the night . . . pour out thy heart like water before the Lord."

Rabbi Pinhas ben Yair said:

'The study of the Law leads to circumspection, circumspection leads to diligence, diligence leads to freedom from guilt, freedom from guilt leads to asceticism (or Essenism), asceticism leads to purity, purity leads to sanctity of life, sanctity of life leads to meekness, meekness leads to the fear of sin, fear of sin leads to holiness, holiness leads to the acquisition of the Holy Spirit,¹² the Holy Spirit leads to the resurrection from the dead; but the greatest of all is sanctity of life.'

Yet Rabbi bar Rav Ada said¹³ in the name of Rav Yishak:

'Whence is it proved that God is present in the synagogue? From the text (Ps 82¹): "God stands in the congregation of the mighty."

This text further proves that the Shekinah rests with ten people who join in prayer,¹⁴ for the ten spies are called a congregation (Nu 14²⁷). And whence is it proved that the Shekinah rests with a judicial tribunal consisting of three? From the text (Ps 82¹): 'He judgeth among the Gods.' And whence is it proved that the Shekinah rests with two¹⁵ who are engaged in studying the Law?

¹⁴ *Ber.* 6a; *Ab.* 3, 9.

¹⁵ *Ab. ili.* 3; *Yalqut* on *Ps* 82.

From the text (*Mal* 3¹⁶): 'Then those that fear the Lord will converse one with the other, and the Lord will listen.' And whence is it proved that the Shekinah¹ rests even with one who is engaged in the study of the Law? From the text (*Ex* 20²⁴): 'In every place wherein I shall make mention of my name I will come unto thee (singular) and bless thee.' Yet our Rabbis taught² that a priest who does not speak by the Holy Spirit, and upon whom the Shekinah does not rest, should not be consulted oracularly. Abaii said:

'In every generation there are never less than thirty-six righteous men, who receive the presence of the³ Shekinah; for it is said (*Is* 30¹⁹): "Blessed are all those who wait upon Him."'

Rabbi Hama bar Hanina said:

'When God causes His Shekinah to rest upon anyone, He chooses for that purpose⁴ only distinguished families in Israel; for it is said (*Jer* 31¹): "At that time, saith the Lord, I will be a God to all the families of Israel." It is not said: "to all Israel," but, "to all the families of Israel."

'Puah' (*Ex* 1¹⁵) is another name⁵ for Sarah. She was so called because she spake intuitively by the Holy Spirit (from 'to observe,' or 'to perceive'); as it is said (*Gn* 21¹²): 'In all that Sarah saith unto thee, hearken unto her voice.' Whoever pronounces the blessing over the⁶ new moon at the appointed time receives, as it were, the presence of the Shekinah. Whosoever gives his daughter to a disciple of the wise is as if he clings to the⁷ Shekinah.

'Whoever is present at a banquet to which a disciple⁸ of the wise is invited, enjoys, as it were, the effulgence of the Shekinah.'

That the Shekinah⁹ supports the sick is proved from the text (*Ps* 41³): 'God will support him upon the bed of illness.' Any one coming to visit a sick person should not sit either on the couch or on the footstool or on a chair,¹⁰ but should sit wrapped up (a sign of reverence) on the ground, because the Shekinah rests above the couch of a sick person; as it is said (*Ps* 41³): 'God will support him upon the bed of illness.' The hospitable reception¹¹ of strangers is preferable to that of the Shekinah.

Rabbi Yitshak says:

'Whoever commits¹² sin in secret, presses, as it were, against the feet of the Shekinah: for it is said (*Is* 66¹): "The earth is my footstool."

He that strikes the cheek¹³ of an Israelite strikes, as it were, the cheek of the Shekinah; for it is said (*Pr* 20²⁵): 'He that strikes a man, strikes the Holy One.'¹⁴ He that gives way to anger makes no account¹⁵ even of the presence of the Shekinah; for it is said (*Ps* 10⁴): 'The wicked, when his anger arises, cares for nothing; not even God is in all his thoughts.'

'Four sets of men receive not¹⁷ the presence of the Shekinah: the set of scoffers, the set of mendacious, the set of hypocrites, and the set of slanderers.' And Hannah answered and said: No, my lord' (*1 S* 1¹⁵). Illa said: 'Some think that¹⁸ Rabbi Yosi bar Hanina said it: that Hannah spake in the following sense: "Thou art neither lord, nor does the Holy Spirit rest upon thee, because thou dost suspect me in this matter, and hast formed such an uncharitable opinion of me. . . . Neither the Shekinah, nor the Holy Spirit is with thee."

¹⁵ Neither the Hebrew nor the Greek translation gives a satisfactory rendering of this verse. The present writer has therefore translated it somewhat differently from the ordinary rendering of the AV, translating עָפָה as a derivative of the Talmudic עָפָה 'to smite,' 'to strike,' and taking יָי in a figurative sense as well in order to bring out the meaning of the Rabbis.

¹⁶ *Ned.* 22b.

¹⁷ *Ber.* 51b.

¹⁸ *Sanh.* 103a.

'And Esther stood in the inner court¹ of the king's house' (Est 5). Rabbi Laive said: 'When she reached the chamber of the images, the Shekinah departed from her; she then exclaimed (Ps 22): "My God, my God, why hast thou forsaken me? Dost thou perhaps judge inadvertent and compulsory transgression in the same way as thou dost presumptuous sins? Or is it because I called him (Ahasuerus) dog?" as it is said (Ps 220): "Deliver my soul from the sword, and my darling from the dog." She then (by way of making amends) called him lion, as it is said (Ps 221): "Save me from the lion's mouth."

'For a period of six months² David was afflicted with leprosy; for it is said (Ps 51): "Purge me with hyssop, and I shall be clean; wash me, and I shall be whiter than snow." At that time the Shekinah departed from him; for it is said (612): "Restore unto me the joy of thy salvation." And the Sanhedrin kept aloof from him; for it is said (11979): "Let those that fear thee turn unto me." That the affliction lasted six months is proved from 1 K 21, where it is said: "And the days that David reigned over Israel were forty years: seven years reigned he in Hebron, and thirty and three years reigned he in Jerusalem"; whereas in 2 S 5⁵ it is said: "In Hebron he reigned over Judah seven years and six months." The reason why these six months are omitted in Kings is, because during the period he was afflicted with leprosy.'

The Talmud proves that the Shekinah did not exist during the second Temple in the following way:

Why is it that the word *אֲנֹכִי*, 'And I will be glorified' (Hag 19), is without the letter ה, whilst another reading has it? It intimates the absence of five things from the second Temple, which existed in the first,⁴ viz. (1) the Ark, the Mercy Seat, and the Cherubim; (2) the fire from heaven upon the altar; (3) the visible presence; (4) the Holy Spirit; (5) the Urim and Thummim.

SHEOL.—See **ABYSS**, **ESCHATOLOGY**, **STATE OF THE DEAD**.

SHEWBREAD.—

1. Terms.—In the older sources, 1 S 21⁶ (Heb. 7), 1 K 7⁴⁸, we find *לֶחֶם הַפָּנֶה*, 'bread of the face (or presence [i.e. of God])', EV 'shewbread,' RVm 'presence-bread.' This term is also used in the Priestly Code (P), Ex 25³⁰ (*לֶחֶם הַפָּנֶה*) 351³ 393³, and in 2 Ch 41⁹. In Nu 47 it is abbreviated into *happānīm*. In 1 Ch 9³² 23²⁹, Neh 10³³ (Heb. 34), we have *לֶחֶם הַמִּנְחָה*, EV 'shewbread,' AVm 'Heb. bread of ordering'; in 2 Ch 13¹¹ *ma'arekhet lehem*; in 1 Ch 23¹⁶, 2 Ch 24²⁰ 18, we have *ma'arek-heth*, and in Ex 40²³ *lehem*. *Ma'arekhet* is from עָרַךְ, 'to set in order,' and is used in the concrete sense of 'row' or 'pile.' As the Babylonian monuments show sacred tables with piles of bread, it is probable that *ma'arekhet* means 'pile.' In Lv 24⁶ the shewbread consists of two *ma'arekhot*, EV 'rows,' RVm 'piles.' Hence, *lehem hamma'arekhet*, etc., mean 'pile-bread' or 'row-bread.' In 1 S 21⁶ (Heb. 6) the shewbread is called *לֶחֶם קֹדֶשׁ*, EV 'holy bread,' as distinguished from *לֶחֶם יְרֵמָה*, 'ordinary,' EV 'common bread.' In 2 Ch 24 (Heb. 3) we have *לֶחֶם קֹדֶשׁ*, 'ma'arekhet, continually present,' and in Nu 47 *lehem hattamidh*, EV 'the continual bread,' as being always on the table.

In NT the shewbread is *ἀροὶ τῆς προσέλευς*, Mt 12⁴, Mk 2²⁶, Lk 6⁴; and in He 9² *ἡ προσέλευς τῶν ἀρῶν*, 'bread of the setting out,' 'the setting out of bread,' EV 'shewbread,' in He 9² RVm, 'Gr. the setting forth of the loaves.' These are LXX renderings of *lehem hamma'arekhet*, etc., and also of *lehem pānīm*, though the latter is also rendered by the LXX literally *ἀροὶ τοῦ προσώπου* and *ἀροὶ ἐνώπιον*, 'loaves of the face.' Other LXX renderings are *ἀροὶ τοῦ προσέκειναι*, Ex 39¹⁸, 'the loaves set forth,' and *ἀροὶ τῆς προσφοράς*, 'bread of the offering,' in 3 K 7⁴ (Heb. and Eng. 1 K 7⁴⁸). Vulg. follows LXX with *panes propositionis*, 'the loaves of setting forth,' etc.; Luther has *Schaubrot*, hence probably 'shewbread' in Tindale's NT (1620), He 9², and in other English versions. This rendering may be due to the idea that the loaves were set forth to be shown to God.

With two exceptions the shewbread is said to be placed upon a 'table'; but in 1 K 6²⁰ 22, Ezk 41²², we read of an altar which is clearly the table of the shewbread and not the altar of incense, which does not appear till the latest strata of the Priestly Code. In Mal 17¹² 'the table of Jahweh' may be the table of the shewbread, but is more probably the altar of burnt-offering, or may include both.

2. Nature.—The shewbread consisted of two rows or piles, each containing six loaves or cakes of bread made after a special recipe (Lv 24⁵⁻⁹ P). The post-Biblical Jewish authorities, Josephus, Philo, Mishnah, and Talmud,¹ state that the shewbread was unleavened, and in view of Lv 21¹ P, which prescribes that a *minhah*, or bloodless offering, shall always be unleavened, it seems likely that this was the case with the shewbread, at any rate after the Exile, though possibly not in primitive times. In one passage in the Priestly Code, according to our present text, the shewbread is spoken of as *נֶמֶן*. This term is explained by J. G. Wetzstein² as for 'inshek, from 'enosh, 'man,' and this view is accepted by König;³ but it is rejected by the *Oxford Hebrew Lexicon* and most scholars. 'Ishek is usually explained as EV 'offering made by fire,' which would imply that the shewbread was burnt; it could hardly be called a 'fire-offering' because it had been baked. But there is no suggestion elsewhere that it was burnt, and the idea is inconsistent with the statements everywhere else that it was eaten. In the immediate context, Lv 24⁷, the incense placed with the shewbread is called 'ishsheh; probably some confusion between the shewbread and the incense led to a slight corruption of the text, the original having merely stated that the incense was 'ishsheh.

The shewbread was placed upon a table or altar and was renewed weekly (Ex 26³⁵ 40²², 1 S 21⁶ (Heb. 7), 1 K 6²⁰⁻²²). Probably the original text of 1 K 6²⁰⁻²² stated that the table was cedar (Ezk 41²², 'altar of wood'), and this may very well have been the case in the pre-Exilic sanctuaries, 1 K 7⁴⁸ being late and the Chronicler, as usual, antedating the conditions of his own times.⁴ In the description of the table in Ex 25³⁰⁻³⁰ it is made of *shittim* (acacia) wood and overlaid with gold. Probably this was the case with the table in the post-Exilic temple; it is not likely that the statements of 1 K 7⁴⁸ and Jos. Ant. viii. iii. 7, to the effect that there was a table of solid gold, are literally true. According to Ex 25²⁹, there were various utensils on the table, and, according to Lv 24⁷, incense on, or by the side of, the loaves. In Lv 24⁶, 2 Ch 13¹¹, the epithet *ṭāhor* is applied to the table; as this term is frequently applied in P to the gold used for the tabernacle, it is probably applied to the table as being overlaid with 'pure' gold.

3. History.—The antiquity of the shewbread is shown by the mention of it in 1 S 21⁶ (Heb. 7), where it appears in the sanctuary at Nob in the time of Saul. In this passage it seems that the shewbread was placed hot upon the table, and that the stale bread, after it had been removed from the table, might be eaten by any one in a state of ceremonial cleanness, and not merely, as in later times, by the priests. This passage belongs to one of the older sources of S, compiled some time before 750.

We next meet with the shewbread in the Temple of Solomon (1 K 6²⁰⁻²² 7⁴⁸; the former of these passages belongs to an early source, before 700, and establishes the presence of the shewbread in Solomon's Temple). From analogy we may conclude that it was also a feature of the sanctuary at Shiloh and other early Israelite shrines. Ezk 41²² includes the table in the specifications for the restoration of the Temple; no doubt the temple built by Zerubbabel had such a table; there is

⁴ The numerical value of the letter ה is five.

positive evidence for its presence in the post-Exilic temple somewhat later. It is mentioned in Neh 10³⁸ (Heb. 34); 1 Mac 1²² mentions it among the spoils carried off by Antiochus Epiphanes; 1 Mac 4⁴⁹ tells us that Judas Maccabæus replaced the table when he cleansed and refurnished the Temple. The statement of 2 Ch 4⁸ (cf. 1 Ch 23¹⁶, 2 Ch 4¹⁹, 'tables') that Solomon made ten tables is an example of the Chronicler's passion for exaggerating numbers. A writer whom Josephus quotes under the name of Hecataeus of Abdera,¹ apparently belonging to the 3rd cent. B.C., speaks of a golden altar in the Temple, doubtless the table of the shewbread. The pseudepigraphal *Letter of Aristeas*,² variously dated from about 200 B.C. to after A.D. 33,³ gives an elaborate account of a table of gold and precious stones said to have been presented to the Temple by Ptolemy Philadelphus (285-247 B.C.). The incident and the table are both imaginary, but they may add something to the evidence for a table of gold in the Second Temple. The table is mentioned in Philo⁴ and Josephus.⁵ There are also details and discussions concerning the table and the shewbread in the Talmud and other post-Biblical Jewish literature. No doubt the table and the rite continued till the final destruction of the Temple by Titus; the table is shown on the Arch of Titus, as part of the spoils taken by him from the Temple. There is no mention of shewbread in connexion with the temple at Heliopolis or that at Elephantine, but, as the available evidence is scanty, it is possible that the rite may have been observed in either or both of these sanctuaries.

4. Significance.—There is no official or even express statement as to the significance of the rite. The terms are got from the arrangement of the loaves (*maḏrekhet*) or the position of the table (*pānim*). There is no ground for the view sometimes held that the loaves were called 'presence-bread' because they symbolized the presence of God with His people. P speaks of them as *qōdesh qōdāšim*, 'holy of holies,' i.e. as belonging to the group of most sacred things, probably partly because of proximity to the inner shrine, the Most Holy Place, partly because of the ancient and unique character of the rite, as far as the Temple worship was concerned.

In the absence of any express statement we can only attempt to deduce the significance of the shewbread from analogy and other *a priori* considerations. The setting out of food on a table in a temple before the shrine or image of a deity is found in many religions.⁶ Jer 44¹⁹ etc. speaks of the cakes (*kawwanim*) baked by Jewish women for the Queen of Heaven (*q.v.*); and Is 65¹¹ of those who set in order (*arakh*) a table for a deity Gad, RV 'Fortune.' There were at Rome *lectisternia*, or festivals at which banquets were spread for the gods—a practice perhaps introduced from Greece. Babylonian ritual included the setting forth of loaves—twelve or a multiple thereof—before the deity; these were to be sweet, i.e. unleavened, and made of a special kind of meal.⁷ No doubt the rite in Israel was a survival from the time when the deity was thought of as actually consuming the food offered to him. Even Lv 21¹⁷ H speaks of the sacrifices as *lechem Elōhim*, 'the bread of God,' doubtless metaphorically. It has been suggested that hot bread (1 S 21⁶ (Heb. 7)), fresh from the oven, was used so

that the deity might enjoy the fragrance. But would there be any agreeable fragrance at the end of a week? The idea that Jahweh consumed the food would be obsolete long before our documents were composed. In historical times the shewbread was an ancient established fact, accepted as a matter of course, part of the divinely prescribed worship, and therefore binding and efficacious, apart from any explanation or justification. For most that would be sufficient, but thoughtful men would find the rite significant in the different ways in which it appealed to them. To Philo¹ it seems to symbolize the earth, as the lamp-stand does heaven; i.e., the presence of the loaves symbolizes the dominion of Jahweh over earth and heaven. Josephus says that the twelve loaves denoted the year with its twelve months.² Cyril of Jerusalem treats the shewbread as a type of the Eucharist.³

SHĪ'AHŠ.—1. The name.—The term 'Shī'ah' is a collective term meaning 'party' or 'following,' which has been applied to the partisans of the family of 'Alī, the cousin and son-in-law of the Prophet Muḥammad, since the early days of Islām, when they first constituted themselves a sect. The full name would be Shī'ah Ahlu'l-Bait, 'followers of the Prophet's kindred.' Much more frequently used in the beginning was the term 'Alīite,'—a term which is primarily of political implication as referring to the claims of 'Alī's family to the khalifate. 'Shī'ahs' to-day has a directly religious reference. It describes the smaller of the two great divisions of Muḥammadanism, which adheres to the twelve (or seven) *imāms* of the family of 'Alī. For the Shī'ahs these *imāms* are infallible religious leaders. The Shī'ahs are found at the present time in large numbers only in Persia and in India.

2. Origin.—Despite the claims of the Shī'ahs and the traditions offered in proof of them, there is no reliable trace of any utterance by the Prophet which points to 'Alī or his descendants as his successors in the leadership of Islām. The Shī'ahs assert that Muḥammad definitely nominated 'Alī and his descendants at the Pool of Al-Ghadir and that on different occasions he indicated his preference for 'Alī. Veiled references in the Qur'ān, when interpreted allegorically (*tawīl*), are made to place 'Alī next to the Prophet in excellence and far above all other men. 'The Prophet is the sun and 'Alī is the moon. The course of events in the days of the Prophets and afterwards so strongly contradicts these arguments that they may be set aside, and the development of the 'Alīd claims may be studied in the light of historical facts.

Muḥammad refused to name his successor, and the two first khalīfahs, Abū Bakr and 'Umar, were elected by the Muslim community (*Ijma'*), the latter on the nomination of his predecessor; the third choice was indecisive, and the khalīfate was offered to 'Alī on condition that he pledged loyalty to the traditional interests of Islām. In his answer he was uncertain, and the choice passed to 'Uthman. Meanwhile, 'Alī's wife, the Prophet's daughter Fāṭimah, had presented a claim to Abū Bakr for some crown lands as her inheritance from her father's estate. The claim had been refused

by the khalifah Abū Bakr, and the family of 'Alī felt aggrieved at the treatment shown them. When 'Uthman was elected, the umpire of the election, Abd-ar-Rahmān, warned 'Alī against using his nearer kinship to the Prophet as a basis for special consideration. This probably marks the emergence of a claim in favour of the 'Ahlul-Bait. The weakness and failure of 'Uthman's reign ranged the stronger forces of Islām against him, and among them 'Alī and his friends. 'Uthman's governor in Syria, Mu'āwiyah, was of Umayyad descent like the khalifah himself. In the natural course of things he very probably would have seized the power from 'Alī on 'Uthman's death in any case. But, when 'Alī and his party lent their countenance to the conspiracy which robbed 'Uthman of his life, Mu'āwiyah gave himself out as the avenger of 'Uthman's blood. Even then, when the way was once more open for him to be elected khalifah, 'Alī was not willing to stake anything on his legitimist rights. He would have evaded election had it been possible. The rebels and his friends almost compelled him to accept. Up to this point, therefore, events make it clear that no belief in a divine right of the 'Ahlul-Bait to succeed the Prophet existed, and consequently there could be no Shi'ah or party which held that belief. It is also clear that the causes at work after 'Uthman's death were tending to produce a violent schism in Islām. On the one hand there was a powerful usurper, Mu'āwiyah, with the irresistible appeal of blood-revenge and the vindication of the khalifate—the holiest authority which Islām possessed. On the other were arrayed the partisans of democratic rights, who were prepared to resist Mu'āwiyah's usurpation, and standing with them the duly elected khalifah 'Alī, whose supporters were now forging arguments looking towards the establishment of the divine right of 'Alī and his family to rule over the Muslim community. The two sides came into armed conflict. Mu'āwiyah cursed 'Alī in the Friday service at Damascus, and 'Alī denounced Mu'āwiyah at Kūfa. The decisive clash came at the battle of Šiffin (36 A.H.; A.D. 657), and at that time the bungling management of a golden opportunity by 'Alī's representative, Abū Mūsā, left 'Alī without the support of the democratic rights party and legally deposed in the eyes of his own friends. The former withdrew from the army and gave themselves to anarchist excesses which were a constant hindrance to 'Alī's cause. The withdrawal of these Khārijites,¹ as they called themselves because of their protests against both khalifahs, left 'Alī's supporters a homogeneous party, a Shi'ah. The party was sufficiently formed to hold together from this time forwards. The assassination of 'Alī (40 A.H.) greatly diminished its political hopes, but the total reaction of the events gave added strength to the spirit and numbers of the group.

3. The Shi'ah imāms.—With the death of 'Alī the khalifate ceased to be an attainable end for the Shi'ahs. For a few brief months al-Ḥasan, the elder of the two sons of 'Alī and Fātimah, maintained a shadowy rule in Kūfa and then resigned (41 A.H.) and betook himself to Medina. In 61 A.H. the younger son, al-Ḥusain, yielded to the flimsy assurances of the Kūfans and left Mecca on the fatal adventure which, they said, was to set him upon the throne in Kūfa. The overwhelming of his little host by the troops of the Umayyad khalifah, Yazid ibn Mu'āwiyah, at Kerbelā extinguished the 'Alid hope of political dominion. The Shi'ahs made the best of necessity and gave themselves now to an ambition for religious leadership. The representatives of the house of 'Alī became the indispensable religious heads of Islām,

¹ See art. KHA'RĪJĪ.

the imāms of the believers. The history of the centuries that followed the death of Ḥusain is a history of intrigue actuated by religion. The 'Alids, when they acted on their own motive, were not often successful, but their claim to religious leadership gathered about them a following and made them useful instruments in the hands of men opposed to the existing form of government. In Persia they lent themselves at an early date to the nationalist movement, which in time displaced the Arab domination by purely Persian rule. In this way Shi'ism ultimately became the national religion of Persia.

(1) Al-Mukhtār in 64 A.H. is the first adventurer to employ the Shi'ahs for his own purposes. He gave himself out as the avenger of the martyred 'people of the House' and professed allegiance to a son of 'Alī, Muḥammad ibn al-Ḥanafiyah, whose mother was one of the wives taken by 'Alī after the death of Fātimah. Al-Mukhtār declared Ibn al-Ḥanafiyah to be the Mahdī (q.v.), the founder of a new order of justice and peace. The direct heir to the imāmate, 'Alī ibn Ḥusain, Zainu'l-'Abidin, was but a child, and it seems to have been agreed that Ibn al-Ḥanafiyah should be recognized for the time being. In 68 A.H. the Shi'ahs were admitted to standing at the *hajj* in Mecca and Ibn al-Ḥanafiyah was acknowledged as their imām. Thus within a few years of al-Ḥusain's death the Shi'ahs were an acknowledged sect of Islām along with other sects or parties. Al-Mukhtār's effort was shattered by his defeat at Kūfa in 67 A.H. He had championed the cause of the Persian Muslims (Mawālī) and had been supported by the Shi'ahs. His defeat bound the interests of the two groups much more closely together than they had been.

(2) The second important instance of a use of the Shi'ahs to serve the ends of designing politicians is found in the campaign of Abū Muslim, the chief agent in bringing about the overthrow of the Umayyad dynasty and the accession to power of the 'Abbāsids. Abū Muslim, the general of the revolting army in Khorāsān, while ostensibly conducting a revolution on behalf of the 'Alids, was really the agent of the family of 'Abbās. By kindling the hopes of the 'Alids he gained the support of the Persian Muslims and fought a campaign which brought Arab control in Persia to an end; but, instead of winning the ascendancy for the house of 'Alī, he secured the throne for Abū 'l-Abbās and settled the khalifate in the keeping of the 'Abbāsids for 500 years.

(3) A third illustration of the ease with which the religious preoccupation of the Shi'ah leaders placed them at the mercy of political schemers is afforded by the case of the eighth imām, 'Alī ibn Mūsā ar-Riḍā, who was a favourite of the khalifah al-Mamūn, was named his successor, and was married to his daughter. Al-Mamūn admired his piety and valued his counsel, but these qualities were quite second in importance to the opportunity afforded of extending his influence and strengthening the support of the reigning dynasty. The motive of policy which led him to exchange the colour of his royal standard from its traditional black to the 'Alid green was the motive which led him to show favour to the leading representative of the 'Alid family. This was made clear when public dissatisfaction became acute, and he took an early opportunity to get rid of the imām—the Shi'ahs say by giving him with his own hand a bunch of poisoned grapes.

(4) The most startling instance of this use of the religious aims of the Shi'ahs is perhaps that supplied by 'Abdallah ibn Maimūn, the founder of the Ismā'īlian sect of the Shi'ahs (280 A.H.; A.D. 873-874). This man of far-reaching political vision laid plans to found a world-empire by destroying the power of the spiritual authority existing in Islām and, on the basis of a more rigorous and unified religious authority, securing that unquestioning obedience which would be the factor of might in the new state. As a starting-point for carrying this plan into effect, he made use of a small unaggressive sect of the Shi'ahs who insisted on recognizing as the seventh Shi'ah imām either Ismā'īl ibn Ja'far aṣ-Ṣādiq or Ismā'īl's son, Muḥammad. With the seventh imām, whichever it might be, the succession was thought to end, and because of that fact the seventh imām was said not to have died and thus brought the imāmate to extinction but to have withdrawn into concealment and to exercise his indisputable authority as a 'Hidden Imām' through chosen representatives in each generation. The Hidden Imām was also the Mahdī who at the end of the age would regenerate the world. 'Abdallah ibn Maimūn claimed for himself and his successors the position of a chosen legate of the Mahdī. He thereby put forward the highest claim to exercise spiritual authority. The discipline which he formulated for the novitiate of the new order was thoroughly adapted to secure the obedience that he wished to obtain. The Ismā'īlians, as they had previously existed, were absorbed in the re-organized sect and became a mere pedestal to serve the vaulting ambition of the Maimuniyah group and its leader.

Within the history of the Ismā'īlian sect the political purpose of revolutionary leaders has been prompt to avail itself of Persian mysticism in some of its Shi'ah modifications. The sect of the Hashishin, or Assassins (q.v.), in the 12th and 13th

centuries A.D., the Carmatians (*q.v.*), who were contemporary with the first century of Ismā'īlian history, and the Fāṭimids of N. Africa, who established their new capital, al-Mahdiyyah, in A.D. 909, are all instances of the point in question, viz. that religious Shī'ism lent itself to the ambitious ends of political leaders all too readily. The succession of the Shī'ah imāms is shown as follows:

(1) 'Alī (35 A.H.-40 A.H.), (2) al-Ḥasan, (3) al-Husain, (4) 'Alī, Zayn al-'Abidin, (5) Muḥammad ibn al-Hanafīyah, (6) Muḥammad al-Bāqir, (7) 'Abū Ḥāshim (8) Ja'far al-Sādiq, (9) Muḥammad al-Riḍā, (10) Muḥammad al-Askari, (11) Muḥammad al-Mahdi (disappeared in A.D. 873).

These, except 'Alī and his sons and Riḍā, were not men of note in public affairs, but, as being in the line of succession to the imāmate, they all are reputed to have possessed in pre-eminent degree the character and gifts of saints.

The Hanafīyah imāmate comprises only five imāms. The last of the five is reported on 'Abbāsīd authority to have transferred his claim to the imāmate to Muḥammad ibn 'Alī the 'Abbāsīd. His father, Ibn al-Hanafīyah, is regarded by his followers as the Hidden Imām.

The Ismā'īlī imāmate includes only seven imāms, the seventh becoming 'the Hidden One.'

The regular Shī'ahs, who form a very large majority of the whole number, are designated as the Ithnā-'ashariyah ('Twelvers'), to distinguish them from the Ismā'īlians, who, as they hold to only seven imāms, are called Ṣaḥībiyah ('Seveners'). The 'Twelvers' are generally called the Imāmiyah.

The law of succession in the imāmate has been fairly consistent. The imām inherits the grace of his office from 'Alī as the legitimate successor of the Prophet and is, as well, the heir of the Prophet through his daughter Fāṭimah. He is of the descendants of Husain, the younger son of 'Alī and Fāṭimah. He is regularly the eldest son of his father. It was the departure from this rule that caused the Ismā'īlian schism. The imāmate of Ibn al-Hanafīyah claims to be legitimate, though it has no connexion with Fāṭimah. It deems the connexion with 'Alī sufficient. The Zaidīyah sect of Shī'ahs seem to have a better argument in claiming that the imāmate need not be restricted to the line of Husain and need not observe the law of primogeniture. Their own founder, Zaid, a grandson of Husain, was not a first-born son.

4. Later history of the Shī'ahs.—The early 'Abbāsīd khalīfahs were disposed to be friendly towards the Shī'ahs. Their attitude towards foreigners and foreign learning was sympathetic and their view and outlook liberal towards those who differed from them. By profession they were Sunnites, but in practice their attitude was much more generous than that of the orthodox leaders of their day. In the khalīfate of al-Manṣūr, the second of the 'Abbāsīd rulers, the Mu'tazilite school of thought took its rise. It was the Persian response to the cultures of the East and West as these began to make their influence felt in Persian Muslim circles. It cultivated the spirit of criticism and encouraged the testing of traditional views by an appeal to reason. The Mu'tazilah flourished especially in the reigns of al-Mamūn, al-Mu'tasim, and al-Wāthiq (198-232 A.H.; A.D. 813-847). In the bitter rivalry between the Sunnites on the one hand and the Mu'tazilah and Shī'ahs on the other it was assumed that the two last shared the same opinions, and Sunnī orthodoxy opposed the one in proportion as it opposed the other. Both schools were essentially Persian and both refused to be bound by the Tradition and Consensus as held by the Sunnis. They both favoured speculation and the dialectic method of proof. Unfortunately, the apologetic industry of the orthodox party showed

a zeal in creating an effective literature and in organizing a propaganda, while their opponents trusted in the intrinsic reasonableness of their views. In the conservative reaction which set in under al-Mutawakkil (232 A.H.) both Mu'tazilites and Shī'ahs suffered severely; and they seemed to be put at a still greater disadvantage when the great tradition collections of the Sunnis were put in circulation. Al-Bukhari issued his *Ṣaḥīḥ* before 256 A.H. (A.D. 870) and Muslim his collection with the same title a few years afterwards. These works constituted the foundation of all later works of law and seemed to afford a body of proof which could not be controverted. The Mu'tazilah and Shī'ahs alike suffered when Abu'l Ḥasan al-Ash'ari (*q.v.*), who had been trained under Mu'tazilite teachers, turned their own weapons against the Mu'tazilah (c. 300 A.H.) and framed his system of doctrine along traditional (*i.e.* Sunnite) lines. His formulation of orthodoxy became the standard throughout Sunnite Islām and has maintained its position down to the present time. Such Mu'tazilism as remained at the close of the 4th Muslim century has been absorbed by the Shī'ahs, and scholars are disposed to find in modern Shī'ism a fair representative of the old speculative and dialectical spirit of the Mu'tazilah.

The Shī'ahs enjoyed a period of prosperity when the Buwaihids came to assume the real power under the khalīfate of al-Mutī' (334 A.H.; A.D. 946). These princes were of Shī'ah faith, and Shī'ism was protected and encouraged by them while they retained their power in Baghdād (until 447 A.H.; A.D. 1055). During the Buwaihīd régime there appeared an interesting propagandist organization which seems to have aimed at a more rational and systematic presentation of Islām as it was understood by the Mu'tazilite-Shī'ah scholars. This society was known as the 'Brethren of Purity' (Ikhwān aṣ-Ṣafā'). Their views were set forth in a series of treatises numbering about 50 or 51 in all. These treatises were widely known, if we may judge from the number of copies which still survive.

The Shī'ah faith had suffered from lack of political prestige in Persia until the entrance of the Buwaihīd princes upon the scene, and after their time Shī'ism again suffered eclipse as the Seljuks, who were Sunnites, assumed control. The brilliant triumph of the Safawīd Shāh Ismā'il (A.D. 1499-1502) established a new order of things and made the Shī'ah religion what it has continued to be since that date—the national religion of Persia. The one ruler who seriously threatened the secure hold of Shī'ism on the country was Nādir Shāh (A.D. 1736), whose aims were purely secular. With an eye to the control of a vast empire, he proposed to abolish the distinction between Sunnites and Shī'ahs, have both regarded as equally orthodox, and Shī'ism placed upon the same footing as the great schools of Sunnite Islām, as a fifth school alongside the four already accepted as orthodox. The proposal met with vigorous opposition and was given up, though Nādir Shāh's treatment of the Shī'ah hierarchy in Persia to the end of his reign showed that he was very little concerned with the prosperity of the Shī'ah or any other form of religion.

The accession of the Safawīds brought to the throne a line of Ṣūfī¹ saints—a fact which suggests a strong reason for the persistence and spread of Shī'ism. The Ṣūfī mysticism has had a specially close relation to Persia and the Shī'ah form of Islām, and the sects of the Shī'ah have taken much of their distinctive character from Ṣūfism.²

¹ See art. *Ṣūfīs*.

² Cf. the emphasis laid on *gnosis* in the Ismā'īlian sect and the complete submission to authority which the Shī'ah sects make prominent in their requirements.

An even more important factor in the growth of Shi'ism is found in the features of the system which provide for powerful emotional revivals of religion. The Shi'ahs have always lived in the emotional atmosphere of martyrdom. The memory of the martyred founders of the sect, of the sufferings of the *imāms*, and of the confession witnessed by the great saints is much cultivated, and the annual feasts of commemoration are marked by demonstrations of feeling observed nowhere else in Islām. The greatest of all these memorial feasts is the *Muharram*, which is specially devoted to the martyrs of Kerbelā, pre-eminent among them the *imām* Husain. The feast in honour of 'Ali at Nejef and that observed at Meshed for the *imām* Ridā are impressive by reason of the outward show of ceremonial and even more because of the display of intense feeling. Another factor calculated to excite interest and enthusiasm to a marked degree is the Mahdist expectation which has been constantly present in Shi'ah circles. It is not confined to the Shi'ahs, but has been specially active among them. The fanaticism of the Ismā'īlian movement was stimulated by Mahdist hopes which centred in the seventh *imām*. The Carmatians' excesses were connected by the Carmatians themselves, in some part at least, with the service of the Mahdī. The Fātimid empire in the Maghrib was founded by Sa'īd ibn Ahmad, who claimed to be the Mahdī, and Mahdist fanaticism promoted its extension. Other instances might be adduced. Generally speaking, the alleged withdrawal of the *imām* and his continued existence as al-Ghāib ('the Hidden *Imām*') have contributed to make the hope of the Mahdī an abiding incentive to religious interest.

The most important outgrowths of the Shi'ah party are: (1) the Zaidiyah sect; (2) the Ismā'īlians; (3) their offsprings, the Carmatians; (4) the Fātimids; (5) the Druses (derived from the Fātimids); (6) the Hashishin, or Assassins (a development within the Ismā'īlian sect); (7) in quite modern times the Shaikhī sect and its derivatives, the Bābis and Bahāis.

(1) *Zaidiyah*.—The Zaidiyah (*q.v.*) professed to follow Zaid, the grandson of al-Husain, as their *imām*. They established a principality in Tabaristān and ruled there as *imāms* from A.D. 804 to 928. They were then driven out by the Sunnite Samanids. Another division of the Zaidites organized a Shi'ah state in Yemen with its centre at Sa'da and later at Ṣan'a. The date of the foundation was 280 A.H. (A.D. 892), and the independent Zaidi state still exists. The Zaidites demand that the *imām* shall be a descendant of Fātimah as well as of 'Ali, but otherwise they are the most liberal of the Shi'ahs and in many ways are indistinguishable from the Sunnites, though they do not desire to be known as Sunnis. Unlike other Shi'ahs, they admit the validity of the election of the first two khalīfahs, Abū Bakr and Umar. They provide also for the possibility of there being two *imāms* in a given age, in order to meet the needs of regions far removed from one another. The liberal attitude of the Zaidiyah is a survival of early Mu'tazilite teaching.

(2) *Ismā'īlians*.—Reference has been made in passing to the Ismā'īlian sect, or 'the Seveners.' The movement was started by 'Abdallah ibn Maimūn, al-Qaddāh ('the Oculist'), who died in 261 A.H. (A.D. 874). He gave himself out as the representative or 'helper' of the Hidden *Imām*, Muhammad ibn Ismā'īl. He professed to be inspired and to have the power to perform miracles. His professed mission was to prepare a people for the Hidden *Imām*, who was to return to visible manifestation shortly and, as the Mahdī, remove wickedness and bring righteousness on earth. To realize his mission, he sent out missionaries (*du'ā*, sing. *dā'ī*), who were to disguise their purpose, take up an ordinary calling, and as they could reach. With whom they approached. They were then to raise questions and suggest difficulties. When the new-found acquaintance showed anxiety for further light, the missionary was to hint at the possibility that a source might be found which would give the desired explanations and lead on to fuller knowledge. Gradually the inquirer was brought to ask that he might be led to the coveted teacher and was induced to pledge secrecy and unreserved acceptance of the teacher's authority. The conversion to the Ismā'īli attitude was readily realized when an inquirer had advanced thus far, and ere long the head of the sect had added to his subjects another who was bound to him in full submission until death. The discipline of the novice came to have a fixed and elaborate order of stages, of which only those leading to the self-surrender of the candidate to the Ismā'īli head are known. These comprise the first four and leave the remaining three or more to be guessed. The latter are thought to

have led to the complete renunciation of all positive belief and worship and to a sole devotion to the *imām* and his earthly representative.

(3) *Carmatians*.—'Abdallah ibn Maimūn made his headquarters finally at Salamiya in Syria, and to that point the numerous *du'ā* made their reports. One of these men secured the conversion of Hamdan Karmaṭ, who started the sect known as the Carmatians (*q.v.*) in Iraq before 277 A.H. They were Ismā'īlians with immediate obedience to their own chiefs but a more comprehensive submission to the *imām* Mahdī. Their ravages continued to terrorize Islām for a century, when they were finally crushed. Their attack on Mecca and seizure of the Black Stone is one of the acts in history which are regarded with horror by all Muslims. Nor is the sacrilege regarded as having been made right by the return of the Black Stone (A.D. 949) some twenty years after it had been taken away. The spoilers claimed to be acting in obedience to the Mahdī in both the removal and the restoration of the stone. The power of Mahdism to secure obedience to authority is thus illustrated.

(4) *Fātimids*.—Among the missionaries sent out from Salamiya was Abu 'Abdallah, who was to prepare the rude tribes of the Maghrib for the reign of the Mahdī and the acceptance of his 'helper.' This man, Abu 'Abdallah, in 289 A.H. sent word that the Berber tribes were ready to take up arms in the cause of the Mahdī. The head of the Ismā'īliyah at Salamiya, Sa'īd ibn Ahmad, a grandson of 'Abdallah ibn Maimūn, led an expedition to N. Africa, and after a period of conflict succeeded in establishing himself as the Mahdī, giving himself out as the lineal descendant and heir of Muhammad ibn Ismā'īl, the Hidden *Imām*. As such, he took the name Ubaidallah. The new capital which he founded was called the City of the Mahdī, al-Mahdiyya. These are the steps which culminated in the foundation of the Fātimid dynasty. It was the most ambitious and enduring of the Shi'ah dynasties, as the foundation is dated from the foundation of al-Mahdiyya (297 A.H.; A.D. 900), and the empire continued until Saladin, a Sunni Kurd, entered Cairo as a conqueror (567 A.H.; A.D. 1171). The Fātimids had been ruling in Cairo since 450 A.H. (A.D. 1058). They held the throne for 270 years altogether; the Safawid dynasty in Persia is the only other great Shi'ah line of rulers. It lasted for 234 years (A.D. 1502-1736).

The Ismā'īlite views of the Fātimid rulers did not take root and spread in the Maghrib and Egypt. The Kabyles and *fellahin* assimilated the clear-cut appeal to traditional authority which the Sunnite system offered more readily than they did the Ismā'īlite theosophy. To-day Egypt follows the school of ash-Sha'fī, while the Maghrib is Malikite in its views.

(5) *Druses and Nusairiyah*.—A noteworthy development within Shi'ism under the Fātimids is represented by the Druse sect. The khalīfah al-Ḥākim (386-411 A.H.; A.D. 998-1021) was a strange and probably unbalanced individual who alternately favoured and persecuted Shi'ahs, Jews, and Christians, and finally, under the influence of Ḥamza and Darazī, two Ismā'īli emissaries, gave himself out to be God incarnate, who had appeared in the flesh in order to establish an entirely new order of things in the world. He sought to impose his view upon the people of Egypt, but the attempt provoked violent revolt. Al-Ḥākim disappeared mysteriously in A.D. 1021, and his lieutenants were driven out of Egypt. Darazī picked up a following in the Lebanon region of Syria and a sect of Ḥākim-worshippers, borrowing its views and practices from Muslim, Christian, and pagan sources, was formed. This sect assumed the name of its organizer, Darazī—a name which the West has slightly modified into Druses or Druses. They are not generally counted as Muslims; they are distinguished from Shi'ahs and Ismā'īlians, and are sometimes reckoned as a Christian sect.

The Nusairiyah, who have long been found in the Lebanons between Tripoli and Antioch, are of Ebīah origin, but the heathenism of their environment has been rank and persistent and has over-grown the Islāmic elements to such an extent that the sect is frequently regarded as a development of paganism rather than of Islām. They are worshippers of the natural forces for whom 'Ali is the moon-god and the 'commander of the heavenly host' (stars). The family of 'Ali constitute the supreme objects of worship. Muhammad is only a 'veil,' though with 'Ali and Selmān he forms the Nusairi trinity. The sect accepts the Qur'ān, but adopts an extravagant allegorical interpretation (*lawī*).

(6) *Assassins and Metāwile*.—Much more important from the historical standpoint is the order of the Hashishin, or Assassins (*q.v.*), which arose within the Ismā'īlian sect in the 11th Christian cent. and continued to spread terror throughout Persia and Syria until they were destroyed by the Tatars under Hulagu Khan in A.D. 1258. The Assassins held the opinions of the Ismā'īliyah and seem to have been organized to assist any who might be favourably disposed towards their sect and to do away with such as were opposed to them or their friends. The Grand Master, or Shaikh of the Mountains (*Shaikh al-Jebāl*), exercised complete authority over all the ranks under him and was served with blind fidelity, in particular by the *fedāis*, or rank-and-file, who executed the Master's commands without being informed as to their motive or aim and often with fearful consequences to themselves as well as to their victims. The crushing of these militant Ismā'īlians left the sect an ineffective body and robbed it of its savage spirit. There are still followers of the Ismā'īli faith in Syria, Persia, and India, all recognizing the noble head of the order, the Aga Khan, who claims descent through the Assassin leaders from Fātimah, the Prophet's daughter. The seat of the Aga Khan was formerly in Persia, but is now located

in Bombay. Some of the Indian Ismā'īlians, the Khojas, are not, strictly speaking, 'Sevensers.' They have been described as followers of the 'twelve' *imāms*.

The Metāwile, who form a considerable body in the Lebanon region at the present day, are the descendants of an old Shī'ah colony, possibly of Persian origin. They display the exclusive- themselves, receive instruction the Sayyids (professed members en trained in Iraq, and exhibit physical and social characteristics which distinguish them from their orthodox neighbours. These 'friends of 'Alī,' as their name describes them, live in small communities, and their places of worship and ceremonial are of a modest character.

(7) *Shaikhs*.—The Shaikhi sect took its rise in Persia in the early years of the last century. They are Ithnā-ashariyah ('Twelvers') by profession, but hold an exaggerated belief in the divinity of the *imāms*, especially of the *imām* Mahdī. The sect is of interest because from it sprang Mirza Muḥammad 'Alī, the founder of the Bābī sect—an eclectic religious enterprise which renounced connexion with conventional Islām and struck out a path for itself. From Bābīism has sprung in its turn Bāhāism, which aims at being a universal religion. Bābīism was founded in 1844-46, and Bāhāism in 1892. These sects are not recognized or tolerated by the Shī'ahs.¹

5. *Shī'ah doctrines*.—The cardinal tenet of Shī'ahs is that of the *imāmate*, and the chief duty is the acknowledgment of the true *imām*. Shī'ism centres religious authority in an inspired person, whereas the Sunnis find their authority in the Qur'ān as interpreted by the Sunnah and the Consensus, or *Ijmā'*. The *imāms* of the Sunnis are the four orthodox founders of schools, Abu Hanīfa, Malik ibn Anas, ash-Shāfi', and Aḥmad ibn Ḥanbal. They are infallible interpreters of the Qur'ān and Sunnah and represent the Consensus of Islām. This Sunnite teaching the Shī'ahs criticize as advocating dependence upon the fallible opinion of men for whom no claim of inspiration is made, who lived several generations after the Prophet, and whose several presentations of the agreed opinion of the Muslim community are vitiated by serious discrepancies. The Shī'ahs claim that the presence of the inspired *imām* is the only sure guarantee of right guidance. Nor is the fact that the last *imām* has withdrawn and is now the 'Hidden One' a bar to the effective exercise of his authority. He is still in the world and in contact with his chosen agents, who have the right to pronounce *ex cathedra* an opinion on any matter affecting the *shār'*, or canon law. They are the media whose voice correctly interprets the view and will of the *imām*. In theory the Shī'ah doctrine of authority should be more satisfactory than that of the Sunnites. It unifies authority and makes it consistent. Neither the Sultān as khalīfah of the Sunnis nor the Shāh of Persia has religious authority except as an executor of ecclesiastical decisions and a purely civil administrator.

The contest between the Shī'ahs and the Sunnis turns largely on their different modes of choosing their religious authority. The Shī'ahs assert that the *imāmate* is settled on the basis of divine right inhering in the family of the Prophet, and that 'Alī, as the cousin of Muḥammad and the husband of his daughter Fāṭimah, was the first *imām* by divine right. After him his sons al-Ḥasan and al-Ḥusain inherited the right in order, and after them the *imāms* descended from them in order down to the 'Hidden One,' who left no visible successor. There are variant theories of the *imāmate* according as the line of al-Ḥasan is admitted as eligible, or the Hashimite family in the more comprehensive sense, or Ismā'il ibn Jafar, or as the use of the mode of popular election when necessary is allowed; but in all these cases the Shī'ahs hold to the special *a priori* right of the individual chosen. It is because of the right that he is chosen. The Sunnite explanation is that the khalīfah of the Prophet is 'the commander of the community of believers,' but not an infallible source of religious direction, and that he is chosen

by the suffrages of the Muslim community (*Ijmā'*) and finds his right to office in that fact.

Along with this legitimist claim, the Shī'ah *imāms* are declared to have a right by virtue of the nomination of 'Alī and his house by the Prophet at Kum Ghadir. With this goes the further claim that the celestial light substance which was lodged in Muḥammad was likewise received into the souls of the *imāms* in succession. This was the substantive basis of their dignity, prophetic insight, and infallibility in matters of religion. They were sinless, and, because of the 'light' within them, some deemed them incorruptible and immortal. Their character and divine mission in a world like ours brought upon them persecution, wickedly inflicted, but borne for the sake of others, and availing to atone for the sins of penitent believers.

The extreme sect of the Shī'ahs exaggerated the endowment of the *imāms* and claimed that some or all of them were of divine nature or incarnate manifestations of God. In this belief they offered to them divine honours. Among the Ismā'īlians the Ghulā, or Ghālīa ('Exaggerators'), group were more common than elsewhere. We have seen how easily such views develop in connexion with Mahdist movements. Commonly the leaders of such movements make claims for themselves that imply a superhuman origin and nature. The 'Alī Ilāhiya sect, which still has followers in Persia and India, takes its name from its belief in the deity of 'Alī.

The *imāmate* among the Shī'ahs is officially represented in Persia by the *mujtahids*. When Sir John Malcolm wrote his *History of Persia* (1815), there were in that country very few of these final authorities on canon law. This was probably due to the action of Nādir Shāh in the 18th cent. in confiscating for state purposes the ecclesiastical funds and lands, thus diminishing greatly the income available for the maintenance of the Shī'ah hierarchy. At the present time the former sources of income have been restored to a large extent, and the number of *mujtahids* has been greatly augmented. In some of the large cities there are as many as four or five. Their interpretation of the canon law, or *shār'*, is accepted, and the *mujtahids* are careful to respect the decisions of the members of their own order, so that conflict of interpretation on points of importance is not common. The *qadīs* and *shaikhs ul-Islām*, who are responsible for the administration of the customary law, or *urf*, accept the word of the court of *sharī'a*, and the Shāh, who imposes or confirms the sentence in important cases, acts as the canonists have recommended, unless the vague distinction between the functions of the canon law and the customary law gives him an excuse for exercising his personal authority. The exceptions are numerous, and all the weight of public sentiment in favour of the *shār'* and its venerated interpreters, the *mujtahids*, has been needed to check in some measure the despotic exercise of the prerogative of the Shāh. The constitution of 1905, as placing restriction upon the autocratic power of the throne and the alleged exclusive rights of the hierarchy in Persia, has been resisted by both and at the present time has little regulative force in the politics of the country. The *mujtahids* are chosen by the people and appointed by the Shāh. They are therefore men of outstanding reputation and held in esteem by the laity. It is required that they shall have had a long and thorough training in the schools of the law, including a period of many years at the best known of the Shī'ah schools at Kerbelā. Exhaustive knowledge of 'seventy sciences' and study extending through 'eighteen years' is the way in which popular report phrases the prerequisites of the *mujtahid's* office. These higher clergy are

¹ See art. BĀB, BĀBIs.

expected to maintain a reputation for sanctity, humility, and reverent gravity. They speak little and affect meditation habitually. Those well able to judge regard them as probably sincere, but professionally or conventionally pious. Apart from their activity as juriconsults and judges, they have an important place in state functions and the greater religious ceremonies; they are also available for private ceremonies and legal transactions where the parties are of some social significance.

The inferior religious functionaries are the *mul-lās* (q.v.). They include a large number of men of excellent legal training and of sincere character, but as a class the *mul-lās* are not held in high respect, and a great many impostors are found. They have no fixed stipend and must depend on what they can collect in fees for their services, on gifts, and on charity. They execute deeds of sale, contracts, documents connected with marriage, and wills. They also perform the marriage ceremony, conduct funerals, and perform other minor religious rites. They are consulted by those needing advice and officiate at public prayers. In small places and among the nomad tribes in Persia they try cases and adjudicate disputes, their decision being subject to revision by the nearest higher authority such as the *qaḍī* or *shaiikh ul-Islām*.

The Sayyids among the Shī'ahs are the nobility who trace their descent from 'Alī and Faṭimah. They draw stipends from the state in Persia, and in other places are regarded as entitled to support by the gifts of the faithful.

In their legal usage there is little difference between the Shī'ahs and the Sunnis on the whole. The most pronounced variation is found in the permission of *mut'a* marriage. This has its justification for the Shī'ahs in *Qur'ān* iv. 28: 'It shall be no crime to make agreements over and above the law' (of marriage)—a verse which the Sunnis contend was later abrogated by the Prophet. The Shī'ahs deny this. The prohibition of *mut'a* marriage attributed to the khalifah 'Umar is not recognized as having any authority with them, as they deny the validity of 'Umar's claim to his office. This form of marriage permits a man to enter into a legal contract with a woman that they should live as man and wife for any period of time upon which they may agree. The sum of money is paid over, and all obligations on either side cease when the term of the contract has expired. The lawful offspring of such marriages are reckoned to the father. Divorce is not permitted. The women who lend themselves to this kind of union are of humble social standing and in many cases of indifferent reputation. The custom seriously affects the happiness and purity of the marriage relation and tends to degrade the character of those who participate in it. At the same time, as having full legal status with the Shī'ahs, it is not viewed as discreditable by the lower clergy, who themselves practise this mode of marriage.

The sanction of equivocation in the religious life is carried out systematically by the Shī'ahs. Muḥammad had approved *taqiyyah* under special and extreme circumstances. The Shī'ahs regard the practice of it as a positive obligation. The term implies that, where one is likely to suffer or the safety of religion requires it, the believer should suitably protect himself or his faith by accommodating his profession of religion to the views of those with whom he has to deal. This practice of *taqiyyah* or *kitmān* ('concealment') is the result of the early persecution of the Shī'ahs in Persia and has been confirmed ever since by their ill-treatment when present in Mecca and Medina for the ceremonies of the *hāj*. The advocacy and practice of such a principle as this have a decidedly damaging effect upon the Shī'ah character.

The mutual hatred of the Sunnis and Shī'ahs is of long standing. It is tending to diminish on the Shī'ah side with the growing contact of the Persians with foreigners and is now not so noticeable in large cities and in parts where Christian churches are conducting missions as it is in more remote parts. One fruitful cause of friction has been the Sunnis' use of the Sunnah against the Shī'ahs. It has been claimed that the Sunni traditionists have falsified some traditions and forged others, in order to prove their own position and discredit their opponents; but as a matter of fact the Sunnah which the Shī'ahs profess to follow is commonly adjudged unreliable. The standard collections of traditions were prepared to oppose the great Sunni collections and were compiled at a late date. The evidences of manipulation are unmistakable.

The ablutions before prayer (*wuḍū*) are somewhat different from the Sunni practice. The feet are not washed, but wiped, while the hands and arms are washed in an upward direction, towards the elbow, and not downward towards the finger ends. There is a slight change in the formulas of prayer and the order in which they occur.

The laws of marriage, inheritance, and slavery are not in all details the same as the Sunni laws.

The *hāj* may be performed by proxy among the Shī'ahs, and much more practical importance is attached to the *ziyārah* ('visitation') to the tombs of pre-eminent Shī'ah saints than to the Meccan pilgrimage.¹

WALTER M. PATTON.

SHILLUK.—1. Geographical and general.—The Shilluk country forms a narrow fringe on the west bank of the Nile from Kaka (between 10° and 11° N.) in the north to Lake No in the south. From Kodok to Taufikia the Shilluk also occupy the east bank, and their villages extend about 35 miles up the Sobat river, principally on the north bank. Their territory is almost entirely a grass country; hence cattle are their wealth and principal care, and, although a considerable quantity of dura is grown, not enough is harvested to provide fully for the really dense population, and scarcity is by no means unusual. A census taken in 1903 gave a population of nearly 40,000 possessing over 12,000 head of cattle and nearly 64,000 sheep and goats. No doubt the number of cattle returned was unduly low, but, making all allowances, the Shilluk are poorer in cattle than the Dinka.

The Acholi, or Gang, and the Lango of Uganda speak dialects of Shilluk, but it is not clear whether the Shilluk migrated northward from the neighbourhood of Lake Victoria or their 'cradle-land' lay between the lake and their present territory, emigration taking place in both direc-

¹ See also art. LAW (Muhammadan).

tions. The latter hypothesis is perhaps the more probable.

The Shilluk are tall long-headed Negroids, usually with coarse features and broad noses, but it is not uncommon to meet men, especially members of chiefs' families, with shapely features, including relatively thin lips, noses that are anything but coarse, and well-modelled foreheads. While it would be premature to assert that the Shilluk aristocracy represents a conquering, predominantly Hamitic stock, there is little doubt that, as far as the Nilotic tribes are concerned, the maximum of Hamitic blood is to be found among the Shilluk—a matter worth remembering when comparing their social organization and religious ideas with those of kindred tribes such as the Dinka. The Shilluk are probably the best-organized people in the Anglo-Egyptian Sudan; they alone of the black tribes offered a constant and determined opposition to the Mahdi and his followers; their king is absolute head of a state, whose territory is divided into districts, each administered by a chief directly responsible to the sovereign and acting as his proxy.

On account of the important part played by the king in the Shilluk religion, it is necessary to give some account of the royal family and its relation to the general organization of the people. The aristocracy of the Shilluk nation consists of the king (*ret*), his children (*niḍret*), his grandchildren (*niḍaret*), and his great-grandchildren (*kwanḍaret*). Royal descent is not recognized beyond four generations. Nyakang was the first of the Shilluk kings, and all subsequent rulers are his descendants, the present king being his twenty-fifth successor in the twelve generations that, according to the royal genealogy, have existed since his time. The Shilluk have always paid their king high honour, so that even now he keeps up considerable state and has much authority. He usually rides a donkey, and never moves without a body-guard of from twelve to twenty men, more or less well armed, and all ready to obey his commands implicitly. In the old days his word was law, and his decisions are still obeyed in all matters coming before him; e.g., the fines of cattle that he imposes are paid with reasonable speed.

Polygamy is prevalent, and a large number of the *tukl* in Fashoda—the royal burgh—are the residences of the king's wives, who are very numerous. His sons, too, take many wives, but the royal daughters must remain unmarried, the alleged reason being that it is unfitting that the daughter of a king should marry a commoner, while she could not marry a *niḍret*, since this would be incest. When one of the king's wives is pregnant, she remains at Fashoda until the fourth or fifth month; she is then sent to a village, not necessarily her own, where she remains under the charge of the village chief until the child is weaned, when she probably returns to Fashoda. She usually takes a certain number of servants and cattle with her to the village in which she will be confined, and these are generally left there after her departure, becoming the property of the child, who is invariably brought up in the village where it is born, in which it should also be buried. This rule applies equally to all royal children of either sex, in whatever part of the Shilluk territory they may happen to die.

2. The Shilluk high god.—The Shilluk recognize a high god whom they call Juok. He is formless and invisible, and, like the air, is everywhere at once; he is far above Nyakang (in whom the Shilluk religion centres¹) and men alike; nevertheless, it is only through Nyakang that men can approach him, performing the sacrifices to Nyakang

which cause him to move Juok to send rain. Although the name Juok occurs in many greetings—e.g., *Yimiti Juok!*, 'May Juok guard you!'—and although a sick man may cry *Er ra Juok?*, 'Why, O Juok?', it seems doubtful whether he is ever worshipped directly; and, although some Shilluk may vaguely associate the dead with him, this feeling does not appear to imply any dogma concerning a place of the dead or their condition. It should be noted that Westermann¹ gives a prayer to Juok, but the ritual accompanying it is the same as that practised in the case of possession by one of the early divine kings of the Shilluk, while the words of the prayer seem to reflect a common enough confusion between Nyakang, his son Dag, and Juok.

3. The cult of Nyakang.—J. K. Giffen² gives the following account of the origin of Nyakang:

In the beginning Juok created a great white cow, Deung Adok, who came up out of the Nile. She gave birth to a man child, whose grandchild, Ukwa, married two sisters, of whom one, Nikaiya or Nyakai, whose lower parts were those of a crocodile, gave birth to Nyakang, who inherited his mother's saurian attributes.

In spite of the animal element attributed to Nyakang in this legend (apparently collected on the Sobat), the writer feels confident that the majority of Shilluk think of Nyakang as a divine or semi-divine being, entirely human in form and physical qualities, though, unlike his recent successors, he did not die, but disappeared. Moreover, in spite of the fact that the objects kept in his shrine are fit for the use only of a creature with a human body, the writer is convinced that to many of his worshippers, including some at least of his priests, Nyakang, though the founder of their nation, is now essentially a spiritual being.

It is convenient to begin a description of the cult of Nyakang by considering certain shrines which exist in many Shilluk villages, but which are not shrines of Nyakang. These consist of groups of two or more huts of the same circular form and much the same size as those of which the village is composed, but they are more neatly thatched, and their miniature spires terminate in an ostrich egg from which there projects the blade of a spear; moreover, the fence surrounding them is kept in specially good repair. These huts, with the enclosed area, are sacred; for, with the exception of the old people concerned in keeping them clean, no one enters the enclosure, or even approaches it, without due cause. Each enclosure constitutes a shrine, sacred to a dead king, one of the huts being built over his grave, while the others are used by those who attend to the upkeep of the shrine. Nyakang and his son Dag, who did not die but disappeared, have many shrines called 'graves'; Nyakang has no fewer than ten, the most celebrated being at Akurwa and Fenikang. The former consists of two huts, the latter of five. The shrines of Nyakang do not differ in appearance from the grave-shrines of the later Shilluk kings, and they are all spoken of as *kengo Nyakang*, 'the grave of Nyakang,' although it is well known that no one is buried in them.³ The *kengo Nyakang* are looked after by certain men and old women, the real or reputed descendants of the companions of Nyakang. All are responsible for keeping the shrines clean, but in addition the men act as priests, killing the sacrifices and disposing of the bones, which they cast into the river. The contents of the *kengo* vary, but they always

¹ *The Shilluk People*, p. 171.

² *South-Eastern Sudan*, London, 1900, p. 107.

³ Cf. below, p. 461. Only to the graves of kings and their companions being spoken of as *ret*; a similar verbal distinction is made with regard to the death of kings, who are said not to 'die' but, like their ancestor Nyakang, to 'go away.'

¹ Cf. below, p. 3.

include certain sacred spears called *alodo*, representing those used by Nyakang and his companions. At Akurwa the shrine contains the effigy and stool of Nyakang.¹

The shrine at Fenikang, as already mentioned, consists of five huts; one of these is in a special sense the house of Nyakang, which, in his spirit form, he is thought to inhabit. It is distinguished by a number of very rough paintings on its outer wall, some of which could be recognized as representing animals, but the writer could not learn that the paintings had any special significance. Before the door of this hut are a number of elephant tusks, the broad ends of which are thrust into the ground; within it there are skins on the floor as if for Nyakang to rest upon. Some of the sacred 'spears of Nyakang' appear to be kept in the hut, and there is an extremely sacred stool in this shrine, which seems to be kept there, though it may perhaps be preserved with some of the sacred spears and a number of elephant tusks in one of the other huts of the shrine. The other huts are used by the guardians of the shrine and for storing the dura brought as offerings when the crop is cut.

The graves of the kings and the *kengo Nyakang* are alike the site of the performance of certain ceremonies which show the intimate relation, amounting sometimes to confusion, which exists between Nyakang and subsequent kings. Thus it is usual for the harvest ceremony to be performed at the royal grave-shrines as well as at the shrines of Nyakang, though it is recognized that this is not absolutely necessary. Again, each king soon after his installation sends, or should send, presents to the grave-shrines of his predecessors, treating these in the same way as he treats the shrines of Nyakang, though the presents need not be so lavish. Finally, sick folk send animals to be sacrificed as offerings at the shrines of their kings, just as they do at the shrines of Nyakang.

The writer may now anticipate the conclusions to which the remainder of this article will lead, and point out that the actual working religion of the Shilluk is a cult of Nyakang depending upon the acceptance of the following beliefs: (i.) the immanence in each king (*ret*) of the spirit of Nyakang, simply spoken of as Nyakang; (ii.) the conviction that the king must not be allowed to become ill or senile, lest with his diminishing vigour the cattle should sicken and fail to bear their increase, the crops should rot in the fields, and man, stricken with disease, should die in ever increasing numbers.

It follows that the *ret* of the Shilluk must be numbered among those rulers whom J. G. Frazer has called 'divine kings,' and, though, as in many instances in other countries, every precaution is taken against accidental death—e.g., they may not take part in battle—the Shilluk kings are (or were) killed, in order to avoid those disasters which their senescence was thought to bring upon the State.

4. The killing of the king and the transmission of the divine spirit.—Although there is not the least doubt that the kings of the Shilluk were killed ceremonially when they began to show signs of old age or ill health, it is extremely difficult to ascertain exactly what was done, and there is no doubt that a good deal of Shilluk folklore is enshrined in the accounts commonly given of the killing of the *ret*. According to these, any *niäret* has the right to attempt to kill the king, and, if successful, to reign in his stead. The killing could take place only at night, for during the day the king would be surrounded by his friends and his body-guard, and no would-be

successor would have the slightest chance of harming him. At night the king's position was very different. Alone in his enclosure with his favourite wives, and with no men to protect him, except a few herdsmen whose huts would be at a little distance, he was represented as passing the night in constant watchfulness, prowling fully armed, peering into the shadows, or standing silent and watchful in some dark corner. Then, when at last his rival appeared, the fight would take place in grim silence, broken only by the clash of spear and shield, for it was said to be a point of honour for the *ret* not to call the herdsmen to his assistance.

Many commoners will give some such account as the above, and, though nothing of the sort occurred during the recent period before the Mahdia, it is probable that these tales reproduce with tolerable fidelity a state of affairs which once existed among the Shilluk, or among their ancestors before they occupied their present territory. One survival of the conditions outlined does, indeed, seem to remain. It is commonly believed that the king keeps awake at night and sleeps only by day, and the sleepy condition of the king on the few occasions on which the writer saw him seemed to confirm this report.

In recent times the leading part in the killing of the *ret* has been assigned to the members of certain families called *ororo*, said to be the descendants of the brothers of Oshalo, the third king of the Shilluk. It is generally believed among well-informed Shilluk that their fourth king, Duwad, was the first to be killed ceremonially, but, according to one account, Tugo, the seventh king, was the first to suffer. Absolutely reliable information concerning the actual killing of the *ret* during recent times is not forthcoming. It is said that the *ororo* and some of the chiefs announce his fate to him, after which he is taken to a hut specially built for the occasion, and strangled. The reasons determining the *ororo* to act are said to be the ill health of the *ret* or his incapacity to satisfy his wives, which is regarded as an undoubted sign of senescence. Concerning this there are two popularly received accounts. One states that his wives would themselves strangle the *ret*, but 'this is incorrect; the other is to the effect that the wives notify their husbands' shortcomings to some of the chiefs, who tell them to inform the *ret* of his approaching death. It is widely believed that this is done by spreading a piece of cloth over his face and over his knees as he lies sleeping during the afternoon. If we ignore these discrepancies and recent practice, there is little doubt that the old custom was to take the *ret* and a nubile maiden (or perhaps two) to a specially built hut, the opening of which was then walled up so that the inmates, left without water or food, died of starvation and suffocation. This practice was said to have been given up some five generations ago on account of the sufferings of the *ret*, who was so distressed by the stench arising from his companion's body that he shouted to the people outside the hut commanding them on no account to leave his successor to die slowly in such a manner.

For a long time no public announcement of the king's death is made, but the news spreads gradually. As already stated, no information was obtainable as to who actually killed the king, or by whom and under what circumstances he was brought to his birthplace where he would be buried and his grave-shrine erected. It must, however, be remembered that Fashoda has not always been the home of the king, for, although it is uncertain how the change was brought about, there is no doubt that formerly each Shilluk king reigned and was buried in the village in which he was born and in which his afterbirth was buried. Some months after the king's death, when decomposition was judged to have proceeded so far that little but the bones would be found, the hut was broken open by the *ororo*, a grave was dug, and the bones of the king

¹ Cf. below, 4.

and of his companion were placed in it, after being wrapped in the skin of one of the oxen sacrificed. A hut was built over the grave, and one or two others were put up within the enclosure for the attendants on the new shrine which had thus arisen. Westermann¹ states that this ceremony was the public notification that the king had disappeared, and he describes the sacrifice by drowning of a man and woman, who were placed in a canoe with many spears, cattle, bells, beads, and pottery vessels. The canoe with its load was towed into the middle of the river and sunk.

During the interregnum which occurs after the death of a *ret* the most important chiefs decide all comparatively small matters, great affairs standing over until the appointment of a new king. The election appears to be in the hands of not more than eight or ten men, none of whom are *ororo*; the evidence is not clear whether their choice is thought to be inspired, but certain portents might occur if the wrong man were chosen. The king-elect and a number of big chiefs wait for the return of two or three chiefs, who go to Akurwa near the northern limit of the Shilluk country to bid the Akurwa people bring the sacred four-legged stool from the shrine of Nyakang in their village, and also his effigy called 'Nyakang,' which is kept wrapped in a piece of *dammur*, i.e. the common cotton-cloth of the Sudan. The effigy and the sacred stool are carried southward towards Fashoda; each night the effigy is placed upon the sacred stool, but by day the objects are borne upon men's shoulders, and as they march the men sing songs that Nyakang has commanded them to sing.² The party bearing the sacred objects may seize anything they like on the way, but it seems that their wants are so freely provided for in the villages which they pass that they scarcely exercise their prerogative.

There is a shallow, generally dry, *khôr* near Kwom, which is the scene of a sham fight between the Akurwa men bringing the effigy and the folk waiting with the newly-elected *ret*, in which the former are victorious. No reason could be given for this 'old custom,' as it was called, but immediately after it the king-elect is escorted to Fashoda. Certain of the Akurwa men now enter the shrine of Nyakang with the stool, and, after a short time, come out and place it on the ground outside the entrance to the shrine enclosure; they now place the effigy of Nyakang on the stool, the king-elect holding one leg of the stool while an important chief holds another. Near him stand two of his paternal aunts and two of his sisters, while he is surrounded by a crowd of *niâret*, *niâr-et*, *kwaniâret*, and *ororo*. The Akurwa men carry the effigy into the shrine, and the *ororo* lift up the king-elect and place him upon the stool, on which he remains seated for some time, perhaps till sunset, when the Akurwa men take the sacred stool into the shrine and the *ororo* escort the new king to three new huts specially built for him. The king stays in one of these, or perhaps within the enclosure, for three days; on the fourth night the *ororo* take the king quietly, almost stealthily, to the royal residence. The three newly-built huts which were occupied by the king are broken up (perhaps by the *ororo*) and their fragments thrown into the river.

5. Reverence for trees.—Special regard is paid to trees that grow near the shrines of dead kings. This is not remarkable, for the Shilluk country is in the main bare, with few shade-trees, so that

any tree growing in or on the outskirts of a village is preserved and the ground becomes to some extent a meeting- and squatting-place. But the Shilluk attitude to trees growing near the grave-shrines of their kings appears to be something more than an appreciation of the grateful shade, though there is no regular cult. When a tree has grown, or is believed to have grown, near a shrine shortly after its erection, i.e. within a few months or years of the burial of a 'divine king,' it is thought that the tree has sprung from one of the logs used in making the grave, and in such cases the connexion between the tree and the dead king is one that would easily suggest itself.

In the case of an old tree at Kodok which grew near the grave of Nyadwai, the ninth king, a 'big' sacrifice was made when it fell down, and its trunk and all its fragments were carefully thrown into the river. This is not done to produce rain or to influence the crops, but it was said that, if any one burned the wood of this tree, even accidentally, he would sicken. In this connexion reference may be made to the fact that the bones of certain sacrifices are carefully gathered and disposed of in the same way. There was (1911) no hut over the grave of Nyadwai, probably because it is situated some little distance from the present native village and is surrounded by Government offices and houses, but it had a fence round it, and a young tree that had appeared at some distance from the stump of the old tree was regarded with respect. The old tree did not really spring from the grave of Nyadwai, since it was admitted that during his lifetime it stood near his house, and that he would often sit under it; nevertheless, there is a general feeling that it is associated with his grave, and this feeling is so strong that many Shilluk at one time or another spoke of Nyadwai being buried under the tree, though his grave must be nearly a hundred yards away. It should be remembered that the due growth of the crops, i.e. of the most important part of the vegetable world, depends on the well-being of the 'divine' king, so that there is nothing surprising in a strong, almost religious, feeling for any tree growing near a shrine.

6. The appearance of the Shilluk kings in animal form.—Nyakang, Dag, and Nyadwai all appear as a white bird called *okak*, or rarely as a giraffe; if the animal comes straight towards the village in which the shrine stands, exhibiting no sign of fear, it is concluded that it is a spirit animal, and the attendants at the tomb sacrifice a sheep or perhaps even a bullock. Father Banholzer¹ adds 'long-bodied grasshoppers' and 'a kind of snake called *red*' as forms in which Nyakang appears. The writer is indebted to Dr. Lambie of the American Mission for pointing out that unusual behaviour on the part of almost any land animal will lead the Shilluk to look upon the creature as a temporary incarnation of Nyakang.

Thus, 'if a little bird flies into the midst of a crowd of people and is not frightened, or attracts some one's notice in a special manner, they say "Nyakang."'²

Occasionally Nyakang appears as a bull. A very old Shilluk of the royal family said that, when he was a youth, fifty or more years ago, Nyakang appeared as a white bull; the king ordered sacrifices to be made in addition to those already offered by the local chief. Dr. Lambie adds that unusual behaviour on the part of a water animal will be put down to the animal containing the spirit of Nikaiya (Nyakai).

Reference may here be made to the Shilluk attitude towards the crocodile. This animal is generally spared, as some of the worst man-eaters are believed to be men whom other crocodiles have taken, and very dark coloured crocodiles are supposed to be either man-crocodiles or their descendants. Further, there is a firm belief in the crocodilian attributes of the ancestors of Nyakang already recorded.² Nikaiya lives in the river, and is definitely associated with the crocodile, and, though in old days she would assume human form, and at times come to the village by night in all friendliness, she might seize a man or woman and bear him or her off to her home in the river, and there change her victim into a crocodile to be

¹ P. 126.

² Nyakang appears in a dream to one of the guardians of the shrine at Akurwa and prescribes the songs to be sung; further investigation will probably show that songs play an important part in the tribal lore of the Shilluk, and that there is a sort of epic commemorating the great deeds of the royal family.

¹ In a personal communication to the present writer.

² Above, § 3.

spouse to one of her crocodile relatives. Nyakai brings luck to those whom she visits by night to ask for fire; if a barren woman bears a child after such a visit, it will be called Nyakai, and the father will take a sheep and kill it and throw it into the river. Nyakai is known by her short, stout figure and great muscular development, and by the fact that she 'eats' (mouths) her words. That the river is the true home of Nyakai, even in her most spiritual form, is shown by the sacrifice made to her on another occasion. Just as a sacrifice would be made at the shrine of Nyakang, or at the grave-shrine of any king, if Nyakang or one of the Shilluk kings had appeared in a dream, or if one of the kings had 'possessed' a man, causing him to become ill, so, when Nyakai takes up her abode in a man or woman, the sacrifice is made by throwing a live sheep with its legs tied together into the river.

The Shilluk do not eat the flesh of the lion, leopard, hyena, a species of monitor lizard (*varanus*), and a fish called *shuro*. The last prohibition is directly attributed to Nyakang, who told his people to bring him all the fish that they caught in the river. Although they brought him many fish, they kept back one, and Nyakang, who knew this, as in a dream men know things happening at a distance, told his people that this fish should always be unlawful food to them.

7. Oaths.—Oaths are sworn by Nyakang or on one of the holy spears from a shrine of Nyakang. Westermann¹ notes that the latter form is used only in judicial procedure. A sheep is killed and both parties are smeared with its blood, after which they swear by the spear, perjury being followed by death. In swearing by Nyakang his name is often coupled with that of one of the villages in which he has a shrine; e.g., a man may swear by 'Nyakang of Akurwa.' The early kings may also be invoked by name, especially Dag.

8. General remarks.—Juok, the high god of the Shilluk, must not be confused with the *jo*k (ancestral spirits) of the Dinka (*q.v.*), whose worship is so important a part of the Dinka religion. It is at first sight somewhat surprising that, although in the case of important men the funeral customs are by no means short or lacking in ceremony, there is no considerable cult of the dead among the Shilluk. The explanation is no doubt to be sought in the development of the cult of Nyakang and the divine kings in whom his spirit is immanent. Thus, while the Dinka commonly attribute sickness to the action of an ancestral spirit, the Shilluk regard the entrance into the body of the spirit of one of their kings as the commonest cause of sickness. Probably only the early kings are thought to produce illness in this manner, and the few cases with which the writer became familiar were held to be possessed by Dag, the son and successor of Nyakang.

One of these cases, a woman who recovered after two sheep had been sacrificed to Dag, wore bead anklets, and amidst the beads there were threaded small pieces of the ear lobes of the sheep. These anklets were considered protective against future possession by Dag. A chief who had been badly used and imprisoned by the king was treated in exactly the same way. On his release his friends brought him beads, sheep were killed, and he now wears the beads and pieces of the ears of the sheep in exactly the same manner as the woman.

The men and women called *ajuago*, though they too have immanent in them the spirits of the early Shilluk kings, seem to form a class apart. They have the power of healing the sick and do a brisk trade in charms, of which almost every Shilluk seems to wear a considerable number. When a man first becomes *ajuago*, he is taken ill, perhaps waking up trembling and agitated from a dream (in which he may afterwards say the spirit came to him). He consults an *ajuago*, who may tell

¹ P. xliii.

him, 'No, you are not ill; you have the spirit of Dag within you.' A long and complicated ceremony is then performed in order that the spirit may not affect him so severely, for without this ceremony the spirit would be so strong in his body that he would not dare to approach his women. It was impossible to discover with certainty the exact nature of the change effected by the ceremony, but the informant, one Akon Achol, who had in him the spirit of Dag, seemed to think that, after the ceremony, the spirit which had previously attacked his body in the rudest fashion became attached rather to his spirit or soul.

One ancestral spirit may be immanent in many *ajuago* at the same time, often passing at the death of an *ajuago*, or shortly afterwards, into one of his children, who thus becomes an *ajuago* like his or her father. It was said that *ajuago* of the female sex should not marry if they were unmarried at the time that the spirit came to them; they would be allowed to take lovers, but, like the king's daughters, they should not bear children. But it seemed that women very seldom became *ajuago* in their youth, and it is certain that married women who are *ajuago* do not leave their husbands, and continue to bear children. The following information on this matter was volunteered by a usually reliable informant: the husbands of women who are *ajuago* have access to their wives only during the dark half of the month, for 'Nyakang and Dag only come during that half of the month when the moon is bright.' Unfortunately the writer was unable to follow up his information or even to verify it.

LITERATURE.—P. W. Hofmayr, 'Religion der Shilluk,' *Anthropos*, vi. [1911] 120 ff.; C. G. Seligmann, *The Cult of Nyakang and the Divine Kings of the Shilluk* (Fourth Report of the Wellcome Research Laboratories, vol. B.), Khartum, 1911; D. Westermann, *The Shilluk People, their Language and Folk-lore*, Philadelphia and Berlin, 1912.

Since this article was written, an officer of the Sudan Civil Service who witnessed the installation of the Shilluk king Fafite wad Yor on Jan. 17, 1918, has published an account of what he saw (P. Munro, 'Installation of the King of the Shilluks,' *Sudan Notes and Records*, Khartum, 1918, vol. i. no. 8). The author gives further details, the chief discrepancies noted being that an effigy of Dag is brought from Akurwa with that of his father Nyakang, and that the mock battle with dums stalks takes place after the installation.

SHINS.—See art. DARDS. Here it may be noted that, since the art. DARDS was written, it has been ascertained that the correct spelling of this name is 'Shin,' not 'Shin.' Similarly, their language is Shiná, with the stress-accent on the last syllable, not Shina. G. A. GRIERSON.

SHINTO.—1. Early history and general features.—Shinto, i.e. 'the way of the gods,' is the old native religion of Japan before the introduction of Buddhism and Confucianism. Its affinities, as the analogy of race and language would lead us to expect, are with the religions of Northern Asia rather than with the ancient Chinese cult. Shinto agrees with the former in making the sun the chief object of worship, though this is in itself by no means conclusive, as sun-worship is common to most nations in the barbaric stage of development. It is more significant that it has nothing to correspond with the two chief deities of ancient China, the personal Supreme Deity called *Shangti* and the more impersonal *Tien* or Heaven. In Japan, Heaven is not a god, but the region where the gods reside. There are more definite indications of a connexion between Shinto and the old religion of Korea. Some Shinto gods are of Korean origin, and others have Korean associations.

Writing was practically unknown in Japan before the 5th cent., and the myths and rituals of Shinto were transmitted by oral tradition only, chiefly by the Nakatomi and Imbe, hereditary priestly corporations attached to the Mikado's court. We also hear of *katarihe*, or reciters, who recited 'ancient words' at the *Ohonihe*, or coronation ceremony, and doubtless on other occasions. In A.D. 712, a quasi-historical work called the *Kojiki* was compiled by Imperial order. It contains much mythical matter. The *Nihongi*, a

similar compilation, completed in 720, is our other chief authority for the myths of Japan (see the Literature at the end of this article). The prayers and rituals of Shinto were not committed to writing until the beginning of the 10th century. The *Yengishiki*, compiled at this time, describes the chief ceremonies, and gives the text of a number of prayers called *norito*. The picture of Shinto presented by these and other less important works is tolerably complete, and has the great advantage for us of having been drawn by the Japanese themselves.

When we compare Shinto with the great religions of the world, it must be deemed perhaps the most rudimentary cult of which we have an adequate written record. It has not advanced beyond a crude polytheism; its personifications are vague and feeble; there is little grasp of the conception of spirit; it has scarcely anything in the shape of a moral code; it practically does not recognize a future state, and generally gives little evidence of deep thought or earnest devotion. It is, nevertheless, not the religion of a primitive people. Long before Shinto had assumed the shape in which we know it, the Japanese had possessed a settled government and a fair degree of civilization. They were already an agricultural nation, a circumstance which has profoundly affected their religion. The degree of their material civilization is indicated by the mention in the old records of bridges, iron, copper, mirrors, bellows for smelting metal, weaving, silk culture, and brewing. Their degree of mental culture may be gathered from the fact that Chinese learning had reached Japan early in the 5th century, if not sooner, and Buddhism towards the middle of the 6th century. The Shinto of this early period is a State religion. We hear but little of the popular beliefs and practices.

It is impossible with Herbert Spencer to refer all classes of deity to one origin, namely, the worship of humanity, as ghosts or ancestors. As Pfeleiderer, d'Alviella, and other Continental scholars have clearly pointed out, there are two currents of deity-making thought. One is the personification of natural objects and phenomena, the other the deification of men. Shinto, which has been described as exclusively a cult of ancestors and deceased sovereigns, has in reality little of this element. It is in the main a worship of nature. The man-deities are of more recent origin and of minor importance. These two classes of deities may each be subdivided into deities of individuals, of classes, and of qualities, all of which are exemplified in Shinto. The sun-goddess is a deified individual object; the gods of trees and herbs represent classes; the god of growth (*Musubi*) is a personification of an abstract quality. *Temmangu* is a deified statesman; *Koyane* is the deified type of the Nakatomi priestly corporation; *Ta-jikara no ico* ('the male of hand-strength') is a human quality personified and raised to divine rank.

The Japanese word for God is *Kami*. It means 'above,' 'superior,' and may therefore be compared to the Latin *superi* or *calicoli*, the Greek *obapavtwes*. It suggests the theory that celestial objects were the first deities. Motoöri, the great modern Shinto theologian, says:

'The term *Kami* is applied in the first place to the various deities of Heaven and Earth who are mentioned in the ancient records, as well as to their spirits (*mi-tama*) which reside in the shrines where they are worshipped. Moreover, not only human beings, but birds, beasts, plants and trees, seas and mountains, and all other things whatsoever which deserve to be dreaded and revered for the extraordinary and pre-eminent powers which they possess, are called *Kami*. They need not be eminent for surpassing nobleness, goodness, or serviceableness alone. Malignant and uncanny beings are also called *Kami*, if only they are the objects of general dread. Among *Kami* who are human beings I need hardly mention Mikados. . . . Amongst others there are thunder (In Japanese *Naru kami* or the

Sounding God); the dragon, the echo (called in Japanese *Ko-dama*, or the Tree-Spirit), and the fox, who are *Kami* by reason of their uncanny and fearful natures. The term *Kami* is applied in the *Nihongi* and *Manyöshü*, a collection of ancient poetry, to the tiger and wolf. Izanagi gave to the fruit of the peach, and to the jewels round his neck, names which implied that they were *Kami*. . . . There are many cases of seas and mountains being called *Kami*. It is not their spirits which are meant. The word was applied directly to the seas or mountains themselves, as being very awful things.'

There may be recognized in Shinto, as elsewhere, three successive stages of the conception of divinity in nature. First, the god, a natural object as the sun, is regarded as sentient, and direct worship is paid to it. This is probably what Comte meant when he described the first stage of religion as fetishism. But the word 'fetish' has been used of so many things, notably of the material object representing a deity, that its use is undesirable when precision is aimed at. Secondly, the god is thought of as an anthropomorphic being; and, thirdly, it is conceived, not as the natural object itself or its presiding deity, but as a spiritual emanation (*mitama*) from him, which resides in his temple on earth and otherwise exercises an influence there. There is much confusion in all mythologies between these different stages. The first and second are confused in the Shinto sun-myth. When we are told that the sun-goddess by retiring to the rock-cave of Heaven caused darkness all over the world, it is evidently the sun itself that is intended. Yet in the same story she does many things which have no meaning, if not said of a purely anthropomorphic being.

The passage just quoted from Motoöri illustrates another kind of confusion, namely between the god and his *mitama*. The doctrine of the *mitama* (the *Shekinah* of the Jews) is plainly of secondary origin. It is due to the attempts of thoughtful men to reconcile such facts as the presence of the sun-goddess at the same time in the sky and in her temple at Ise. It is a step towards the conception of the omnipresence of Deity. But it is not prominent in Shinto. On the whole, the ancient Japanese gods (like Homer's) are very material beings, modelled, not on ghosts or spirits, but on living men. There is a myth in which the god *Oho-na-mochi* has an interview with his own *mitama* or spiritual double, resulting in the latter being settled in the shrine of Miwa. But the people disregard this distinction and speak of the god worshipped here simply as *Oho-na-mochi*. A god may have two *mitama*, one in his beneficent, the other in his sinister, aspect, or many, according to the number of shrines at which he is worshipped. The special place of residence of the *mitama* is the *shintai*, or god-body, which is a sword, a stone, a mirror, or other material object deposited in the shrine, usually in a box which is rarely or never opened. Some ignorant worshippers confound the *shintai* with the *mitama*, just as in France the peasant speaks of the host as 'le bon Dieu.'

Shinto has practically no idols, not because the ancient Japanese were specially enlightened, but because they had no art before sculpture and painting were introduced from China, and because they realized very feebly the personal character of Divinity. The deities are very numerous, as is always the case in nature-worship. For, although a monotheistic nature-worship, as, for example, of the sun, is conceivable, yet in practice the same feeling leads inevitably to the cult of other natural phenomena as well. The number of Shinto deities is constantly fluctuating. Some are forgotten, and are re-established under new names. Or wholly new gods may be added to the pantheon. A deity is frequently cut into two by a fissionary process; or, on the other hand, two distinct deities may come to be regarded as identical. Their character is very ill-defined. A well, a tree, or a mountain

spouse to one of her crocodile relatives. Nyakai brings luck to those whom she visits by night to ask for fire; if a barren woman bears a child after such a visit, it will be called Nyakai, and the father will take a sheep and kill it and throw it into the river. Nyakai is known by her short, stout figure and great muscular development, and by the fact that she 'eats' (mouths) her words. That the river is the true home of Nyakai, even in her most spiritual form, is shown by the sacrifice made to her on another occasion. Just as a sacrifice would be made at the shrine of Nyakang, or at the grave-shrine of any king, if Nyakang or one of the Shilluk kings had appeared in a dream, or if one of the kings had 'possessed' a man, causing him to become ill, so, when Nyakai takes up her abode in a man or woman, the sacrifice is made by throwing a live sheep with its legs tied together into the river.

The Shilluk do not eat the flesh of the lion, leopard, hyena, a species of monitor lizard (*varanus*), and a fish called *shuro*. The last prohibition is directly attributed to Nyakang, who told his people to bring him all the fish that they caught in the river. Although they brought him many fish, they kept back one, and Nyakang, who knew this, as in a dream men know things happening at a distance, told his people that this fish should always be unlawful food to them.

7. Oaths.—Oaths are sworn by Nyakang or on one of the holy spears from a shrine of Nyakang. Westermann¹ notes that the latter form is used only in judicial procedure. A sheep is killed and both parties are smeared with its blood, after which they swear by the spear, perjury being followed by death. In swearing by Nyakang his name is often coupled with that of one of the villages in which he has a shrine; e.g., a man may swear by 'Nyakang of Akurwa.' The early kings may also be invoked by name, especially Dag.

8. General remarks.—Juok, the high god of the Shilluk, must not be confused with the *jok* (ancestral spirits) of the Dinka (*q.v.*), whose worship is so important a part of the Dinka religion. It is at first sight somewhat surprising that, although in the case of important men the funeral customs are by no means short or lacking in ceremony, there is no considerable cult of the dead among the Shilluk. The explanation is no doubt to be sought in the development of the cult of Nyakang and the divine kings in whom his spirit is immanent. Thus, while the Dinka commonly attribute sickness to the action of an ancestral spirit, the Shilluk regard the entrance into the body of the spirit of one of their kings as the commonest cause of sickness. Probably only the early kings are thought to produce illness in this manner, and the few cases with which the writer became familiar were held to be possessed by Dag, the son and successor of Nyakang.

One of these cases, a woman who recovered after two sheep had been sacrificed to Dag, wore head anklets, and amidst the beads there were threaded small pieces of the ear lobes of the sheep. These anklets were considered protective against future possession by Dag. A chief who had been badly used and imprisoned by the king was treated in exactly the same way. On his release his friends brought him beads, sheep were killed, and he now wears the beads and pieces of the ears of the sheep in exactly the same manner as the woman.

The men and women called *ajuago*, though they too have immanent in them the spirits of the early Shilluk kings, seem to form a class apart. They have the power of healing the sick and do a brisk trade in charms, of which almost every Shilluk seems to wear a considerable number. When a man first becomes *ajuago*, he is taken ill, perhaps waking up trembling and agitated from a dream (in which he may afterwards say the spirit came to him). He consults an *ajuago*, who may tell

him, 'No, you are not ill; you have the spirit of Dag within you.' A long and complicated ceremony is then performed in order that the spirit may not affect him so severely, for without this ceremony the spirit would be so strong in his body that he would not dare to approach his women. It was impossible to discover with certainty the exact nature of the change effected by the ceremony, but the informant, one Akon Achol, who had in him the spirit of Dag, seemed to think that, after the ceremony, the spirit which had previously attacked his body in the rudest fashion became attached rather to his spirit or soul.

Shinto, which has been described as exclusively a cult of ancestors and deceased sovereigns, has in reality little of this element. It is in the main a worship of nature. The man-deities are of more recent origin and of minor importance. These two classes of deities may each be subdivided into deities of individuals, of classes, and of qualities, all of which are exemplified in Shinto. The sun-goddess is a deified individual object; the gods of trees and herbs represent classes; the god of growth (*Musubi*) is a personification of an abstract quality. *Temmangu* is a deified statesman; *Koyane* is the deified type of the Nakatomi priestly corporation; *Ta-jikara no wo* ('the male of hand-strength') is a human quality personified and raised to divine rank.

The Japanese word for God is *Kami*. It means 'above,' 'superior,' and may therefore be compared to the Latin *superi* or *calicoli*, the Greek *ὀψιπλοῦρες*. It suggests the theory that celestial objects were the first deities. Motoōri, the great modern Shinto theologian, says:

'The term *Kami* is applied in the first place to the various deities of Heaven and Earth who are mentioned in the ancient records, as well as to their spirits (*mi-tama*) which reside in the shrines where they are worshipped. Moreover, not only human beings, but birds, beasts, plants and trees, seas and mountains, and all other things whatsoever which deserve to be dreaded and revered for the extraordinary and pre-eminent powers which they possess, are called *Kami*. They need not be eminent for surpassing nobleness, goodness, or serviceableness alone. Malignant and uncanny beings are also called *Kami*, if only they are the objects of general dread. Among *Kami* who are human beings I need hardly mention Mikados. . . . Amongst others there are thunder (In Japanese *Naru kami* or the

Sounding God); the dragon, the echo (called in Japanese *Ko-dama*, or the Tree-Spirit), and the fox, who are *Kami* by reason of their uncanny and fearful natures. The term *Kami* is applied in the *Nihongi* and *Manyōshū*, a collection of ancient poetry, to the tiger and wolf. Izanagi gave to the fruit of the peach, and to the jewels round his neck, names which implied that they were *Kami*. . . . There are many cases of seas and mountains being called *Kami*. It is not their spirits which are meant. The word was applied directly to the seas or mountains themselves, as being very awful things.'

There may be recognized in Shinto, as elsewhere, three successive stages of the conception of divinity in nature. First, the god, a natural object as the sun, is regarded as sentient, and direct worship is paid to it. This is probably what Comte meant when he described the first stage of religion as fetishism. But the word 'fetish' has been used of so many things, notably of the material object representing a deity, that its use is undesirable when precision is aimed at. Secondly, the god is thought of as an anthropomorphic being; and, thirdly, it is conceived, not as the natural object itself or its presiding deity, but as a spiritual emanation (*mitama*) from him, which resides in his temple on earth and otherwise exercises an influence there. There is much confusion in all mythologies between these different stages. The first and second are confused in the Shinto sun-myth. When we are told that the sun-goddess by retiring to the rock-cave of Heaven caused darkness all over the world, it is evidently the sun itself that is intended. Yet in the same story she does many things which have no meaning, if not said of a purely anthropomorphic being.

The passage just quoted from Motoōri illustrates another kind of confusion, namely between the god and his *mitama*. The doctrine of the *mitama* (the *Shekinah* of the Jews) is plainly of secondary origin. It is due to the attempts of thoughtful men to reconcile such facts as the presence of the sun-goddess at the same time in the sky and in her temple at Ise. It is a step towards the conception of the omnipresence of Deity. But it is not prominent in Shinto. On the whole, the ancient Japanese gods (like Homer's) are very material beings, modelled, not on ghosts or spirits, but on living men. There is a myth in which the god *Oho-na-mochi* has an interview with his own *mitama* or spiritual double, resulting in the latter being settled in the shrine of Miwa. But the people disregard this distinction and speak of the god worshipped here simply as *Oho-na-mochi*. A god may have two *mitama*, one in his beneficent, the other in his sinister, aspect, or many, according to the number of shrines at which he is worshipped. The special place of residence of the *mitama* is the *shintai*, or god-body, which is a sword, a stone, a mirror, or other material object deposited in the shrine, usually in a box which is rarely or never opened. Some ignorant worshippers confound the *shintai* with the *mitama*, just as in France the peasant speaks of the host as 'le bon Dieu.'

Shinto has practically no idols, not because the ancient Japanese were specially enlightened, but because they had no art before sculpture and painting were introduced from China, and because they realized very feebly the personal character of Divinity. The deities are very numerous, as is always the case in nature-worship. For, although a monotheistic nature-worship, as, for example, of the sun, is conceivable, yet in practice the same feeling leads inevitably to the cult of other natural phenomena as well. The number of Shinto deities is constantly fluctuating. Some are forgotten, and are re-established under new names. Or wholly new gods may be added to the pantheon. A deity is frequently cut into two by a fissiparous process; or, on the other hand, two distinct deities may come to be regarded as identical. Their character is very ill-defined. A well, a tree, or a mountain

may have worship paid to it without having an individual name or any indication of sex or number. Japanese grammar greatly neglects these two distinctions. The wind-god is sometimes a single male deity and sometimes a married pair; the sea-god of Sumiyoshi is either one or three. The rain-storm god, *Susa no wo*, has in modern times been made into a sort of trinity. *Musubi*, the god of growth, was split up into several deities.

The general character of the Shinto deities is beneficent. But even a good deity may send plague or disaster if offended by neglect or disrespect. There is no evil deity, though *Susa no wo*, the rain-storm, shows some tendency to represent the evil principle generally. Their functions also are very much confused. Generally speaking, the nature-god in course of time acquires the functions of a providence that watches over human affairs. The sun-goddess is not only looked up to with gratitude for warmth and light, but is supposed to grant bodily health and success in business to her devotees. She also gives protection from foreign invasion, and many other blessings which have no conceivable relation to her nature-functions. *Inari*, the grain-god, is in one place the patron-god of swordsmiths. At another, he has a reputation for recovering stolen property. Very often a god is worshipped simply as the deity of a particular shrine, nothing more being known of him. Few people are aware that the very popular *Suitengu* of Tokio is in reality three several deities of widely different origin and character. Shrines may have their deity changed, as was the case with the well-known *Kompira* of Shikoku, without detriment to their popularity.

2. Ancestor-worship.—The worship of ancestors in Japan is an importation from China, and has no place in the older Shinto. There are, however, in the *Nihongi* cases of the worship (whether divine or otherwise is not clear) of deceased Mikados by their successors, and at a later date they were certainly regarded as *Kami*. Even living Mikados claimed a titular divinity, though without miraculous powers. We may probably trace these practices to Chinese influence. When a modern Japanese says that Shinto is ancestor-worship, he is no doubt thinking of the *ujigami* cult, which unquestionably formed an important part of it. In ancient times the local chieftainship and the offices of the central government were hereditary in certain families. The result was that the official designation came to be equivalent to a family name. These families or clans had each its special deity, called *ujigami*, or 'surname-deity,' for whose worship the members were from time to time convened. The *ujigami* might be and often was a nature-god. But even when he was a man-deity he was in most cases not a deified individual, but only a type. *Kojane* and *Futodama*, for example, are simply personifications of the families or clans whose ancestors they were feigned to be. They correspond to such conceptions as John Bull and Tommy Atkins. This is not true ancestor-worship.

3. State of the dead.—A land of Yomi or darkness is frequently mentioned in the ancient myths. Several of the gods are said to have gone there at death. In the old times Yomi was probably only a sufficiently transparent metaphor for the grave. There is little to show that the ancient Japanese believed in a future state of existence. A story in the *Nihongi* implies that the question was an open one, but that some people believed that the dead could execute vengeance on those who were their enemies during life. It is true that in pre-historic times it was the custom to sacrifice wives and

attendants at the tombs of deceased Mikados. To some this will appear a conclusive proof of a belief in their continued existence in another state. But if we reflect on the motives of our own funeral observances, we may see reason to doubt this. Was the sacrifice of a wife to a Mikado intended for his personal satisfaction any more than the primroses laid before Lord Beaconsfield's statue are meant for the gratification of his sight and smell? The rituals make no mention of a future state. There are no prayers that after this life we may enjoy eternal felicity.

4. Animals in Shinto.—Animals may receive worship for their own sakes as terrible or uncanny beings. It is for this reason that the tiger, the serpent, and the wolf are called *Kami*. But they have no temples and no regular organized cult. They may also be honoured for their association with some deity as his servant. The deer, the monkey, the pigeon, the tortoise, etc., are held sacred to various deities. The gods in myth often assume the form of animals, as the cormorant, the *wani* (dragon or sea-monster), the deer, the snake, etc. There is no definite evidence that totemism was known.

5. Supreme Being.—Shinto has no Supreme Deity. There has been, however, a tendency to exalt some of the gods to a supreme position. The sun-goddess is described as the most exalted of all the gods. Especially in modern times she has received an increasing degree of honour as a general providence, her special solar quality being left in the background. There was once an attempt to raise *Kuni-toko-tachi* to the position of Supreme Deity, simply because he is the first god in point of time of the *Nihongi*. Infinite knowledge and power are not recognized as attributes of Shinto deities.

6. Myths.—The chief religious ideas embodied in the myths of Japan are, firstly, the conception of various parts and aspects of the material universe as sentient beings, or presided over by sentient beings; and, secondly, the doctrine that reverence and obedience are due to the wise sovereign, whose rule confers on his people blessings comparable to the sun's warmth and light. This, we take it, is the real meaning of the story which traces the descent of the Mikados from the sun-goddess. The *Nihongi* begins with a philosophical essay of later date, which bears manifest traces of Chinese inspiration. It describes the evolution of Heaven and Earth from a chaotic egg-shaped mass which contained germs. The purer part became thinly diffused and formed Heaven, while the grosser element sank down and became Earth. Thereafter divine beings were produced between them.

There is great confusion in the various versions of the myths in regard to the earlier deities. The *Nihongi* calls the first god *Kuni-toko-tachi* ('land-eternal-stand'), and says that he was produced by the transformation of something in form like a reed-shoot, which was brought forth between Heaven and Earth. The other mythical records give different names to the first deity. *Kuni-toko-tachi* was succeeded by a number of other deities of whom little is known. Most of them, from their names, seem to be nature-gods.

It is not until the seventh generation that Japanese myth really begins with the creator pair, *Izanagi* and *Izanami*. At the behest of the other gods, these two stood on the 'floating bridge of Heaven' (the rainbow), and, thrusting down the 'jewel-spear of Heaven' (a phallus, according to some), groped with it in the chaos below. The brine from the spear-point coagulated and formed an island, upon which the divine pair descended and built a house with one central pillar. Then, the male deity turning by the left and the female deity turning by the right, they went round this central pillar until they met at the other side.

¹ See art. ANCESTOR-WORSHIP (Japanese).

¹ Cf. art. COSMOGONY AND COSMOLOGY (Japanese).

The female deity thereupon spoke first and exclaimed, 'How delightful! a lovely youth!' The male deity was displeased at the woman for having spoken first, so they went round the pillar a second time; and, having met anew, the male deity spoke first and said, 'How delightful! a lovely maiden!' Thereupon they became united as husband and wife. Another account says that, in consequence of the ill-luck produced by the female deity having been the first to speak, the child which was born to them was a leech, which they placed in a reed-boat and sent adrift. The author of this story probably had in mind an ancient marriage rite. The house built by them is the hut specially erected by the ancient Japanese for the consummation of a marriage. Izanagi and Izanami then proceeded to procreate the various islands of Japan, the deity of trees, the deity of herbs and grasses, the sun-goddess, the moon-god, the god *Susa no wo* (by one account), the earth-goddess, the water-goddess, the wind-gods, the food-goddess, the fire-god, and others. In giving birth to the last-named deity, Izanami was injured so that she died. Izanagi, in his rage and grief, drew his sword and cut the newborn fire-god into pieces, a number of other deities being generated by his doing so.

On her death, Izanami went to the land of Yomi or Hades. She was followed thither by her husband. But he was too late to bring her back, as she had already eaten of the cooking-furnaces of Yomi. She forbade him to look at her, but he disregarded her prayer. Breaking off the end-tooth of the comb which he had in his hair, he made of it a torch, and looked in where his wife was lying. Her body was already putrid and swarmed with maggots, and the 'Eight Thunders' had been generated in various parts of it. Izanami was enraged at her husband for exposing her nakedness, and sent the 'Eight Thunders' and the 'Ugly Females' of Yomi to attack him. Izanagi took to flight and used various expedients to delay his pursuers. He first flung down his head-dress. It became changed to grapes, which the 'Ugly Females' stopped to gather and eat. Then he threw down his comb. It turned into bamboo-shoots, which the 'Ugly Females' pulled up and ate before continuing their pursuit. Izanami herself overtook him at the 'Even Pass of Yomi,' where the formula of divorce was pronounced by Izanagi, and their final parting took place. On returning from Yomi, Izanagi's first care was to bathe in the sea, in order to purify himself from the pollutions which he had contracted by his visit to the Land of the Dead. A number of deities were generated by this process. The sun-goddess was born from the washing of his left eye, and the moon-god from that of his right, while *Susa no wo* (the rain-storm) was generated from the washing of his nose. To the sun-goddess Izanagi gave charge of the 'Plain of High-Heaven,' and to the moon-god was allotted the realm of Night. *Susa no wo* was at first appointed to rule the sea; but he preferred to rejoin his deceased mother Izanami, and was therefore made the Lord of Ne-no-kuni, i.e. the Root or Nether Country, another name for the Land of Yomi. *Susa no wo*, before proceeding to take up his charge as Ruler of the Nether Region, ascended to Heaven to take leave of his elder sister the sun-goddess. By reason of the fierceness of his divine nature, there was a commotion in the sea, and the hills and mountains groaned aloud as he passed upwards. The sun-goddess, in alarm, arrayed herself in manly garb, and confronted her brother armed with sword and bow and arrows. The pair stood face to face on opposite sides of the River of Heaven. *Susa no wo* then assured his sister of the purity of his intentions, and proposed to her that

they should each produce children by biting off and crunching parts of the jewels and swords which they wore and blowing away the fragments. Eight children born in this way were worshipped in after-times as the Hachōji or eight princely children. From one of them was descended Hoho no Ninigi, who came down from Heaven to rule the world (i.e. Japan), and became the ancestor of Jimmu Tennō, the first Mikado.

Susa no wo's subsequent proceedings were very rude and unseemly. He broke down the divisions between the rice-fields belonging to his sister, sowed them over again, let loose in them the piebald colt of Heaven, and committed nuisances in the hall where she was celebrating the solemn festival of firstfruits. The climax to his misdeeds was to flay a piebald colt of Heaven and to fling it into the sacred weaving-hall where the sun-goddess was engaged in weaving the garments of the deities. She was so deeply indignant at this last insult that she entered the Rock-cave of Heaven and left the world to darkness. The retirement of the sun-goddess to the Rock-cave of Heaven produced great consternation among the heavenly deities. They met on the dry bed of the River of Heaven (the Milky Way) and took counsel how they should entice her from her seclusion. By the advice of *Omoi-kane no Mikoto* ('the thought-combiner' or 'counsellor-deity'), the long-singing birds of the Eternal Land (cocks) were made to utter their prolonged cry before the door of the cave. *Koyane no Mikoto*, ancestor of the Nakatomi, and *Futo-dama no Mikoto*, ancestor of the Imbe, dug up by the roots a five-hundred-branched true Sakaki tree of Heaven, and hung on its higher branches strings of jewels, on its middle branches a mirror, and on its lower branches pieces of cloth. Then they recited their liturgy in her honour. Moreover, *Ame no Uzume* ('the dread female of Heaven') arrayed herself in a fantastic manner and, standing on a tub which resounded when she stamped upon it, performed a (not very decent) mimic dance and gave forth an inspired utterance. The sun-goddess wondered how *Ame no Uzume* and the other gods could be so jolly while the world was wrapped in complete darkness, and peeped out from the half-opened door of the cave. She was at once seized by *Ta-jikara no wo* ('male of hand-strength') and prevented by main force from re-entering, to the great joy of all the deities.

Susa no wo was then tried by a council of gods, who mulcted him in a fine of a thousand tables of purification-offerings. They also pulled out the nails of his fingers and toes, and banished him to the land of Yomi. Finally, *Ame no Koyane*, the ancestor of the Nakatomi, recited his *Uharai* or great purification liturgy. After his banishment *Susa no wo* went to the province of Idzumo. Here, like another Perseus, he slew the eight-headed serpent of Koshi (having first made him drunk) and delivered his intended victim, a young maiden who subsequently became his wife. Eventually he entered the Nether Land.

Susa no wo had 181 children. One of these was *Oho-na-mochi* ('great-name-possessor'), also called *Oho-kuni-nushi* ('great-country-master'). He dwelt in Idzumo, and with the aid of his *mitama* reduced to order this part of Japan. Associated with him was the dwarf-deity *Sukuna-bikona*, who came floating over the sea in a tiny boat, clothed in bird-skins. To these two is attributed the origin of the art of medicine and of charms against the powers of evil. The dynasty of *Susa no wo* was not recognized by the Gods of Heaven, who sent down several other deities to subdue and govern the world, i.e. Japan. Ultimately *Oho-na-mochi* and his son *Koto-shiro-nushi* ('thing-know-master,'

or 'governor') agreed to yield the government to *Hoho no Ninigi*, a grandchild of the sun-goddess, who accordingly descended to earth on a mountain in the western island of Kiushiu. He was attended by the ancestors of the five *be*, or hereditary government corporations, viz. the Nakatomi, the Imbe, the Sarume, the mirror-makers' *be*, and the jewellers' *be*, to which some accounts add several others.

Hoho no Ninigi took to wife the daughter of a deity whom he found there. When the time came for her delivery, she shut herself up in a doorless shed, which, on the birth of her three children, she set fire to, with the object of clearing herself from certain suspicions which her husband had entertained of her fidelity. 'If,' said she, 'the children are really the offspring of the Heavenly Grandchild, the fire cannot harm them.' The children and their mother came forth unhurt, and were thereupon recognized by *Hoho no Ninigi* as his true offspring and wife. One of these children, named *Hohodemi*, was a hunter. He exchanged his bow and arrows for the fish-hook of his elder brother, but lost the latter in the sea. This led to his visiting the palace of the sea-god *Toyotama-hiko*, and marrying his daughter. A child of this union was the father of *Jimmu Tennō*, the first human sovereign of Japan. With him history is supposed to begin. But in reality the annals of Japan for nearly a thousand years longer are deeply permeated by legend.

7. The pantheon.—(i.) *NATURE-GODS*.—(a) *The sun-goddess* is the most eminent of the Shinto deities. She is called the Ruler of Heaven, wears royal insignia, and is surrounded by a court of ministers and functionaries. Yet she is hardly what we should call a Supreme Deity. All important celestial matters are determined not by her fiat, but by a council of the gods. The sea and the land of Yomi are beyond her jurisdiction. Her Japanese name is *Ama-terasu no Oho-kami* ('the Heaven-shining Great Deity'). She is also called *Ama-terasu hirume* ('Heaven-shining-sun-female'), or, more briefly, *Hirume*. Another name is *Ama-terasu mi oya* ('Heaven-shining-august-parent'). In modern times *Tenshō-daijin*, the Chinese equivalent of *Ama-terasu no Oho-kami*, is more common. Under this name her solar quality is practically forgotten, and she is simply a great deity whose seat is at Ise. The *shintai* or material token of the sun-goddess is a mirror, called the *yata-kagami* ('eight-hand-mirror') or *hi-gata no kagami* ('sun-form-mirror'). It is kept in a box in the great shrine of Ise, and is treated with the greatest reverence, being even spoken of as 'the great God of Ise.'

The *yata-garasu*, or 'eight-hand-crow,' is a bird sacred to the sun. It is identified with the Chinese *yang-wu*, a three-legged crow of a red colour which inhabits the sun. *Ama-terasu* is only one of many solar deities mentioned in the old records. *Waka-hirume* ('young-sun-female,' probably the morning sun) and *Hiruko* ('sun-youth') may be given as examples. *Hiruko* may also mean 'leech-child.' Hence the legend according to which the first child of *Izanagi* and *Izanami* was a leech.

Susa no wo, a name which has been interpreted variously as the 'male of *Susa*' (a place where he was worshipped), and as the 'impetuous male,' has been the subject of much speculation. Dr. Buckley of Chicago has shown that he is a personification of the rain-storm. This explains the violent character given to him in myth, and his quarrel with the sun-goddess. *Hirata* identifies him with the moon-god; and it is true that myth often associates the darkness of the storm with the gloom of night—represented by its presiding deity, the moon. This view may be correct; but

if so, it had been forgotten in the time of the *Kojiki* and *Nihongi*, which distinguish clearly between the moon-god and *Susa no wo*. *Susa no wo* appears in a beneficent aspect as the rescuer of a Japanese Andromeda from a great serpent, and as the provider of fruit and other useful trees for mankind.

Tsukiyomi, the moon-god, is not one of the greater gods of Japan. The name means 'moon-darkness,' or perhaps 'moon-reckoner.' There is a myth in which he is represented as the murderer of the food-goddess, and therefore alienated from his sister, the sun-goddess. His *shintai* is a mirror. Star-worship is hardly known in Shinto.

(b) *Earth-worship*.—There are several cases in which the earth is worshipped directly, without attributing to it sex or distinct personality, or the addition of name or myth. The *Ji-matsuri* ('earth-festival') is a ceremony by which it is sought to propitiate a plot of ground selected for building or for bringing under cultivation. A secondary phase of earth-worship is where the deity is a god who rules, or who has made the country. *Oho-na-mochi*, the great god of Idzumo, is the chief deity of this class. His name means 'great-name-possessor,' a merely honorific title. He is also called *Oho-kuni-nushi* ('great-land-master'), or *Oho-kuni-dama* ('great-land-spirit'). His temple ranks next in importance after the shrines of Ise, and is supposed to be visited by all the other gods annually in the tenth month. His *shintai* is a necklace of jewels.

(c) *Mountain-gods*.—Most mountains have their deity, but few have more than a local importance. The deity of *Fujiyama*, *Sengensama*, and that of *Mount Aso* in the province of *Higo* are the best known.

(d) *Sea-gods*.—A triplet of sea-gods was produced by *Izanagi* when he washed in the sea after his return from Yomi. They are named *Soko-tsu wata-dzu-mi* ('bottom-sea-body'), *Naka-tsu wata-dzu-mi* ('middle-sea-body'), and *Uha-tsu wata-dzu-mi* ('upper-sea-body'). They are frequently spoken of and depicted as if they were only one deity. Their chief shrine is at *Sumiyoshi*, near *Osaka*. They are prayed to for prosperous voyages.

(e) *River-gods* have no individual names. They are called generically *Midzuchi* or 'water-father.' As in other countries, they are usually conceived of as having the form of snakes or dragons. Two rain-gods are mentioned in the *Nihongi*. They have also dragon-form. But any god may be prayed to for rain. All wells are more or less deified. Offerings are made at the present day to the house-well on the morning of New Year's day. The wells from which water is drawn for the great ceremonies of Shinto are worshipped. The element of water is also deified on account of its use in sacrifice.

(f) A wind-god is mentioned in the *Nihongi* as having been produced from *Izanagi's* breath, but the *norito* or rituals recognize two wind-gods, male and female. They were much prayed to for good harvests.

(g) The fire-god, *Kagu-tsuchi* ('radiant father') or *Ho-musubi* ('fire-growth'), is worshipped at *Atago*, a hill near *Kioto*, and other places. He is supposed to protect against conflagrations. *Futsu nushi* is probably another fire-deity. He it was who was sent down from Heaven to prepare Japan for the advent of *Hoho no Ninigi*, the grandchild of the sun-goddess. His chief shrine is at *Kadori* in Eastern Japan. Associated with him in myth and worship is a god called *Take-mika-tsuchi*, whose shrine is at *Kashima*, also on the east coast. *Take-mika-tsuchi* ('brave-dread-father') is a personification of thunder. But in modern times both these gods are universally recognized as war-

deities. Futsu nushi's material token or *shintai* is a sword. There is a separate worship of *thunder* under the name of *Naru-kami*, or the 'sounding-god.' The domestic *cooking-furnace* is worshipped as a god all over Japan. Sometimes it is a single deity, sometimes a married pair. There is no *shintai*. The furnace is the deity.

(h) Next after the sun-goddess, the *goddess of food* is the most important deity of Shinto. To her the outer shrine of Ise is dedicated. She is called *Uke-mochi* ('food-possessor'), or *Uka no mitama* ('spirit of food'), with numerous aliases. The *sake-god* is sometimes identified with the food-goddess (*sake* is brewed from rice), and at others is a distinct deity. Notwithstanding the difference of sex, *Inari* or the rice-god may be regarded as a variant of *Uke-mochi*. Every village and many private houses have small shrines in honour of him. He grants his worshippers agricultural prosperity; but, as is so often the case with nature-deities, his functions have been extended so as to cover many things which have nothing to do with grain, such as the restoration of stolen property, wealth, domestic harmony, etc. The *shintai* varies. Very often it is a round stone, which has the advantages of being cheap and durable. The fox is associated with him as his messenger or servant, and the vulgar regard the figures of this animal which are set up before his shrine as the deity himself.

(i) *Tree-gods.*—Individual trees of great age and size are universally worshipped. A *Kami-gi* ('god-tree') is frequently planted before shrines, not, however, as a god, but as an offering. The older records mention a god of trees named *Kukunochi* ('trees-father'), and a deity of herbs and grasses called *Kaya no hime* ('lady of reeds'). These gods were prayed to before cutting wood or reeds for building or thatching.

(j) The *house* is deified, sometimes as one, sometimes as two, deities. A special sanctity attaches to the central pillar—corresponding to our 'king-post.' There is also a god of the *privy* and of the *gate*. The latter had some importance in the palace. One of the *norito* is addressed to him or them—the number is uncertain.

Izanagi and Izanami, who occupy so conspicuous a place in myth, are in ritual comparatively unimportant deities. The present writer regards them as personifications of the Chinese *yin* and *yang*, or positive and negative principles of nature. They are therefore of later date than the gods whose parents they are feigned to be. *Musubi*, the god of growth, represents the conception of a god immanent in the Universe, and not, like Izanagi and Izanami, external to it. *Musubi* became split up into two deities, *Kami-musubi* ('divine growth') and *Taka-musubi* ('high growth'), supposed by some to be a married pair. Subsequently a still further subdivision took place. Their worship at one time flourished, but is now almost extinct.

(ii.) *MAN-GODS.*—*Take minagata*, the very popular deity of Suwa in the province of Shinano, is one of the few ancient gods who, with some probability, may be assigned to the class of deified individual men. He was a son of Oho-na-mochi, who refused allegiance to the sun-goddess's grandchild, and fled to Shinano, where he was afterwards worshipped. The present high priests are regarded as his descendants and incarnations. There is no shrine, but only a rock-cave—perhaps a dolmen. The war-god *Hachiman* is also stated to be a human being deified, viz. the Mikado Ōjin, a very legendary personage. The authority is an oracle delivered hundreds of years after his death. This god is unknown to the Shinto of the *Kojiki* and the *Nihongi*. Other legendary heroes who were deified

in subsequent times are: *Jimmu*, the first Mikado; *Jingo*, the empress who is supposed to have conquered Korea; her counsellor, *Taketchi no Sukune*; and *Yamato-dake*, the hero-prince who subdued eastern Japan. The best known indubitable example of a deified human being is *Temmmangu*, who presides over learning and calligraphy, and is the special god of schoolboys and pedagogues. He was a statesman, born A.D. 845. Owing to slanderous accusations by a rival, he was exiled to Kiushiu, where he died. Great calamities followed. To propitiate his angry ghost, a cult was instituted in his honour, which continues to this day. It may be suspected that the worship of Confucius in China had much to do with that of Temmmangu in Japan.

The man-gods of the older Shinto are not deified individuals, but types. The sun-goddess is represented as attended by the gods of the five *be* or hereditary government corporations. These included Koyane, the so-called ancestor, but really a type, of the Nakatomi priestly gild; Futo-dama ('great offering'), the ancestor of the Imbe who prepared the sacrificial offerings; and Toyotama ('rich-jewel'), the ancestor of the jewel-makers. *Sukuna-bikona*, a dwarf deity who is associated with Oho-na-mochi in worship and myth, is probably also a deified type—a sort of *Æsculapius* or father of medicine.

The *phallic deities* are the chief representatives of the class of deified human qualities. Originally a symbol of the procreative power, the phallus came to represent lusty animal vigour generally, the foe to death and disease. Hence its use as a magical appliance to repel pestilence. It is mainly in this prophylactic capacity that it figures in Shinto, where it is deified under the name of *Kunado no kami* ('god of the come-not place'), and has a special ritual. *Kunado no kami* had no shrines, but in the shape of a natural phallic boulder or carved wooden pillar was worshipped by the roadside, especially at cross-ways. Hence he came to be regarded as the god of roads and the guide and protector of travellers. The honours still paid to the *Dōsōjin* ('road-ancestor-deity') are a survival of this cult, which, in spite of official discouragement, is not quite extinct in eastern Japan. The *kteis* is represented by the peach, the bean, and the rice-grain, which are used magically to keep off diseases or—what is the same thing—demons. The peach flung by Izanagi to drive back the 'Thunders' which pursued him from Yomi was deified for its services.

8. Priesthood.—Herbert Spencer's saying (*Sociology*) that 'in early stages of social evolution the secular and the sacred are but little distinguished' is well illustrated by Shinto. The *Jingikwan*, or 'department of religion,' whose officers discharged the chief religious functions of State Shinto, was simply a Government bureau like any other, though it took precedence of the rest, and its proceedings were as much matters of State as the collection of taxes or the administration of justice. The very word *matsurigoto* ('government') is only another form of *matsuri* ('a religious festival'). Hirata says that 'the worship of the gods is the source of Government, nay, it is Government.'

The chief priest of Shinto is the Mikado himself. In some of the most important ceremonies he takes the leading part. But from the most ancient times his religious functions have been delegated. In the Jimmu Tennō legend we are told of a *michi no omi*, or 'Minister of the Way,' who acted as 'ruler of a festival' in honour of the god Taka-mi-musubi. The chief vicars of the Mikado were the family, or rather hereditary corporation, called the Nakatomi, of which the Fuji-
